Chalmers "Six"

(Six-cylinder—54 horsepower)

7 Passengers—\$2600

We make the assertion without qualification:

There is no better performing car than the Chalmers "Six."

We will put this "Six" against any car at any price, any time, any place, and under any conditions of road or weather—and for any sort of a demonstration—slow running, fast running, quick "pick-up," and power on the hills.

The Chalmers "Six" is a maximum car.

It carries the maximum number of people—seven. It carries them all in perfect comfort and safety wherever you want to go.

The 6-cylinder motor is a giant of power—54 to 70 horse, all you will ever need.

The "Six" gives the maximum of flexibility—a snail's pace or express train speed "on high."

It offers the maximum of convenience—all controls centered on the cowed dash.

It rides as smoothly as a Pullman car.

In the essential qualities of motor satisfaction, no car at any price, we are convinced, surpasses the Chalmers "Six." In power, speed, safety, beauty of design, luxury of equipment, the Chalmers "Six" is without a superior.

Added to the fundamental excellence of Chalmers quality, it offers you every desirable "feature"—electric lights, compressed air self-starter, long stroke motor, flexible four-forward transmission, demountable rims, power tire inflater, Turkish cushions, 11-inch upholstery, special Chalmers top, automatic windshield, Warner speedometer, and many others.

As in the case with nearly all the makers of high class cars, we are now receiving orders faster than we can ship cars. We know there will be a shortage of high grade "Sixes" this spring. There is nothing to be gained by waiting.

So our advice to you is, see the Chalmers dealer at once and let him have your order. And remember this: No price will buy a better car than this "Six" at \$2600.

Chalmers Motor Company, Detroit.

POPULAR NEW NOVELS

The Adventures of Miss Gregory

By PERCEVAL GIBBON

12°. With 8 Illustrations. \$1.35 net

A book full of freshness and surprise. Miss Gregory knocks about the world, and wherever she goes she is in the thick of things. Her extraordinary experiences are full of graphic pictures of men and women in widely separated parts of the globe, and the characterization of these is as forceful and impressive as the narrative in which they play their parts is swift in movement and enthralling in theme.

The Port of Dreams

By MIRIAM ALEXANDER

Author of "Beyond the Law"

"Miss Alexander tells her story with much skill and beauty. . . . She has created an ineffable, absolutely un-artificial atmosphere—the atmosphere of Ireland's weird, sombre romance and of France's dark, hopeless intrigues of a hundred and fifty years ago. . . . Sincere, conscientious and interesting."—*Boston Evening Transcript*.

\$1.35 net

Who Laughs Last

By ASHTON HILLIERS

Author of "As It Happened," "The Master Girl," etc.

"A vigorous and vivacious romance, rich in human content, abounding in telling contrasts of character and impressive portraiture, and seasoned with incident and adventure."—*Cleveland Plain Dealer*.

\$1.25 net

The Burning Question

By GRACE DENIO LITCHFIELD

Author of "In the Crucible," "The Moving Finger Writes," etc.

"The story of a man who unknowingly becomes a bigamist, believing his first wife—a cold and unloving person—dead. Miss Litchfield presents an arresting series of circumstances in a telling and convincing way, and at the same time points out an important moral truth. . . . An intense and dramatic story."—*Baltimore Evening News*.

\$1.25 net

Add 8 per cent. for carriage charges.

New York **G. P. PUTNAM'S SONS** London
Send for Catalogue At All Book Stores

By JOHN FOX, Jr.

Author of

"The Little Shepherd of Kingdom Come," etc.

The Heart of the Hills

First Edition, 100,000 Copies

"It is by long odds the author's strongest book."—*Boston Globe*.

"Rarely has a more sympathetic character been drawn in fiction than Mavis, the mountain heroine."

—*New York World*.

Monarchical Socialism in Germany

By ELMER ROBERTS

"Monarchical Socialism," a splendid paradox, stands for the combining of apparently incompatible principles by splendid statesmanship. Germany, right or wrong, has gripped, and seems now to control those great forces of capital and labor with which we grapple. Her methods of handling trusts, railroads, labor bodies, and so on, are here set down by a student of them.

\$1.25 net; by mail \$1.36

Plays by Bjørnstjerne Bjørnson

"The New System," "The Gauntlet," "Beyond Human Power"

Translated from the Norwegian, by Edwin Bjorkman

These plays by the famous Norwegian suit the temper of the time. "The Gauntlet" particularly. It is a sharp challenge of the double moral standard of the sexes; will startle a (man) reader into vivid realization, like the blow of a glove upon his cheek. But all three, though restrained and, in form, almost classic, radiate the spirit of the day.

\$1.50 net; by mail \$1.65

Plays by Galsworthy

The prolonged demand for John Galsworthy's plays has induced the collection in one volume of "Justice," "The Little Dream," and "The Elder Son"—a cheaper and more convenient form.

\$1.35 net

The Enjoyment of Poetry

By MAX EASTMAN

Formerly Lecturer at Columbia University

A delightful inquiry into the nature of poetry, which will intensify the pleasure of those who love it, and may well open the eyes and ears of those insensible to it.

But its prime value lies in the entertainment it gives; for though its interest is serious indeed, the wit, humor, and lightness of the writing make it the reverse of abstruse or pedantic. It should be read for its own sake.

\$1.25 net; by mail, \$1.35

The New Hostess of Today

By LINDA HULL LARNED

This remarkable exposition of the arts of cooking and serving comprises the substance of Mrs. Larned's famous book, "The Hostess of To-Day," for years the recognized authority on its subject. But it is a much larger book than that; contains a large proportion of new matter, and the old matter in new and more detailed form. It is actually, if not technically, a new book.

Illustrated. \$1.50 net

The Penalty

By GOUVENEUR MORRIS

A big novel of New York life whose characters are drawn from the shining city about Central Park and that other murky city under the shadows of the East River Bridges. With a great many illustrations by HOWARD CHANDLER CHRISTY.

A Work of Practical Value to Every American Community

The Social Center

Edited by EDWARD J. WARD, Wisconsin State Adviser in Civic and Social Center Development under Extension Division, University of Wisconsin; Director Playground and Public Recreation Association of America.

Of the many practical applications of the twentieth century idea of utilizing hitherto wasted values, that of making the schoolhouse the social and civic center of the neighborhood is the basis of Mr. Ward's work. It should be the polling place, and the social center of the community, serving adults and children alike.

Mr. Ward's pioneer work in this field greatly enhances the value of the volume.

What would happen to "The Great White Way" if electric light were not so cheap?

Broadway at night stripped of its flashing brilliance—Broadway lighted only by street lamps—would lose its world-famous power to attract crowds. If electricity were not so cheap, merchants could not afford the astonishing signs, the cheerfully bright window displays that compel attention from the passing throng and help to make Broadway the greatest night-street in the country.

Business men on every "white way" appreciate the longer day made possible by cheap electric light.

Of even greater importance is this "longer day" in our homes, where artificial sunlight obeys the turn of a switch.

Not only is electric light cheaper than ever, but new inventions make electric power an economical convenience in lifting the burdens of housework—in running the sewing machine, removing dust, polishing silver, heating the flat-iron, turning the freezer, and in scores of other ways, making housework easier.

Edison Mazda Lamps Save Current

Electric light is now made additionally cheap

by the EDISON MAZDA LAMPS, which require only one-third as much current to give as much light as the old-style carbon lamps. The current saved will be more than enough to run these other home conveniences without increasing the average size of bills for electricity.

Thus the use of Edison Mazda Lamps makes electricity in the home a real economy. Scientifically designed Holograph reflectors still further increase the amount of useful light from each lamp.

And Electric Wiring is Cheaper Now

You will be surprised to find how little it now costs to equip your home for all these electrical comforts. The walls will not be marred. Your nearest electrical dealer or your lighting company will direct you to a good electrical contractor. Ask them also to show you G-E Motors, G-E Pull Sockets, the various sizes of Edison Mazda Lamps and the many other G-E electrical conveniences for the home.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 44-60 E. 23d St., New York

VOL. XLVI., No. 14

NEW YORK, APRIL 5, 1913

WHOLE NUMBER 1193

TOPICS OF THE DAY

TORNADO, FLOOD, AND FIRE

ANY COMMENT by the press seems inadequate after reading the accounts that have been filling the news columns telling of death in the storm-twisted timbers

of homes, in floods that swept away towns and cities, and in fires that caught those the deluge spared. The President's comment that it is a "national calamity" seems to be accepted as putting briefly the feeling of everybody, for its disastrous effects are expected to reach into almost every industry and to be felt for years to come. The press add it to the list of great American tragedies which includes the Johnstown flood, the Chicago fire, the Charleston earthquake, the destruction of Galveston, the Baltimore fire, and the San Francisco earthquake and fire. The loss of the *Titanic*, almost one year ago, was more sudden and dramatic, but this spring's horror was equally unexpected, and more disastrous. On Easter Sunday, more than 150 tornado victims perished in Omaha and its environs, and similar storms in Indiana, Iowa, and Illinois brought the total death list up to nearly 250. Two days later a quarter of a million people were made homeless by floods in Ohio

and Indiana, while, as the *New York Herald* points out, "as the waters from these smaller rivers pour into the Ohio and

Mississippi another chapter of this pitiful tale may have to be written."

Not since the St. Louis storm of May 27, 1896, when there

were more than 300 deaths and a property loss of \$12,000,000, says the *New York World*, "has a tornado taken such costly toll of human life as that which wrecked Omaha." The Middle West, it adds, "lulled by long security," had "almost forgotten its cyclone-cellar period." Omaha, says one of its newspapers, had fancied itself tornado-proof on account of its barricade of surrounding hills. But the "twister" came, and the suddenness of it all is evident from this opening paragraph of *The World-Herald's* story the next day:

"A balmy spring day, typical in its fleeting glimpses of the sun and threatening of showers, developed into a driving rain-storm and then, in a twinkling of an eye, into a devastating monster of annihilation. And as the dead were carried to the morgues, and the maimed moaned from the wreckage, and the yellow skies glowed with the carmine reflection of hundreds of burning homes, it was recalled that it was Easter Sunday!"

The tornado, which was part of a general cyclonic disturbance passing across the continent, reached Omaha at 5:45 p.m. The business section escaped, but the storm, according to

MULTIPLY THIS BY HUNDREDS.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. Instructions for **RENEWAL**, **DISCONTINUANCE**, or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed

that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 44-60 East Twenty-third Street, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

A STREET IN TORNADO-SWEPT OMAHA.

The World-Herald, drove a diagonal course through the residence district from southwest to northeast. In its wake were 553 wrecked houses, 11 churches, and 8 school buildings. The city assessors put the property loss at \$5,000,000. Reports of the dead and injured are still incomplete and varying. An apparently fair estimate puts the death losses in Omaha, Council Bluffs, and their suburbs at 154, while 652 injured have been attended in the hospitals. In Indiana, Terre Haute suffered heavily, with 20 deaths and property loss exceeding \$1,000,000.

There was hardly time for more than the first spontaneous expressions of sympathy on the part of the press, and offers of aid, which the mayor of the self-reliant Nebraska city declared quite unnecessary, before news from Ohio turned the country's attention to a scene which the *New York Sun* thus described:

"A great region where splendid cities, towns, and humble

villages alike are without resource; a region of broken dams and embankments; placid rivers gone mad in flood, bridgeless, uncontrollable, widened into lakes, into seas; a region where people are huddled shivering on hills or housetops, watching the swelling waters; where practically every convenience, means of communication, comfort, appliance of civilization have been wiped out or stopt; where there is little to eat and no way of getting food save from the country beyond the waters; a wide range of ruin where fire works by the side of its old enemy; and hunger, thirst, and sickness are ready to crown and consummate the disaster."

The magnitude of the catastrophe can not be conveyed by figures. The loss in life, whether of hundreds or of thousands, can not even be estimated until the waters go down, while the damage to the property of railroads, manufacturers, farmers, and city dwellers will mount far into the millions and score of millions. It can better be understood from Ohio's call to the nation for help, and by the nation's response, by the presence of the Secretary of War, the Chief of Staff, and the Surgeon-General of the Army in the flooded district, by the prompt dispatch of supplies by the Departments of the Federal Government, and by various States, cities, societies, and individuals. Even the President of the United States held himself in readiness to go to the scene and take personal charge of the relief work.

Practically all of the southern half of Ohio has been under water, we gather from the news dispatches, the Miami, Scioto, and Muskingum Rivers being swollen by unprecedented rains and by the bursting of dams and reservoirs. In Indiana, the White and Wabash valleys have been flooded. One hundred thousand have been made homeless, the greatest loss in life and property occurring at Peru, Marion, Noblesville, Howesville, Logansport, and Indianapolis. But the rising waters made the greatest havoc in Dayton, Ohio, and in Columbus, the capital city; Zanesville, Piqua, and Chillicothe suffered only slightly less, and such cities as Akron, Delaware, Cincinnati, and Hamilton added their share to the accounts of death and devastation.

Dayton's story is that of a manufacturing city of over 125,000

PATH OF THE GREAT STORM.

The last of the three which brought disaster. Omaha's tornado was only a local manifestation of the general disturbance, probably the worst the country has ever known, which caused many "twisters" and deluged the Middle West.

Copyrighted by the American Press Association.

BEGINNING OF THE FLOOD IN COLUMBUS, OHIO.

inhabitants flooded to a depth of from eight to twenty feet, excepting the remoter suburbs. A twenty-five-foot dam burst early in the morning of March 25, letting in the yellow Miami, augmented by its rising tributaries, and the waters from the crumbling reservoirs belonging to Ohio's obsolete canal system. Tales of suffering and heroism have filled pages of the newspapers. It has been estimated that 70,000 persons were marooned in the upper stories of buildings, where they were for days in peril of death by drowning, by fire, and by sheer lack of food. The buildings of the National Cash Register Company, on high ground, were a haven for thousands and a headquarters for relief work. In Columbus, hundreds were drowned in the swift current of the swollen Scioto, which for many hours effectually cut off the "west side" from the rest of the city. Zanesville, like Dayton, a city quite isolated from the world in a sea of rushing yellow water except for a single telephone wire, was almost as hard hit, and told the same tale of sudden destruction, darkness, destitution, and waiting. Practically all railroad transportation was stopt in the flooded district and for a time but one of the east and west lines across the State from Chicago to the Atlantic seaboard was in operation.

Before such catastrophe editorial writers stand aghast. Many agree with Chief Hydrographer Leighton of the United States Geological Survey that "no work that could have been built by the hand of man could have prevented it." This authority, as quoted in the *New York Tribune*, declares that the rainfall causing the flood was of such "unprecedented proportion" that "no reservoir system that has even been contemplated in that region could have afforded protection against it." And he concludes:

"So far as I can see, there is nothing for us to do with respect to a situation like this but to repair the damage as best we can, and then stand by and take our medicine, knowing that, sooner or later, we may expect the same thing again, but hoping that it will not come within our generation."

OUR DUTY IN FLOOD PREVENTION

THE DEVASTATION in the Ohio Valley gives weight to the arguments of those who are urging the adoption of a comprehensive scheme of Federal regulation of our river systems. Two associations, looking at the problem from somewhat different angles, have been enlisting the services of public men and putting the question before the people through the press. The Mississippi River Levee Association, with headquarters in Memphis, declares "that the alluvial lands of the Mississippi River delta can be permanently protected from overflow by levees," quoting high engineering authorities to show that "levees are the only feasible and economical means of flood prevention," and insists "that it is the duty of the National Government to construct these levees as soon as possible."

WHY THE MISSISSIPPI FLOOD PROBLEM IS NATIONAL.

The heavy line encloses the drainage basin of the Mississippi. It takes in 31 States and constitutes 41 per cent. of the total surface of the country. The shaded area, 29,000 square miles, is the alluvial country annually subject to inundation.

But another body, the National Reclamation Association, believes, as Mr. Walter Parker puts it in *Maxwell's Talisman* (New Orleans), "that something is radically wrong with the idea that the levee system alone is an adequate means of protecting the river cities and towns, the fertile lowlands and the farms, from floods and inundation." Members of the Reclamation Association urge the passage of the Newland-Bartholdt River Regulation Bill, as "the nearest thing to a tangible program." This bill, explains *Collier's Weekly*, provides

"for an appropriation of \$50,000,000 annually for ten years and the formation of a board composed of the chief army engineers, the directors of the Geological Survey and Reclamation Service, the Chief Forester, and a civil, a sanitary, and a hydro-electric engineer appointed by the President. This board would lay out a comprehensive scheme of levees, flood reservoirs in the head waters, and of swamp drainage, with the whole appropriation divided as fairly as possible between the various States."

This measure will also provide "ways and means for putting the men and machinery from the Panama Canal at work" in the Mississippi basin, notes Executive Director George H. Maxwell of the Reclamation Association in his *New Orleans Talisman*. He quotes editorials from such papers as the *New Orleans Item*, *Baton Rouge Country Review*, and *Los Angeles Tribune* asserting that "the all-levee system" has been "demonstrated a failure." Their arguments are much the same as those presented by Mr. Parker in the *Talisman* article previously quoted. He says:

"The advocates of the Newlands Bill say that the supplementing of a well-built levee system by such practical source-stream control in the Mississippi River watershed as the building of dams similar to the Roosevelt and Assuan dams, and the use of the impounded waters for the irrigation of arid lands, for the creation of power, and for the feeding of stream flow in the dry season, augmented by a practical national policy of forest preservation and reforestation, will put an end to floods and overflows in the low country, make the rivers navigable all the year round, and prevent the waste of an enormous asset of power, of timber, and of soil."

"These people wisely say that the problem of the rivers is national, not local, and that no practical solution can come except through treating the rivers as units from source to mouth. They explain that the opposition to such a policy is due to the fact that, under it, the water-power sites would, in many instances, become a profit-paying asset of the taxpayers instead of passing into the ownership and control of speculators and great private water-power interests; that source-stream control will mean plenty of water in the streams at all seasons, on which to float boats, and that it will put an end to the political pork-barrel method of appropriating Federal money for river improvement; that it will coordinate and make efficient and effective the Government agencies, and promote the endeavors of the Government to advance the welfare of all the people in the interest of lasting national prosperity."

THE CONSTITUTION IN A LABOR WAR

ALTHO the prolonged and warlike miners' strike in West Virginia seems to the press to be rapidly approaching a settlement, it promises to leave behind it a vital constitutional question which will not be answered until the United States Supreme Court has spoken. This question is: Can the civil law be suspended in time of peace, and trial by jury for civilians be superseded by a drumhead court martial? In the Paint Creek and Cabin Creek districts of Kanawha County, the scene of the rioting and bloodshed described in our issue for

February 22, a state of martial law exists and justice is administered by a military commission. Among the many prisoners who have come before this commission are five labor leaders—"Mother" Jones, C. H. Boswell, John W. Brown, Charles Batley, and Paul J. Paulsen—who, after demanding in vain a trial by jury, have challenged its jurisdiction by refusing to put up any defense against the charge of murder conspiracy, thereby hoping to enable their lawyers to carry the case by appeal to the nation's highest tribunal. John Brown, in a letter written to his wife and published in the *Socialist New York Call*, makes clear his view of the situation in the following passages:

"If it was only myself personally that was concerned, I would, for the sake of gaining my liberty and being free to go to you and the children, go before this court and defend myself. Nor have I the least doubt in my mind that I would come clear. But, my dear, there are principles involved in this case infinitely deeper than the fate of any one citizen. If the capitalist class get away with this, then constitutional government is dead, liberty is dead, and justice for the

working class is a thing of the past."

"Already have they scuttled the ship of state; they have strangled justice; they have cut the throat of liberty. They have stolen the jewel of liberty from the crown of manhood, and reduced the victims of the burglary to slavery and to prison, and I repeat, if we let them get away with it, then in the future wherever and whenever the interests of the working class and the capitalist class reach an acute stage, out will come the militia, the courts will be set aside, and the leaders railroaded to the military bull-pens, and thence to the penitentiaries. Here lies the great danger."

"This case can not now be settled until it has reached the bar of the nation's conscience. In order to do this, the sleepy old public must have another victim. We boys have made up our minds to go to the pen; this will give the lawyers a ground to test the case before the Supreme Court and we will trust to our comrades to keep up the agitation."

"The history of this case must go to the common people. It must be told o'er and o'er again, until the deafest ear will hear and the numbest brain will act. The American people must see Holly Grove and Hansford as I saw them on February 8, 9, and 10. They must not only see, but they must hear the moaning of the broken hearts, and the wailing of the funeral dirge; they must see the hot tears of orphans and widows falling on the

EVIDENCES OF CIVIL WAR IN WEST VIRGINIA.

Arms and ammunition taken from the strikers by the militia. In the all-day fight between strikers and mine guards at Mucklow sixteen men were killed.

glassy eyes and bullet-mangled faces of dead husbands and fathers; they must see these tented dwellings in the dead of winter, and the poor wretches that occupy them. Ay, they must not only see but they must know the cause."

These prisoners will base their appeal, according to *The United Mine Workers' Journal* (Indianapolis), upon the following clauses of the Constitution of West Virginia:

"The military shall be subordinate to the civil power; and no citizen, unless engaged in the military service of the State, shall be tried or punished by any military court for any offense that is cognizable by the civil courts of the State."

"The provisions of the Constitution of the United States and of this State are operative alike in a period of war as in time of peace, and any departure therefrom, or violation thereof, under the plea of necessity, or any other plea, is subversive of good government, and tends to anarchy and despotism."

In the local courts the contentions of the prisoners have met with little encouragement. Judge Littlepage, of the United States Circuit Court, after first issuing a writ of habeas corpus on the theory that the defendants had a right to a trial by jury, reversed his opinion and decided that "a Federal judge has no right to interfere with a court martial duly organized under the laws of a State"; and at the same time the West Virginia Supreme Court of Appeals upheld the governor's right to declare martial law and to appoint a military commission.

Outside the State affected, however, we find a widespread tendency on the part of editorial observers to agree with the defendants that this suspension of civil law establishes a dangerous precedent. "This thing of trying civilians by court martial is a dangerous proceeding, for, if allowed, there is hardly any limit to its abuse,"

remarks the *Houston Post*, and the *New York Evening Post* agrees that it is "a vicious practice." "West Virginia does what the United States can not do," says the *New York World*; "it suspends the civil law in time of peace." This paper continues:

"The President of the United States is specifically forbidden to suspend the writ of habeas corpus except in cases of invasion or rebellion. The Governor of West Virginia exercises that power in the presence of a sordid disagreement over work and wages.

"There can be no such thing as martial law under Federal sanction even in time of war except in territory in which the civil authority has ceased. The civil courts of West Virginia, in full operation, are ignored by tribunals presided over by militiamen.

"More than the welfare of one monopoly-ridden State is involved in this tyranny. It menaces the peace of every State. It is a wrong that will rankle in millions of hearts. It is an injustice that will embitter political and industrial controversies from sea to sea. It is an error that even the most infatuated of employers must see can lead only to mischief and reprisal.

"The American people will not be denied trial by jury. They will not submit to despotism. If the puppets of privilege who now dragoon West Virginia do not know this, some of their powerful friends and backers among the coal magnates should instruct them speedily."

And in the *Buffalo Express* we find the situation thus tersely stated:

"The United States is at peace with all the countries of the world. Within our own borders there is no civil strife of which the Federal Government has taken cognizance. Yet in West Virginia, a State military commission may pass its judgment of life or death on persons who are accused of murder in connection with the strike riots in the Kanawha mining-district. Among the defendants is Mother Jones, 'the angel of the miners.' The issue to be decided by a court martial in her case is the same that arose at Lawrence during the trial of Ettor, Giovannitti, and Caruso. The right of free speech similarly was involved in the rioting at Little Falls. At

"I HAVE NO AXES TO GRIND, AND I WILL BRING BOTH SIDES INTO LINE."

Altho Governor Hatfield has released most of the miners held for trial by the military commission, he says he will not recall the proclamation of martial law until order is permanently established in the mining-districts of West Virginia.

Lawrence a jury of twelve men decided that the speeches of the defendants did not incite murder. In West Virginia the same question is to be decided according to military practices."

Altho Governor Hatfield has not seen his way clear to lift the edict of martial law imposed by his predecessor, his personal investigation of conditions and his blending of firmness with clemency are believed to have been large factors in bringing the difficulty as far along the road to settlement as it has come. Thus he has released, on promise to keep the peace, the majority of the miners held for trial by the military commission, and since his intervention the operators of the Paint Creek district have made concessions which bring between 3,000 and 4,000 miners back to work. This leaves about 7,000 miners of the Cabin Creek district still on strike. In the Paint Creek region, according to Mr. John P. White, international president of the United Mine Workers, the demands of the men have in the main been granted. Among the points gained, we learn from the dispatches, are: the right to organize; payment twice a month; and the employment of check weighmen. The character of these concessions, remarks the *Springfield Republican*, "shows that the coal companies in the West Virginia fields have been backward in the treatment of their employees compared with the Pennsylvania coal companies." In this connection the *New York Tribune*, which seldom sides with the strikers in a labor war, remarks:

"If anywhere in the world workmen need organization in order to protect their interests it is in the West Virginia coal-mining district, where the strike is. . . ."

"In the West Virginia coal fields the mine operators are the landlords, the local merchants—for the miners trade at the company stores—and they are very much of the local government so far as there is any in those mountains. Indeed, they have always been a large part of the State government, too. Each way the miner turns he comes up against the employing corporation. When he rents a house it must be at the company's terms. When he buys food and clothes he must pay the company's prices. And when he seeks his legal rights it must be from authorities that are likely to be subservient to the great local industry. It is a species of industrial serfdom to which he is subjected. . . ."

"All the American instinct for fair play opposes leaving workers as defenseless against aggression and oppression as these West Virginia miners, unorganized, are."

In an earlier issue, as noted above, we outlined the history of this labor war which has already kept West Virginia in a state of disturbance for nearly a year. We did not, however, refer to the claim of the West Virginia operators that the strike was instigated in the first place by the operators of rival coal-producing States like Pennsylvania and Ohio, jealous of the low cost of production in West Virginia. In a pamphlet issued by the West Virginia Mining Association, and published in Charleston, West Virginia, we read:

"The year-in-and-year-out attack by Pennsylvania and Ohio operators against the West Virginia mining industry has been thorough and with the Miners' Union. They have proceeded on the sound theory that if West Virginia were unionized the weight of miners' delegates from Pennsylvania, Ohio, Indiana, and Illinois could vote such conditions upon us that scores of our mines would be compelled to shut down."

"The Pittsburg and Ohio operators' efforts to stir the Union into action have been continuous for a number of years. At every wage conference the operators have openly demanded that West Virginia should be organized,—and the miners have been played as so many pawns in the game. . . . It is an operators' battle, and the miners are being used as tools by the operators in rival States."

According to the *Chicago Black Diamond*, an organ of the coal trade, the West Virginia operators have been opposed to the unionization of their mines for two reasons: they feared both that the union would make unreasonable demands on its own account, and that it would be used by outside operators to narrow the market for the West Virginia product.

EFFECT OF THE CHINESE LOAN VETO

A CLOSER LOOK into the meaning of President Wilson's virtual veto of American participation in the loan to China seems to convince many editors and experienced Washington correspondents that the Administration has enunciated a new Chinese policy, which may in time rank as important as Secretary Hay's stand for the "open door." Officially, the Chinese Government approves and has conveyed its thanks through Minister Chang. Unofficially, there come from China expressions of regret as well as relief, the Chinese public opinion is hardly articulate. The people of this country, so far as their opinion may be traced in newspaper utterances, appear generally to favor the Wilson doctrine. In editorial comment in journals representing such a diversity of sectional and political allegiance as the *Chicago Record-Herald* (Rep.), and *News* (Ind.), *Philadelphia Record* (Dem.), *New York Daily People* (Soc. Lab.), *Baltimore News* (Prog.), *Milwaukee Free Press* (Rep.), *Louisville Herald* (Prog.), and *Houston Post* (Dem.), we find three distinct grounds of approval. The resumption of the old-fashioned attitude toward "entangling alliances" is welcomed by these papers. The American investor, they insist, can not suffer in view of this sentence from the President's statement:

"The present Administration will urge and support the legislative measures necessary to give American merchants, manufacturers, contractors, and engineers the banking and other financial facilities which they now lack and without which they are at a serious disadvantage as compared with their industrial and commercial rivals."

And China, too, these editors declare, will unquestionably be the gainer, for they believe that the Wilson Administration's real position, as succinctly stated by a *New York Sun* correspondent at the capital, is this:

"Once the bargain with the five other Powers had been entered into, the bargain would have to be kept. Possible eventualities might have put this country in the position of being a party in a scramble for Chinese territory. The Administration desires to remain able, if such a scramble comes, to deter these ambitious Powers acting as the friends of the new Republic."

But *The Sun* itself, taking common ground with two papers so seldom in agreement as the *Progressive New York Evening Mail* and the conservative *Detroit Free Press*, objects vigorously to the Wilson policy. In the course of a long article in its news columns it declares that, upon our withdrawal from the loan group, "the services to China of the United States, as efficient guardian, ceased absolutely."

And turning to the financial press, we find the *New York Journal of Commerce* somewhat worried over the thought whether in withdrawing "we are not making the closing of the door to our commerce more easy, rather than helping to keep it open." It can not agree with President Wilson in his condemnation of the conditions of the proposed loan to China. It insists that there was nothing unreasonable in them, for among other difficulties were the obstacles placed by Chinese officials in way of proper auditing. Hence the bankers did not care to undertake the business without governmental support, and felt obliged to outline several "indispensable conditions precedent to the negotiation of the loan." These were:

"That they should have the right to satisfy themselves as to the purposes for which funds were required; that China should herself create a system of audit in which foreigners should be employed with executive, not merely advisory, powers to insure the effective expenditure of loan funds for the purposes specified; that the salt taxes hypothecated for the service of the loan should be administered either by the existing Maritime Customs organization or by a separate Chinese service like the Customs, under foreign direction, thus safeguarding the proper administration of the security despite the possible continuation or recurrence of unsettled conditions in China."

"The Salt Gabelle may be an ancient, but it is certainly not an 'antiquated' form of taxation. It may be 'burdensome,' but that is because of the corrupt and wasteful methods of administering the salt monopoly—methods which it was and is the desire of the banking groups to reform."

But the no less authoritative New York *Commercial and Wall Street Journal* and the weekly *Commercial and Financial Chronicle* take the opposite view. It has been a matter of common knowledge, according to *The Chronicle*, that many of the conditions of the loan "were irritating and distasteful to the Peking Government—whether reasonably so or not," and the incident of the Crisp loan, in which the Chinese Government deliberately undertook negotiations with an independent syndicate, seems to have arisen directly from this state of mind." The American group of bankers, if we may believe *The Chronicle*, "were not enthusiastic as to their share in the enterprise," but continued their participation under pressure from the State Department, and felt some relief when President Wilson's statement enabled them to announce their withdrawal. In this financial editor's opinion our participation in the loan would have secured us no great commercial advantage. As he puts it:

"We should doubt considerably if discrimination could be practised against any nation which was not represented. Trade relations are not ordinarily conducted on such a basis. . . . International good feeling and the understanding of the peculiar needs of one market by the manufacturers and exporters in the other have been far more efficacious in the past."

"When the attitude of the European Powers in the present group is examined, it is difficult to avoid the conclusion that their primary motive has been politics pure and simple. Otherwise one could hardly explain satisfactorily the insistence of Russia and Japan to join in the syndicate—two countries which are not competitors of Europe or America in the export trade, and which, incidentally, are not equipped with capital such as would make them natural participants in a large foreign-loan operation. The answer to any one perplexed as to the action of those two countries is easy; their motive was clearly either a desire to obtain partial political domination over China or else to acquire the option to exercise as much domination as any other Power. But if this is so, it must be clear that for the United States to

patch from Shanghai gives it as "the opinion of observers here" that it would have been "infinitely better" if America "had courageously fought China's cause from the inside, for China positively must borrow soon, and now that she is deprived of American protection, which has hitherto been properly given

"AIN'T I ALWAYS HAD THE USE OF THE ARMY AND NAVY?"
—Minor in the St. Louis Post-Dispatch.

and of the most valuable nature, the terms she will obtain can not but be more stringent." But on the editorial page of the same New York paper we find *The China Republican* of Shanghai quoted as saying: "It may be seriously doubted whether in the whole history of modern international finance any responsible government ever before treated such monstrous loan conditions seriously." And some one sends to *The Evening Post* this paragraph taken from an unnamed Shanghai trade paper:

"China now wants to be released from the complicated position in which she has been thrown, and to gain for herself once more a free hand to borrow from whoever is willing to befriend her. The question arises, why should not the men of commerce who have such an enormous stake in this country come together, and insist upon the curtain being rung down upon the long-drawn-out farce that has occupied the boards for the past twelve months, the playing of which jeopardizes their interests and delays the fruition of their legitimate hopes for the arrival of a boom in trade; thereby men's minds would be diverted from sordid politics, and the republican Government about to be organized would have a chance to show what it is capable of accomplishing."

It should be noted, finally, that in London *The Economist*, a financial authority, believes that the abandonment of the six-Power plan would make a good opening for independent British enterprise, and in this country several editors take the position thus stated by the St. Louis *Globe-Democrat*:

"Acting independently, our bankers will probably contribute something toward China's exchequer, and will thus be in a position to maintain and extend our country's social and political influence in the big Republic. Altho our Government need not, and will not, guarantee any such loans, the stability which they will aid in bringing at Peking will undoubtedly hasten the formal recognition of the Republic by us."

Joined with the St. Louis daily in urging immediate formal recognition of the Chinese Republic we find such New York papers as *The World*, *Tribune*, *Evening Post*, and *American*, tho the Philadelphia *Inquirer* and New York *Sun* advise caution, thinking, to use *The Sun's* words, that "perhaps it will be time to recognize the Chinese Republic when the permanent constitution is built and goes into operation."

THE DEPUTY-SHERIFF BUSINESS AT AN END.
—De Mar in the Philadelphia Record.

join Europe in promoting a loan syndicate on conditions such as have been laid down to China would amount to committing our State Department to such possible interference. We can not help thinking that our Government is well out of it."

It is still too early to ascertain just the way in which the Wilson policy is regarded in China. A New York *Tribune* dis-

RICH AND POOR AMBASSADORS

ALONG WITH THE EXIT of "dollar diplomacy," some expect to see the departure of the dollar diplomat, if the plan of appointing ambassadors of moderate means succeeds. The declination of Richard Olney and Dr. Charles W. Eliot to accept the post of Ambassador to England, and particularly the refusal of William F. McCombs to go to Paris, have started a country-wide discussion. The *Milwaukee Journal* (Ind.) thinks the situation "has become a shame to America," and, in the opinion of the *Boston Journal* (Prog.), "our present inadequate diplomatic salaries make wealth practically the first desideratum, and have before now resulted in our being represented by men who may be statesmen among dilettanti, but who are only dilettanti among statesmen." President Wilson's own views on the subject are summed up in the following paragraph:

"It is a great pity that the country has to ask such sacrifices of those who are invited to serve it abroad—a service which every year becomes more exacting and more important. The sacrifice of time, of means, and of opportunity at home is very serious for any but men of large means and leisure, and the diplomatic service is unnecessarily hampered."

Henry White, formerly Ambassador to Germany, who is one of several prominent diplomats who have risen in the service by promotion, is quoted as saying that he hopes the President's statement, "emanating from the highest authority in the land, may at least draw the attention of our countrymen to a condition which is, and has been for some time past, little short of scandalous." Mr. White particularizes:

"It is monstrous, particularly in a republic, that no one unless he be possessed of a large income or willing to spend his capital, can now accept one of the important embassies. Every other first-class Power provides at the great capitals, either by purchase or long-term lease, a suitable embassy house in which to lodge its Ambassador, his family, the office and the archives."

"Such houses are kept up at the expense of the different governments, and a suitable salary in addition is paid the Ambassador, the idea being that he should not have to pay out of his own pocket for the services which he is rendering his country."

"We not only pay a salary which is wholly inadequate in any of the important capitals, including Buenos Aires, in South America, but owing to the lack of any house in which the Ambassador can live even this meager salary is uncertain, as the recipient can not tell what amount will have to be deducted therefrom for rent."

"I do not believe it possible for any American Ambassador

to get on at Paris, London, Berlin, St. Petersburg, or even Vienna with less than \$40,000 or \$50,000 a year, and of course many of our Ambassadors have to spend much more. If the Government owned its own embassy houses this sum could be materially reduced."

No diplomatic appointment ever met with such instant and widespread approval as that of Dr. Eliot, thinks E. Clarence Jones, president of the Embassy Association, who goes on to say of his refusal that "it is an open secret that his reason was the fact that he did not feel that his private income would enable him to support an establishment in London and to entertain upon a scale that has come to be associated with the London Embassy." The Embassy Association was formed in 1909, and its purpose is "the promotion and encouragement of the acquisition by the United States of permanent houses for its Ambassadors in foreign countries." Frederic R. Coudert, the international lawyer, who is a member of the executive committee of the Embassy Association, declares that half of the fight for the principles advocated by the President was won by the passage last year of the Snowden Bill providing for "the purchase or erection, within certain limits of cost, of embassy, legation, and consular buildings abroad," and appropriating \$500,000 for that end. Mr. Coudert says that "it would be a misfortune should the high posts in the American diplomatic service tend to become the perquisites of plutocracy."

The *Washington Post* (Ind.) admits that "the financial question had a bearing on the declinations," but wonders if, taken in a larger sense, "the series of refusals of tenders of high honors" does not "constitute a protest against extreme radicalism in the party." And the views of the *Washington Star* (Ind.) are even more hostile:

"Much of the talk that our diplomatic posts are at the mercy now of money-bags is rot. To fortify the charge, the case of Whitelaw Reid is often cited. And yet no case so little supports the charge. Mr. Reid was a rich man, but at the same time very able and accomplished. Intellectually he rose easily to the fullest requirements of his post at London. He was the intimate associate of scholars, and statesmen, and men of the world—an all-around man of the best caliber. He entertained liberally at his individual expense. But had he lived within his salary, the very men who have criticized him for display would have lectured him for ostentatious niggardliness."

"In this particular the President has stumbled at the start, but not necessarily with serious results to his Administration. A little more care should set things right. There is a good deal of money in this country, but a good deal of it is associated with brains."

PRESIDENT WILSON is scrupulously returning all the gifts he has received since reaching the White House. Mr. Knox is one of those to whom a package has been sent.—*Philadelphia North American*.

MANY Tory papers hasten to warn the world that a living wage will not save girls from ruin. Perhaps not in every case. But, by the way, what will a wage which is not a living wage do to them?—*Philadelphia North American*.

REALLY, Mr. Bryan, you must glance over documents before signing them. Otherwise you may find yourself committed to a set of Balzac in forty volumes, half morocco, or an application for a million dollars' worth of life-insurance.—*Chicago Tribune*.

FOREIGN COMMENT

CANADIAN OBJECTION TO AIDING ENGLAND

UNWILLINGNESS to send good Canadian money, ships, or men to help Great Britain is felt and openly avowed by some of our northern neighbors. These objectors go beyond the group represented by Mr. Emerson, who merely resented British naval dictation as to the method of Canada's contribution. Their method is perfectly simple; they would give nothing at all. They are "largely massed in Quebec, with a considerable addition in parts of western Canada," says a native Canadian, now a member of the British Parliament, in the *London Contemporary Review*. "They ridicule the idea of Canada being in danger from invasion, and they object absolutely to becoming involved in any European conflict whatsoever." Old World quarrels do not concern them; their interests are in the New. In fact, they suspect that the English ruling classes are merely using the Canadians as pawns, without caring a button for their real interests, and in case of war would keep Canada's naval force in English waters and let Canada shift for herself. "This is the old Canadian view," and it is a minority view, but we are assured that it exists. We find it expressed pretty strongly in a letter to the *London Daily Chronicle* from one who merely signs himself "A Canadian Nationalist." Great Britain has not done anything to develop or help Canada, he says, so why should Canada be called upon to help or add to the naval strength of the mother country? "The people who have developed Canada have been the Canadians themselves." The Canadians, as he sees it, have undergone all kinds of hardship in turning a wilderness into a cultivated land, and he believes that this agitation in favor of help to England originates in London or is cooked up by an Imperialistic clique in Toronto. To quote his words:

"The roots of the present agitation for Canadian contribution to Imperial armaments will be found in London—not in Canada. The action of Canada is a result very largely due to outside pressure which has been brought to bear through an exceptionally thorough and able propaganda which has been carried on by the Imperialist section, who have enlisted a number of Canadians whose interests are centered in the city of Toronto. They have scattered titles and dangled titles and rewards of various kinds before those who care for such things, and often secured support in this way. Canadians have been told that a serious emergency existed; that the motherland was in great peril, and it was their duty

to stand by it. A large proportion of Canadians are of British birth, and have an unquestionable affection for the motherland. They have responded, many of them, to this appeal, not realizing that it was, to a large extent, based upon an imaginary condition of affairs or upon conditions which do not really exist."

The general run of young men in Canadian universities are not devoted, at any cost, to the interests of the motherland, he avers; they are Canadians first and last. He declares it absurd that a poor country like Canada should be called upon to help a rich country like England. As he puts it:

"The resources of Canada are trifling as compared with the resources of Great Britain. It seems absurd that a country which is borrowing money to such a large extent as Canada is doing should be called upon to contribute to the defense of Great Britain, which has not only got loans all over the world, but is a lending nation to a greater extent than any nation in history, and one which reinvests its interest every year.

"While the Imperialist agitation has been carried on for a good time, nothing has resulted from it except shouting, until the naval proposal of Mr. Borden. Those who have taken no part heretofore are now going to be stirred to action. There are many who feel that if the British connection means that we are going to be dragooned, and that influences are going to be brought to bear upon us as they have been during the past few years, and Canada diverted from its natural and proper course, then they would prefer an independent Canada. I should not be at all surprised if the present movement for the navy were to result in a very rapid growth of feeling in favor of Canadian independence.

"The proper policy for the Canadians to take in regard to naval defense is to defend their own ports and to relieve Great Britain from all expense (if, in fact, she is at any expense now) regarding our defense. Then, if it were thought necessary, some small ships could be built and a navy thus started. The amount that would have to be expended would be small. In fact, there seems no reason why Canada, just now, should have a navy or, at any rate, any more of a navy, than a very small one."

Mr. Hamar Greenwood, the *Contemporary Review* writer quoted at the opening of this article, says the objection to aiding Great Britain, however, "is giving way before the growing determination of most Canadians to take an increasing share in the working out of the Empire's destiny." And England, he adds, cares less for Canadian coin than for Canadian loyalty, and, if necessary, will continue to shoulder the naval burden.

MR. H. H. EMERSON.

TURKISH HEART-BURNINGS

THE FALL of Adrianople, and the expected end of the war on terms that will leave the Turk with only a foothold in Europe, are producing an intense feeling of humiliation in Constantinople. The press of that city are under a strict censorship, and little or nothing can be printed that will be unfavorable to Shevket Pasha, Enver Bey, and the other leaders who seized the reins of government on the plea that they would crumple up the Bulgarian Army and recover all the territory overrun by the Allies. But there can be no censorship of the "man on the street," and private reports say that bitter

THE COMMANDER OF ADRIANOPLE.

Ghazi Shuket Pasha, whose defense of the ancient Turkish capital will be memorable in the annals of European warfare. He held out a few days more than five months.

criticism of the Government is heard on every side. "Reform" is spoken of in many Turkish papers, but while in the rest of Europe the reform of Turkey seems to mean driving the Turk into Asia, in Turkey itself it means the actual doing of what has been talked and written about as necessary and neglected for many years. One intelligent Turk in Constantinople is quoted as characterizing this neglect in severe terms, saying:

"A blind man is in no greater danger than one who closes his eyes in face of vital facts. Sooner or later he will run against something and be crushed. We have been doing this all our days. Some months ago we unsheathed our swords, but did not succeed, because before drawing our swords we did not waken our mind and soul from the sleep of centuries.

"To lose provinces is to grow smaller on the map. This does not much frighten me. I am more afraid of growing smaller in mind and soul.

"The other day a friend was saying, 'How did it happen that we gave up that large Rumelia in ten days?' 'No, my simple-minded friend,' I said, 'not in ten days, not even in ten years, but centuries ago we began to give those lands back when we conquered and took them.'

"With the calamities that have now befallen us, are we going to wake up—or shall we return to our old sleep by merely shifting our position in the bed?"

A bitter note of regret runs through the comment of the *Tasviri Efkyar* (Constantinople, March 10). It admits that the strongest diplomacy is that which is backed by the bayonet, but it remarks that wisdom also has its place in diplomacy, and reflects that Turkish statesmanship has seemed to have neither wisdom nor bayonets. It says:

"It must be regretfully acknowledged that in our statesmanship, whether internal or external, no marked degree of skill has been seen. In internal affairs we have forgotten that progress must go as slowly as the nation develops, and we have tried to ape western methods too servilely, forgetting our own characteristics as Orientals, and in this way we have failed to meet the needs of our social administration or to take any real step in needed reforms.

"Nor can we find much cause for congratulation for any success in our foreign policy gained since the establishment of the constitution. Even up to this very year our policy has been vacillating between the Triple Alliance and the Triple Entente. This vacillation has caused only weakness, dissension, and growing injury among ourselves. . . . We do not recall all this to criticize the Government, but to show how foolish it is to have our feelings run away with us in handling political questions. It is to be hoped that it will teach us a lasting lesson, for we have much to learn for our present needs and our future safety. We seem possessed with the idea that we must trail after either the Triple Alliance or the Triple Entente. Here is our mistake.

"Our interests after this war will lie largely in Asia. Meantime, the control of the Mediterranean has assumed a new importance, affecting the interests of many Governments. The Government that rules the eastern shores of this sea will hold the balance of power in Mediterranean control, if only it observes the principles of wise statesmanship and has the tact to adjust delicately and graciously the questions that arise in international relations. The first requirement, however, is the harmonious union of the constituent members of our own body politic."—*Translation made for THE LITERARY DIGEST.*

THE MONEY SQUEEZE IN GERMANY

THE TIGHTNESS of money in Germany is not only of interest, but of importance and concern, to all the world. It is well known that Germany's war budget has been swelling to enormous proportions, and taxation is becoming heavier year by year. At last Berlin's money market trembled on the edge of some such situation as confronted the London Exchange in 1866 and New York during the panic of 1907, and was only saved by importing gold at a high rate and by the easing of all markets on the belief that the Balkan War is ending. People are asking what is the meaning of this state of things in a country like Germany—one of the wealthiest of Europe's manufacturing and supply centers. A writer in the *London Daily Mail* attempts to account for the crisis, signing himself "A Financier." This clear and lucid observer remarks:

"The Berlin stringency is traceable to the unsettled conditions on the Continent, acting upon a financial position already strained by economic causes. The industrial development of Germany and the growth of its population and production have necessarily involved an increasing demand for gold currency. Large sums of money have, moreover, been invested in commercial and manufacturing enterprises, for the fruition of which time must be allowed. Much the same sort of thing, only in a far more serious form, took place in England in 1866, when as a consequence of the scare caused by Napoleon the Third's bellicose utterances, following on huge lock-ups in railway projects, money was practically unobtainable, and one big house after another had to put up its shutters. We are not suggesting that there is any immediate fear of a German commercial panic; we are only pointing out a similarity of kind, but different in degree, to the disastrous experience of 1866. For there can be no question at all that the rival armament preparations of Germany and France have produced a state of nervous tension

THE OTTOMAN EMPIRE UNDER SOLYMAN THE MAGNIFICENT.

Upon a rich rug the Sultan sits, proud and serene. The Crescent advances, the Cross retreats.

THE OTTOMAN EMPIRE UNDER SULTAN MAHMUD II.

But a mysterious hand appears and draws away a portion of the rug. The Sultan becomes worried.

SAD PARTING BETWEEN THE RUG AND

of which the gold scarcity is a natural tho unpleasant expression. "Two things always follow scares of this character: some people hoard their gold and others make haste to sell their securities, the latter because they either actually want the money or are afraid that prices will drop still lower. The political uncertainty of which the military and fiscal measures of the Imperial Government are the culmination has now lasted for some time, and it is estimated that from £15,000,000 to £20,000,000 in gold has been hoarded in Germany since the outbreak of the Balkan War. The ordinary requirements of the Government, coming last week at a time of stringency, made that stringency more acute. This has been emphasized by the forced sale of international securities on German account, resulting in a heavy fall and a reacting depression on Continental and American exchanges."

The aching need of Germany just now is a large supply of actual money. The situation can only be relieved by replenishing the currency, declares this writer, who goes on to sketch the situation as follows:

"Between February 22 and March 7 the Imperial Reichsbank lost over two millions in gold and silver coin and bullion, altho in the week ending March 7 there was an increase of £141,150 in the gold coin and bullion. The next return may perhaps show a further improvement, for bullion to the extent of £300,000 was bought in London on Berlin account this week, and more of the shipments due here will probably be secured by the same buyers; and gold is also going to some extent from New York. . . . If the Berlin rate should rise above its present point of 6 per cent., the difficulty of raising money will be intensified, the financial

disorder will become more acute, and a commercial crisis will be within the bounds of probability. The question, therefore, is whether Germany will succeed in obtaining enough gold to counteract the heavy pressure on the money market which threatens to prevail during the whole month of March."

By herculean exertions the gold was secured and panic averted. This gold pinch leads the financier to make some reflections on the gold standard as a too inelastic basis of currency:

"The crux of the situation is that, except in a few Far Eastern countries, the financial fabric of the world, with its vast system of credit, bills of exchange, notes, and checks, all rests upon the one standard of value—the only asset that is invariably liquid at its full worth—namely gold. In normal conditions the world's gold supply suffices for the world's necessities, but with the continual growth of population, the tendency of wages to increase, and other influential factors, the danger of abnormal pressure on weak spots will become increasingly frequent and increasingly difficult to handle. Germany is not a gold-producing country; on the other hand, her production of iron and steel is going up by leaps and bounds, and this is wealth, even if it is not a medium of exchange. The financial weakness that now menaces the country is only temporary. It is but comparatively few years since Germany adopted a gold currency, and altho that fact has no direct bearing on the present monetary squeeze, except as regards the requirements for coinage, it accounts in a measure for the industrial expansion, accompanied by speculative activities, that make money crises more possible where the ultimate basis of credit is limited and inelastic."

THE OTTOMAN EMPIRE UNDER SULTAN ABDUL HAMID.

The rug grows still smaller, while bombs explode about the Sultan, who is now alarmed.

THE OTTOMAN EMPIRE UNDER THE YOUNG TURKS.

The Sultan is able to hold hardly any of the rug. The Crescent disappears everywhere before the Cross.

RUINS OF A RAILWAY STATION AT RAUNDERTON (BUCKINGHAMSHIRE).

RAILWAY STATIONS IN ENGLAND BURNED BY SUFFRAGETTES TO PROVE THEIR ABILITY TO VOTE.

DEPORTATION FOR SUFFRAGETTES?

THE GREAT LEADER of the English demanders of votes for women, Mrs. Pankhurst, was recently committed for trial on various charges of public violence. When imprisoned she threatened to commit suicide by voluntary starvation. She was immediately let out on bail, and her conviction becomes a fiasco, exclaims *The Saturday Review* (London). This incisive organ of public opinion asks what is to be done with these female agitators, and considers various severe measures:

"The most plausible, perhaps, is the policy of allowing hunger-strikers to die in jail. Certainly it is difficult to see how or why authority should incur any blame for the death of a person who starves in the midst of plenty, who has food but will not take it. But we have to reckon with a society in which brimming sentimentality has largely usurped the functions of reason, and we have to guard against any act which might foster the anarchy which has to be suppressed. The militants themselves boast that the death of a 'martyr' in prison, either through starvation or through forcible feeding, would be the best recruiting agent for their antisocial cause. We believe that this calculation is correct and that, however great the volume of public indignation against militant suffragism may now be, the successful suicide of a suffragist in prison would spread the blaze of insurrection and increase the difficulties of the situation. Therefore we have no belief in the effectiveness of this, the simplest course. Of course, the attachment of the funds of the militant organizations would be a very useful weapon in the hands of the law, and we should rejoice if this could be effected under existing sanctions. But,

in and by itself, the sequestration of funds would not be much more likely to bring disorder to an end than lack of money is effective in preventing war."

This writer, as if by a second thought, then suggests a less violent and more merciful treatment:

"Almost every civilized community reserves to itself the right to exclude from its life the undesirable intruder. To deport from this country, with no option of return, all prisoners who refuse food in jail would not strain very far this elementary right of self-protection. For this purpose a bill would be necessary. But the Government would not have any difficulty in passing rapidly through all its stages any measure which promised any real remedy for the present evil. It would want, of course, careful thought and drafting. Refusal of food would need exact definition. But the resources of the draftsmen should be quite equal to the needs of such a bill. This plan, we believe, would be a useful deterrent, would forestall martyrdom, and become a way out of the present ridiculous impasse. Also, most certain benefit of all, this country would be free of a number of undesirable persons."

"By one means or another the conspiracy and the lawlessness must be suppressed. If that be not done, only one consequence can ensue—mob violence in which one or several of the women will be mauled to death by public hooliganism. That is a disaster for the state, for society, and for all the foundations of national and domestic life, which all reasonably sane men and women must dread with an in-

creasing anxiety. One can see the springs of primitive passion have been loosened already. . . .

"If this sort of thing goes on, some suffragette outrage will kill somebody, or more than one, and then the mob explosion will come."

IMPLEMENTS OF DESTRUCTION

Found during a raid on a suffragette arsenal at Campden Hill Gardens, London.

SCIENCE AND INVENTION

A TIDAL POWER-PLANT

PLENTY OF PLANS have been made to utilize the flow of the tides for generating power on a large scale, but all have stopt short before they were realized. The old-fashioned tide-mill illustrates what can be done, but its modern big brother has never yet materialized, altho he has always looked well on paper. His latest portrait is drawn in *The Electrical Review* (London, February 21), in the description of a proposed tidal power-plant at Husum, on the Schleswig-Holstein coast of the North Sea, where, between the Isle of Nordstrand and the mainland, a reservoir of 4,000 acres is to be created by means of embankments. This reservoir will be divided into an upper and a lower tank, communicating by sluices with the shallow inland sea on one hand and the turbine-plant on the other. This is asserted by *The Review* to be "the first serious attempt to use [the tides] for the production of energy." It may be remarked that the tides have plenty of energy already; they do not have to "produce" it; the only trouble is to utilize it. How the German engineers are planning to accomplish this is told in the following words:

"The scheme is based on the assumption of a uniform tidal amplitude of ten feet, the lowest ebb and highest flood each time reaching the same level, and their difference of level always being ten feet. Under this assumption the working of the plant will be as follows: When the water in the sea is higher than in the upper reservoir, this will be filled through the sluices; if, on the other hand, the water in the upper reservoir be at a higher level, this will flow off through the turbines, thus actuating the latter. This would commence some time after the beginning of low tide, and cease shortly after the beginning of high tide. An opposite process is to take place in the lower tank; when the water in the sea is higher than in the tank, it will flow in through the turbines, thus starting them some time after the beginning of high tide, and stopping them some time after the beginning of low tide. If the water in the sea be lower than in the tank, water will flow from the latter through the sluices into the sea.

"The promoters of this scheme, on the hypothesis of a regular return of tidal amplitudes, presume that the operation of the turbines from one of the tanks may begin at the very moment the operation from the other tank ceases, thus ensuring a continuous service; they are reckoning on a level difference of five or six feet between the sea and the tank actually in operation, the water in both tanks rising and falling about three feet during each tide.

"The turbines are to yield 5,000 horse-power, driving dynamos which will work without any accumulators, thus communicating their output directly to the supply system. The cost of construction is estimated at \$1,250,000, of which about \$875,000 is allowed for the embankments and about \$125,000 each for the turbines and sluices, the buildings and the electrical part of the plant. The cost of the kilowatt hour, as produced in the tidal electricity works, has been calculated in the first instance at 2½ cents, but in the event of a large consumption it will be reduced considerably (down to half a cent and less). Even should the electrical enterprise fail, the promoters would in any case recover the value of the land reclaimed from the sea."

This plan, we are told, has not escaped criticism. In the *Hamburger Korrespondent* it is asserted that the fluctuations of

tidal level are often unexpected and abrupt; that the dynamos would be at rest at least two hours between periods of operation, instead of working continuously; that enormously long transmission lines will be required to take the current to places where it may be used; that the figures for cost are at least doubtful; that the machinery has not been well planned, and finally, that the foundations are in the mud and would cost a fortune. Whether the projectors or the critics are right, of course, time alone will tell, but engineers would surely love to see a tidal power-plant in operation, after contemplating so many pictures of abortive projects.

A GOOD WORD FOR "BOB" VEAL

HE LIFTS AN OLD FOOD BAN.
Prof. P. A. Fish finds "bob" veal is not so dangerous as supposed.

THE LATEST NEWS from the pure-food world is that "bob" veal, long condemned as unwholesome, if not poisonous, and prohibited as human food in various countries, is really harmless. "Bob" veal is simply the flesh of very young calves. On some statute-books it is defined as the flesh of a calf less than one month old. The authority who now commends this article for our consumption is Prof. P. A. Fish, of Cornell University, who has carefully compared bob veal with market veal and with beef in respect of some of its properties. He sets forth his results in an article on "Bob Veal and the Public" in *The American Veterinary Review*. Our quotations are from an editorial notice in *The Journal of the American Medical Association* (Chicago, March 15). The writer notes, in the first place, that an inspection of representative

books on hygiene fails to disclose any evidence for the justification of this popular notion regarding bob veal. He goes on:

"Veal is commonly regarded as more difficult of digestion than beef, the reason being assigned to differences in the texture of the flesh. . . .

"Altho the experiments indicate quite a satisfactory line of demarcation between the younger bob and older veal, there are occasional individual exceptions, and the method of distinguishing between old and young veal as yet can not, therefore, be declared infallible. Dietetic experiments were also carried on in which bob veal was eaten in seven families aggregating twenty individuals ranging from two to sixty years of age. The statement that the flesh of bob veal has a laxative effect and induces diarrhea was not confirmed in a single instance throughout the work. The health in all cases was apparently normal; nor did any family refuse a second helping when another carcass became available.

"In all veal there is a deficiency of fat as compared with beef. In bob veal this deficiency is naturally somewhat more pronounced, because fat is a result of growth and age under proper nutritive conditions. In the use of bob veal this deficiency may be overcome to a considerable extent by cooking the veal with pork or other fat.

"Professor Fish is of the opinion that bob veal is in no way injurious when used as human food. The desirability of changing the present regulations and existing legal restrictions regarding the sale of very young veal is thus thrown open for discussion. The subject is one which should not be dismissed or settled by a few haphazard experiments or hasty generalizations."

PHOTOGRAPHY UNDER WATER

PICTURES have been taken of the subaqueous world before this, but perhaps never so systematically or so successfully as by Dr. Francis Ward, of Ipswich, England, who has built an observation chamber in a pond on his place, separated from the water only by a large sheet of plate glass. To a fish swimming in the pond this glass appears as an opaque wall; the swimmer, even when so near as to touch it, sees nothing on the other side, and can not detect the observer who, so far as he is concerned, is plunged in obscurity. On the other hand, this observer sees so clearly the smallest fishes that pass to and fro only a few feet away that he sometimes forgets the glass's very existence! We are told by Mr. V. Forbin, writing in *L'Illustration* (Paris, March 1):

"The latest photographs taken by Dr. Ward in this subaqueous laboratory . . . enable us to understand several phases of the trout's life.

"For example, it has been hitherto believed that the female trout dug a hole in the gravel, deposited her eggs therein and covered them carefully by pushing in sand with her snout. Dr. Ward describes the operation in quite another way:

"The trout, lying on her side, removes the grains of sand beneath her, and thus digs a sort of trench where she deposits her eggs. She draws herself along a little and repeats the operation; and while she is laying a new quantity of eggs in the

TREES AS CLIMATE RECORDS

A TREE is a living record of all the climatic changes that have taken place since it began its growth. Every "ring" or annual layer of new wood varies in width and composition in such ways as to betray, to him who knows how to read the record, the nature and intensity of these changing conditions. Forest fires, the incursion of an insect host, a rainy season, or a period of drought—each is written indelibly upon the wood-formation of the trunk from year to year. From studies of this kind the government experts have recently been enabled to deduce interesting facts regarding the fluctuations of climate on this continent for many years past. Says a writer in *The Hardwood Record* (Chicago, February 25):

"For more than two years work of this kind has been conducted under the direction of the Carnegie Institution of Washington. Part of the work was concerned with a study of data previously obtained by the United States Forest Service and part from original measurements of the stumps of a large number of the big trees of California.

"A few of these trees proved to have started more than thirty centuries ago, the oldest being 3,150 years. Careful study of the rate of growth of over three hundred of the giant trees, many of them upward of 2,000 years old, strongly supports the belief of very decided fluctuations in climatic conditions extending over periods of several hundred years.

A TROUT-FIGHT. FROM A SUBAQUEOUS PHOTOGRAPH.

prolongation of the trench, her tail, being waved about, replaces the sand previously removed. At this period the males engage in terrible combats, shown in Dr. Ward's photographs.

"I placed in my pond," he tells us, "three large rainbow trout, one of which was a female. One morning I noticed that the surface was much agitated, and realizing that the two males were fighting, I hastened to descend into my chamber of observation. Thus I was present at a duel that lasted 20 minutes.

"The two trout chased each other around the basin, and one sometimes succeeded in biting the other's tail. Suddenly the one that had hitherto been on the defensive turned on his enemy and the fight was on.

"After some swift lunges, the stronger succeeded in grasping the weaker with his jaws and threw him violently on his back. Exhausted, he finally let go, and the victim rose slowly to the surface, belly upward, about to draw his last breath, while the conqueror went to rejoin the cause and object of this duel to the death."

"As the author has remarked to us, in the first of the three photographs devoted to this combat, the two upper images are the reflections of the fish in the surface of the water, which acts as a mirror. In the second the combatants are so near the surface that it is agitated and consequently reflects imperfectly. In the third, which represents the end of the duel, we see in the rear some small fish that are fleeing, frightened by the ardor of the combatants.

"As for the other photographs, which show the curious movements of diving birds, . . . they form part of the illustrations of a forthcoming book by Dr. Ward on submarine photography."—*Translation made for THE LITERARY DIGEST.*

"From the thousands of measurements or analyses gathered by the Forest Service in its investigation of tree and forest growth, a large number of the records of the oldest trees of certain species have been chosen for special study. Some of the species represented are western yellow pine in the northern and southern limits of its range; Jeffrey pine in southern California; Douglas fir in the Northwest; white oak and yellow poplar in the southern Appalachians; and red spruce in the north woods. It is only by averaging the rates of growth of a great many trees growing in widely different parts of the country and under essentially different local conditions that it is possible to eliminate the many local factors affecting the development of individual trees and stands.

"One conclusion from the study of western yellow pine in Arizona is that the climate of the Southwest is becoming drier, the snowfall less, the winters shorter, and that it has been doing so for a long time. This finding is corroborated by the presence in that country of irrigation ditches and other ruins of an ancient people, indicating that water was at one time fairly plentiful in places now remote from any signs of springs, streams, or other sources of supply. Investigation of the rate of growth of the same species of tree in Idaho indicates that the winters there are also shorter and the snowfall less than formerly, but in this case the change in conditions is favorable to tree growth, since it is producing a longer growing season.

"In order to study the interior of living trees a form of drill was devised for removing a solid core of wood extending from the center to the bark. With these it is hoped to obtain data from the largest and oldest specimens of the big trees, which will throw more light on conditions thirty centuries or more ago."

A PENGUIN CATCHING FISH UNDER WATER.

METALLIC PAPER

THE APPROACHING INVENTION by Thomas A. Edison of a thin metal film, tough and light enough to be used for paper in the making of books and newspapers, and practically indestructible, was announced in the public press a year or so ago. This announcement having come to the notice of a committee of the American Library Association engaged in an investigation of the deterioration of paper and its possible prevention, the members sought for authoritative information, with so little success that they concluded to apply at headquarters and elicited an interesting and characteristic letter from the "wizard" himself. This letter is noticed but not quoted in the last *Bulletin* of the Library Association (Chicago, March). We are enabled, through the courtesy of the chairman of the committee, Dr. Frank P. Hill, Librarian of the Brooklyn Public Library, to quote it in full. Writes Mr. Edison:

"In the development of my storage battery, one of the greatest difficulties I encountered was to provide a material for insuring perfect electrical conductivity in the positive tube. After a vast amount of experimenting I concluded to use pure metallic nickel in exceedingly fine flakes. The process for making this was developed after much labor and thought. The result was the production of sheets of metallic nickel so thin that 200 of them are only about the thickness of an ordinary business card.

"In this product I saw a future possibility of using sheets of metallic nickel, not quite so thin as ours, for making books that would be really permanent. I made a passing reference to this idea in talking one day to a newspaper man, and I presume the news reached you through that channel.

"The fact is, the extremely attenuated sheets that we use in our work would be entirely too thin for use in books, and to produce the nickel sheets for the latter purpose would involve a lot of experiment and special apparatus before a standard material could be obtained. I am so very busy that there is no present expectation of my working on the subject, but I have no doubt it will be done by some one in the future."

FALL OF THE AMERICAN SAXON

IS WOODROW WILSON to be the last of the Anglo-Saxons to sit in the seat of Washington? Is he, at least, the first of a final Saxon group to be succeeded by Celtic, Teutonic, and Scandinavian presidents—perhaps even by Latins and Slavs? *American Medicine* (New York) charges in a leading article that the old American stock is becoming decadent, "more interested in genealogical research than in the welfare of posterity"; that they are all "sons of something or other," and are leaving the burden of government to the new stocks of which the bone and sinew of the nation is now largely coming to be made up. If Governor Johnson of Minnesota had lived, the writer thinks, he would have been our first Scandinavian president, but by no means our last. Further:

"More than half the nation is foreign-born or of foreign-born parents, and they all seem to have developed more or less distrust of the ancestor-hunting enfeebled descendants of really great men of Revolutionary fame. Many voters do not think of this side of the matter at all, tho the fact that a candidate is Irish or German is sometimes advertised locally to catch a few votes. This trick is not so popular as it once was, for it may cause greater loss than gain. The rise of the more recent stocks must be explained on other grounds, and this is where the medical profession is keenly interested.

"Is the old stock of Americans decadent? That is the usual explanation for the failure of the sons of our great men to be as great as their ancestors, but the same phenomenon is seen in every other nation. Great men rarely marry great women, and the children may inherit from the feeble parent. In the lower walks of life, exceptionally able people occasionally mate together, and produce children who become eminent. Great families, therefore, are constantly producing great men, generation after generation, tho the majority of their children are below the average. At the same time new blood is just as constantly forging ahead and occasionally snatching control from the hands of scions of old families. Unfortunately the scions of the old

A WATER-FOWL DIVING AMID A SHOWER OF BUBBLES.

stocks in America are not as numerous as in Europe, and there is ample ground for the belief that an unsuitable climate or other adverse factor is causing such racial deterioration as to prevent great achievements. It is certainly a fact that our great fortunes were begun, as a rule, by immigrants like Astor, Carnegie, Guggenheim, or by the first or second generation, as the first Vanderbilts. Foreigners figure quite largely in science and invention, such as Carrel and John Ericsson. Foreign names wholly different from those of pre-Revolutionary families seem to monopolize many lines of industry. All this rather hints at racial decadence of the old stock, but it must be remembered that new conditions require new types which would have been utter failures in the colonies, and that even George Washington might have been as much out of place in modern New York as was General Grant in Wall Street. There is no question that both factors are true. Mr. Wilson might have been a failure among the farming communities of the 17th century, but he seems to fit into new conditions and has lost little, if any, of the energy of his foreign-born grandfather. In any case, he shows that the nation's destinies are drifting into the hands of those whose ancestors came to America in the 19th century, long after the nation became a great reality. The old stock is being elbowed to one side."

A HOUSE-BOAT EXTRAORDINARY

A FLOATING THEATER and art-gallery, to be moored on the New York water-front, is proposed by an exhibitor in the recent show of the Architectural League in this city. *The Scientific American* (New York, March 1) calls this suggestion "interesting and thoroughly modern," and reminds its readers that a site for such a structure, if it stood on solid ground, might cost the city a matter of five millions or so. If built as a "house-boat," on the proposed plan, the site would cost not one cent. The building, tho floating on the water as truly as any vessel, has little about it of a nautical, or even of an aquatic flavor, altho concrete as a material for boats is becoming more or less familiar.

As shown in the illustration it looks like a circular Greek temple. We read:

"This structure, rising abruptly from the water, suggests that the building occupies an island site, but it is in reality upon a buoyant concrete foundation. The foundation has the form of a great double-walled bowl with ledges built in amphitheater form on the inner wall, on which would be placed regular theater seats. The inner shell of the bowl is a segment of a sphere of smaller radius than the outer one and contracts with it at the lowest point. From this point a dozen or more vertical walls connecting the two radiate to the circumference, dividing the intervening space into as many water-tight compartments.

"This building is proposed as a desirable city enterprise for the maintenance of a civic theater, concert hall, arts and crafts schools, exhibitions and competitions, the discussion of civic public art and other matters—in a word, the art and civic center of the people, to be moored at some such accessible point on the water-front as Battery Park, where mooring privileges are controlled by the municipality. . . .

"It is the conception of Robert Paine, a sculptor of decided character and originality with a natural affinity for engineering activities, who has several other practical achievements to his credit, among which is the sculptor's pointing- or enlarging-machine."

HOW THE TEETH AFFECT THE EYES

THE NAME "EYE-TEETH" shows that some relationship between the eyes and the teeth has long been popularly recognized. There is no reason to suppose, however, that the relationship is limited to any particular tooth or group of teeth. Dr. W. E. Bruner, in an article in *The Annals of Ophthalmology*, treats this subject, and particularly the production of diseases of the eye or disturbances of vision from abnormal conditions in the teeth. Our quotations are from a review in *The American Journal of Clinical Medicine* (Chicago, February). After noting several minor eye-troubles due to defective teeth, especially in the upper jaw, the reviewer says:

"Blindness following the extraction of a tooth has been reported. Organic or structural changes in or about the eye, resulting from the teeth, have been observed in many varied forms; and inflammation of almost every structure of the eye, depending upon or at least attributable to dental trouble, has been reported."

The writer notes that when septic conditions about the mouth are found in a patient upon whom an operation upon the eyeball is contemplated, it is most important to correct this condition before proceeding to any operation. Blindness has even followed decay of the teeth extending to the floor of the orbit and involving the optic nerve. The reviewer goes on:

"The remarkable fact upon which the author lays particular stress is, that not infrequently the patient is wholly unconscious of anything wrong with his teeth, and he will state that the latter are examined regularly by supposedly competent dentists. The author has grown to be suspicious of a mouth showing numerous gold crowns and fillings, and he places great weight upon an x-ray examination, which he insists upon when he does not feel certain of the work previously done. He has thus succeeded in several instances in finding abscesses at the roots of teeth, or improperly filled roots, where nothing wrong was suspected by the patient, with the result of securing relief of the ocular symptoms by treatment of the pathologic dental condition."

WHITE LIES IN MEDICINE.—The opinion prevails among certain persons that it is justifiable for a physician to deceive a patient for the patient's own good. Issue is taken with this idea by an editorial writer in *The Journal of the American Medical Association* (Chicago, March 15), who admits, however, that there is great need for sympathy and insight to perceive all aspects of cases which involve the mind as well as the body, and for a philosophy whereby a physician shall himself "see life steadily," and also "see it whole," and so assist his patient to a like view. He goes on:

"To dispel false ideas which surround death with horror is surely an obvious duty; equally obligatory is it, when discussion is not feasible, to fill a patient's thoughts with all that can make his remaining life peaceful and happy. The belief is too general that psychotherapy consists in deceiving the patient for his own good. This is the method of a charlatan—but in such a rôle a physician can never be more than an amateur; for the charlatan succeeds best when he first deceives himself, and the true physician, not able for an instant to deceive himself, is but ill adapted to an elaborate deceiving of others. The physician who has a unifying philosophy of his own is thereby able to dispense with makeshifts and to speak convincingly to his patients, administering hope with truth, courage with frankness—and his sincerity will deepen public confidence. This confidence, surely

due to science and disinterested motives, is often sacrificed unwittingly by the physician himself. He administers a therapeutic lie at the earnest solicitation of the patient's friends. Presently one of those friends falls ill, and the physician is puzzled to know why this new patient fails to respond to his words of encouragement and good cheer. The physician whose statements, uniformly squaring with facts, bear witness to his skill and to his sincerity, is the only one fitted to command the respect of the public and to inspire his patients with confidence in himself, and hence with faith in his words."

A CAST-IRON VOICE

HOMER'S WISH for a metal vocal apparatus was merely premature. In the new Grand Central terminal, New York, there is now just such an outfit, announcing trains simultaneously in all parts of the station in tireless, stentorian tones. The origin of the voice is an ordinary human being; but he is not in evidence. What is really heard is a magnified reproduction of what he says. The device has been in use several years, and the thousands who have heard it may wish to know how it works. The electric announcer is really only a telephone with a receiver actuated by an electric current of unusually high voltage. This is what gives the powerful tone. Says Frank Parker Stockbridge, in an account of the new terminal published in *Popular Electricity Magazine* (Chicago, March):

"Many of those who have followed the directions of the voice seemingly coming from the wall are under the impression that the contrivance is a combination of telephone and megaphone. It is neither, but something different from anything in use for the same purpose anywhere else in the world. The marvelous results obtained by the operation of the announcer

are achieved through the new application of an old principle in electricity.

"The announcer consists, first, of a mouthpiece similar in appearance to the ordinary telephone transmitter. But it differs vastly from the telephone transmitter in the important particular that it contains no induction coil. The transmitter also is unlike anything else of the kind in the fact that it is surrounded by a water-jacket, through which a tiny stream of cold water flows constantly, cooling the carbon, which would otherwise become packed with the heat of the heavy current . . . of 110 volts used in operating the announcer. The ordinary telephone requires only a small fraction of this amount. . . . But it is through the employment of the heavy voltage that

THE VOICE THE PASSENGER HEARS.

Thirty-six of these are hidden in the walls, so that the messages seem to come out of the air.

the remarkable results are obtained. The voltage is so equalized and the circuits so balanced on the Wheatstone principle that the sound of the human voice is intensified many times. And there is no limit to the number of points to which wires may be run for the transmission of sound from the central point."

OIL-BURNING ENGINES IN FAVOR

A CONTINUAL INCREASE in the number of oil-burning locomotives in the West and Southwest is remarked by a writer in *Railway and Locomotive Engineering* (Chicago, March). This fact, we are told, is the best proof that the use of liquid fuel on the modern locomotive is attended with important advantages. Some of these are economy in fuel, better steaming quality, a decreased cost of handling, and absence of the smoke nuisance. Burners have now become standardized, and the fire-boxes are built with greater care to withstand the intense heat developed by the burning oil. Fuel-economy is at least 25 per cent., with some variation due to locality:

"It has been clearly demonstrated that oil-burning locomotives are capable of hauling nearer their maximum tonnage than a coal burner, and, particularly in passenger service, maintain the schedule better. This is not only owing to the better steaming quality of the locomotives using oil fuel, but to the absence of delays caused by the use of poor coal, or, rather, foul coal with its accompanying difficulties in fire-grate and front-end cleanings. Experience had also shown that there is much to be gained by the intelligent cooperation of engineer and fireman working together, as every change of the throttle-valve or reverse lever must immediately be met with a corresponding change in the oil supply and adjustment of the atomizer.

"The quickness also with which even the heaviest engines can be made ready for service is also a decided advantage, and the decreased cost of handling at terminals, the convenience of taking water and oil at the same time, the complete freedom from fires as shown in the reports of the claim departments, are all matters that speak loudly in favor of the oil burners."

Disadvantages, however, are not entirely absent. Expenses in the mechanical departments have increased. The flues wear out quicker than in coal-burning locomotives, and portions of the fire-box have also to be renewed at closer intervals. Fire-boxes are now constructed to meet the requirements of the situation, seams being avoided as much as possible, button-headed bolts avoided, and radial stays used. But:

"Altogether the advantages of the use of oil fuel much more than overcome the disadvantages. Recent discoveries of coal deposits in the districts where oil-burning locomotives are in use do not seem to affect the growing favor of the oil-burning locomotive. Even if the coal were of the best, which it is not, and even if found more easily and in larger quantities, it is not at all likely the other advantages in the use of oil fuel will be overcome."

WHERE THE VOICE ENTERS.

The transmitter into which the announcer speaks.

LETTERS AND ART

THE CHORUS WITH XENIA AND BORIS.

Reversing the usual order of grand opera, the principals in "Boris Gudonoff" are of less importance than the chorus. The composer has made use of Russian folk-music to enable the peasants, who compose the chorus, to speak in their genuine voice.

OUR FIRST RUSSIAN OPERA

THE MOST "SIGNIFICANT INCIDENT" of the season at the musical theater, think the experts, is not Walter Damrosch's "Cyrano," but Moussorgsky's "Boris Gudonoff," sung for the first time in New York on March 19. Critics call it a work of genius; Mr. Gatti-Casazza is on record as estimating it his highest artistic achievement at our opera-house; the chorus "did themselves so proud" that Mr. Kahn granted them each a bonus above their week's salary. Just how the public will come to regard this "barbaric" Russian opera after the novelty has worn off remains to be seen. Mr. Aldrich, of the *New York Times*, thinks the opera will put too great a strain upon the public's power of being interested, for no great tenor or no leading soprano has part or lot in it. Moreover, it has no significant "love interest," thus lacking "some of the chief reasons for an opera's being." Speaking further with no great estimate of the public's artistic perceptions, Mr. Aldrich remarks that an opera—

"that raises the chorus to a principal interest and importance, in the opinion of many, will seem to reverse the natural and necessary order of things, and exaggerate absurdly the rôle of what is expected to be an agreeable diversion and interlude in an operatic performance, desirable also as a means of allowing the principal singers, the tenor and the soprano, in the intervals of their love-making, to get their breath and secure a little needed rest in preparation for further efforts."

But with all these abatements there are qualities that lead Mr. Henderson, in *The Sun*, to enthusiastic admiration. Thus:

"The Russianism of the work has a theatrical vitality. No opera ever heard in this city radiates more brilliant local color. No lyric drama possesses in a larger degree that enveloping spell called atmosphere. The hearer is transported to the strange and splendid northern land; he sits at the foot of the tower of Ivan the Terrible; he bows his head as he passes under

the arch of the Gate of the Redeemer. The presence of the spirit of the land is palpable.

"This is a great achievement. And it is attained by simple, direct means, as great achievements in art usually are, despite the new proclamations of cubists and futurists. Two principal factors operate in bringing about the result. The first is the masterful use of the chorus to publish the feelings of the Russian people. The chorus becomes one of the chief actors in the drama. Its various and conflicting moods, the moods of a restrained people naturally impelled hither and thither by emotions turbulent and uncontrolled and often in successive moments diametrically opposed, are set forth in music of immense expressional power.

"This music is combined with an orchestral support of wonderful picturesqueness and delineative detail. Against these two massive parts of the ground plan are projected the highly characteristic utterances of the solo voices, framed generally in a freely constructed *arioso*, and sometimes sinking almost to a *parlando* and again rising to real melody.

"The entire musical scheme is reared upon a foundation of national themes. The composer has utilized folk-songs and has also created melodic ideas of his own in the idiom of the people. The characteristics of Russian music are preserved throughout the score. By these means then Moussorgsky has brought the atmosphere of Russia to us. He has wrapt us in it, saturated us with it. We may not recognize the Russianism of the work if we do not know Russia, but its strongly marked individuality we must perceive."

The critic of *The Evening Post* tells the story of the opera briefly:

"It is based on a play by Pushkin, which depicts scenes—chiefly tragic and gruesome—from the life of *Boris Gudonoff*, the councillor of the half-witted *Czar Feodor*. As *Feodor* has no offspring, there is only his younger brother, *Dimítri*, to stand in the way of the realization by *Boris* of his ambitious plan to have himself proclaimed *Czar*, the consequence being that *Dimítri* is assassinated.

"In the first scene, which is laid in front of a convent near Moscow, to which *Boris* has retired, the populace gathers in the courtyard and clamors for his proclamation as Czar; but he sends word that he declines the throne. The scene changes to a cell in the Convent of Miracles. An old monk, *Pimen*, is writing by lamplight the chronicles of the time, ending with the horrible murder committed by *Boris*. Then he turns over the task of historian of the future to a young monk, *Gregory*, who hears incidentally that he is of the same age as the murdered *Dimitri*; and thereby hangs the tale. The first act, after the scene has changed to a square between two cathedrals, closes with a grand procession. *Boris* appears, is acclaimed as Czar, and enters the Cathedral of the Assumption.

"The first curtain of the second act opens on an inn on the frontier of Lithuania. It is the hiding place of two vagabonds. With them is the young monk *Gregory*, who has escaped from the cloister and spread the report that he is *Dimitri*, having escaped the assassin's hands. He is trying to get across the border to Poland. The officers and soldiers who are pursuing him enter the inn and he is recognized, but eludes them by jumping out of the window. When the curtain rises again we behold *Boris* in the Kremlin in Moscow enacting a nursery scene with his children. For five years he has now been Czar. He has lost all capacity for joy. Heaven has sent dire ills to punish him for his crime, which is ever before him, and with 'O God, have pity on me!' he ends his monolog. There is a commotion outside; he is informed by *Prince Shouisky* that there is an uprising in favor of *Dimitri*. Left alone, he is tormented by his guilty conscience; the specter of the murdered boy appears to him, and he breaks down in an agony of remorse and terror.

"The last act is divided into three scenes. The first is a moonlit garden. The false *Dimitri* has escaped to Poland and won the love of *Marina*, daughter of a nobleman who is prepared to help him in his attempt to become acclaimed as Czar. In the second the Polish army arrives in the forest of Kromy just in

time to save *Dimitri's* former tramp companions from being hanged by a mob. The final scene takes us back to the Kremlin Palace. The Duma is in session discussing the punishment to be inflicted on *Dimitri* when captured. *Prince Shouisky* comes and tells them how, after he had told *Boris* of the uprising, he had watched him through the keyhole and seen him

THE SQUARE OF THE CATHEDRALS.

The audience broke through Moussorgsky's music to applaud this scene on the opening night. Crushed at the foot of a white sheet of walls was a throng that made a rich red tapestry of garments.

a victim of terrible hallucinations. While he speaks *Boris* enters, denies he is an assassin, in a state bordering on madness. His confusion and agony are increased by the narrative of a dream by *Pimen* relating to the tomb of *Dimitri*. *Boris* calls for his son, addresses him as his heir, bids him crush his enemies. His own life is ebbing away. His last words are: 'I am still Czar. . . . Oh, I die. . . . God forgive me!' and then to the Boyars, 'He is your Czar! Oh, mercy, mercy!'

Another notable feature of the new opera is the first appearance of Russian scenery at the Metropolitan Opera House. The sets were actually prepared by Russian artists for the Paris production in 1908 when Chaliapine made a triumph in *Boris*. Since his day the Paris Opéra has hesitated to trust the rôle to a lesser hand, and Mr. Gatti-Casazza was able to buy the entire production. Of it the critic "K. M." says in the *Boston Transcript*:

"Russian scenery is as curiously different from German as from the conventionalized makeshifts of France, England, and America. It makes little or no use of the mechanical advances in the building and handling of solid masses of structure. The settings are composed of the simplest and most conventional elements. They are built up out of flat 'drops' and 'wings' such as make the backs and sides of all the settings in the oldest and poorest of American stock theaters. These are the mechanical, technical materials, which the scenic artist reanimates and brings into glowing life by the brilliance, originality, or sturdiness of color and design. There

THE FOREST OF KROMY AT WINTER TWILIGHT.

The scene designer and the electrician of this production which comes from Paris create "a prospect of gray misty distance, through the dried and spidery trees of winter."

is nothing of the 'new stagecraft' of Germany in this Russian art except the fine artistic ability of the men who work at it, their imagination and their readiness to experiment. These virtues sublimate the old forms.

"The Russians like to work in the large. Their backgrounds may often be full of the detail of tapestries, but they cast the outlines in simple and majestic proportions. In 'Boris,' for instance, there is the great square between the Cathedrals of the Assumption and of the Archangels in Moscow. The whole background—and it towers upon you from close at hand—is the bare white wall and three minarets of one of the churches. . . . There are other walls as large, as simple, as bare of niches, corners, angles, and small design. Everything goes in huge sweeps, great solid spaces that make the flapping canvas seem the masonry of the old medieval city.

"The abilities of these artists such as Mr. Golovine do not, however, run entirely to the massive and obvious. They can achieve the subtle, the fine, the atmospheric, as well. 'Boris' has a scene in the Forest of Kromy at winter twilight. As Mr. Golovine and the electrician have made it, it is a prospect of gray, misty distance through the dried and spidery trees of winter. The snow drifts down at moments among the slim, interlaced branches. Through it we get a glimpse of wide country, just beyond. Perhaps there might be a great icebound river hidden there in the quiet."

EDUCATIONAL RANK OF THE STATES

A DEBT of gratitude is due from students of any particular phase of public education to the Sage Foundation for its pamphlet giving "A Comparative Study of Public School Systems in the Forty-Eight States." This debt is enthusiastically paid by *The Dial* (Chicago), which speaks of the pamphlet as representing "what must have been an enormous amount of labor," and for the first time presenting "in simple form what may be called a bird's-eye view of present conditions in all the essential phases of the subject." Many school reports, as *The Dial* points out, are inexcusably belated in publication, and "the method of presenting reports is not standardized." It has been, therefore, "extremely difficult to determine the relative efficiency of the school systems of the several States in some very important matters." The first chart in the pamphlet now available shows the "children in school and out" in each State in 1910. Ranking them in the order of percentage of children in school, Vermont heads the list with only 7.3 "not in any school," and Louisiana is last with 44.7. The first half dozen of this list are Vermont, Maine, Connecticut, Colorado, Iowa, and Montana. A comment printed in the margin suggests that "Vermont, Maine, and Connecticut, with more than 90 per cent. of the children of school age actually in school, are making better investments in future citizenship than Alabama, Texas, Nevada, and Louisiana, with 35 to 45 per cent. of their children of school age not receiving schooling." *The Dial* proceeds with some interesting quotations and comment from these tables too elaborate to reprint entire here:

"In the statistics of school revenue the range is from New York, with over fifty millions of annual revenue—almost all of it taxes—to Nevada, with about half a million, or approximately 1 per cent. of what the larger State collects. This represents a far greater discrepancy than the relative populations would warrant, which makes it evident either that New York exceeds its duty, or that Nevada falls short of it. It is interesting to learn that local taxation supports the public schools, from 97 per cent. in the case of Massachusetts to only 27 per cent. in the case of Georgia. It is highly desirable that the local communities should learn not to look to the State for aid for their schools, and in this matter Massachusetts, Rhode Island, and Kansas, which are above the 90 per cent. mark, furnish examples that the other States should seek to emulate. Six States get from 10 to 20 per cent. of their school income from permanent land grant funds; allowing for this, the honor list of States which do not lean heavily upon State taxation should be considerably increased. But there is not much to be said for the local governments of Kentucky, Georgia, and Alabama, which call upon the

State to collect and distribute more than half of the funds applied to the purposes of the schools."

No more "vitally important figures" in this statistical exhibit are given than those showing "the investment in school plant, the expenditure per child of school age, the ratio between wealth and school expenditure and the daily cost of the child's schooling." We learn that—

"Massachusetts has put \$115 for each of her children into school buildings and grounds; Mississippi has provided the munificent sum of \$4. This is the best available index for a State of the past educational interest of its people. The amount annually spent for each child is from thirty-two to three dollars—in Washington and South Carolina, respectively. A note points the moral: 'In the long run, States, like individuals, purchase about what they pay for, not much more and not much less.' For each hundred dollars of wealth in the State, the amount paid annually for schools is 75 cents in Oklahoma and 19 cents in New Hampshire. It would seem to be in order for the White Mountain State to quadruple its educational budget without delay, unless it is content to be permanently shamed by what was only a few years ago the Indian Territory. Nevada, which makes a rather poor showing in most respects, comes magnificently to the front in the matter of the daily cost per child in its schools, providing no less than 39 cents, as against the seven cents of Georgia and the Carolinas. Low cost, of course, means cheap teaching, and the wages that we pay our teachers, the country throughout, are nothing less than a national scandal.

"This latter subject deserves a paragraph of its own, and the statistics of average salary in the forty-eight States show some surprising contrasts. California and Arizona, with averages of \$918 and \$817, respectively, set the pace for even New York and Massachusetts, whose averages are \$813 and \$757, respectively. North Carolina is disgraced by the fact that its teachers receive salaries averaging only \$200, and this of course means that there are thousands of individuals receiving far less than this average. The average for the entire country is only \$485, which is less than the average for factory workers and common laborers. 'The fact that teachers' wages are lower than those paid for almost any other sort of service means that as a nation we are neither asking for nor getting a high grade of service, and that as a nation we place a low valuation on the teacher's work.' It seems to be about time for public speakers to stop boasting about our national devotion to education. Stated in aggregates of millions of dollars, the figures are doubtless impressive; stated in any rational way, with reference to the numbers of teachers and taught, or with reference to our resources in wealth and taxation, they constitute a pitiful exposure of our national niggardliness."

MR. ROOSEVELT ON THE CUBISTS—What our senior ex-President calls "the lunatic fringe among the votaries of any forward movement," he found in the rooms of the Cubists and Futurists of the International Show, now moved on to Chicago. He modestly calls his views those of a layman, and as such we pass them on from the pages of *The Outlook*:

"The Cubists are entitled to the serious attention of all who find enjoyment in the colored puzzle pictures of the Sunday newspapers. Of course there is no reason for choosing the cube as a symbol, except that it is probably less fitted than any other mathematical expression for any but the most formal decorative art. There is no reason why people should not call themselves Cubists, or Octagonists, or Parallelopipedonists, or Knights of the Isosceles Triangle, or Brothers of the Cosine, if they so desire; as expressing anything serious and permanent, one term is as fatuous as another. 'Take the picture which for some reason is called 'A naked man going down stairs.' There is in my bathroom a really good Navajo rug which, on any proper interpretation of the Cubist theory, is a far more satisfactory and decorative picture. Now if, for some inscrutable reason, it suited somebody to call this rug a picture of, say 'A well-dressed man going up a ladder,' the name would fit the facts just about as well as in the case of the Cubist picture of the 'Naked man going down stairs.' From the standpoint of terminology, each name would have whatever merit inheres in a rather cheap straining after effect; and from the standpoint of decorative value, of sincerity, and of artistic merit, the Navajo rug is infinitely ahead of the picture."

"As for many of the human figures in the pictures of the

Futurists, they show that the school would be better entitled to the name of the 'Past-ists.' I was interested to find that a man of scientific attainments who had likewise looked at the pictures had been struck, as I was, by their resemblance to the later work of the paleolithic artists of the French and Spanish caves. There are interesting samples of the strivings for the representation of the human form among artists of many different countries and times, all in the same stage of paleolithic culture, to be found in a recent number of the *Revue d'Ethnographie*. The paleolithic artist was able to portray the bison, the mammoth, the reindeer, and the horse with spirit and success, while he still stumbled painfully in the effort to portray man. This stumbling effort in his case represented progress, and he was entitled to great credit for it. Forty thousand years later, when entered into artificially and deliberately, it represents only a smirking pose of retrogression, and is not praiseworthy. So with much of the sculpture."

ART TO DICTATE FASHION

THE AMAZING freakishness of some of the fashions which have of recent years emanated from Paris, for so many ages the *arbitrator elegantiarum* of the civilized world, has occasioned a tide of revolt, not only in this country, where the *New York Times* has just conducted a successful prize competition for American designers, but also in the French capital itself.

The most interesting result of this revolt is the determination of a group of artists, all celebrated as painters of women, to associate themselves with leading *modistes* and *costumiers* in an endeavor to guide the mode of the day instead of slavishly obeying it. The great *couturiers*, who, says Michel Psichari, in *L'Illustration* (Paris), "establish, often with the happiest results, the temporary formula of elegance," have apparently grown weary in well-doing. During the last ten years they have exhausted all the suggestions of the Orient in order to render woman piquant and striking. This French writer details some of their achievements:

"For a long time, and even until the present winter, the Parisienne of refinement would have felt herself disgraced not to have an essentially Persian silhouette. There has been a furor for stuffs of violent color and mysterious and disconcerting design; for vestments of strange cut, with lines now wandering, as if an awkward cut of the scissors had directed their course, and now abruptly broken; and, finally, for barbarous decorations.

"The peril of the exotic is that it is with difficulty kept within bounds, and permits almost any audacity. The impertinences it has occasioned have sometimes passed for things exquisite. It soon came to pass that the more eccentric and unheard of a toilette was, the better chance it had to please.

"But shall this make the judicious grieve? This research for the bizarre in all its manifestations has resulted in a charming liberty. At the present moment it is possible to see one *élégante* affect in her evening dress an Egyptian style, or something Viennese, perhaps, while another borrows from her tailor some delightful garb of Muscovy. This one dons a Japanese tunic where chrysanthemums flaunt themselves, and that one

a silken jacket shot with metal and brodered with the roses of Ispahan.

"Among so many diverse tendencies the mode at this critical moment is in a state of uncertainty. And, behold!—a new style appears which undertakes to impose itself upon us and make us forget all the others."

How, we are asked, shall the advocates of a style at its *début* avoid being severe to those whose principles it combats? While we are breathlessly seeking an answer comes the brusque declaration that, "The artists of this reform condemn *in toto*

the Persian, the Turkish, the Japanese, and the Egyptian manner. They are opposed to international *couture*. They project the reestablishment in all its glory of French taste, marked by simplicity, moderation, and a just harmony." And this is how it's being done:

"According to them, the apparel of the Thousand and One Nights will no longer be even an article of exportation. *Scheherezade* begins to cut a poor figure in the United States, whither we have sent her, and the Americans, on whom Paris continues to exert her charm, will henceforth seek discreeter inspirations in that city of elegance.

"To further the proposed movement a committee has been formed, composed of well-known and popular artists, under the auspices of a great house which undertakes to constitute itself the guardian of the French tradition. And we note a curious evolution in the usages of *La Mode*.

"For it is now the painters of whom the great *couturiers* de mand counsel and precise indications in regard to the *toilettes* they are about to launch. Until now the former have been called on merely to

reproduce in their portraits of the great world the *chefs-d'œuvre* of the second. To-day they participate in their creation.

"This collaboration has already produced results which are full of promise. The group known as 'Painters of Women,' presided over by M. A. de la Gandara, and counting among its members such masters of design as Willette, Anquetin, Grün, Gerbault, A. Guillaume, Mérovet, Neumont, Préjelan, Rouville, and Abel Truchet, has undertaken the task, each bringing to it his own talent, his conceptions, his 'manner.' There is no idea of returning to the modes of a bygone day by laborious imitations, nor of adapting to modern taste the neglected elegances preserved for us in old prints.

"The 'Painters of Women' propose to be innovators, while remaining faithful to the grace and sobriety of costume which are peculiarly French. A beginning has been made with models which have been adroitly transformed. A slight retouching will often change the aspect of a gown or coat, giving it a seductiveness it lacked. The task is easy and engaging for observers trained in apprehending the harmony of lines, and in combining and harmonizing shades of color. But they have not confined themselves to mere retouching. They have endeavored to contribute by individual designs to the mode which will perhaps be that of to-morrow. An exposition of these will be given next month. Meanwhile, here is one of the first designs, executed by Willette, in which we recognize, in an unfamiliar *genre*, his lively fancy and *verve*."

It is a woman drest, as it were, in a great *fleur de lis*, and with a formal garden as background.—Translation made for THE LITERARY DIGEST.

NATURE AND THE COMING MODES.

Willette, among the group of Paris artists who have taken to designing women's fashions, offers this hint from the *fleur de lis*.

RELIGION AND SOCIAL SERVICE

THE "MINIMUM WAGE" FROM A NEW ANGLE

THE POVERTY of the wage-earning girl is only one factor in the vice problem. So points out *The Living Church* (Milwaukee), which views the question of the minimum wage for girls in factory and store from another angle than that observed by the lay editor. "It is just possible that the reputed cure for the trouble is only superficial," declares this writer, who asks pointedly whether there is not greater need for a minimum wage for men. It ought, he thinks, to be distinctly recognized that the condition involving the employment of girls outside the home is abnormal. "Girls have a right to live and to be supported at home, doing such work as naturally devolves upon home-makers, and recognizing the normal probability of marriage ahead of them." This probably seems too old-fashioned a doctrine considering the conditions already existing were it not that in the present discussion "our hasty reformers may be beginning at the wrong end." What *The Living Church* sees to be wrong is not that the girl is "at work for from four to six dollars a week; it is that, while unskilled, she is at work, outside her home, at all." The woman who finds the home occupation too narrow is not to find her freedom curtailed, for we read:

"This does not mean that a woman should be estopped from following the honorable profession of bachelor maid and voluntarily entering upon a life of self-support. That is her right; and a social system that forces her into matrimony is itself a frightful wrong. But to enter that profession, she is bound to fit herself to become a skilled, productive worker in some line of industry. She may not demand that society give her a living wage *qua* woman; she can only demand the right to perform such labor as shall be of sufficient productive value to make self-support possible to her. And that means that she must become, to the fullest degree of which she is possible, a skilled laborer. She may then rightly demand that a living wage be the recompense of her skilled labor—not because she is a woman, but because she has given to society the equivalent of that which she expects in return.

"But the unskilled girl in the factories and the stores is not, necessarily, thus productive. If she has been driven into industry, not because she deems her vocation to lie therein, but because her father can not support her at home, she is, indeed, the victim

of our bad economic system, which has so nearly broken down at this stage of the world's history. She it is that is in greatest danger of falling into prostitution. What shall we do with her?"

Looking first at the "abnormality" of the condition that legislation is now hurrying to alleviate, the writer observes:

"The great bulk of unskilled girls in industry either live at home, or have, without real necessity, left their homes. If the former, the demand that their unskilled labor should be so remunerated that their father no longer supports them even in part, places a premium upon a condition that is bad in itself. It is superficial to ask, with some of our reformers, 'Is not any girl worth the cost of her living, to society?' She may be to society; but it does not follow that her employer is bound to pay society's bill. That is to say, her employer is not paying for her girlhood, but for her unskilled labor. Society's obligation to support the girl is one that should be expressed through the family. As girl she is entitled to protection and support in her own home; not in the factory. If, through any abnormal conditions, social or individual, this fails her, society may, no doubt, be bound to intervene, but it does not follow that the father's responsibility is to be transferred to the employer of her as an unskilled laborer. The cure for the condition is not to be found in compelling the employer to act *in loco parentis* in the girl's support.

"Thus, tho it is an evil that unskilled girls, living at home, should be obliged to go into factories and receive in wages less than it would cost them to live apart from the family, the wrong is

not with her wage scale; it is with her father's. It ought to be unnecessary for her to go into the factory at all. But if she *must* go, to supplement her father's inadequate wage, it does not follow that she should be compelled to earn her whole living, or that her whole living should be a charge against her employer. Her father is bound to support her; whatever she earns, by her unskilled labor, is that much help to him in the fulfilment of his duty to his child. But it must not be supposed that he has shifted the duty of her support on to her employer; and if the employer of the girl is forced by law to pay a fictitious price for the girl's labor, he is, in effect, paying a bonus to the employer of the girl's father. If law is to intervene at all, it ought to be to compel payment of a family's living wage to the man who rears the family.

"Can that be done by law? The question, other than as an academic possibility, is too new for an offhand answer to be

Copyrighted by the New York Evening Journal Publishing Company

—McCay in the New York Evening Journal

given. But if it can not, it does not follow that we ought to seek a solution of the problem by regulation of the girl's wage. To do that is to tinker with an effect without going back to its cause.

"It would seem probable, then, that only confusion would result from the enactment of most of the minimum-wage bills now pending in the several States."

The writer is optimistic enough to believe that there is a possible alleviation to be applied, in the meantime, to "a condition that is not immediately curable but is part and parcel of a fast-dying economic system." Thus:

"I. Homelessness, on the part of a girl, is a grave evil; and it is a crime where it is avoidable and the girl is unskilled. Very much of it can be prevented by laying stress constantly on this fact. The farmer who permits his unskilled daughter to go alone to the city is committing a crime against her. She can not earn her full living as an unskilled laborer in any industry. Let that be taken as absolutely certain. If, in her failure and despair, she falls into sin, the blame is not to be imputed to our economic system, much less to her employer, but to her parents. Parenthood implies the duty of protection to the children until these have homes of their own. The first amelioration of the condition, then, is to inaugurate a back-to-the-home campaign among girls, and to stop the influx of girls from homes in the country and in smaller towns to the city. The girl living at home and obliged to earn some part of her living to supplement her father's wages is not a serious problem in society, however unfortunate it is that she should be forced to do it; the problem is with the homeless girl in the cheap boarding-house of a city or of a mill town.

"II. The second step is to train girls to be skilled instead of unskilled laborers. To permit a girl to grow up without being trained to do something well, such as could, in emergency, be used to provide her own living, is another crime. An expert young woman in any phase of industry ought also not to be away from home life if that be avoidable; but if she is, she is at least prepared to escape from the worst phases of the social danger. She will be competent to earn her own living if she be thrust suddenly upon the world.

"III. What remains after all the homelessness possible has been removed, and after the largest possible number of girls have become skilled in something, is the very considerable number who have no homes to which they can return, and who have not been trained to do anything well. Send these into factories as unskilled laborers, and your product will be despair and prostitution. But it is wholly unnecessary for them to be in factories. The place for such girls is in domestic service. Here is an ever-active labor market, in which the demand is always greater than the supply, in which a home is invariably provided, and in which the opportunity is given to advance rapidly, and at good wages, from unskilled to skilled labor. Granted that the social limitations of domestic service are annoying; it does not follow that they are prohibitive. And those who are eloquently portraying the dilemma of starvation or prostitution as confronting the unskilled girl, wholly overlook this third factor which makes it necessary to seize neither horn of the imaginary dilemma.

"IV. And what, then, of the factory and the department store, after all this mass of cheap, unskilled girl labor has been removed? Ah, here is the real solution of the problem. Big business will find a way to adjust itself to a condition in which girls are no longer waiting to be fed into a machine and turned out broken in spirits, in health, and in morals. Any business that requires the sacrifice of girls may well go to the wall. If we can not have shoes without that price, let us all go barefoot. But the only way to compel business to find the way is to stop the supply of cheap girls. We are quite convinced that this can not be done by virtue of any law compelling an employer to pay ten dollars for five dollars' worth of labor, provided only that that labor be performed by a girl.

"So if there is to be a minimum-wage law at all, let it be one that applies to men, and that does not assume that the girl is the central figure in the problem of breadwinning. . . .

"The demand for legislation to require a minimum living wage for girls and women has arisen with a sudden insistence that seldom has been paralleled in American annals. We can hardly wait long enough to get the necessary measures drawn up and hurried through our legislatures. We are impatient of discussion. We are suspicious of any who do not join vociferously in the popular demand. And yet it is just possible that the

reputed cure for the trouble is only superficial. Perhaps we might better make haste slowly."

CATHOLIC CHURCH STATISTICS

THE ANNUAL STATISTICS of the Catholic Church from Catholic sources are now available from the annual "Official Directory." That volume is so far advanced toward publication that Catholic journals are able to present from it figures of general interest and importance. There are, according to these authorities, 15,154,158 Catholics in the United States alone, while in the outside possessions there are 7,131,989 in the Philippines, a million or more in Porto Rico, 11,510 in Alaska, 42,108 in the Hawaiian Islands, and 900 in the Canal Zone. In all, "it will be found that there are 23,329,047 Catholics under the Stars and Stripes." The issue of the Directory for 1913 informs us that a new church is built every day in the year. We read from the abstract in *The Inter-Mountain Catholic* (Salt Lake City):

"There were 373 new churches established during 1912, some of them, of course, being only mission churches. To be exact, there are 244 new churches with resident pastors and 129 new mission churches, that is, served by a neighboring pastor. All told, there are 14,312 churches in the United States, 9,501 having resident pastors.

"According to the publication there are 17,945 Catholic clergymen in the dioceses of the United States, 13,273 being secular clergy and 4,672 being members of religious orders. In addition to the 17,945 priests, there are also hundreds of fathers in distant lands; in fact, there is hardly a civilized or uncivilized land where United States clergy are not to be found. Only a few days ago a United States priest sailed from New York for the Island of Timor, an island away out in the Indian Ocean, inhabited by semi-barbarous Malays and Papuans.

"In addition to the 17,945 clergymen engaged in the United States, there are 6,169 men and youths studying in 85 seminaries, located in various parts of the country.

"There are also 230 colleges and academies for boys and 684 academies for girls, where the higher education of our Catholic youth is given serious attention. The number of academies for girls is, of course, larger than the colleges for men and boys, but the number of men and boy students is much larger than girl students.

"One of the features of the Directory which will give food for thought is the table giving the statistics of the parochial schools. According to the figures which have been supplied by the Diocesan Chancery officials there are 5,256 parishes which have parochial schools connected with the churches. In these 5,256 schools, 1,360,761 boys and girls are receiving their elementary education. Furthermore, it must be borne in mind that in many rural districts, where parochial schools can not be organized, due provision is made for the religious instruction of youth. With this in mind, the fact that 1,360,761 children are attending the parochial schools will stand out more sharply.

"It must also be remembered that there are 47,415 orphans in our orphanages, and, adding together the number of pupils in parochial schools, in orphanages, detention schools, institutes, academies, high schools, and colleges, it will be found that there are 1,593,316 young people under Catholic care in the United States."

A table has been prepared showing the distribution of the Catholic population in twenty-five States having the largest number of Catholics. Thus:

"During the year 1912 Michigan has forged ahead of Wisconsin and Kansas has advanced over New Hampshire, Maine, and Nebraska. The table follows:

"New York, 2,790,629; Pennsylvania, 1,633,353; Illinois, 1,460,987; Massachusetts, 1,383,435; Ohio, 743,065; Louisiana, 584,000; Michigan, 568,505; Wisconsin, 558,476; New Jersey, 506,000; Missouri, 470,000; Minnesota, 454,797; Connecticut, 423,000; California, 403,500; Texas, 306,400; Iowa, 266,735; Maryland, 260,000; Rhode Island, 260,000; Indiana, 232,764; Kentucky, 163,228; New Mexico, 140,573; Kansas, 131,000; Maine, 123,600; Nebraska, 118,270; Colorado, 105,000."

AN OPPONENT OF CHURCH UNION

SELDOM in his long ministerial career, says *The Congregationalist*, has Dr. George A. Gordon, of the Old South Church, Boston, "spoken more boldly or frankly" than he did when delivering the last of the six Brookline addresses on Church unity. Dr. Gordon spoke as a Congregationalist, but made it very clear that he was voicing his own views. A united Protestantism, he declared, was possible, but not likely to come. Not likely, as *The Congregationalist* sums up this part of his discourse, "as long as the Episcopal Church claims to be the church, and by its failure to receive and give letters of dismission to other Christian bodies is constantly discrediting the validity of our Christian experience." Dr. Gordon followed this with the question: "Is such a union on the whole desirable?" And the answer he gave was an emphatic, "I think not." Since the pastor of the historic Boston Church here seems to put himself on record against what so many Protestants are now striving for, it is well to note his reasons. He says:

"The legitimate differences of human beings are many and the denominational differences match the constitutional differences, and if we did not have the ecclesiastical promoter who overdoes denominationalism I think we should see at once that the Christian church is not poorer but richer and more powerful, because of these different denominations. Efficiency and latent power are developed in different ways among different sets of human beings. Put a Congregational minister to lead a Methodist brigade or a Baptist to be the commander of a Presbyterian battalion and you will discover at once what I mean. There is a vast variety in this humanity of ours, and these denominations have naturally arisen to give effective expression to the divinely implanted variety in our humanity.

"Wiser administration of the denominations, a more statesmanlike ecclesiasticism will do away with many of the evils that now embarrass us as distinct denominations. Much of our waste would be at once eliminated if we had wise and noble men as leaders with a vision beyond organized Christianity in the interest of which organized Christianity is moving; men of this type would deliver us from most of the evils that are driving serious men and women to think of the impracticable—a united Protestant Christianity."

Then, too, asserts Dr. Gordon, "freedom is a possession always in peril." And he continues:

"The church was united once, the holy Catholic Church throughout the world, and what was it? An ineffable tyrant, denying freedom over its whole broad domain and crushing the intellect and the spirit into a dead uniformity. . . . Your one holy Catholic Protestant American Church would give me much uneasiness if it should come into existence to-morrow."

The conclusion, then, is that:

"There is something immeasurably better than a uniform ecclesiasticism. The vision of all men the children of God, all human beings the possible disciples of the Lord, the vision out and beyond all organized Christianity of a redeemed humanity; and the sense of all the agencies of the intellect that are sincere and fine, all the forces of society that are wholesome and true, as the instruments of the Holy Spirit in the realization of that divine dream of a race renewed in God through Christ.

"One Commander, the Lord Jesus Christ; all the sects and denominations and communions, different regiments in his grand army; that is my idea of church unity. He alone can command and bind his followers into the unity of the Spirit; he alone can keep them distinct, manly, brave, free. Let us make over the problem of a split and vexed Protestant world to the great Captain of our salvation; let us fight each in our own regiment under his guidance, with good will and good wishes to all the others.

"There is too, incidentally, the subject of the crank; the peculiarity of the crank is this, that the man who is a crank in your communion, when he gets into another often becomes sane. You bottle up in your communion an inevitable Methodist, an inevitable Baptist, an inevitable Episcopalian, and see what a

time you will have! The denominations are the clearing-houses for the cranks. I have seen many of them in my time, and I have thanked God when they found another church home. I often pity a small community with one church, where are included all the sane people and all the insane. Such a state is tragic."

CHURCH ADVERTISING IN PHILADELPHIA

A PRACTICAL ILLUSTRATION in Philadelphia of the way churches may come together arouses the admiration of *The Universalist Leader* (Boston). In the first place, we are told, the churches are associated in an organization with a business man at the head, and they "have been making an impression on the city" in ways like these:

"There appeared in at least one of the leading dailies of the city a half-page display advertisement with the heading, reaching clear across the page, 'Why Not Go to Church?' Then through this great area of white paper, for which the united churches have paid a very large sum, appear a few sententious sentences which even the busiest can read at a glance, fixing the place of the church among the most vital of institutions, and then this: 'Every non-attendant upon religious services virtually votes for the elimination of the institution from society. If a person believes that the world needs the church, he has but one clear, unmistakable, and unanswerable way of stating his position. That is by regular church attendance. The man who goes to church stands for an indispensable institution, even as a good citizen stands for the state by voting. Absenteeism from the ballot-box and absenteeism from the church are kindred failures in duty to society. Thoughtful persons stand for the Church because the Church stands for the best things. The churchgoer lines up with the forces which make up for righteousness.' And more of like import. Below, occupying the balance of the page, are the announcements of the different churches and their services. And a significant line right in the middle: 'In case of illness, death, or other trouble, any of the city ministers will be glad to help.' This looks good, but one thing strikes us as of especial significance, and that is, all of the Protestant churches of the great city are going to unite in this large way in making a statement to the people of the city, of the things they hold in common, and thus controvert the foolish and untrue charge that the Christian churches are divided. The fact stands out with startling distinctness that more and more are the forces of Christianity being united, each in its own way and through its own method, for the common purpose, which is to bring in the Kingdom of Heaven now."

OFFENDING POETS—Very much of the whole body of literature that used to be known as "Gospel Hymns", that came in with the "Moody meetings" seems discriminated against in an editorial in the *Western Methodist* (Little Rock), telling writers of religious verse why some of their productions had been excluded from its columns. The reason may have a wider interest than just for the particular offenders:

"The reason for returning them was the frequency of such expressions as 'dear Father,' 'Father, dear,' 'dear Savior,' 'dear Jesus.' We suggested that such endearing terms in connection with the divine name are not in good taste; they smack of a degree of familiarity with the divine being that does not comport with a due sense of his majesty. We know of no such form of address in the mouth of any inspired writer. Not even Jesus ever used such a form. It would have had a strange sound coming from his lips. 'Take off thy shoes from thy feet,' said the Holy One to Moses at the burning bush. 'Holy Father' is a form of address from the lips of the Master.

"We know of no poet of the first order who ever used such a form as the one we are criticizing. Some of the rag-time hymns of our day have this form. Indeed they trip lightly and almost flippantly over such phrases as 'the blood,' 'the cross,' wholly unlike the hymn of the great Watts, 'When I survey the wondrous cross.' Mr. Wesley, in particular, had a great aversion to such easy and almost irreverent locutions. They tend to cheapen the things divine."

REVIEWS OF NEW BOOKS

MADAME JUDITH'S AUTOBIOGRAPHY*

Reviewed for THE LITERARY DIGEST by

JEANNETTE L. GILDER

MADAME JUDITH, of the Comédie Française, was a contemporary of the great Rachel, and yet she died only a few months ago. To be sure, Madame Judith was eighty-five years of age when she passed from Paris to the world beyond, but if we may judge by her memory, she was as keen of mind as tho she was still living in the midst of those things that make Paris unique among the cities of the world.

It is said of Mme. Sara Bernhardt that when she married Damala she told him "everything." "*Quel courage!*" remarked one friend. "*Quel memoire!*" added another. And one may exclaim "*Quel memoire!*" after reading Madame Judith's Autobiography. If all the anecdotes she tells, all the conversations she repeats in such detail are just as she heard them, she either had the memory of a Macaulay or she took notes at the time.

My private opinion is that Madame Judith did remember a great deal, but that she assisted her memory by reading the gossip of her day. However she did it, she has made a most lively and entertaining book, and there is scarcely a scandal of her time that she does not relate and with a personal touch that adds greatly to its piquancy.

Madame Judith numbered among her friends Victor Hugo, Dumas, father and son, Alfred de Musset, George Sand, Theophile Gautier, Louis Napoleon, Ponsard, poet and playwright, in short, all the distinguished men and women of her time and country. She was the original of Hugo's "Marion Delorme," and tells us of the thrilling experiences that marked the first performance of that play.

Like Rachel, Madame Judith was a Jewess, and yet she tells us with a twinkle in her pen that the painter, Lantboine, asked her to sit to him for a portrait of the Madonna that he had been commissioned to paint for the Mount Carmel Monastery in Palestine, and there it hangs to-day.

Rachel and Judith were not only contemporaries on the stage, but they were children together, and it was M. Felix, Rachel's father, who taught her to act. She tells this anecdote to illustrate the difference in her character and that of Rachel:

"One day, when I was myself discussing terms with an impresario, who wished to secure my services, but thought I asked too much, he said to me: 'Ah, you are like Rachel, it is easy to see that you are both Jewesses.'

"'I beg your pardon,' was my retort. 'There is a great difference between us. Rachel is a Jew, and I am only a Jewess.'"

While there was a certain amount of jealousy between the two actresses, Judith sincerely admired Rachel's genius, while the latter was kindly disposed toward her childhood's companion. Rachel's last ap-

pearance in Paris was at a benefit for Judith. This was just before her departure for America. In Philadelphia she caught cold behind the scenes of the theater and came home to die. She was only thirty-eight, and would probably have achieved greater distinction had she lived a few years longer; but, after all, is it not better to die young in the height of one's glory, than to lag superfluous on the stage? Shakespeare says so, and he was a very wise man, particularly in matters concerning his profession.

It must be said of Madame Judith's recollections that they are principally of the gay life of Paris, of men and their mistresses, and the intrigues not only of Bohemia, but of those who lived in the shadow, or sunshine, of the throne. Of Rachel she says:

"She was dignified without being stiff; majestic without being pompous. She spoke earnestly and passionately, but she

HENRY STEDON HARRISON.

Author of "Queed," one of the notable successes of 1911. Mr. Harrison publishes this season a new novel entitled "V. V.'s Eyes." The theme of "V. V.'s Eyes" is described as "the evolution of a girl's ideal." "Queed" was essentially a book about a man.

never declaimed. Her features expressed tragedy without effort, and when in repose were dreamy and melancholy, becoming terrible when she was agitated by grief, anger, or jealous rage. Her voice, which was clear and powerful, never assumed any peculiar intonation, but changed constantly according to the feelings interpreted, be-

coming now caressing, now languorous, vibrating, passionate, imperious, harsh, or sibilant, according to circumstances.

"I have often been present at her toilette in her dressing-room at the theater, and I can tell you it was got through quickly enough. Altho she was thin she was so well proportioned that the antique costume seemed to have been invented for her. She never took the trouble to put a stitch or a pin anywhere, so as to make the folds fall in a picturesque way. She just put her peplum on as it was, and it draped itself naturally, lending itself effectively to her movements, the pleats seeming to arrange themselves about her limbs as tho they felt that she lent her beauty to them."

Judith describes an exciting scene between Rachel and her sister, Sarah Felix:

"The famous actress was just making herself up to appear as *Phedra*. She was accentuating the shadows beneath her eyes to convey the impression of the exhaustion consequent on an ardent but unsatisfied longing.

"When Sarah broke in on her it was with the words: 'Rachel, you are a nuisance, a regular brute!'

"'Well, Sarah, what's the matter?' was Rachel's calm and dignified reply, as she went on dabbing her eyelids.

"'The matter!' cried Sarah, 'why you have taken away my lover.'

"'Which?'

"'Oh! oh! oh!' shrieked Sarah, looking as if she would like to scratch her sister's face, tho she was restrained by the Olympian composure of the queen of tragedy.

"'Which?' repeated Rachel, in a provoking manner.

Of Victor Hugo she writes:

"One day when Alexander Dumas was calling on me he said to me: 'Blanchette, come and dine with me to-night, Victor Hugo will be there.'

"Blanchette was a nickname given to me because of my fair complexion. I accepted the invitation. I knew Victor Hugo slightly, but had rarely met him. On this particular evening he was more interesting than usual. Generally he was very taciturn, and I generally found him as tiresome as any *burgress*, which is saying no little.

"On this occasion he was in very good spirits, and I remember a good deal of the conversation that took place.

"Talking of poetry, somebody quoted Alfred de Musset, and Victor Hugo was led to express his opinion on his illustrious fellow author.

"'Yes,' he said, 'he has immense talent. He boasts that there are some who consider him as good a poet as I am!'

"Dumas jogged my elbow, and it was all I could do to help laughing.

"At the end of the meal Hugo treated us to a very strange exhibition. He put a whole orange, rind and all, into his mouth, and then managed to thrust as many pieces of sugar as possible into his cheeks. This achieved, he began to scrunch it all up with his lips tightly closed. In the midst of this operation he swallowed down two liqueur-glasses of Kirsch and a few minutes later opened his mouth wide. It was empty! No one made any attempt to

HEAVY CAR TYPE FISK TIRES

The Great Service of Fisk Tires is Due to the Exclusive Heavy Car Type Fisk Construction

From every corner of the globe where Heavy Car Type Fisk Tires are used come reports of *Greatest Service*. These reports prove:

First, that Fisk design is right; second, that the proper materials are used; third, that these materials are blended in the proper proportions to make a "balanced" whole, a tire each part of which is attuned to the other so as to work in perfect harmony for a common end—that end being SERVICE.

The exclusive HEAVY CAR TYPE Fisk Construction is responsible for this tire perfection. As the name implies, it is a construction providing surplus strength for the severest strains of heaviest cars. With these strains properly taken care of there can be no question of *Greatest Service* on lighter vehicles.

imitate him, possibly because no one else had teeth good enough for such a feat.

Judith played in a little piece by Alfred de Musset, and the poet came to her apartment to read the lines to her. He was then a comparatively young man, but did not look it.

"I was very proud to receive him. It was the first time I was brought into personal relations with him, and came face to face with him. Shall I confess it? The impression he made on me was a very ambiguous one, for good and bad were strangely blended, or rather conflicted, in his nature. He was but thirty-seven years old then, but he looked nearly sixty, so flabby were his features and so dull his eyes, so muddy was his complexion, so blank his expression, and so languid his walk. . . .

"Looking at this nightmare of a De Musset, I also realized the terrible ven-

MADAME JUDITH.

geance with which Nature punishes those who abuse the joys she gives. The man, who for all time will be looked upon as the type of sensual voluptuousness and of frenzied passion, was there before my eyes, with trembling hands, slobbering mouth, teeth chattering with intermittent fever, his whole body distorted and bent, and every now and then shaken with convulsive tremors. Hideous phantom of the triumphant victor of days gone by. I assure you I am not exaggerating in the least.

"Before beginning to read, De Musset asked me to give him something to drink. I pointed to the bottle of beer I had had put on the table for him.

"Beer!" he cried; "Pooh! I don't actually dislike it, but I think it is too insipid."

"Would you like me to get you some rum?"

"Mademoiselle," he replied with some impatience. "I beg you to excuse my weakness, but it is so well known that it is useless for me to try to conceal it. It is absinthe that I crave for," and he added, "I simply must have it. I depend on it to give clearness to my ideas."

"So I sent for a bottle of absinthe for him. He then half filled his glass with beer, and added absinthe up to the brim, an extraordinary mixture, the mere sight of which made me feel sick."

Judith failed to understand the passion that De Musset had for George Sand. She was never a beauty, but when Judith knew

her she was less beautiful than ever. To quote Judith:

"As for me, I fail to understand the passion Alfred de Musset professed for her. As I have already remarked, she was very ugly. It is true that she was forty-three years old when I saw her for the first time, but I found it difficult to believe that such a great, stout creature could ever have been pretty. Her chin was linked to her neck by three rolls of fat from which grew scattered hairs, her cheeks were flabby and drooping. I must admit, however, that she had fine black eyes, tho their beauty did not make up for her common appearance as a whole. She had very slovenly habits. Her hair, which retained its brown color, was as greasy as that of a wandering gipsy. She dressed very badly, her bodices being shabby and her cloaks threadbare. It must be admitted, however, that her personal economy was very much to her credit, for she denied herself for the sake of her children or for the poor, whose wants she liberally supplied. But whatever may have been her mental qualities, she certainly had no feminine graces in her external appearance. She was, in fact, like what is vulgarly called a 'tohy jug.' And to these disadvantages were added a masculine voice, a martial gait, and bold, blunt manners. Nature certainly made a mistake in her case, for she ought to have been a man.

"George Sand certainly had genius, but one must be allowed to remark that her dramatic work was by no means up to the level of her fiction.

"She presided at our rehearsals in the greenroom, now sitting astride on a chair, now with her legs resting on a second chair placed opposite to her. She used to talk and laugh a good deal with the friends she had brought with her as critics.

"Have you got a match?" she would ask every now and then, to relight her pipe—a clay one with a bowl as black as a porpoise, from which she emitted great clouds of smoke.

"Here," I said to myself in my disenchantment, "is my divine Lælia!"

Here is Judith's description of Alexandre Dumas, the elder, and it is not a very pretty one:

"This giant of a mulatto, with his big black, mocking eyes, his wide nostrils, thick lips, heavy chin, his crisply curling hair, and his forehead, with its strange bumps, like that of some imbecile child who is always fighting with his comrades, was truly a representative personage, a type reflecting all the passion of the romanticists. There would have been something wanting to his time if this grandson of a negress had not been seen striding along the Parisian boulevards, if his laugh had not been heard on the terraces of the cafés, or if he had not appeared playing his part with naive self-satisfaction in official ceremonies and at the Tuileries balls, or walking about behind the scenes at the theater with his arm round the waist of some actresses, or eating and drinking enough for four in the merry suppers at which authors and artists used to meet."

One of the most sensational stories in this book is of Napoleon's son, the ill-fated Duke of Reichstadt. He was not more than twenty years old when he died, but it was generally supposed that he died a natural death. Judith says not, and tells us that she had it from the best authority that he was poisoned by order of Metternich.

"It was the Grand Duchess Stephanie of Baden, cousin of Napoleon I., who told me of the crime."

"She had a lady's-maid of whom she

was very fond, and to whom, on the eve of her marriage, she gave a large dowry as a token of her affection. The former lady's-maid became the wife of a noted Austrian dentist, and not long afterward she was taken dangerously ill. On her death-bed she sent to ask the Grand Duchess Stephanie to come and see her, as she had something very important to confide to her.

"When her former mistress stood beside her bed the dying woman said to her:

"You will no doubt be interested in learning the truth about the death of the Duke of Reichstadt, as he belonged to your family, and you will probably feel very differently with regard to certain persons when I have told you what I know.

"It was my husband who killed the son of the Empress Maria Louisa. He was dentist to the young Duke, and one day Prince Metternich sent for him and saw him without witnesses. He asked him if he could put the son of Napoleon slowly to death in the course of a year or less, by injecting poison in small doses into his gums. Death would thus appear to be the result of decline. The Prince promised to enrich him if he consented.

"My husband agreed to the horrible bargain, and carried out his part of it. This is the confession I wished to make to you. I know I am dying, and longed to relieve my conscience of a secret which has filled me with greatest horror."

"The Grand Duchess Stephanie is a very truthful woman, and I cannot doubt what she told me."

I have not begun to exhaust the anecdotes of this highly spiced book. It has one on every page.

FARNOL'S NEW BOOK

Farnol, Jeffery. The Amateur Gentleman. Illustrated by Herman Pfeiffer. Pp. 425. Boston: Little, Brown and Co. \$1.40 net.

When, two years ago, "The Broad Highway" appeared, critics declared it to be the work of a master with promise of great future achievement. The present book fulfils that promise. It possesses the same charming characteristics as the former book, but adds to them greater facility in handling material, stronger plot, and more engrossing action. There is something refreshing and big about it that is indescribable, but it is fascinatingly "different." The author has the power to make absolute impossibilities seem the most natural events.

The hero is the son of John Barty, ex-champion pugilist of England, who with a brother pugilist, Natty Bell, keeps a tavern and where they have taught the young Barnabas to box, ride, and be a "man." But Barnabas has been educated according to his mother's desire, and, when a fortune is left him, he goes to London to "become a gentleman." There is difference of opinion at the start as to the desirability of such a step. Father John finally tells his son that before he enters upon his crazy scheme he must knock his father down. Now Barnabas has been well taught, is young and determined, and accepts the challenge. He proceeds to knock John "off his pins," but "as gently as possible." Starting out with Natty Bell's watch and blessing, he then heads for London, resolute and hopeful. Experiences begin at once. He knocks down a villain, rescues and loves a maiden fair, and goes on his way with adventures crowding him close at every turn.

The underlying current is always toward that which is good even if it is the hard

Seven Years to Make These Foods

Prof. A. P. Anderson spent seven years to solve this problem of Puffed Wheat and Rice.

Every food granule in wheat and rice has a little center of moisture. The problem was to turn that moisture to steam, then explode the steam.

That meant to create inside of each granule a pressure of 175 pounds. And every kernel contains not less than 125,000,000 granules.

All these millions of granules were to be blasted to pieces without blasting the kernel too.

We seal the grains up in mammoth guns and revolve those guns for one full hour in 550 degrees of heat.

When these grains explode the coats expand. The grains come out eight times their normal size. But these crisp grains, though puffed like bubbles, remain shaped as they grew.

The result of this process is the best-cooked food that science ever knew.

Other methods break some of the granules. That's the whole object of cooking. But this process alone blasts every food granule into digestible atoms.

So these fascinating foods are also scientific. Whole grains are made wholly digestible.

These foods that millions love best are among the best foods for them. Every physician knows that.

Seven Ways to Serve

Serve in the morning with sugar and cream. Or mix with any fruit.

Noon or night-time, serve like crackers in a bowl of milk.

Use as crisps in soup.

Scatter them over a dish of ice cream, to give a nut-like blend.

Let boys take a pocketful to eat like peanuts when at play.

Let the girls make Puffed Rice candy. There's a recipe on the package.

Wherever nut meats taste good, so does Puffed Wheat or Rice. For the grains have an almond flavor, much like toasted nuts.

They are porous, crisp, thin-walled and airy. You are losing a treat if you lack them. Tell your grocer — now, before you forget it — to send you a package of each.

"Walk-Over"

The Shoe for You

THERE are just as many sizes, lengths and widths in Walk-Overs as there are different sizes of feet! This gives choice.

Walk-Overs do not sacrifice ease for style, nor style for ease. Both are considered—both are united in every Walk-Over shoe. This gives comfort.

The result is a fit for every foot and a style for every taste; made possible by a closer study of foot needs—more care, more conscience!

See this "Restoe" model at your local Walk-Over store. Snug-fitting ankle. Low heels, wide shank, a very easy walking shoe.

Walk-Over stores, or agencies, are everywhere! From \$3.50 to \$7.00—Standard prices \$4.50 and \$5.00.

way, but the situations are dramatic, thrilling, and intensely exciting. With his great wealth and big heart, Barnabas pursues his purpose. He chooses attendants from among the "under dogs," who serve him with a devotion that is well-nigh blind idolatry. The title of the book attracts especial attention to two definitions of "gentleman" that the book contains: One is given by a gay young captain: "A gentleman is a fellow who goes to a university, but doesn't have to learn anything; who goes out into the world, but doesn't have to work at anything; and who has never been blackballed at any of the clubs." The other is given by a wandering preacher: "A gentleman, young sir, is (I take it) one born with the Godlike capacity to think and feel for others, irrespective of their rank or condition. . . . One who possesses an ideal so lofty, a mind so delicate, that it lifts him above all things ignoble and base, yet strengthens his hands to raise those who are fallen—no matter how low."

On every page we find lofty ideals, racy philosophical conversations, and a final choice of the better part. The men are real, the women pure, and the villains are of the deepest dye, but the story moves on steadfastly to the final happiness of Barnabas and Cleone. Judged by the number of pages, the book is long, but it seems short to the reader, it is so convincing and satisfactory.

OTHER NOVELS OF THE SEASON

Fox, John, Jr. The Heart of the Hills. Pp. 396. New York: Charles Scribner's Sons. \$1.35.

Since the days when "Charles Egbert Craddock" made Southern mountains a background for fascinating romance, no one has written with so much appreciation and sincerity of the rugged mountain folk as John Fox, whose success in "The Trail of the Lonesome Pine" should be repeated in this new story. In it he has woven together the lives of four young people, two from the mountains and two from the aristocratic Blue Grass section. Jason Hawn and his cousin Mavis are true children of nature, imbued with the reticence of their kind, rough but straightforward and honest, accustomed to family feuds and frequent murders. With the coming into their lives of Gray and Marjorie, comes a spirit of unrest and new ideas. Political warfare and the subsequent murder of Governor Goebel are skilfully woven into the threads that influence the life of the hero. While the young people are getting their education, there are some violent heartaches caused by propinquity as well as novelty, but back of all is the story of a great-hearted, simple-minded people, striving to hold their own against a pressure of civilization they do not comprehend. Mr. Fox makes very plain the difference effected by education in any family, also the force that characterizes the real mountaineer: "It's a reserve, a reticence that all primitive people have, especially mountaineers; a sort of Indian-like stoicism, but less than the Indian's because the influences that produce it—isolation, loneliness, companionship with primitive wilds—have been a shorter while at work."

REVIEWS OF NEW BOOKS

(Continued from page 780)

child-hearted man, but his gifts of heart and mind needed the push of ambition to make him valued in the world, and ambition was the one thing he did not possess. This story is really little more than the description of a rural episode in Owen Powell's life when, after a business failure, he and his brothers plan a sort of co-operative paper business where they can turn over a new leaf—"The New-Leaf Mills." For a time the family is buoyed up by the hopes of what may happen, and we find ourselves interested in the great future and the lovely home that is to be built, but, unfortunately, husband and father so dear to them all, so kindly and cheery to friends and neighbors, is always optimistically postponing his deeds to some future day. So placid a theme hardly indicates much keen interest, but the interest is there just the same. It is due either to the skill of the narrator, or to the kindly influence that emanates from so lovable and pathetically helpless and hopeless a character.

Oppenheim, E. Phillips. The Mischief Maker. Pp. 372. Boston: Little, Brown & Company. 1913. \$1.25.

In this story dramatic romance, diplomatic intrigue, and international crises are mixed. The result is breathless interest rather than logical approbation.

Sir Julien Portel was a British M.P. and a bachelor, a so-called clever politician, but he made the mistake of indiscreetly revealing state secrets to a woman, ambitious for her husband's promotion at any cost. Resignation and exile followed. Sir Julien and a journalist friend, Kendrick, found themselves involved in some critical and dangerous plots of the German diplomat, Falkenberg, who was making every effort to break the *entente cordiale* between France and England. Most of the action takes place in the show places of Paris. Women of beauty, wealth, and brains add to the mysterious and exciting scenes, which include socialistic secret meetings, murders, and suicides. The most lovable character is Lady Anne, who refuses to sell herself for money or position, but is brave enough to wait for the love that is perfect. The villain is finally thwarted, and Sir Julien, having profited by his one great mistake, rises to greater heights and attains success, political honor, and personal happiness.

Parr, Olive Katharine. The Little Cardinal. Pp. 248. New York and Chicago: Benziger Brothers. \$1.25.

This is a touching, pathetic story of a poor little lad whose instincts of missionary charity and love for doing good to others are awakened by a suggestion in the form of a letter from the Bishop to each of the pupils of the school which Uriel attended. "The Little Cardinal" earned his title by his unique composition on "what I wish to become." His efforts to earn money for the poor attracted many appreciative and influential friends, who finally discovered that Uriel is really a "lord," the son of a young noble who left home, a victim of misunderstanding, to die in a foreign country. The establishing of the young lord in his beautiful home follows, and there are wonderful and dramatic episodes in connection with

HAYNES

America's First Car

Popular New Model at New Low Price

HAYNES Model 24—a big, roomy five-passenger touring car—brings a new standard of value into the \$1800 field.

This Haynes for \$1785 is a *rare car*.

Keep in mind the fact that here is a *known* make, *not* an unknown or a *new make*. Remember that Haynes history and Haynes success reach clear back to the *very beginning* of American motordom. Remember that in twenty years Haynes has never marketed an experiment or an over-priced car. Take note of these things and you will begin to appreciate the value of this new model.

In the whole \$1800 class we do not believe there is any other car that measures up to this new Haynes Model 24, in design, materials, equipment, the sincerity which is built into it.

Model 24 is *big enough* for a good sized family, *so strong* that it is ideal for touring, *so smart* as to please really *critical* folk, and *fast enough* for anybody. It is roomy in both front and rear compartments. It is so *quiet* we might well call it silent.

An interesting car, mechanically!

Left side drive, center control.

Electrically started and lighted, by the Leece-Neville most efficient separate unit system, the type of equipment first adopted by Haynes and now recognized as the standard type.

Four cylinders, 4¼-inch bore, 5½-inch stroke, cast in pairs

Wheel base, 118 inches.

34 x 4-inch tires.

Big brakes, 14-in. x 2½-in.

Notable regular equipment, including, besides the electric starting and lighting system, top, top cover, two large electric headlights, glass front, electric side lights flush in dash, electric tail light, electric cowl lamp, Eiseman dual magneto, speedometer, extra demountable rim, horn, coat and foot rails, tire irons, tools, etc.

Haynes model 23, six cylinders, 4¼-in. x 5½-in., cast in pairs, 130-inch wheel base, completely equipped, \$2500.

Haynes model 22, four cylinders, full 40 horsepower, 120-inch wheel base, a big powerful car, seven body styles, \$2250 to \$3500.

his former friends and his kindness to them. At the last, the Little Cardinal, through sympathy for the down-trodden and abused, loses his life in a pathetic and touching manner, but the tone and moral of the story are very uplifting.

Whitman, Stephen French. The Isle of Life. Pp. 498. New York: Charles Scribner's Sons. \$1.35.

This is a rather lurid and melodramatic but well-told romance, whose setting is first in modern Roman society, afterwards in an island where family feuds and "capable Camorristi" play thrilling parts. Sebastian Maure had rather an unsavory reputation, altho he was noted as a writer and socially was received everywhere. His attentions to Ghirlaine Bellamy were very distasteful, even tho she felt his attraction, his powerful influence over her. Refusing to be dismissed, Sebastian follows her when she attempts to join her betrothed in England. Failing to interest her, he puts into execution a plan which is as startling and unique as it is incredible. The second part of the story on "the Isle of Life" deals with the moral development of the hero. All that is good and strong in the man's character is developed in his struggle with an epidemic of cholera that breaks out on the island. The reader is really relieved when Ghirlaine becomes at first interested, afterwards fascinated, by the man's personality. She finally falls in love with Sebastian, who has "made good" in spite of his unusual methods.

De Coulevain, Pierre. American Nobility. Pp. 471. New York: E. P. Dutton & Company. 1912. \$1.35.

Pierre de Coulevain is a writer of well-proven power. She is always entertaining, but her point of view is essentially French. Her readers will do well to keep that fact in mind. This is a real novel, more definitely so than her stories have usually been. It deals with the complications and necessary adjustments of marriage—particularly that of an American heiress with a foreign nobleman. The author's meaning in the title is probably expressed by the heroine's statement to some friends in her own drawing-room: "We Americans have a title of moral nobility which can not be inherited and can only be obtained by merit. It is the title of 'Gentleman' and 'Lady,' and it is only given to those who respect themselves and others." When Annie Villars decided to go to Europe she was determined that no impoverished noble should wed her millions, but when the Marquis d'Anguilhon, aided by the cleverest of women, lays crafty siege to her heart and fortune, she yields to what she believes is true affection. Complications follow. While it is a dramatic and interesting story of readjustment and final conjugal peace, it involves some situations and theories of morals incredible as well as distasteful to our American minds. The reader's appreciation and admiration will depend on his power to assume the author's point of view.

Herrick, Robert. One Woman's Life. Pp. 406. New York: The Macmillan Company. \$1.35.

Supposedly any life would make a story if frankly and fully told. Mr. Herrick is well known for his delineation of feminine

character. He does not idealize, does not spare his subjects, but ruthlessly holds their souls up for contemplation and, consequently, is never dull. Milly Ridge is a type with which we are all familiar—the generally popular, average kind of daughter, wife, and mother. While we may acknowledge the truthfulness of the portrayal and get some edifying hints from the details of her development, sordid and otherwise, we do get rather tired of her long-drawn-out and protracted tale of selfish, grafting struggle for social supremacy. Whatever interest the book has lies in its truthfulness to nature, and its frank discussions of some common phases of ordinary life, but it is not unusual and is a little tiresome.

INTO THE HEART OF NEW GUINEA

Rawling, Capt. C. G. (F.R.G.S.). The Land of the New Guinea Pygmies. An Account of the Story of a Pioneer Journey into the Heart of New Guinea. With 48 illustrations and a map. 8vo. Pp. 366. Philadelphia: Lippincott Company. \$3.50 net.

The account and results of an expedition sent out by the British Ornithologists' Union to Dutch New Guinea, covering what was virgin soil so far as whites are concerned, make up the bulk of this portly volume. In Chapter XIX is a little monograph on the pygmies by Dr. H. S. Harrison, written from the anthropological point of view, and the first chapter gives the history of European contact with and possession of the island. The rest is cast in narrative form, following the progress of the expedition, fully illustrated by reproductions of excellent photographs, picturing the country and the natives and their manner of life. The title of the volume is very naturally taken from the Tapiro pygmies discovered by the author, yet the data he gives of the other natives of full stature of the coast and plains are almost as interesting as those which give name to his book.

The little men of Dutch New Guinea present few differences from the pygmies of other parts. They are of the brown Negrito type, the males averaging about four feet eight inches in height, well proportioned and strong, using bows much longer than themselves, living in substantial huts placed on piles and gathered in villages, possessing little material wealth, using wooden, bone, shell, and a few stone implements and securing fire by friction of wood on wood. The expedition was not able to catch sight of a female of the race, the elders firmly resisting all inducements to permit their women to be brought into camp and enforcing their absence in the bush while visitors were in a village. The men became fairly friendly, tho never off their guard or free from suspicion, but permitted photographs to be taken freely. Their habitat is far up the hills, and they are restricted to this by agreement with the Papuans, nor are the latter allowed to pass a well-understood boundary.

The narrative is interesting and straightforward, always clear, and without pretensions to fine writing. The illustrations are good, and illumine the story. Ignorance of the language prevented inquiry into many matters of interest—tribal and family relations, religion, and the like. But by the carefully honest behavior of the expedition the way has been opened

MR. TALBOT'S FINE NIGERIAN BOOK

Talbot, P. Amaury (of the Nigerian Political Service). *In the Shadow of the Bush*. 8vo. Pp. xiv-500. New York: George H. Doran Co.; London: Heinemann. \$5 net.

How well served the British Government generally is in its colonial department is well illustrated by this imposing and important volume. Its author has been district superintendent of the Oban district of Nigeria, and imparts the results of close observation and experience since 1907, while traveling "in the bush" some 1,700 miles each year. It throws light upon the comprehensiveness of the interests displayed by these government officials, and makes clear why British colonial government is usually so successful. Every page bears witness to two facts closely related: (1) the real interest of the district superintendent in the welfare of the people under his care; (2) the reciprocal affection of these people for those who take pains to understand them. Throughout the volume there are many evidences, introduced incidentally and not with apologetic purpose, of the benefits to savages of British rule, the abolition of slavery, of sacrifice of menials at the death of a chieftain, and of the cruel treatment of wives and dependents in the ordinary course of life.

The contents are comprehensive, dealing in especial chapters (thirty-one in number) with religion, clubs, and societies, jujus (fetishes), women, birth customs, ordeal, divination, witchcraft, funeral ceremonies, ghosts, life in peace and war, art, records, government, and folk-lore. But lest the list of chapters mislead, let it be said here that almost every page of the book gives matter that is of first-rate importance for the study of primitive religion and folk-lore. Apart from such collections of data as Frazer's *Golden Bough*, the reviewer has not found a volume so rich as this, and so absorbingly interesting, since the issue of Cushing's *Zuni Tales*. If one were to combine Spencer and Gillen's volumes on Australia and Crook's on India with those just mentioned and that under review, he would have the raw material for a very complete presentation of the facts on animism. Mr. Talbot, dealing with a series of tribes that were practically untouched by white civilization, has gathered native traditions, folk-lore, and mythology unmixed with European material. His diligence was one of foresight, for he saw that not long could these stories remain undiluted and unmixed. The fund of myths and tales, given to illustrate concrete acts and customs, is rich almost beyond expression. Belief in the soul-life of inanimate things, of plants, animals, even of such phenomena as the rainbow, is here registered. The way in which the juju, or fetish, works, the operations of magic and "medicine," the belief in ghosts and the after-life, all these are set forth with a skill and a verve that win completely the anthropologist and comparative religionist. One must add a remark upon a series of illustrations the list of which covers three and one-half pages. And so fine reproductions of so excellent photographs one rarely sees.

The author and his wife were diligent

Flex-a-Tile Asphalt Shingles

Make your roof more than a mere covering for your home; they make it an artistic part of the ensemble. Flex-a-Tile Shingles mean

Permanency with Economy

Flex-a-Tile really costs less than ordinary roofing and will endure as long as the building stands.

Flex-a-Tile roofs never need repairs, paint or renewal. They are water proof, fire-proof and weather-proof.

Flex-a-Tile, with the natural green or rich red of its granite or slate surfacing combine beautifully with your color scheme.

collectors too of fauna and flora, and of the latter alone over 150 new genera or species have been contributed to the British Museum. Mrs. Talbot has made over 1,600 drawings, mostly in water-color, of new and rare species. It is seldom that a book so satisfying as this comes from the press. Teachers of primitive psychology, and especially of comparative religion, might almost adopt it as a text-book, so fully is it fitted to perform this task. The publishers, too, have risen to their opportunity, and hardly a single typographical error has been noted.

THE FIRST OF THE PUBLISHERS PUTNAM

Putnam, George Haven. George Palmer Putnam, a Memoir. Together with an Account of the Earlier Years of the Publishing House Founded by Him. 8vo, pp. 476. New York: G. P. Putnam's Sons. \$2.50.

This life of the originator of a publishing house of such marked individuality as that of the Putnams is valuable and interesting, not only because it portrays a typical American, but because it sets forth a striking chapter in the history of the American book trade.

Of the Putnam stock which emigrated from Buckinghamshire, England, about 1642, George Palmer was born in Brunswick, Me., in 1814. When his father's health failed, his mother supported the family by school-keeping and by opening a boarding-house. George Palmer Putnam was apprenticed to a Boston merchant of his own kin at the age of eleven, but finally sought and obtained employment in a bookstore. This was congenial to him, for the taste for reading was his from early life to extreme age. When he was eighteen he published "Chronology, Introduction, and Index to Universal History." He next published the *Bookseller's Advertiser*—a list of new books, American and foreign, with notices of the most important—which plainly showed which way the bent of his talents was to lead him. In 1834 was founded the firm of Wiley & Putnam, which subsequently became an exclusively Putnam house. With the Harpers and Appletons, it now represents the only publishing houses of the forties which still survive.

At that time the pirating of American books by English publishers and of English books by American houses was one of the blots on the international book-trade. Mr. George Palmer Putnam made it a principle of his business never to publish a foreign book without consulting the author. In order to make arrangements on the ground, Mr. Putnam resided in London from 1841 to 1847. It was in 1841 that Mrs. Browning wrote to her husband telling him that she had received £14 "from the self-same publisher in New York who agreed last year to print my poems at his own risk and give me 10 per cent. on the profit." She was surprised and her husband assured her that Putnam could do her no harm and was performing "a good, straightforward, un-American thing." While George Putnam was hammering away at the copyright question and paying copyright for everything he published from England, an incident occurred which was both sad and unfortunate. When Frederika Bremer came to New York in the hope of making money by lecturing and selling her book-rights she found herself in difficulties from her failure

pression of power—actual power, potential power, power of the individual, power of the group, power well used, power misspent. The impression is almost stunning." Miss Kendall's conclusion as to the stability of the new Republic is based on this impression—"if they will only now bring into play all their undoubted power of organization, of resource, of moderation, they will certainly make a success of their new experiment in government."

"MANTOVANO"

Glover, T. E. Vergil. 8vo, pp. 343. New York: The Macmillan Company. \$2 net.

The poet Vergil in many ways takes the place in Latin literature which has long been occupied by Wordsworth in English poetry. He looked upon poetry as a serious profession, and wrote from a serious and patriotic conscience. His "Georgics" were written with the deliberate purpose of interesting his countrymen in agriculture, while his great poem "The Aeneid" was an enthusiastic glorification of Rome and the Julian family. Vergil had the great advantage of a long and increasingly vigorous life for his poetic genius. He survived most of his contemporaries, and continued to the end rewriting and finishing his greater works.

Many of his contemporaries died in early life, others exhausted their genius long before they died. Horace, the Epicurean poet of ease and pleasure, became well-to-do in later life, and when asked for a poem by Mæcenas, his great patron, replied that worn-out horses ought to be turned out into pasture, just as the gladiator, who had been long successful upon the public arena should be given the wooden sword, as a token of his honorable discharge from the pains and labors of his risky profession. But Vergil never gave up his art, and his constancy to the muse is well illustrated by this capital work of Mr. Glover. In these days, when classical studies are somewhat depreciated and Greek and Latin are becoming studies of the past, and no longer made the training ground for master minds, it is refreshing to pick up this book and see how wonderfully interesting and full of literary grace and inspiration the life of such a poet as Vergil may be made. Mr. Glover is a genuine Humanist, and, like Tennyson, he knows and loves the subject of this volume. He would be glad to say, in the words of the late poet-laureate of England:

"I salute thee, Mantovano. I have loved thee since my day began,
Wielder of the stateliest measure ever
molded by the lips of man."

We commend this volume to the notice and study of all who love Humanism, and wish that our boys and young men could still continue to devote five or ten years of their early life to the study of writers patronized by Pericles and Augustus.

River Parkway, Cambridge, Mass.

Cambridge's Experience with Tarvia

CAMBRIDGE, MASS., is another Tarvia town. Many of its roads have been built during the last five years with "Tarvia X" or treated with "Tarvia B." The streets of Cambridge carry an enormous automobile traffic and the problem of maintaining adequate road surfaces was a serious one.

During 1912 eight of the leading thoroughfares which had been built with "Tarvia X" received surface treatments with "Tarvia B" at a cost of 2½¢. per square yard.

The Superintendent of Streets of Cambridge reports "This treatment not only preserves the surface of the road from raveling, but renders the street dustless to a large extent. It has been found to be the most economical way to care for tar bound macadam."

In later years it will be found that additional annual treatments with "Tarvia B" will cost less each year. Westfield, N. J., for instance, found that roads which have been built with Tarvia, cost as little as 1½¢. per yard per year to maintain with "Tarvia B."

Towns which experiment with Tarvia get the habit and in time settle down to its use as a matter of consistent policy. By this means they reduce their road costs and at the same time give greater satisfaction to the citizens.

Tarvia is a special combination of refined tars especially prepared for road use. It forms a tough, plastic matrix about the stone and prevents erosion and attrition. It is not a palliative but a cure. It does not suppress dust so much as prevent the attrition which creates dust. Booklet on request.

ROYAL CHAIR CO. STURGIS, MICH., U. S. A.

For All Buildings in All Climates

The true test of a roofing is its ability to withstand unusual conditions. Illustrations show buildings on which J-M Asbestos Roofing has withstood 120° of heat without melting or drying out—40° below zero without cracking—deadly gases and chemical fumes without being injured—and a constant rain of hot sparks without burning.

The wonderful durability of this roofing is due to its all-mineral construction. There isn't a particle of perishable material in it.

J-M Asbestos Roofing

Made of that indestructible rock, Asbestos, reduced to felt and resinated layer on layer with Trinidad Lake Asphalt, the greatest known water proof. Literally a life-time roof. This roofing is still in good condition on hundreds of buildings throughout the country after more than 40 years of wear. Costs less per year of service than any other roofing—its proof test is the last cost. No roofing or gravel ever needed.

Easily applied. Shipped direct from our nearest branch if your dealer can't supply you. Write for free sample of the wonderful fire-proof ASBESTOS ROCK from which this roofing is made, and our Book No. 1000.

the Madeira and Amazon rivers, and thence out to civilization. His book is a tale of experiences and adventures, chiefly with the rapid-running Secco Indians of the Mapiri. It is brightly written, not overloaded with information (tho it would be the better for a map), and reveals the artist not only in the excellent illustrations of his own drawing, but in the vivid, colorful descriptions of the scenery and incidents. It is an interesting book and one very useful to any intending traveler to those wild parts.

Betham-Edwards, Miss. In French Africa. Pp. 318. Chicago: A. C. McClurg & Company. \$2.50.

This is a book not easy to describe, as it is a record of vacation trips in French Africa. Alternating with these memories, personal and anecdotal, are passages from former works by the same writer. The records are intimate and interesting, depicting people and customs in the different foreign cities—Algiers, Tlemcen, Oran, Saida, and others, and relating historical bits of information, describing fêtes, festivals, and various peculiarities of the cosmopolitan inhabitants, among whom are Jews, negroes, Arabs, and many other types. The author pays a glowing tribute to the charm of the country and its beautiful flowers, praising the hospitality of the inhabitants and the natural beauties of cities of unpronounceable names. Charming photographs supplement the expressive word-pictures. The reader will be tempted to follow the author's example and set sail for the shores of Barbary.

Key, Ellen. Rahel Varnhagen. Pp. 312. New York and London: G. P. Putnam's Sons. 1913. \$1.50.

It is regrettable but true that the name of Rahel Varnhagen means little to the ordinary reader. Ellen Key has here given us a portrait of "the greatest woman the Jewish race has produced; the greatest woman Germany can call her daughter." Rahel was a personality, not a writer. No great practical achievement can be credited to her. There was nothing conspicuously romantic about her life. But behind the veil that obscured her, the soul of this little Jewess was an ever-burning flame—"a real woman," as Goethe said, "with the strongest feelings I have ever seen, and the completest mastery of them." Mr. Havelock Ellis, in his introduction, says, "A woman who is herself one of the chief representatives of some of the most vital movements of the day, here brings before us, in clear and vivid outline, the woman who nearly a century earlier was the inspired pioneer of those movements." Rahel was far in advance of her time, and is typical of the great movement which seeks to evolve the completely human personality from the feminine creature of sex. The main facts of her life are feelingly described; also her salons, which made her the German Mme. de Staël, and were frequented by Humboldt, Ranke, Schleiermacher, and other notables of the Napoleonic era. Her admiration for Goethe was a vivid force in her life. Herself childless, she had a wonderful love for children and power over them. Her one passion was for truth in life and expression, which she herself sought and taught others to seek. Her influential position she attained exclusively by the power of her own personality, and exer-

Hart, Jerome A. Sardou and the Sardou Plays. Pp. 404. Philadelphia and London: J. B. Lippincott & Company. \$2.50 net.

So little has been written about Victorien Sardou that this volume of valuable information should be welcome to many who remember famous plays by this great playwright and the favorites who have appeared in them. The book is in three parts: First comes a biographical sketch of his life, his early struggles, and his eventual success; secondly, an analysis of about forty of his plays—not critical, but narrative analyses; thirdly, the Sardou plays that have been given in the United States. The great dramatist's life was not unlike those of others in its early struggles. It was long before he attained the position to which he aspired, and to which his talent destined him. Interesting facts are given about his daily life, his habits of study and work. The book is replete with anecdotes of Sardou and those whose lives were associated with his success. The great dramatist was a man of remarkable versatility, but his habits were fixt and his life regulated most methodically. The book gives his scheme of work and faithfully depicts his literary and stage achievements. It will be found invaluable for handy reference and good for contemplation.

Legge, Edward. King Edward in His True Colors. Illustrated. 8vo, pp. 416. Boston: Small, Maynard & Co. \$4 net.

Much of this biography is written from the personal experience of the author. Its ostensible object is to correct certain false impressions of the royal character given in Sir Sidney Lee's much discussed work. It deals with Edward VII. as Prince of Wales, as practically regent during his mother's later years, and as reigning sovereign when for a time he seemed "to control the destinies of Europe." It is essentially a gossip book, with a very strong dash of the "Well, well, we could and if we would." But there is nothing really new in it. It is far from being a serious and well-considered record of the reign of Queen Victoria's successor, but rather reminds us of what has been called "the mystery column" on the front page of *Reynolds's* (not *Reynold's*, as Mr. Legge writes it) *Newspaper* which is cited in the "Baccarat Case." The book is one of chaste pruriency and charitable scandal such as leaves a bad taste in the mouth, but it will afford amusement to readers who can see between the lines and recognize it as a work hung on to the peg of a conspicuous name and made to sell.

It is true that the author acknowledges Edward as a great pacificator, a diplomatist who began his education under the instruction of Napoleon III.—that astute shuffler of the political cards. The late King's place as a patron of sport and a leader in the social life of the aristocracy is emphasized, but the elusiveness and evasion and innuendo of the text make the reader feel that he is walking on slippery and uncertain ground.

His Chances.—"The doctor says if 'e lasts till morning 'e'll 'ave some 'ope, but if 'e don't, the doctor says 'e give 'im up."—*London Tattler*.

"Standard" GUARANTEED PLUMBING FIXTURES

NO matter how inexpensive you plan your new home, the selection of the equipment for your bathroom should have the most thoughtful consideration. "Standard" guaranteed fixtures, because of their assurance of sanitary safety, should be specified always. Their installation will make your bathroom a constant source of comfort and satisfaction.

Genuine "Standard" fixtures for the Home and for Schools, Office Buildings, Public Institutions, etc., are identified by the Green and Gold Label, with the exception of one brand of baths bearing the Red and Black Label, which, while of the first quality of manufacture, have a slightly thinner enameled, and thus meet the requirements of those

who demand "Standard" quality at less expense. All "Standard" fixtures, with care, will last a lifetime. And no fixture is genuine unless it bears the guarantee label. In order to avoid substitution of inferior fixtures, specify "Standard" goods in writing (not verbally) and make sure that you get them.

How can I walk in rich robes when his people and mine are in need?"

Brigid, the daughter of Duffy, was brought to the court of the King.
(Monarch of Leinster, MacEnda, whose praises the poets would sing).
"Hither, O monarch," said Duffy, "I've come with a maiden to sell;
Buy her and bind her to bondage—she's needing such discipline well!"
Ah, but 'twas wise was the King. From the maid to the chieftain he turned;
Mildness he saw in her face, in the other's 'twas anger that burned;
"This is no bondmaid, I'll swear it, O chief, but a girl of your own.
Why sells the father the flesh of his flesh and the bone of his bone?"

Brigid, the daughter of Duffy, was mute while her father replied:
"Monarch, this maid has no place as the child of a chieftain of pride.
Beggars and wretches whose wounds would the soul of a soldier affright,
Sure, 'tis on these she is wasting my substance from morning till night."
Ah, but 'twas bitter was Duffy; he spoke like a man that was vexed.
Musing, the monarch was silent; he pondered the question perplexed.
"Maiden," said he, "if 'tis true, as I've just from your father heard tell,
Might it not be, as my bondmaid, you'd waste all my substance as well?"

Brigid, the daughter of Duffy, made answer.
"O monarch," she said
"Had I the wealth from your coffers, and had I the crown from your head—
Yea, if the plentiful yield of the broad breasts of Erin were mine,
All would I give to the people of Christ who in poverty pine."
Ah, but 'twas then that the King felt the heart in his bosom unleap,
"I am not worthy," he cried, "such a maiden in bondage to keep!
Here's a king's sword for her ransom, and here's a king's word to decree
Never to other than Christ and his poor let her servitude be!"

In England, it seems, even more than in America, spring still is the most popular of all seasons with the poets. In America, the "spring poem" has been so thoroughly ridiculed by the newspapers that it has been driven almost out of existence. But the English poets are unwearied of the recurring phenomenon of summer's birth, and old as is the subject, some of them are able to say novel and beautiful things concerning it. We print below two poems relating to spring. They are alike in a certain not displeasing archaism of phrase. In the first (from the *London Nation*), that modern Elizabethan, William H. Davies, uses to advantage that "pathetic fallacy" which never lacks its advocate and expresses in the last two lines an idea of splendid magnitude. Miss Macaulay (whose poem appears in the *London Spectator*) is less subjective than Mr. Davies. Her interpretation of the season's message is by no means new, but it is exquisitely told.

Love and the Muse

BY WILLIAM H. DAVIES

My back is turned on Spring and all her flowers,
The birds no longer charm from tree to tree;
The cuckoo had his home in this green world
Ten days before his voice was heard by me.

We Have Given This Word A New Meaning

The Latin dictionary defines "fenestra" as "an opening for light—a window."

Fenestra now has a greater meaning. In the commercial sense it means not only *light*, but *all that goes with light*.

In factories it means *brighter and better working conditions—a speeding up of the working force* without striking the breaking point.

Fenestra, as we have interpreted it, sunlights all of your buildings. It makes wholesome, airy, well-lighted workrooms. It gives workers an abundance of fresh, vitalizing air through open factory windows.

Its results are contented workers, a higher average of attendance, a minimum sick list, and an elimination of dangerous and costly accidents due to poor light. For your factory buildings specify,

Fenestra
(Patented)

Solid Steel Windows

They are far more *satisfactory* and more economical than any wood construction. The patented Fenestra Joint insures *extra strength* where *greatest strength* is needed.

For fire protection, Fenestra Solid Steel Windows are unequalled. They have *repeatedly* proved their efficiency. They *protect* against flames from without; they *retard* every fire from within.

Wooden sash, with its inflammable, warping and sticking tendencies, giving *prison light*, is a thing of the past. Today Fenestra has *preference* among builders for permanence and economy.

Scores of prominent companies like the following are using Fenestra: United States Steel Corporation, Gary, Ind.; Bellair, Ohio; Duluth, Minn.; and Birmingham, Ala.; Packard Motor Car Co., Detroit, Mich.; Ford Motor Co., Detroit, Mich.; Proctor & Gamble, Ivorydale, Ohio; Pennsylvania Railroad, New York Central & Hudson River R. R., Chicago & Northwestern Ry., United States Navy, Woolson Spice Co., Toledo, Ohio; Johnson Harvester Co., Batavia, N. Y.

Why not follow their example? If you are going to build a new factory or remodel an old one, write us for reasons why Fenestra has been adopted as standard for lighting and ventilating factory buildings. We carry in stock ready for immediate shipment, over 400 standard sizes of Fenestra. Ask for catalog "V," "Fenestration" and Illumination Folder.

which explains all this and tells you how to materially reduce the high cost of living—how to have better, more nourishing food—how to keep food longer without spoiling—how to cut down on bills—how to guard against sickness—doctors' bills.

Monroe Refrigerator Co., Station 12D, Lockland, Ohio

Had I an answer from a dear one's lips,
My love of life would soon regain its power;
And suckle my sweet dreams, that tug my heart,
And whimper to be nourished every hour.

Give me that answer now, and then my Muse,
That for my sweet life's sake must never die,
Will rise like that great wave that leaps and hangs
The sea-weed on a vessel's mast-top high.

Youth's Debt

By ROSE MACAULAY

When in the pretty wood
The larches sparkle red for the year's turning,
Then, in men's moving blood,
Sweet April does set frolic fires a-burning.

But now, since the trees stand
Naked and deep asleep, yet pathless yearning
For the spring's kindling hand,
Let youth go forth, and set the woods a-burning.

Such quick fire is in youth
(And this youth knows, having no other learning),
That where it moves, in truth,
Its touch shall set the dead earth's soul a-burning.

'Tis good all debts to pay;
So let youth thank the sweet year for his turning,
And newly every day
Go forth, go forth, to set the woods a-burning.

A little less than a year ago the world was in the midst of the *Titanic* tragedy. Hundreds of poems were written praising the heroism of the survivors, lamenting the lost and describing the tremendous combat between the iceberg and the unfortunate ship. H. Rea Woodman wrote thirty-five poems, which have now been published in a little volume entitled "In Memoriam: The *Titanic* Disaster" (privately printed by the author). All of these are well written and some of them are admirable as simple and sincere expressions of powerful emotion. The one we quote describes the return of the *Mackay-Bennett* from her quest of the bodies of the drowned. The tone of sorrowful dignity is consistently sustained.

The Return of the "Mackay-Bennett"

By H. REA WOODMAN

Toll tenderly, toll tenderly,
You thousand mourning bell!
Toll tenderly across the bay,
Where slow the coffin ship makes way.

Grave-clothes fresh and scant and simple,
All humble-proud in meek array;
Lilies frail that seem to proffer
Solace in their most lovely way;
(Toll tenderly, toll tenderly!)
Girded for her honored duty,
Sadly waits the seaside city;
In her hands, her funeral labors,
And her heart broken with pity.

Fall slenderly, fall slenderly,
You thousand mourning flags!
Fall slenderly against the sky,
While slow the dead are carried by.

Gently, lingeringly lowered
Deeply into the steadfast ground,
While the pleasant April weather
With healing seems to film the sound;
(Fall slenderly, fall slenderly!)
Down the tolling streets of sorrow,
Down avenues alined with prayer,
Tempest-bent, shapeless, seaworn,
The driftwood dead are borne with care.

PERSONAL GLIMPSES

A STORY OF THE GREAT STORM

THE hurricane which swept over some of the Western and Middle Western States on March 23, killing more than two hundred people, injuring probably twice as many more, destroying many million dollars' worth of property, and leaving thousands of people homeless, was too large for anybody to attempt to describe in full even in a dozen newspaper articles, but some of the fragmentary stories told by eye-witnesses suffice to convey a fairly good impression of what happened. One of those who saw the storm in action was W. P. Comnar, a traveling salesman, and his story was told upon his arrival in Chicago on the day following. We find it in a dispatch to the New York World:

I never want to witness another thing in this world so fraught with horror. I boarded the train at Lincoln, Neb., and traveled in the heart of the cyclone for miles and watched its deathlike hand creep about the towns we passed and crush them in a twinkling. I helped to carry in the human beings who, bruised, crushed, and hysterical, we stooped to pick up and take to Omaha for medical attention.

I had stepped out on the back platform for a breath of air. It was about five o'clock, maybe a little before, and I noticed a peculiar light in the sky. If you have ever read South Sea Island stories you will know that an uncanny, yellow glare seems to precede a hurricane. Well, there was that light in the sky when I noticed it first. But there was something else that seemed far more terrible to me at the moment.

I don't know that I can describe it, except to say that at first thought some one behind me had whispered. It was a whisper—but a whisper of voices we are not supposed to hear in this world. It was sibilant, strange, ethereal, and it sounded like the peculiar sucking-hiss that one hears when a train rounds a curve. But there was a strange power back of it. I don't know why it affected me in the manner it did. But, somehow, it was a forecast—a threat of frightful things to come.

All the time the sound grew and I noticed that the queer cloud in the sky was growing larger. It was black, and cone-shaped, with the small end toward the earth. Then I knew what was going

Nailing joints of Beaver Board to new walls

Beaver Board walls and ceilings in the home of Mr. Weller, Richmond, Nashville, Tennessee

Quicker Construction—Better Results

BEAVER BOARD Walls and Ceilings can be built in much less time than is needed for lath, plaster and wall-paper. You can get into your new home just that much quicker and there is no mess of lime-dust, plaster, bits of lath and torn paper to clean up.

If you wish to remodel an old room, Beaver Board affords the quickest, easiest way, as it can be nailed right over the old plaster. The room is re-occupied in short order, and the walls and ceilings are far more beautiful and durable than before.

A Beauty That Is Permanent

Beaver Board Walls and Ceilings never crack. They are put up in panels, giving opportunity for expansion and contraction without disturbing the wall. These panels are perfectly suitable for painting in beautiful color schemes—eliminating the disadvantages of wall-paper.

They make a better room in space and under its canopy. They are used in every type of home or commercial building, residence or commercial. They have in all its great advantages over lath and plaster.

Beaver Board is sold by builders, carpenters, hardware and paint dealers and druggists. Ask for most all average requirements. Forward sample and free.

Genuine BEAVER BOARD is patented and has its registered trade mark on the back of each panel and sample. It has also a light cream color all the way through, that comes only by the use of sanitary, durable, FIRE-RESISTANT, tough on setting, fresh, grade-made and color before drying.

FREE BOOK. "Beaver Board and Its Uses." Handsomely illustrated with stories of actual installation, most helpful suggestions. Send for it.

In answer to your demand our engineers have built a "More Mileage" Tire

Perfect 3-Point Rim Contact

Our Engineers have built up and torn down thousands of experimental tires to give you a road-resisting More Mileage Tire—a tire in which each thread of fabric and every ounce of rubber would be combined to give you the greatest strength and resistance—and the result is Perfect 3-Point Rim Contact.

Diamond {No Pinch} Tires made of Vitalized Rubber

Our Chemists discovered how to get a flint-like rubber that retains all the young, lusty vigor of the pure gum, with no loss of elasticity—Vitalized Rubber.

Add to these advantages the No-Pinch Safety Flap for inner tube protection, and, if you wish, the new famous Diamond Safety (Squeezee) Tread, and you have the ideal More Mileage Tire you have demanded.

So this time buy Diamond Vitalized Rubber Tires—you can get them to fit your rims at any of the

Correct section of Diamond Safety Tread Tire

If You are in the Market for a RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at \$10,000, down to genuine old violins at \$50 and \$100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

LYON & BEALY, 23-45 E. Adams St., Chicago
The world's largest violin house. Dealers in all famous
musical instruments.

The garbage-man can't batter Witt's!

YOU know how a few weeks of hanging on the hard pavement battles and splits the ordinary ash or garbage can—makes it entirely unfit for use. Such treatment can't hurt

Witt's Can and Pail

because their deep corrugations make them 29 times stronger than plain steel cans. Witt's are heavily galvanized, too, and will resist rust indefinitely. Yet they cost but little more than the ordinary kind—last twice as long.

There's much more to Witt's than meets the eye. If you want Witt's, write us and we will see that you are supplied.

Look for the
Yellow Label

to happen. I was fascinated. A moment before there had been light, clear and white, with just a gentle wind to ruffle the few clouds in the sky. Now all was changed.

The gentle whistle had grown to a roar and strange mutterings filled the air. Then, all of a sudden, I saw that the high cloud was enveloping everything. For a moment my heart stopt and my breath seemed to be drawn from me as if by a powerful bellows. My face was peppered with flying gravel—there was a terrific roar, a shuddering of the earth, and the cyclone had crossed our trail not fifty feet behind us.

For a moment I could not catch my breath. My face was stinging with the sand and gravel that had been hurled against me. I went inside the car.

The wind crossed the track and swept on in a northeasterly direction, as near as I could tell. By that time we were near Ralston, Neb., which is within twenty-five or thirty miles of Omaha. Far up the track I could see the lights of the town. For one moment I wanted to hide from the sight, but curiosity dominated me and I returned to the platform. There was one man there, William Coon, of Lincoln, and we were soon joined by other passengers.

Not a man of us said a word. Fascinated, we watched that little group of houses where human beings were waiting unknowingly for the hand of Providence to strike them. I felt like crying out a warning to them, but the vacuum following the storm stole my breath again and my reason finally got the better of my impulse.

One shattering crash, a whirlpool of flying wood, shingles, and with a roar of triumph that was nothing short of demoniacal, the storm swept on. We looked again. From the chaos of swirling boards and debris there emerged now and then a housetop—whole buildings went rolling along the ground as if impelled by some force within them. Box-cars on sidings, hurled through the night, split open with sickening crashes and ejected their merchandise. One of these cars, a car minus the usual trucks, was flung through the air to land in an open field. There followed a sickening sight, for with an unearthly screech the sides of the car fell apart and a number of men, railroad section hands, fell out. Some of them moved. Some were whole and some were torn to shreds.

The engineer stopt the train and we rushed over to the village. There was hardly a house standing in the way it was built. Everywhere, in every stage of life and death, were men, women, and children. Faces into which color would never come again stared up at us. One man was rammed halfway through the side of a frame building. He was muttering when we reached him, but soon died. So stricken with the horror of the thing were the sufferers that they could do nothing for each other or for themselves. We gathered the living together, the whole and broken, and placed them on the train.

It was a path of disaster that we followed from then on into Omaha. Groans and shrieks and pleadings filled the coaches. Every woman on the train worked as fast as she could to render help to the crushed and fear-stricken survivors. At the next town whole factories collapsed and their walls fell in as if some giant were playing dominoes with them.

We could hear the screams of the injured and dying workmen and their families as their houses fell about them. We stopt

here and picked up many of the injured. I don't know whether or not we got them all.

But we were to get a real heart-sickness when we reached Omaha. A lurid glare was in the sky. We could hear huge walls sighing into chaotic heaps of bricks. I would hate to have to remember for the rest of my life the horrible details of that night in Omaha.

I saw one man's head split open with a brick. One little girl—but I'd rather not tell that. There were many more of a similar character.

Omaha was burning. Hotels, hospitals, and homes were crowded. Every man was mad and every woman hysterical. It was a night straight out from Hades, and I never want another one like it. I am trying to forget it.

THE "GOLDEN RULERS" OF TOLEDO

WHEN Brand Whitlock was trying to get a start in the law in Toledo he had occasion to prosecute a poor German for neglecting his family. The Humane Society was looking after the affair, and it employed Whitlock to see that justice was done. The defendant was sent to the workhouse for nine months, and shortly after he was locked up his wife secured a divorce and married the principal witness who had testified in her behalf. The misdemeanor prosecution was regarded as a triumph by the Humane Society. But afterward Whitlock discovered that the poor German's fate had been involved in the eternal triangle. The man had tried to make himself understood when he was on the witness-stand, but had failed, and Whitlock now knew what the defendant had tried to explain. The result was that Whitlock decided never to prosecute another case. And when his resolution became known, nearly everybody criticized him on the grounds that his attitude would militate against the safeguards of society. But he had one strong sympathizer, and an important one—"Golden Rule" Jones. Whitlock, who tells about the incident in his reminiscences, running serially in *The American Magazine*, says that up to that time he had known Jones only as the eccentric mayor of the city, and nearly every one whom he had met since his advent into Toledo had spoken of Jones only to say something disparaging of him. The ministers and the newspapers were against Jones, and the most charitable thing Whitlock heard said about him in private was that he was crazy. Of what followed the novelist-mayor writes:

One day, suddenly, as I was working on a story in my office, in he stepped with a startling, abrupt manner, wheeled a chair up to my desk, and sat down. He was a big Welshman with a sandy complexion and great hands that had worked hard in their time, and he had an eye that looked right into the center of your skull. He

Residence of Mr. W. C. Calkins, Jr., at Flushing, Long Island. Frederick Squires, New York, Architect. A twelve room house exposed on three sides, with many casement windows, yet comfortably and economically heated with a Pierce-Spence Hot Water Boiler.

All houses present different heating problems—some difficult. But no house is beyond the heating possibilities of

Pierce Boilers and Radiators

There is a size and type of Pierce Boiler built to meet every heating condition—boilers for steam and boilers for hot water. Among them is one that will bring to your house—the one you have or the one you intend to build—all the heat you need in any weather.

Any competent steam-fitter can select just the boiler for you from the Pierce line. See him. But first send for, and read our free Primer on Heat. It reduces the heating question to its simplest terms and will enable you to talk with him intelligently.

This is the Pierce-Spence, a round Hot Water Boiler, with outside water ports and new triangular bar grate.

This free Heat Primer tells in simple language all about all kinds of heat. Send for it.

Paint Without Oil

Remarkable Discovery That Cuts
Down the Cost of Paint
Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 97 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information, showing you how you can save a good many dollars. Write to-day.

Cut Your Coal Bill THE UNDERFEED DOES IT

What did you pay for coal last winter? Figure it up—then divide the amount by two or even three—that will give the cost for next winter—provided you put in an Underfeed—either Warm Air Furnace or Steam or Hot Water Boiler. And the difference saved will soon pay for the Underfeed. Get our free book. It will tell you how.

The Underfeed way of burning coal insures FOUR big savings:

1. Cheaper grades of hard or soft coal—slack, pea or buckwheat sizes—are pumped into the fire-pot from below, burn perfectly and yield more clean, even heat than highest priced coal.

2. Smoke and gases (valued heat units) wasted up chimneys of other heaters, must pass through the fire, are consumed and make more heat.

3. In the Underfeed the fire glow plays upon heat-responsive, clean metal, instead of upon soot-coated surfaces which retard heat in other heaters.

4. Instead of being blanketed under fresh coal, live coals are always on top close to heating surfaces, resulting in even Underfeed temperature.

The Underfeed is the ONE heater built on scientific principles that through years of constant use, has fulfilled every claim.

Mr. A. C. Brefeld, Trenton, Ill., writes: "Last winter, coldest in 25 years, Underfeed took care of 10 rooms for us for \$22 worth of slack. Fire never out from Oct. 15 to March 15."

Dr. W. A. Dougherty, Massillon, O., writes: "My Underfeed Boiler—with 11 radiators—is doing all you claim for it. Is certainly a money saver. Cost me only \$14 for slack last winter."

Write for FREE Book, giving full information of this practical, money-saving heating system. Heating plans and estimates of cost—free.

wore, and all the time he was in the room continued to wear, a large cream-colored slouch hat, and he had on the flowing cravat which for some inexplicable reason artists and reformers all wear; their affinity being due, no doubt, to the fact that the reformer must be an artist of a sort, else he could not dream his dreams. I was relieved, however, to find that Jones wore his hair clipped short, and there was still about him that practical air of the very practical business man he had been before he became mayor. He had been such a practical business man that he was worth half a million, a fairly good fortune for our town; but he had not been in office very long before all the business men were down on him, and saying that what the town needed was a business man for mayor, a statement that was destined to ring in my ears for a good many years. They disliked him of course because he would not do just what they told him to—that being the meaning and purpose of a business man for mayor—but insisted that there were certain other people in the city who were entitled to some of his service and consideration—namely, the working people and the poor. The politicians and the preachers objected to him on the same grounds; the unpardonable sin being to express in any but a purely ideal and sentimental form sympathy for the workers or the poor. It seemed to be particularly exasperating that he was doing all this in the name of the Golden Rule, which was for the Sunday-school; and they even went so far as to bring to town another Sam Jones, the Reverend Sam Jones, to conduct a "revival" and to defeat the Honorable Sam Jones. The Reverend Sam Jones had big meetings, and said many clever things, and many true ones, the truest among them being his epigram, "I am for the Golden Rule myself, up to a certain point, and then I want to take the shotgun and the club." I think that expression marked the difference between him and our Sam Jones, in whose philosophy there was no place at all for the shotgun or the club. The preachers were complaining that Mayor Jones was not using shotguns, or at least clubs, on the "bad" people in the town; I suppose that since their own persuasions had in a measure failed, they felt that the mayor might with such instruments have made the "bad" people look as if they had been converted anyway.

It was when he was undergoing such criticism as this that he came to me me, to ask me to speak at Golden Rule Park. This was a bit of green grass next to his factory; he had dedicated it to the people's use, and there under a large willow-tree, on Sunday afternoons, he used to speak to hundreds. There was a little piano which two men could carry, and with that on the platform to play the accompaniments the people used to sing songs that Jones had written—some of them of real beauty, and breathing the spirit of poetry, if they were not always quite in its form. In the winter these meetings were held in Golden Rule Hall, a large room that served very well as an auditorium, in his factory hard by. On the walls of Golden Rule Hall was the original tin sign he had hung up in his factory as the only rule to be known there. "Therefore whatsoever things ye would that men should do to you, do ye even so to them." In the course of time every reformer, every radical, in the country had spoken in that hall or under that willow-

It will be yours for good. Write today and get your pleasure in free trial. Don't miss this opportunity. Dept. 51, JOHNSON & ANDERSON, Hastings, Mich.

tree, and the whole place developed an atmosphere that was immensely impressive. The hall had the pictures of many of them on its walls, and some good paintings besides; and in connection with the settlement which Jones established across the street the whole institution came to be, as a reporter wrote one day in his newspaper, the center of intelligence in Toledo.

Well, then, on that morning when first he called, Jones said to me:

"I want you to come out and speak."

"On what subject?" I asked.

"There's only one subject," he said,—"life." And his face was radiant with a really beautiful smile, just tinged with his keen humor. I began to say that I would prepare something, but he would not let me finish my sentence.

"Prepare!" he exclaimed. "Why prepare? Just speak what's in your heart."

He was always like that. Once, a good while after, in one of his campaigns, he called me on the telephone one evening just at dinner-time, and said:

"I want you to go to Ironville and speak to-night."

I was tired, and, as I dislike to confess, a little reluctant,—I had always to battle so for a little time to write,—so that I hesitated, asked questions, told him, as usual, that I had no speech prepared.

"But you know it is written," he said, "that 'in that hour it shall be given you what ye shall say.'"

I could assure him that the prophecy had somewhat failed in my case, and that what was given me to say was not always worth listening to when it was said; and then I inquired:

"What kind of crowd will be there?"

"Oh, a good crowd!" he said.

"But what kind of people?"

"What kind of people?" he asked in a tone of great and genuine surprise. "What kind of people? Why, there's only one kind of people—just people, just folk."

I went, of course, and I went as well to Golden Rule Park and to Golden Rule Hall, and there was never such a school for public speaking as that crowded park afforded, with street-cars grinding and scraping by one side of it and children laughing at their play on the swings and poles which Jones had put there for them; or else standing below the speaker and looking curiously up into his face, and filling him with the fear of treading any moment on their fingers which made a little border all along the front of the platform. And for a year or so after his death I spoke there every Sunday; we were trying so hard to keep his great work alive.

But it was their interest in the poor, the outcast, the disowned, that drew Whitlock and Jones together—that and the fact that the two were gradually assuming the same attitude. The writer goes on:

He was full of Tolstoy at that time, and we could talk of the great Russian, and I could introduce him to the other great Russians. He was then a little past fifty, and had just made the astounding discovery that there was such a thing as literature in the world; he had been so busy working all his life that he had never had time to read, and the whole world of letters burst upon his vision all suddenly, and the glorious prospect fairly intoxicated him, so that he stood like stout Cortez, tho not so silent, upon a peak in Darien.

He was reading Mazzini also, and Emer-

For All Screening Purposes

It is the Best and
Most Economical

THE seasons of a life time may come and go but the Pompeian Bronze Screen Cloth with which your window and door screens are filled will show no deterioration.

Barring fire or accident screens filled with this material of sterling worth are completely efficient. No painting ever necessary as the bare Pompeian bronze wires cannot rust or corrode. No paint clogged meshes to retard ventilation.

POMPEIAN BRONZE SCREEN CLOTH

LASTS AS LONG AS YOUR HOUSE

Though exposed to salt laden mists at the seashore, to the acid charged smoke of the city or ammonia fumes encountered in barns and stables Pompeian Bronze Screen Cloth resists their corrosive effects indefinitely.

Get the genuine. It is easily identified by the Removable Red String woven into the Selvage.

son, who express his philosophy fully, or as fully as one man can express anything for another, and it was not long before Jones discovered an unusual facility for expressing himself, both with his voice and with his pen. The letters he wrote to the men in his shops—putting them in their pay-envelops—are models of simplicity and sincerity, which show a genuine culture and have that beauty which is the despair of conscious art. He had just learned of Oscar Wilde's "Ballad of Reading Gaol," and he committed it to memory, or got it into his memory somehow, so that he would recite stanzas of it to any one. He read Burns, too, with avidity, and I can see him now standing on the platform in one of his meetings, snapping his fingers as he recited:

A fig for those by law protected!
Liberty's a glorious feast!

But it was Walt Whitman whom he loved most, and his copy of "Leaves of Grass" was underscored in heavy lines with a red pencil until nearly every striking passage in the whole work had become a rubric. When anything struck him, he would have to come and tell me of it; sometimes he would not wait, but would call me up on the telephone and read it to me. I remember that occasion when his voice, over the wire, said:

"Listen to this [and he read]:

"The snag-tooth'd hostler with red hair, redeeming sins past and to come,
Selling all he possesses, travelling on foot to see lawyers for his brother and sit by him while he is tried for forgery."

Then he laughed, and his chuckle died away on the wire. That express him; that was exactly what he would have done for a brother, exactly what he did do for many a brother, since he regarded all men as his brothers, and treated them as such if they would let him. He was always going down to the city prisons, or to the work-houses, and talking to the poor devils there,

An Ironing Convenience Every Housewife Needs

Whether you do your own ironing or have help to do it the **Simplex Ironer** will save your time, clothes, labor and money. The professional laundry dress can double her earnings. No more ironing drudgery, no tired arms and feet, no lame back, no unpleasant heat. Lounge near to your fireside.

American Ironing Machine Co.
504, 168 N. Michigan Blvd., Chicago, Ill.

quite as if he were one of them, which indeed he felt he was, and as all of us are, if we only knew it. And he was working all the time to get them out of prison, and finally he and I entered into a little contract by which he paid the expenses incident to their trials—the fees for stenographers and that sort of thing—if I would look after their cases. Hard as the work was, and sad as it was, and grievously as my law partners complained of the time it took, and of its probable effect on business (since no one wished to be known as a criminal lawyer!), it did pay in the satisfaction there was in doing a little to comfort and console—and, what was so much more, to compel in one city, at least, a discussion of the grounds and the purpose of our institutions. For instance, if some poor girl were arrested, and a jury trial were demanded for her, and her case were given all the care and attention it would have received had she been some wealthy person, the police, when they found they could not convict, were apt to be a little more careful of the liberties of individuals; they began to have a little regard for human rights and for human life.

CASTRO'S STORY OF HIS ELLIS ISLAND EXPERIENCE

GENERAL CIPRIANO CASTRO, sometimes referred to as the ex-dictator of Venezuela, left for Europe the other day with about as bad an opinion of the United States Government, or at least of the Taft Administration, as anybody ever held. Being held for several weeks at Ellis Island by the immigration authorities did not set well with him, and just before bidding Uncle Sam farewell he put his complaint into rather vigorous language for the New York Herald. Whether altogether true or not, his story has plenty of color of the darker sort. We read:

"Since the day I was kidnaped from the *Tauraine* I have been made the object of a ridiculous farce and have been vilely treated. I did not at that time protest as strongly as I might have against the imprisonment because I thought I was serving an ideal, one which would be of service to humanity and would redound to the credit of the American people. I did not think of myself.

"I was actually buried alive as if I were a great criminal. If this is the inheritance which the great Washington left, the American people ought to weep bitter tears or give up imperialism. Unless the imperialistic Government of the United States gives a satisfactory reason for such iniquitous conduct it stands convicted of being a tyrant and having forgotten the past glories of America.

"I was insulted treacherously. They even descended to crime. I refer to that terrible night of December 31. After a very bad voyage of ten days I was thrown into a dirty, small room, and at six o'clock in the evening I threw myself on the bed and tried to sleep. Vain illusion! At a quarter-past six somebody knocked on the door. I got up and opened it. In walked a man of about twenty-seven or twenty-eight years. He approached me with such

Yes, all our Stationery is on CONSTRUCTION BOND

So say the purchasing agents of hundreds of the biggest concerns everywhere. Shrewd buyers—they hold their jobs by knowing the right price for good quality. Can you afford to ignore their judgment?

Construction Bond is the paper for you because it produces important looking, substantial feeling business stationery at a price which interests large users. It is not cheap paper. Its quality is impressive. The low price is secured by an economical method of distribution.

Construction Bond is sold only in large quantities direct to the most responsible printers and lithographers in the 160 principal cities of the United States. It carries no jobber's profit, none of the heavy expense of handling small lots. Its price is as close to the actual cost of production as modern methods can make it. The benefit is yours only when you secure your business stationery on Construction Bond. There are firms near you ready to supply such stationery. Their names and our collection of 25 specimen letterheads showing the nine colors and four finishes of Construction Bond will be sent free if you ask us on your business stationery.

W. E. Weiss & Co., 1012 South Michigan Avenue, Chicago, Ill.

Impressive Stationery at a Usable Price

Here is an ideal investment for savings or idle funds—

Michell's Grass Seeds

**750,000 lbs
FOR 1913
DEMAND**

For average lawns, shaded spots, terraces, golf courses, parks—there is one best mixture of grass seeds for each purpose. If you follow the Michell Catalog, you can make no mistake. On the White House Grounds at Washington, and at all recent National and International Expositions, Michell's Grass Seeds have proven their superiority.

\$1.00 brings to your door, prepaid, our Introductory Package (10 lbs.) of Michell's Evergreen Lawn Seed—enough for the average lawn—including our Special Bulletin, "How to Make a Lawn." Budget, \$4.00 (not prepaid).

Write for Michell's 1913 Catalog—lists all that is best in seeds, plants, bulbs, insecticides, etc.

EXPERT LAWN ADVICE, FREE.

HENRY F. MICHELL CO., 519 Market St., Philadelphia

A Rare Flower

The striking beauty of the New Hybrid African Daisy (only lately introduced by us) with its petals of many delicate hues and rich color combinations and its center of deep black, adds distinctive individuality and charm to any garden. It is an exceptionally hardy flower requiring no skill or attention to grow—any soil, any climate will do. The plant grows in graceful profusion to a height of from 12 to 25 inches.

A trial packet of seeds will be mailed you for 10c. In coin or stamps.

Thorburn's Seeds

"The Most Reliable Seeds"

It always pays to plant reliable seeds—and Thorburn's Seeds have stood the test of time. They are justly named "Beads of a Century."

Send ten cents NOW for the packet of Daisy Seeds with which will be mailed you our Spring catalog as well as a handsome color reproduction of a group of the Dahlias.

Wilder-Strong Implement Co. Box 16, Monroe, Mich.

a menacing air that I did not know what to think. As I do not understand English I did not know what he was saying, but it appeared to me that he was looking for the keys to my baggage, altho it had already been examined by the Custom House officers. I, by signs, tried to make him understand this.

Finally, the General says, he understood the magnitude of this aggression. They were trying to provoke him into committing a crime, and he took the only step which could save his life. To proceed:

"The man was walking around the room like a wild bull. I, without showing my uneasiness in any way, turned my back on him and lay down again on the dirty bed which they had placed for me. The man suddenly took off his overcoat, threw it on the floor, took off his coat, and finally took off his gloves. Then he looked at me as if he was going to strike me. I preserved a stoical attitude, still lying on the bed. Who was this man? Where did he come from at such an hour? What had he to do with my baggage which had been examined time and again by the Custom House officers? How did this man get past the official who was guarding my door? All these questions will have to be answered in court proceedings.

"The man seeing my stoical attitude, put on his coat and overcoat and went out. He forgot to take his gloves with him. So I picked them up and gave them to the guardian at the door, so that he would have no reason for coming back and bothering me.

"Fifteen minutes later another knock came at the door, and a young man smaller than the other came in. He repeated the actions of his predecessor, without, however, taking off his coat. He also spoke in English, which of course I did not understand. At seven o'clock two other men and a woman came in and repeated the performance of the others. They all spoke at the same time. They were all gesticulating wildly, and finally they picked up my baggage and left the room. I locked the door and said to myself, Let it be what God wishes.

"I could not sleep all that night. What a terrible experience! The next morning when I opened the door I saw my baggage in the hall outside. The tragic blow which they had prepared with unequalled cynicism more like highwaymen than government officials did not succeed.

"I have kept silence until to-day because I understood that in that way alone could I save myself, being in the clutches of the 'Black Hand,' which was directing the attack upon me. In view of the grave nature of the attempt any indiscretion on my part would have meant certain death.

"I hope the American people will appreciate these facts, which are nothing but the truth, and I hope that the judicial authorities will immediately order an investigation of them. While the American Government is responsible for these insults, the real responsibility lies with the asphalt companies of Venezuela, who have never failed to work harm for Venezuela and for me, especially because I defended the interests which as President of Venezuela had been evaded to me, spending large sums of money to organize these Matos revolution, in which I conquered those enemies of my country after two years of war."

As I stealthily cocked the gun, I was ready to drop, but the enemy apparently didn't hear the click. The instant I got the weapon up I thrust it forward, fired five shots into the mass of coils before me, and as I ducked, grabbed the mesquite.

When the smoke lifted I saw the rattler had been knocked some feet away. It was the most venomous-looking reptile I ever saw.

Over in New York they go snake hunting. But you don't catch me hunting them, and I don't care particularly for their coming around and looking me up.

THE SPICE OF LIFE

Colored Epigram.—A colored philosopher is reported to have said, "Life, my brethren, am mos'ly made up of prayin' for rain, and then wishin' it would el'ar off."—*Presbyterian*.

A Makeshift.—"Look here, Mose; I thought you were going to be baptized into the Baptist Church?"

"Yass, sah, I was. But I's hein' sprinkled into de 'Piscopal till de summer comes."—*Life*.

Wisdom.—"Every man ought to save up enough to buy himself a good big farm," said the thrifty citizen.

"Yes," replied Farmer Cornsmeal; "and then do something else with the money."—*Washington Star*.

Wise.—"Did the doctor diagnose your case?"

"Yes."

"How long did it take?"

"Not long. I wore my shabbiest suit."—*Birmingham Age-Herald*.

Altruistic.—MRS. FLATTERBY—"So you are on the visiting committee of your social workers' society. I should think you'd find it dreadfully irksome making all those slum calls."

MRS. HUNTER-FADDE—"I'm willing to make the sacrifice for a good cause. Every visiting day I send my maid around with my cards."—*Judge*.

Tact.—The president of a small college was visiting the little town that had been his former home and had been asked to address an audience of his former neighbors. In order to assure them that his career had not caused him to put on airs, he began his address thus:

"My dear friends—I won't call you ladies and gentlemen—I know you too well to say that."—*Ladies' Home Journal*.

Subtraction.—The teacher was hearing the youthful class in mathematics.

"No," she said, "in order to subtract, things have to be in the same denomination. For instance, we couldn't take three pears from four peaches, nor eight horses from ten cats. Do you understand?"

There was assent from the majority of pupils. One little boy in the rear raised a timid hand.

"Well, Bobby, what is it?" asked teacher.

"Please, teacher," said Bobby, "couldn't you take three quarts of milk from two cows?"—*New York Evening Post*.

Never mind what the old home was BUILT of—you can PUT A CYPRESS SLEEPING PORCH ON IT

and by this use of "The Wood Eternal" enhance your property value by a touch of modern art, and guarantee the health and add to the joys of your family by adopting this vital doctrine of modern hygiene, without injury to the sentiment of the old place and at a cost you'd hardly notice. We have six special designs. Yours on request, FREE.

The Great Roosevelt Dam in the Salt River Valley, Arizona is watering a farm for you

Not a big farm, perhaps, but an orchard home of ten or twenty, or even forty, acres, if you feel equal to the undertaking. And this is superlatively good land, deep, durable, rich and easily worked, the kind that allows the owner to ride in big automobiles and have pianos in the parlor.

The soil is prolific. Every acre, intelligently handled, will produce from four to ten times the average returns of the best land in the corn belt, and the local market takes everything raised at profitable prices.

You who look to the West for a home can do yourself no greater benefit than to investigate the money-making opportunity offered by this wonderful valley, with its twelve months' growing season.

It is located in the center of the most highly mineralized country on earth. Miners must be fed—hence good prices for all produce.

Fruit ripens early, beating other sections by from twenty to sixty days, and brings "top prices." Thousands of cattle and sheep fatten on alfalfa grown here, and they, too, "top the market."

Land watered by this great dam may be had at about \$130 an acre on good terms. The tremendous electrical power which is being developed is expected to pay the entire expense of maintenance.

If you want to locate on unsurpassed soil, in a perfect climate, with abundant water, splendid living conditions, and a market that will take all you can raise, write to me to-day for a copy of our new folder, "Arizona and the Salt River Valley."

"DON'T SHOUT"

THE MORLEY CO., Dept. 772, Perry Bldg., Phila.

Easy Marks.—Some men haven't any more caution, when they happen to get a little money, than to show it to the family. —*New York Press.*

From Habit.—"Why did she want to set her husband's will aside?"

"Merely because it was her husband's, and she had got in the habit of setting it aside." —*Houston Post.*

Accidental.—PROFESSOR—"Can you tell the class the name of the belt north of the equator?"

"16—" Can't, sir."

PROFESSOR—"Correct." —*Yale Record.*

Used to It.—OFFICER—"Now, you git out o' here, young lady, or you'll land in the workhouse!"

STRIKER—"I ain't afraid of the workhouse—I've been in a workhouse ever since I started to work!" —*The Masses.*

Not Hurt Socially.—"I wouldn't associate with him. I understand he's served a term in prison."

"That's true, but it was for an offense involving a million dollars or more; nothin' really disgraceful, you know." —*Detroit Free Press.*

Indiscretion.—"The Parvenus are furious at that society reporter for saying 'there wasn't a jarring note' in their last affair."

"I suppose the poor wretch didn't know they made their money in preserves." —*Town Topics.*

Outdone.—Says an exchange: "This sentence contains the entire alphabet: 'Pack my box with five dozen liquor jugs.' Thirty-two letters. Can you beat it?"

Beat it? Easily! Our sentence is: "Look, here's pi: czamqeybwngvjudftx." Only twenty-eight letters. —*Boston Transcript.*

A Director.—"What is a political leader?"

"Well," replied Senator Sorghum, "sometimes he is very much like the orchestra leader, the man who provides the gesticulation and general excitement while somebody else is doing the real work." —*Washington Star.*

Ever Thus.—This is worth passing around.

Some one has dug up the following from the *Chicago Inter Ocean* of December 31, 1862:

"George M. Pullman, of the firm of Pullman & Moore, house raisers, is experimenting with what he calls 'a palace sleeping-car.' The 'wise ones' predict it will be a failure." —*Cleveland Plain Dealer.*

An Emergency.—When a certain darky of Mobile, Ala., announced his engagement to the dusky one of his choice, the congratulations that were showered upon him included a note of wonder.

"Joe," said one of these friends, "I shore is surprized! We-all never thought you'd speak up. It's going on two years sence you begun to fool around Miss Violet."

"Dat's true," said Joe; "but de fact is, old man, I didn't lose my job until last night." —*Judge.*

This bunch of artificial VIOLETS

by Parcel Post \$1.00

Send us a dollar and we will send you 12 dozen artificial violets, each with 12 petals, and 12 supporting leaves, stems wrapped in tissue, and finished with silk cord and tassels. Excellent for decoration, and very stylish. Best direct from the makers and save one-third. Mail us a dollar today. Money back if you want it.

THE VELVOR ARTIFICIAL FLOWER CO.

62 State Street Rochester, N. Y.

Prevented—Stopped

MOTHERSILL'S, after thorough tests, is now officially adopted by practically all the Great Lakes and New York Steamship Companies running south, and many Transatlantic lines.

Four years ago Mr. Mothersill gave a personal demonstration of his remedy on the English Channel, Irish Sea, and the Baltic, and received unqualified endorsement from leading papers and such people as Bishop Taylor Smith, Lord Northcliffe, and hosts of doctors, bankers and professional men. Letters from persons of international renown—people we all know—together with much valuable information are contained in an attractive booklet, which will be sent free upon receipt of your name and address.

Mothersill's is guaranteed not to contain cocaine, morphine, opium, chloral, or any other products. 50 cent box is sufficient for twenty-four hours. \$1.00 box for a Transatlantic voyage. Your druggist keeps Mothersill's or will obtain it for you from his wholesaler. If you have any trouble getting the genuine, send direct to the Mothersill Remedy Co., 407 Scherer Bldg., Detroit, Mich. Also at 10 St. Bride St., London; Montreal, New York, Paris, Milan, Hamburg.

Particular.—"What you need," said the doctor, "is an operation."

"Very well," replied the patient. "Which operation are you cleverest at?"—*Detroit Free Press.*

Prescience.—Boy—"Quick! Bring a ambulance down to Paradise Court."

P. C.—"What for?"

Boy—"Mrs. Murphy's caught another lily sneakin' 'er broom."—*London Sketch.*

A Thought Here.—Grand—"It costs more to live than it did a hundred years ago."

Dimus—"All the same, I wouldn't like to be one of those who lived then."—*Boston Transcript.*

Bright, or Lazy.—"Johnny, I don't believe you've studied your geography."

"No, mum; I heard pa say the map of the world was changing every day an' I thought I'd wait a few years, till things got settled."—*Brooklyn Life.*

Appropriate.—THE SON (proudly)—"I am going to have my college diploma framed. Where would you advise me to hang it?"

THE FATHER (grimly)—"Put it up alongside that beautifully embossed mining-stock certificate of mine."—*Puck.*

Must Chew the Pill.—"Is there any way you can suggest, by which we can cure her of her infatuation for him?"

"Oh, yes, that's easy. Just—"

"I mean without letting her marry him?"

"Not that I know of."—*Houston Post.*

Sometimes Less.—"Twice did Smith refuse to take a drink on conscientious grounds."

"Then the third time he should have felt justified in taking one."

"Why so?"

"Because three scruples make one dram."—*Baltimore American.*

Wise Saw Refuted.—MRS. VASTLEE RICH (sentimentally)—"Longfellow says, 'We can not buy with gold the old associations.'"

VASTLEE RICH—"Don't you believe it, my dear. When I was in politics I found that cash would purchase the ancientest organization on earth."—*Life.*

WARNING

Fraudulent persons, representing themselves as agents of publishers of popular periodicals are at work in various parts of the country. We urge our readers to pay no money for periodical subscriptions to strangers, even tho they show printed matter purporting to authorize them to represent publishers, especially when cut rates and bonuses are offered. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect your community is being swindled, notify the Chief of Police and the publishers, and arrange another interview at which the proper action can be taken.

Office Man's

Work-Bench

WHY shouldn't you have a work-bench exactly suited to your special needs—for keeping all your business tools in easy reach?

Carpenters and machinists have work-benches.

Surely your work is important as theirs—and your time as valuable.

Parts made for the B-M "Desk with Brains" can be put together in *over 5000 different combinations.*

Write for chart of these parts.

Select those best adapted to your needs and have them put together in a work-bench for your own use.

Then—should your needs change, you could change parts of your desk to suit, without needing to change the whole desk.

Get away from set old-fashioned desk ideas. Have a real work-bench. Write today for the "Desk with Brains" Chart. With it, we'll send you our new book "Filing Systems." Address your letter—

CURRENT EVENTS

Foreign

March 21.—Jean Barthou is chosen to succeed Aristide Briand as Premier of France, and his Cabinet is announced.

Manuel Bonilla, President of Honduras, dies, and is succeeded by Vice-President Francisco Bertrand.

March 22.—The Powers present peace plans to the Balkan Allies.

A Berlin dispatch says President Wilson's refusal to participate directly in the Chinese Loan is warmly commended in Germany.

March 23.—Sir Ernest Shackleton announces that he will head a scientific expedition to the Antarctic.

Austria demands that Montenegro suspend operations at Scutari.

The Congress of the Labor party at Brussels ratifies the order for a general strike, to be called April 14 by the Belgian National Committee on Universal Suffrage.

March 26.—Adrianople falls into the hands of the Bulgars after the Turks set fire to all magazines and large buildings.

Winston Churchill, First Lord of the Admiralty, in a speech in the House of Commons, urges Great Britain and Germany to suspend naval construction for a year.

Domestic

WASHINGTON

March 21.—William F. McCombs declines the post of Ambassador to France.

March 22.—Willis L. Moore resigns as Chief of the Weather Bureau.

March 23.—The Bureau of Insular Affairs reports that the foreign trade, import and export of the Philippines increased approximately 10 per cent. in 1912.

March 24.—The position of Chief Forester in the Department of Agriculture is put under the civil service, and Henry S. Graves will continue in office.

The Supreme Court holds that Federal courts may take jurisdiction over suits of alleged infringement on patents when patented articles are sold below a price fixed by the patent holder.

March 25.—An official copy of the Underwood Tariff Bill, which will be introduced at the extra session, is delivered to the President.

March 26.—The Government sends aid to the flood-stricken districts of the Middle West.

GENERAL

March 21.—More than 200 people are killed, twice as many are injured, and property aggregating many millions is destroyed by windstorms which sweep over parts of the West, the Middle West, and the South.

The appeal of "Mother" Jones and her fellow prisoners to abolish the Military Commission authorized by the Governor to try them, is dismissed by the West Virginia Supreme Court.

Frank S. Black, ex-Governor of New York, dies at his home in Troy.

March 23.—Governor Oddie, of Nebraska, signs a bill forbidding finish prize-fights.

March 25.—Floods in Ohio and Indiana cause great loss of life.

March 26.—The flood situation is made worse by cold weather.

James Hamilton Lewis, Democrat, is elected United States Senator from Illinois for a full term, and Lawrence Y. Sherman, Republican, is chosen to fill the vacancy caused by the unseating of William Lorimer.

Flood warnings are sent out along the lower Mississippi River.

Setting Her Right.—ANGRY PURCHASER
—"Didn't you tell me that you had got as many as twelve eggs in one day from those eight hens you sold me?"

POULTRY RAISER—"Yes, ma'am."

ANGRY PURCHASER—"Then why is it that I'm never able to get more than two eggs from them, and sometimes not so many in one day?"

POULTRY RAISER—"I don't know, ma'am, unless it's because you look for eggs too often. Now, if you look for them only once a week I feel quite positive that you will get just as many eggs in one day as I did."—*Exchange.*

WICKES

Oak Refrigerator

Opal Glass
Lined

\$31⁷⁵

Direct from factory to user

Here's lifetime refrigerator service and satisfaction for only \$31.75! A genuine "WICKES" made of solid Oak and lined throughout with beautiful sanitary OPAL GLASS, 7/16 in. thick, "Better than marble."

A splendid example of the fine cabinet work for which The Brunswick-Balke-Collender Company has been famous for over half a century. At the factory price, this model costs you no more than an ordinary "enameled" refrigerator.

The Factory, German-Silver Trimmed, seven size Refrigerator, specially priced.

We also make Refrigerators from \$10 upwards.

Investigate the Wonders of Double Refrigeration

The Wickes Model 230, at the factory price of \$31.75, is not only a great bargain, but the Wickes principle, which gives double refrigeration from every pound of ice, means amazing economy in ice bills. Investigation will prove it. Money refunded if the WICKES is not exactly as represented.

Richly Illustrated Catalog Free

Shows all sizes and styles of Wickes Refrigerators, explains Wickes principle of double refrigeration, quotes low factory-to-user prices. Write now to Dept. 2-L.

FUNK & WAGNALLS COMPANY

FOR GIRLS NEW YORK

For Baby, Nothing Matches Holstein Cows' Milk

Nurse your baby if you can—by all means. But if you can't, give it Holstein Cows' Milk—the nearest substitute for breast milk.

Babies fed on fresh clean Holstein milk have the best food medical science has been able to discover and they show it. They have firm flesh and keen appetites; they enjoy regular and peaceful sleep. Indigestion never interferes with their steady growth.

Holstein Cows' Milk corresponds closely to breast milk; for many babies, no modification is necessary.

The moderate amount of fat it contains is in the form of minute globules that are easily and rapidly digested. In ordinary milk, the fat is not only excessive in quantity, but the globules containing it are more than twice the size of those in Holstein milk.

Try Holstein Cows' Milk for baby. It will give your baby the vitality needed for the steady growth it should be making.

Send for our free booklet, "The Story of Holstein Milk"

HOLSTEIN - FRIESIAN ASSOCIATION

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"D. A. G., Jersey City, N. J.—Usage seems to sanction 'Every one' nowadays must aim for a high standard of efficiency if they would reap the fruits of worldly success," and, since grammatical accuracy should be taught by example rather than by precept, for language came first and grammar after, and has been after it ever since, examples of such usage are cited below. The pronoun used to refer to *every one* is often in the plural, this being due to the absence in the language of a singular pronoun of common gender, thus causing the violation of grammatical concord sanctioned by usage.

Dr. Samuel Johnson, the eminent English lexicographer and grammarian, in his translation of Lobo's "Voyages" (p. 89), wrote: "Every one sacrifices a cow or more, according to their different degrees of wealth or devotion." This work was published in 1735. Sir George Dasent, the eminent lawyer, who in 1845 was assistant editor of *The Times*, London, and in 1853 was professor of English literature and modern history at King's College, London, and examiner of civil service commissioners, wrote in his "Annals of an Eventful Life" (vol. I, ch. I), published in 1870: "Every one had made up their minds that I was to be one thing, and I came out another."

W. H. Mallock, the nephew of James Anthony Froude, and himself author of several important works on philosophy and sociology, as well as contributor to the *British Contemporary Review* and *The Nineteenth Century*, wrote in his "The New Republic; or, Culture, Faith, and Philosophy" (p. 94): "Every one then looked about them silently, in suspense and expectation." And well they might, for when the language lacks the means of expression the genius of language supplies it.

"R. W. S., Pine Bluff, Ark.—"One of the newest encyclopedias, in speaking of the power of the camel to withstand the changing climate, uses the phrase, 'the awful climate'; and in speaking of the animal's social habits it says, 'It is unhappy when alone.' Are the adjectives *awful* and *unhappy* properly used in describing climatic conditions and qualities of animals?"

Only that which inspires awe is awful. There may be climatic conditions in certain parts of the world, as the Sahara Desert, for instance, which are correctly so described, as the occurrence of the *khamisin* in Egypt, the *sirocco* in Algiers, the *harmattan* of the western coast of Africa. These are all hot, dry winds, that raise great clouds of sand and dust, and are very exhausting to all exposed to them.

Certain lower animals suffer from lack of companionship and from some other ill conditions in a way that seems very similar to a higher animal's suffering. Therefore, *unhappy* may well describe the state of distress of such an animal when deprived of companionship.

"C. N. D., Baltimore, Md.—"Please give me your opinion as to the correctness of the following sentence: 'I can not but believe our case will be strengthened by the addition of the evidence,' etc. If it be correct to say 'can not but,' would it not be just as effective and make the sentence just as strong to eliminate those words altogether?"

"I can but believe that" and "I can not but believe that" are stronger statements than "I believe that." The former mean "No other view is possible—I am driven to the belief that." "I can but believe" means "I can only believe"; "I can not but believe" means "I can not do anything else than believe"—which is, indeed, the same thing, but is more vigorously expressed.

"F. S. B., Guilford College, N. C.—"Why is Turkey called 'The Sick Man of Europe,' and who is the author of the phrase?"

It was the Emperor Nicholas I. of Russia who, in 1844, called the Ottoman Empire "The Sick Man of Europe." The Turkish empire had been declining in power for several centuries.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 44-60 E. 23d St., New York

VOL. XLVI., No. 15

NEW YORK, APRIL 12, 1913

WHOLE NUMBER 1199

TOPICS OF THE DAY

MR. MORGAN

THE NOTE OF POWER runs through all the estimates of the overshadowing personality whose career ended on the last day of March in the city of the Caesars. Ranging from the eulogies of friends who saw in him the noblest attributes of heart and brain to the colder estimates of critics who regard him as the head and front of tendencies inimical to the real welfare of the country, the appraisals generally concede that his death has removed from the world its most powerful private citizen. As one paper remarks, "kings have died, conquerors have fallen, with less world concern than attended the dying of John Pierpont Morgan, a private citizen of one of the youngest nations." It is no sufficient measure of his power, the same paper asserts, to say that he gathered to himself a fortune running into hundreds of millions, "or that he held direct, almost personal, control over banking and other institutions with assets of \$2,000,000,000, or even that he exercised domination in the government of the country's credits, some \$23,000,000,000 in all." In seeking a clue to his career most commentators discover two outstanding factors—his own unlimited faith in the industrial and commercial possibilities of the United States, and the unquestioning confidence of the investing public in his business judgment and integrity. Moreover, he thought in millions where other men thought in thousands, with the result, according to the *Philadelphia North American*, that his power expanded until "it overshadowed in some aspects the authority of the Government itself." "In his greater operations he was indeed a partner of the Government—and the senior partner, for the force which he wielded dictated administration policies and guided the course of legislation," adds the *Philadelphia paper*. "For a parallel case of dominant individuality we can search modern history in vain," declares the *Baltimore News*.

Whatever may be the verdict of posterity, the press comments leave no doubt as to the profound impression the great financier made on the minds of his contemporaries. "Without question," asserts the *Philadelphia Inquirer*, "J. Pierpont Morgan was the greatest constructive financier in the world throughout its history"; and we find the same estimate, differently phrased, in the *Buffalo Evening News*. "His was the broadest vision, the bravest heart, and the most unbreakable

word in the whole scene of American constructive effort," affirms the *New York Evening Mail*. "All things considered," says the *Brooklyn Eagle*, "he might have been regarded as the most powerful, useful, and influential private citizen in the world." As viewed by the *Toledo Blade*, he was "a born master of men, more nearly a king than the world has produced since kingliness was a matter of military prowess." Even more superlative are the tributes of his friends and business associates. Thus Joseph H. Choate describes him as "the greatest power for good in America," and ascribes his influence over his fellow men to "his superb and never-failing honesty." To Elbert H. Gary, head of the United States Steel Corporation, he was "the greatest man of the age." According to this witness, "he had the courage of a lion and the heart of a woman," and "I never knew him to do or say anything that seemed dishonest or mean." Moreover, says Mr. Gary, Mr. Morgan's first inquiry in regard to any new venture in times of financial stress related to the effect it might have on the welfare of the people at large. Mr. Stotesbury, one of Mr. Morgan's partners, indorses unqualifiedly the estimate that ranks him as "the greatest financier the world has ever produced."

"I have known him to do things which accomplished great good and which were possibly not known by others than myself," testifies Cardinal Farley, while the Rt. Rev. David H. Greer, Protestant Episcopal Bishop of New York, pays tribute to his unpretentiousness, his "absolute sincerity and integrity," and his "affectionate nature." "He was the possessor of a big brain, a sincere heart, and honesty was the one secret of his success." Altho "he had none of the arts of popularity, and little aptitude for self-expression," remarks Senator Root, "his was the most commanding and controlling figure in this country." "He acquired a great fortune," adds the New York Senator, "by making the prosperity of many and by taking his fair and just share of that prosperity." To John Claflin, President of the New York Chamber of Commerce, he was "the man who above any other combined and embodied the American ideals of enterprise and integrity and courage."

Even Mr. Untermeyer, who cross-examined him so searchingly before the Pujo Investigating Committee, bears witness as follows to the purity of Mr. Morgan's motives:

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. Instructions for **RENEWAL**, **DISCONTINUANCE**, or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not

assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter

"Whatever may be one's views of the perils to our financial and economic system of the concentration of the control of credit, the fact remains and is generally recognized that Mr. Morgan was animated by high purpose and that he never knowingly abused his almost incredible power."

Turning from these personal tributes to the efforts of the editors to characterize and explain his genius, we encounter

JOHN PIERPONT MORGAN.

some interesting generalizations. "In the two words character and concentration, the concentration of resources, we find the key to his career," says the *New York Times*. Simplicity and directness of thought, according to *The Sun*, were the salient characteristics of the man. "His grasp of detail, his mastery of essential principles, his perception of the practical, and his instantaneous rejection of the irrelevant, were the properties of a mind of the first class," says *The Wall Street Journal*; and in the *Chicago Record-Herald* we read: "Mr. Morgan's genius was entirely constructive. He exemplified and served the dominant

tendencies of the age—combination, efficiency, and economy." To the *New York World* he represents "a link between the financial barbarism of the Gould-Fisk régime and the financial democracy which is the next great promise of the Republic." Says this paper:

"A halt has already come in the business of exploitation. Even Mr. Morgan's power was rapidly waning as government came more and more to assert its sovereignty over plutocracy. The system which he built up with so much skill and effort is doomed to crumble. The Morgan empire is one that the satraps can not govern, and will not be permitted to govern. In time little will remain except the feeling of bewilderment that a self-ruling people should ever have allowed one man to wield so much power for good or evil over their prosperity and general welfare, however much ability and strength and genius that man possessed."

The idea that Mr. Morgan's death marks the passing of an era of centralization in industry, commerce, and finance has wide currency both in this country and abroad. Thus a London dispatch quotes "some of our keenest financial observers" as predicting that "the work of decentralization in America which has already begun will from now on make more rapid progress." This view is shared in this country by such papers as the *Buffalo Times*, *Washington Post*, *New York Times*, *American*, *Journal of Commerce*, *Wall Street Journal*, and *Iron Age*, *Newark Evening News*, *Milwaukee Leader*, and *Chicago News and Tribune*. Especially interesting on this point is the comment of *The Iron Age*, which is considered by some as a Morgan publication:

"Mr. Morgan's career ends with the assertion of a pronounced sentiment against the individual acquirement of such power as he used so splendidly for the material upbuilding of the country. It marks a transition."

And in *The Wall Street Journal* we read:

"There will not be another leader exactly like Mr. Morgan. This by no means implies that there will not be men of his ability, if not of his genius, but the opportunity has been closed to some extent to a career of construction like his by the growth of the country and by recent changes in the financial mechanism. The concentration of monetary power which was the subject of attack by the Pujo Committee was almost entirely personal. There must be concentration in future, but its character is likely to change from a personal to an official or semi-official authority, which everybody will recognize. The very fact that it is formal and recognized will be an advantage, because it will bring the leadership in the market out into the open, where it will be subject to fewer jealousies and misconceptions."

"In order to attain this result, however, there must be changes in our banking organization which will accord at once with the necessity for concentration and with the demand for its exercise in accordance with sound and established rules."

"Mr. Morgan liked to be called a patriot," notes the *Philadelphia Public Ledger*, "and his associates unite in accrediting to him an immense service to all the people of this country when he unflinchingly stood against the wastefulness of corporate competition." When Harvard conferred upon him the degree of LL.D., in 1910, President Lowell characterized him as a "public-spirited citizen, . . . who by his skill, his wisdom, and his courage has twice in times of stress repelled a national danger and financial panic." Commenting on these services, the *Cleveland Plain Dealer* says:

"Of the late financier's usefulness in two national crises no doubt can be entertained. If, while saving the credit of the Government in 1895 and protecting industry from further panic twelve years later, the house of Morgan made large profits, that is a matter which reflects in no way upon the service performed. Those two performances furnish the measure of Mr. Morgan as a directing genius of finance."

"He unquestionably hastened the development of industry in the United States," says the *Socialist Milwaukee Leader*, because "he brought production, transportation, and finance

into direct relation." The *Philadelphia Inquirer* finds further evidence of his patriotism in the fact that "he never sold short any securities whatever," but "followed his father's advice always to be a bull on the prosperity of the country."

His critics, however, are not at a loss in presenting the other side of the case. "There were two fatal defects in his philosophy," affirms the *Philadelphia North American*:

"He believed that prosperity is created by the dead weight and brute force of masses of money, whereas it is created by the efficiency of the average dollar. And he measured prosperity by bank balances and sales of securities instead of by the welfare of the average citizen."

When public opinion has had time to form a more judicial estimate of his career, suggests the *New York Evening Post*, it may conclude that his faith in the future of the country led him too far in his campaign of exploitation. We read:

"History has produced great financiers who, in an era of public excitement and speculative excesses, devoted all their individual powers to the work of restraining and controlling the dangerous tendencies of the day. It will always remain a matter of deeply interesting discussion just how events financial would have moved in 1901 and 1902, had Mr. Morgan pursued a policy of that nature.

"That he did not pursue such a policy, but elected rather to lead in the memorable campaign of exploitation; that he apparently saw no limit to the possibility of new machinery of hundred-million and thousand-million amalgamations—these well-known facts will be the crux of later historical controversy over the great career now ended. It is perhaps too early, even now, to pass judgment finally on that episode. Some questions involved in it, such as the period's utter misconception of the capacity of credit and capital to endure the prodigious strain imposed, have been settled by subsequent events. Others, such as economic necessity or value of the enormous industrial combinations, are still matters of active controversy, to which only future economic history can give a conclusive answer."

The *Brooklyn Citizen* is concerned lest the newspaper laudation of Mr. Morgan's career should tend to establish in the public mind a wrong ideal of greatness:

"That a poet, or philosopher, or painter, or musician may conceivably do a great deal more for the development of civilization than the owner of any possible amount of money is practically ignored. In good round terms Mr. Morgan is spoken of in most of the newspapers before us as the greatest American of our time. What is quite certain is that the young man who rises from the perusal of the accounts given of Mr. Morgan's achievements without feeling that he was the consummate product of our era, must be peculiar. . . .

"The suggestion we make is that granted, as it ought to be, that the deceased was all that is claimed for him, it is a misuse of language to characterize him as one of the great men, if not the greatest man, of the age. Much more carefully qualified language must be employed if the standards of excellence inherited by the American people are not to be set aside. . . .

"It is important to have the public mind protected from the delusion that it is by the activities of men like Mr. Morgan, and not by the virtues of the industrious millions, that the country prospers."

To the *Milwaukee Journal* Mr. Morgan represents "not a civilized but a barbaric force":

"One looks in vain over the work of this master genius to discover any recognition of humanity, any effort to do good to the soul of man, any yielding of the stern principle that one power must dominate, at the cost of blood and lives and tears."

The Socialist *New York Call* is skeptical concerning the towering image of Mr. Morgan reflected in the press, discounting it as "an allegory—almost a myth." According to this view, he was merely the symbol of the "vast social productive forces."

Some of the most notable movements or events in which Mr. Morgan figured are summarized as follows by *The Wall Street Journal*:

"The development of foreign-exchange business and closer financial relations with the European bankers.

"The enlistment of foreign capital on a large scale in American enterprises.

"The protection of the United States Government from repudiation by the bond sales in the second Cleveland Administration.

"The elaboration of a policy of cooperation among bankers and railroad men for the purpose of preventing cutthroat competition, and securing safety to investors.

"The reorganization of railroads going into the hands of re-

HIS SUCCESSOR, J. P. MORGAN, JR.

ceiver as a result of destructive competition, and the management of the reorganized railroads by voting trust, interlocking control, and gentlemen's agreements designed to secure cooperation.

"The work of procuring stability in the conduct of industrial companies by the organization of the United States Steel Corporation and other large industrial concerns.

"The contest with Harriman and the final adjustment of the difficulties which produced the Northern Pacific panic.

"The assistance rendered in the panic of 1907.

"The concentration of banking power by the combination of banks and trust companies on a larger scale than ever before attempted in this country."

THE WORK OF FLOOD AND FIRE.

Across the top of the page is a general view of the submerged city, and below is seen, at the left, a group of Dayton residences literally torn to pieces by the flood, and at the right a business building destroyed by the fire which followed. The center picture (copyrighted by the International News Service) shows people clambering to safety along the telegraph wires. The loss by flood and fire in Dayton may reach \$80,000,000.

LESSONS IN THE RISING OF THE WATERS

THE DOWNWARD REVISION of the list of those drowned in the floods in the Middle West does not keep the editors of that region from agreeing with *The Ohio Farmer* (Cleveland) that the "combination of circumstances—wind, flood, fire, cold"—was the "worst general calamity that has ever visited this section of the United States." The total number of deaths in Ohio is now not thought likely to exceed 500, and in Indiana 50. Estimates of the complete damage to property run from \$100,000,000 to \$350,000,000. And while the people of the Mississippi Valley are forewarned, and may thus escape the fate of those trapped in the rising of the Scioto and the Miami, much loss of property is expected as the flood waters sweep southward to the Gulf. Railway men are said to believe that the damage to steam-railroad property alone in Ohio and Indiana may reach \$50,000,000. The steel trade, according to trade authorities, was "hit to about 30 per cent. of its productive capacity." Then there are streets, bridges, sewers, and lighting and power systems put out of commission, to say nothing of the destruction of factories, stores, homes, and farms.

It is a "staggering lesson," declares the *Chicago Tribune*, and it should reach Congress "with force enough to move it to action." This very week the National Drainage Congress meets in St. Louis, and these calamities, as President Wilson remarks,

"make clearer than ever before the imperative and immediate necessity for a comprehensive and systematic plan for drainage and flood control." "It is not enough to build reservoirs, dams, and levees," notes the *Chicago Record-Herald*; "there must be truly efficient and economical building of such works, which will conserve as well as preserve." The *St. Louis Globe-Democrat* reminds its readers that flood control has never yet been attempted on the necessary scale:

"Measures of prevention have been few and of a temporizing kind. Dams, reservoirs, and levees are often insecurely built. The expense of such structures made sure is apt to be viewed with dismay. It is true that the incidental benefits, in addition to flood control, are many and give extensive returns. The first cost of a comprehensive system has been a barrier. In many cases there are geographical complications, such as rivers that reach through more countries than one. Questions of jurisdiction must be counted in as well as the amount of money required. Flood legislation on the scale evidently necessary is practically a new proposition."

The plan set forth in the Newlands Bill was discussed in last week's issue of *THE LITERARY DIGEST*, and it is hardly necessary to repeat suggestions for flood prevention which have frequently appeared in print. Now, however, Congress is more likely to act than ever before, and Secretary of the Interior Lane believes that much can be done by the Reclamation Service of his Department. He says:

"We must adopt an adequate system for the control of runoff

EASTER WEEK IN DAYTON.

A view of Main Street showing the depth of the water (photo copyrighted by the International News Service) appears above three typical scenes following the abatement of the flood. They show militiamen guarding supplies (photo copyrighted by Underwood & Underwood), pure water being served from beer kegs, and the rescue of a family from a towering house (photo copyrighted by the International News Service).

at the headwaters of the tributaries of the Mississippi. . . . Each small river is a part of a larger river and the larger river a part of the great stream which finally carries the flood to the ocean. These streams act as giant sewers. It is necessary to deepen or straighten channels, build levees, and possibly go into the problem of forestation to deal with the problem."

Reforestation is urged in many quarters. Indeed, says the *Chicago News*, "aside from the building of levees to protect the surrounding lands from overflow, there seems to be little other recourse." But, it adds,

"One great obstacle to this in Ohio is that there is practically no waste land. Farms occupy 94 per cent. of the State's area, and over 78 per cent. of these farm lands are improved. Agriculture is likewise Indiana's main interest. Its farms cover a large part of the State's area and are extremely valuable. The low watersheds of these States are raising crops and can not be turned back into forest tracts."

Yet could we once get the rivers under control, we read elsewhere in *The News*, the work might almost pay for itself in the increase of agricultural wealth:

"Much of the land which might be cultivated with profit is submerged all or part of the time. Swamp and overflowed lands were estimated by the Federal Department of Agriculture in 1907 to amount to 77,000,000 acres, which could be drained and otherwise made fit for cultivation at an average cost of \$15 an acre. Figuring the present value of these lands at an average of \$8 an acre and their value after drainage at \$60 an

acre, the net increase in value after paying drainage costs was found to be \$2,849,000,000. . . .

"Reasons for making this fertile land available for use—chiefly the fact that the population is growing fast and that the land is needed to raise foodstuffs—add force to the movement for controlling the country's rampaging rivers.

"With a proper system of development this work would more than pay for itself in increased land values that might properly be made to meet the cost of adequate river control."

"The crime of the pork barrel," protests the *Grand Rapids Evening Press*, is responsible for the recent inundation. For, as the Michigan editor sees it:

"This Government already has spent more than \$200,000,000 in confining the Mississippi and its feeders within their boundaries.

"This money, wisely expended, spent according to a systematic and comprehensive plan, would have made life and property safe forever in the myriad cities, towns, and open country situated either on the main river or on one of its many branches or sub-branches. Because it has been foolishly, heedlessly expended we have year after year a flood situation that only China would tolerate."

An interesting suggestion made by several dailies is that the Government establish wireless stations in the interior of the country as well as along the coast. Such a system would be practically storm- and flood-proof and cities would not be completely isolated when the ordinary wire telegraph and telephone systems are broken down.

WILL THE WEBB LAW WORK?

NOW THAT the Webb Act, prohibiting the interstate shipment of intoxicating liquors for use in violation of State laws, is in force, the question is being asked, particularly by those engaged in antisaloon activities, and by those connected with the liquor trade: How will it work? The position taken by one opponent of the law, the *Dayton Journal*, that "in reality it amounts to nothing, and was never intended to amount to anything," is hardly strengthened by the experience of the Louisville correspondent of *Mida's Criterion*, a Chicago liquor-trade journal. He thinks it "fairly safe to say that no

Emphasizing the Dominant Quality.

—Evans in the *Baltimore American*.

statute was ever passed that has caused such widespread comment, speculation, and inquiry as the one in question." Travelers for Louisville firms tell him "that as soon as they present their cards to the outside houses with a view to reaching the head and doing business, they are bombarded with questions as to what is really to happen under the law." Something has already happened, it might be noted. We find both liquor-trade papers and Anti-Saloon League organs summarizing news dispatches telling of the Southern Express Company's instruction to local agents not to receive shipments for any prohibition territory in violation of the Webb Act. They also quote a recent issue of the *Kansas City Star* as follows:

"Three Kansas City railroads issued orders to-day to their freight departments not to accept shipments of liquor into prohibition States except at the shippers' risk. Two railroads put the ban on liquor shipments into Oklahoma entirely.

"The legal departments of the other four railroads that go west and south from Kansas City have notified the freight departments they are studying the new law and that instructions as to what to do will be issued as quickly as possible.

"The Missouri, Kansas & Texas and the Atchison, Topeka & Santa Fe railroads refuse to accept any shipments at all for Oklahoma. For shipments into Kansas they require the liquor dealer to certify that the order is *bona fide* and that the name of the consignee is on file in the liquor dealer's office. The name must be on the bill of lading. They also require the shipper to take all the risk and give up the right to claim damages if the liquor is seized or confiscated."

Actual seizures have been made by Oklahoma officials under the Webb Law, and South Carolina shipments have been held up. Congressman Webb, the author of the law, thinks that

some of these acts will soon furnish an opportunity for a judicial opinion upon its constitutionality. According to a Washington dispatch printed in *The New Republic* (Westerville, O.), Mr. Webb, after a talk with Attorney-General McReynolds, "understands that the Attorney-General will intervene in the first case that is brought challenging the operation of this law in any State so that when the matter is carried forward to the Supreme Court, in a test case, the Government will be fully represented." The unconstitutionality of the law is urged not only by the liquor interests and by those opposed to the measure on principle, but by such legal authorities as Senator Root and former Attorney-General Wickersham, and even by at least one Congressman who voted for the bill out of deference to the wishes of his constituents. President Taft's opposition on the same ground preceded the action of Congress in passing the Webb Bill over his veto. He explained that he considered "it to be a violation of the interstate commerce clause of the Constitution, in that it is in substance and effect a delegation by Congress to the States of the power of regulating interstate commerce in liquors which is vested exclusively in Congress."

Another objection frequently met is based upon the fact that the bill prohibits the shipment of liquor from one State into another in case (to quote the law) the "liquor is intended by any person interested therein to be received, possessed, sold, or in any manner used either in the original package or otherwise, in violation of any law of such State." That is, as one Congressman argued on the floor of the House, the inhibition "is based upon an intent existing and undisclosed in the mind of the consignee" to use the liquor unlawfully. *The National Bulletin* (Cincinnati) of the National Wholesale Liquor Dealers' Association of America gives out this information for those readers who are anxious to know what new situation has been created in the wholesale liquor business by the passage of the law:

"The law simply prohibits the shipment in interstate commerce of intoxicating liquors where such liquors are intended to be used by any one in violation of any law of any State or Territory into which such liquors are shipped.

"That is all there is to it. All other shipments are lawful. . . .

"The law provides no penalty. It can not be enforced in a Federal court nor by any Federal official.

"It simply delegates the regulation of interstate commerce in liquors to the authorities of the various States. . . .

"The goods become subject to the laws of a State into which they are shipped prior to delivery to the consignee.

"Before the Kenyon Bill became a law they did not become subject to the laws of a State until after delivery to the consignee."

The Brewers' Journal (New York) is less patient:

"The 'enforcement' of the law will, to some extent, hamper a trade which, in all but eight of the States forming this Union, is considered to be legitimate and legal; and it will compel many brewers, wholesalers, and retailers to spend thousands of dollars for lawyers' fees, costs of legal process, etc., etc.; it will drive many men engaged in the trade out of business, and all this simply because a few prohibition agitators assert that the failure of prohibition, so far, has been due to the fact that, in present conditions, intoxicants can be shipped into 'dry' territory. . . . But in spite of all this, the American brewing industry as a whole will continue to prosper, and we are firmly convinced that if there be a possibility of strictly enforcing a law prohibiting and thus preventing interstate shipments of intoxicants, not many years will pass until that law shall be revoked by Congress at the indignant command of an overwhelming majority of the American people."

Somewhat different, of course, is the antiliquor idea of what the new law "will do and what it will not do." To quote a representative editorial appearing in *The New Republic*:

"Inasmuch as no State has prohibited a man from getting liquor for his own use, it follows that the Webb Law will not interfere, and was not intended to interfere, with a man sending outside of the State for a reasonable quantity for his own use.

"But this thing of having liquor shipped by the earload or in large quantities to boot-leggers to be peddled out under protection of the Federal law, is now at an end. . . ."

"Under State search and seizure laws, the local officers can now seize instantly every shipment of liquor that comes to their town in case they have reason to believe that it is to be used for unlawful purposes, and it is up to the consignee to prove to the contrary."

Aside from the concrete results which may follow the workings of this legislation, its passage by Congress, as the *Kansas City Star* observes, "shows the drift of public sentiment." And the thoughts of many editors of religious journals are reflected in this paragraph from the *Nashville Christian Advocate*:

"The prohibition wave is truly sweeping onward. The passage of the Webb Bill has heartened the whole nation. Whether or not the bill shall be pronounced constitutional, the next movement in order should be an amendment of the Constitution guaranteeing the right of the State to protect its prohibition territory from interstate invasion of its rights."

THE PUBLISHER AS AMBASSADOR

THE APPOINTMENT of Walter Hines Page, of *The World's Work*, to succeed Whitelaw Reid, of the *New York Tribune*, as our Ambassador to Great Britain pleases most of Mr. Page's fellow editors, and perhaps thrills some of them with anticipation. A few, indeed, wonder, with the *Philadelphia Bulletin*, at the awarding of "the grand prize of the diplomatic service to a man who is comparatively unknown to the public," or fear, with the *Boston Transcript*, that he "may find the duties of his office novel to the point of perplexity." The selection of the editor of a publication "which has been most steadily eulogistic of the new President" might raise a question of taste, thinks the *Boston Herald*. And what the *Springfield Republican* calls "the pin-prick of a critic" is found in this observation of the *New York Herald*: "Disraeli made his private secretary a peer. Why should not a President make his publisher an Ambassador?" But these "pin-pricks" do not occur so often as do the satisfied declarations that "Mr. Page's life has been a training for the distinguished responsibilities" of his post, that he has all the necessary personal qualifications, and that in him the British people will see "a fair human presentment of the American Republic." His close associates, so the *Philadelphia Record* hears, speak of him as a "born diplomat," and several newspapers recall that the late O. Henry once said of Mr. Page:

"He can write a letter declining a contribution with thanks and word it so sweetly that the recipient can take the letter to a bank and borrow money on it."

Since Mr. Page is now for the first time a prominent official figure before the American public, it might be well to point out that he was born in North Carolina fifty-eight years ago, and received his education in Randolph-Macon College and Johns Hopkins University. Since then, we read in the *New York Sun*:

"He has been successively newspaper reporter, publisher, special writer, editor of *The Forum*, literary adviser of Houghton, Mifflin & Company, editor of *The Atlantic Monthly*, member of the firm of Doubleday, Page & Company, and editor of *The World's Work*. He was a member of President Roosevelt's Country Life Commission, and is now a member of the General Education Board."

Southern enthusiasm over Mr. Page's appointment and his immediate acceptance appears in the *Richmond Times-Dispatch's* assertion that "no man since James Russell Lowell has been more splendidly qualified to represent the American people at the Court of St. James's." And this journal adds that the choice "must command the profound satisfaction of the

country," since "the republic of letters is again recognized in the field of American statesmanship." This is a thought which occurs to most of the New York papers, variously stated. Yet the *New York American* contends that "Mr. Page is not a 'man of letters' in the familiar sense of that phrase." He is rather a man of affairs. And these affairs are not those of private gain, but "those of contemporaneous civilization." *The American* then explains:

"He has made great investments of time and labor in the diffusion of practical knowledge and in the promotion of a thousand workable ideas. . . ."

"We expect him to care more for actualities than for theories—to be more interested in the solid things of American civiliza-

Appointed by President Wilson.

WALTER HINES PAGE.

Editor, publisher, lifelong friend of the President, an "original Wilson man," his selection as Ambassador to Great Britain is looked upon as a "personal appointment" by a Chief Executive who prefers brains to dollars in our diplomatic service.

tion than in the subtleties of diplomacy or the visions of sentimentalists."

Pursuing a similar thought, the *New York Globe* emphasizes his exceptional familiarity with American public opinion, so that "if English statesmen want to know what the United States is thinking and feeling, they can find out from Mr. Page." These two editorial utterances are supported by this paragraph from a dispatch to the *Brooklyn Eagle*, dated from Garden City, Mr. Page's home:

"Mr. Page has for years devoted a great deal of his time to the study of conditions among the inhabitants of the various sections of the United States, and his knowledge covers a very broad scope. He has traveled extensively, studying and writing of agricultural, industrial, and educational matters, and his corps of associates on the staff of *The World's Work* have kept him constantly in touch with each new development and problem in the different States of the Union."

In view of the large expenditures which Mr. Page's predecessor made from his own pocket while Ambassador, and President Wilson's apparent reluctance to choose diplomats for their

wealth, it is interesting to note that Mr. Page is reckoned as "not a rich man." This fact pleases the *Springfield Republican* "as affording refutation of the claim that only millionaires are eligible to represent the United States abroad." Similar editorial observations are made by the *New York Journal of Commerce*, *Brooklyn Eagle* and *Citizen*, and *Philadelphia Public Ledger*, while the *New York Times* comes to the conclusion that "if Mr. Page is to set a new example for our diplomats abroad in his mode of life, avoiding entertainments which, so far from increasing respect for us as a nation, merely strengthen the mistaken foreign belief that we are all inclined to extravagance and ostentation, the country is to be congratulated on his appointment." When asked to state his position on this point, the new Ambassador is said to have replied:

"If you know me, your question is answered. The embassy will be modest, and we hope dignified."

THE PROGRESSIVE SENATE

THE POLITICAL REVOLUTION of the last few years is nowhere so evident, say several newspaper writers who have been watching things at Washington, as in the new organization of the United States Senate. First, there is a safe Democratic majority of six, giving the party complete control of the Government for the first time in eighteen years and for the second time since the Civil War. Then, the reorganization of the Senate has been accomplished in a way paralleling the overturn of "Cannonism" in the House, by the practical abolition of the seniority rule in making up committees. The results of these two changes, especially when the personnel of new leaders is considered, are such as to persuade the *Brooklyn Eagle's* (Ind. Dem.) Washington correspondent and the editors of the *Washington Times* (Prog.) and *Herald* (Ind.) that the Senate is now actually a more progressive body than the House.

The breaking of the Illinois deadlock, by the election of Col. James Hamilton Lewis (Dem.) and L. Y. Sherman (Rep.), enables the Senate to meet without a vacant chair. There are fifty-one Democratic Senators, forty-four Republicans, and one Progressive, Miles Poindexter, of Washington. This will be the party line-up for the next two years, unless death invades the chamber. And before the end of this time, notes the *New York*

Press (Prog.), the Constitutional amendment providing for the direct election of Senators will probably be in force, so that the next Senatorial elections may be by popular vote.

President Wilson's exceptional opportunity is noted by *The Press* in its Washington correspondence, for he has both Houses of Congress with him by "an overwhelming majority," while

"In only two years of President Cleveland's tenure in office did he have both branches of the national legislature in political accord with him. And for only two years did Taft have a Republican majority in both the House and Senate."

The Mr. Poindexter is the only out-and-out third-party Senator, *The Press* names as Progressives who still retain "official connection with the Republican party," Senators La Follette, Cummins, Gronna, Bristow, Clapp, Borah, Crawford, Kenyon, and Norris.

The new Senate organization is intended, as Senator Kern puts it, to make that body "Democratic not only in name, but in practical results." It has thrown off, explains the *Providence Journal* (Ind.), "the customary control of a perpetual succession based on seniority of service," and the country is "disposed to applaud," thinks the *Springfield Republican* (Ind.), which proceeds to note some of the consequences of the revolution:

"Senator Bacon, of Georgia was defeated [by Mr. Clarke, of Arkansas] in the Democratic caucus for president pro tem., which he had set his heart upon. Senator Martin, of Virginia, lost the place of leader of the Senate, which went to Senator Kern."

The seniority precedent was upheld in the choice of Furnifold M. Simmons, of North Carolina, as chairman of the Finance Committee, which will handle tariff revision. But the chairman finds himself at the head of a committee majority made up of progressives pledged to radical tariff reduction. The Committee on Banking and Currency, nearly as important in view of approaching monetary reform, is headed by Senator Owen of Oklahoma.

The Republican insurgents, "a hopeless minority," had to see their party go to wreck, notes the *Washington Times*, but—

"The Democrats are more fortunate. Their aggressive liberal element comes to the top at the very beginning of Democratic ascendancy in the upper chamber. They are started right instead of wrong, so far as that body is concerned. Everything indicates that the Senate is become the more progressive, aggressive, radical chamber. Conservatism must make its headquarters in the House."

TOPICS IN BRIEF

It is through an oversight of Providence, doubtless, that born diplomats are not also born rich.—*Washington Post*.

PITTSBURGH has jobs for 10,000 men, but the Washington office-seekers are not looking for that kind.—*Wall Street Journal*.

WE can not be too thankful that the patient simplified spellers have not yet been driven to militant methods.—*Cleveland Plain Dealer*.

ALMOST any ambitious Democrat is sufficiently non-partisan to admit that the Ambassador to Mexico should not be removed to make a place for him.—*Kansas City Journal*.

THE announcement by the Mexican government that there will be no more blood shed in Mexico City may be taken as significant evidence that the supply of Maderos is exhausted.—*Southern Lumberman* (Nashville).

THE Administration has 10,384 offices to bestow and has 131,530 applications. This fact is an effective answer to those who sneer that Americans take no interest in governmental affairs.—*Philadelphia North American*.

MR. HERBERT SAMUEL,
Postmaster-General

SIR RUFUS ISAACS,
Attorney-General

BRITISH MINISTERS ACCUSED IN THE MARCONI CASE.

One declares he never owned any Marconi shares and the other two explain that their holdings were in the American Company.

ENGLAND'S MARCONI SCANDAL

THE STOCK SPECULATIONS of British Government Ministers which compromise such leaders as Mr. Lloyd-George have caused a scandal and brought about a lawsuit in England that threatened at one time to overturn the Ministry. The fracas began when Mr. Herbert Samuel, Postmaster-General, and Sir Rufus Isaacs, Attorney-General, were accused by the Paris *Matin*, which has an office in London, of fraudulently transferring to the British Government certain stock certificates of the Marconi Wireless Company. They bought such stocks at about ten, it was alleged, and sold them to the Government at forty, or thereabouts. When the *Matin* people were charged with slander they publicly withdrew their statements and apologized; but they were sued for libel in London and their complainants were fully exonerated from criminal act or intent. The shares dealt in, it appears, were of the American Marconi Company, not the British concern, and Mr. Samuel denies that he ever had shares in either. Then the matter was taken up by Parliament and an investigating committee appointed, one of whose members has resigned, charging a plan to "whitewash" the accused. Whatever the committee's report, the affair seems likely to play a prominent part in British politics for some time to come. Among the best comments on these proceedings is probably that of *The Saturday Review* (London), which runs as follows:

"The evidence comes to this—that neither of malice nor by accident has any member of the Government had any dealings with the British Marconi Company. But Sir Rufus Isaacs has dealt heavily in shares of the American Marconi Company. Moreover, he induced his friends, Mr. Lloyd-George and the Master of Elibank, to come in.

"The British and the American companies are distinct; and it is very difficult to judge whether the fortunes of Marconi patents in England could have any influence upon the fortunes of Marconi patents in America. Sir Rufus Isaacs's deal, in fact, was speculative. He 'fluttered' in the Stock Exchange, and persuaded his friends to 'flutter.' The imprudence of this is clear; but it is not, in the light of the evidence, corrupt practise.

"Might it not be better for Ministers of the Crown to keep clear of the Stock Exchange as a source of profit? Sir Rufus Isaacs and Mr. Lloyd-George are paid high salaries, in return for which they are expected to keep themselves from even the appearance of evil. Sir Rufus seems distinctly uneasy about his deal in American Marconis—else why should he be so anxious to publish that he made nothing out of the transaction? It does not make the deal more innocent that the dealers were unsuccessful."

The London *Times* leaves the final decision of the question to the House of Commons committee which will have to pass final judgment on the transaction, which this paper concisely accounts for in the following judicial terms:

"It is a matter for sincere satisfaction to all right-minded men that Sir Rufus Isaacs and Mr. Herbert Samuel have been able to give in the witness-box the most unqualified denial of the charges inadvertently made against them by the *Matin*. Englishmen are rightly sensitive about the personal honor of public servants, and their proud conviction that, whatever may happen in the struggles of political parties, no British Minister will stoop to the abuse for private ends of the immense confidence reposed in him, is the saving salt of political life. There is nothing in the vicissitudes of party strife which can compare for a moment in importance with the maintenance full and unimpaired of the high tradition of the personal incorruptibility of British statesmen. Sir Rufus Isaacs and Mr. Samuel have both given a clear, explicit, and categorical denial of the rumor or insinuation that they, being in possession of official knowledge of the Government contract with the Marconi Wireless Telegraph Company, bought shares in that company while the price was low in order to profit by the rise which was to be expected when the effect of that contract came to be appreciated by the public. Mr. Samuel declared that he had never at any time bought or sold or possessed any share in this or any other wireless telegraph company; that he has had no interest, direct or indirect, of any kind whatsoever, in any Marconi Company; and that he has never directly or indirectly been connected with any purchase or sale of any such shares. Sir Rufus Isaacs was equally explicit and emphatic in his disclaimer as regards the English company."

"It still remains for the House of Commons Committee to

investigate the slanderous charges that have been circulated. We are of opinion that more delicacy might have been shown by the Ministers involved in the selection of their investments. But mere lack of judgment is a very different thing from the monstrous offenses that have been imputed to them."

WHERE CONSTANTINE WON HIS SPURS

THE PRELUDE to the fall of Adrianople was the capture of Janina. It was on March 6 that the Greek Army under the then Crown Prince, now King of Greece, received from Essad Pasha the surrender of the latter city, together with 32,000 Turkish troops. The irony of fate appears in the circumstance that Essad Pasha and Constantine had studied together in Germany. We find from the European

ACTUAL SURRENDER OF JANINA.

Essad Pasha's brother, Vehid Bey, second from the reader's right, surrendering the city to General Soutzo, after a Turkish rule of 500 years.

press that the success of Greek arms was received in Athens with a loyal enthusiasm expressed by the ringing of church bells and the singing of the national anthem—too soon to be exchanged, remarks the *Paris Figaro*, for the doleful strains of the "Dies Irae." The Greeks, declares this paper, have now proved that they are worthy of their brave allies at Adrianople and Scutari. We learn from the *Orient* (Constantinople) that Constantine was a genuine godsend, a providential deliverer. In the words of this paper:

"General Sapounjakis was at first in command of the Greek attacking force; but he made fatal and costly blunders in exposing his troops and launching useless attacks on the almost impregnable hill of Bizani, southeast of the city. At length, about a month ago, the Crown Prince was given command of the operations around Janina, and began a careful movement, not toward Bizani, but far to the left (west), where the fortifications were less formidable. Last Wednesday there was a spirited attack on the St. Nicholas fort, which was captured,

and its heavy siege guns turned on Bizani. This unexpected move demoralized the Turkish force, which retreated on the city itself. Nothing could withstand the ardor of the Greek attack under the Crown Prince; and early Thursday morning, the gallant Essad Pasha, yielding to the inevitable, decided to prevent useless bloodshed by surrendering unconditionally. The forces thus captured by the Greeks, including Albanian irregulars, are said to be 32,000. The consuls of Russia, France, Austria, and Rumania are said to have acted as intermediaries to bring about the surrender. A telegram from Athens places the Greek losses in capturing the city at 5,000."

The importance of this victory and its significance from many points of view may be seen from the following description of the town given in the Constantinople paper:

"Janina is a town of some 18,000 to 20,000 inhabitants, more than half of whom are Greeks, the rest being about half-and-half Moslems and Jews. It is on the edge of a small lake six miles long, and its defenses are the hills surrounding the plain in which it is located. In the time of Ali Pasha, 'the Lion of Janina,' 1788 to 1822, the city held twice its present population. It is the seat of a Greek archbishop and contains a gymnasium and other schools. There is a small Evangelical community there also. Previous to 1430 the city was successively under Greeks, Franks, Servians, and Albanians. Janina was captured by the Turks in 1431, under Murad II., and has since remained a Turkish possession."

More important still are the further results of this event, proceeds the *Orient*:

"The fall of Janina will have a profound effect on the three parties concerned. To the Turks it is a staggering blow, for they had considered the city well-nigh impregnable. Its loss makes them less eager to keep on with the war. To the Albanians it brings disappointment, as it is improbable that in the settlement of the Albanian question the town will be taken away from its captors. To the Greeks this success is a fitting climax to a campaign that has taken away all the humiliation of the war of 1897. But it means more: it is the triumph of Crown Prince Constantine as a military leader, and will do more than anything else to endear him to the hearts of his people, with whom but a few years ago he was anything but popular."

DECLINE OF OUR AGRICULTURE

THE "STAGNANCY of American agriculture" will strike many as a strange expression. We have heard so much of the wealth of the American farmer that the world has been inclined to think it the pillar of Western prosperity. We have read of the farmer's automobile, telephone, Oriental rugs, and pleasure-trips to Chicago or New York, until we have looked upon the American agriculturist as one of the most successful and prosperous members of the Republic. Yet in spite of the splendid educational work of the Department of Agriculture at Washington and in the various State governments and universities, we learn from the London *Times* correspondent at Washington that agriculture is languishing in the United States just as it began to languish more than a generation ago in Great Britain. The majority of the population in the country turn to the town for advancement, while the adventurous who wish to remain farmers, we are told, sell their acres, pack their goods, and go to Canada. The ground of this serious condition is accounted for in this way:

"The trouble is that there is no business system at all in farming. The farmer has no ambitions. If he has ambitions, they are apt to be of the 'get-rich-quick' variety. Having made his money, he is apt to retire and spend it or allow his children to spend it in the cities. Thus labor is driven, the land is exhausted and mortgaged to buy more land or luxuries, or to find the price of a trip to Europe."

One of the greatest obstacles to commercial prosperity and success in the United States, says this correspondent, is the fact that there is no cooperation among the farmers, and that most

DOGGED.

EUROPEAN POLICE HOUND—"Drop that bone!"
MONTENEGRIN PUP—"Never."
—Kladderadatsch (Berlin).

of the profit of farming is devoured by the middleman, practically through the agency of bankers. Wherever cooperation among farmers has been established, prosperity has been the result:

"Already the fruit-growers of the West have prospered hugely as cooperative sellers. In the irrigated districts of the arid zones enforced cooperation has produced marked social effects, and throughout the country there are examples of successful collective enterprises."

In its editorial comment on the statements of this correspondent *The Times* emphasizes the point that the vast farming areas in the United States are being neglected and do not contribute as they should to the national wealth:

"The American people are becoming aware that the soil, which is the greatest of their natural assets, is failing to play its proper part in the national economy, and that its development is not keeping pace with the population. That is so far from being the case that the time seems to be within measurable distance when the United States will cease to export foodstuffs and will be unable to support their own population. The vast change that has been in progress of late years is brought out in statistical form by the results of the 1910 Census, which has recently been published. The urban population has been overtaking the rural more rapidly during the last decade than in any previous one; and the two, which were in the ratio of three to seven in 1880, are now approaching equality. The rate of increase of the one was thrice that of the other in the last decade; and, whereas the urban population has never shown so large an expansion before, the rural has never undergone so little in recent decades."

American business ability is declared lacking in this department of our national life. "With all the attention paid to agricultural science and education, there ought also to be an increase in productivity." The contrary is, however, the case. The cause, this editor thinks, is "the lack of business methods" among farmers, and he continues:

"It is a piquant charge to bring against the greatest industry and the largest class of men in the land where business methods

reign supreme, and are popularly believed to be carried to a pitch of perfection unknown elsewhere. Nor is it easily reconciled with the great and growing prosperity of agriculture. The value of farm property has exactly doubled in the decade, and the valuation of crops issued by the Bureau of the Census for the year 1909 shows an increase of 83 per cent. over 1899. This is mainly due to the rise in prices. The grain crops, for instance, which are the largest item, increased in quantity by only 1.7 per cent., but in value by 80 per cent.; cotton and cottonseed, which form the next largest item, increased in quantity by 11.7 per cent. and in value by 122.5 per cent."

This "lack of business methods" is aggravated by a much more serious defect in American life, we are warned. It is the growing love of luxury and exemption from toil that is taking away the spirit, strength, and profit from our rural life, and at the very time when rising prices of foodstuffs promise wealth to the farmer, he turns to the city to join the complaining class who have to pay the fancy prices that fill the farmer's pocket. People are becoming disgusted with the life praised by Vergil when he said that the husbandman was thrice happy if only he knew it. To quote further:

"The land fails to attract, not because of its poverty or of foreign competition, but because of greater attractions elsewhere. Our correspondent points out that the best of the countryside turns to the towns, while the enterprising who wish to remain farmers betake themselves to Canada. Most of the latter are probably men from the north of Europe or their sons. Farm life is no longer good enough for Americans. Agricultural development has for many years depended mainly on immigrants, and the counter-attraction of Canada is now making a great difference. Business and the town draw the native-born, and that is a disease very difficult to cure. In Europe the 'land flight,' which is causing so much anxiety now in Germany, is different. The land is being denuded of laborers, not of farmers. All the conditions are, in fact, different, and, tho the American commission [of agriculture recently sent to Europe to investigate the practical methods in vogue there] may learn much of improved methods of production and marketing, that does not touch the heart of the problem, unless they can revive interest in agriculture and restore its status."

EUROPEAN AMBITIONS CARICATURED.

GERMAN DEFENSE OF ARMY INCREASE

THE VAST military projects of the German Chancellor and the huge expenditure involved have caused great concern in Paris and, indeed, throughout Europe. Germany itself is shocked. The \$250,000,000 demanded by the war budget is to be raised by heavy taxation on rich and poor alike, for while Michel must contribute his little pig, Germany's

GERMANY'S RICHEST MAN.

Prince von Donnersmark, worth \$63,000,000, taxed \$2,500,000 for the proposed army increase.

richest man, Prince von Donnersmark, will be pinched to the tune of \$2,500,000. The Emperor himself will be taxed nearly \$1,500,000, and Frau Krupp must pay almost \$3,000,000. The men at the head of affairs in Germany explain the increase of armament by the fact that the Balkan War has raised to life a powerful spirit of Pan Slavism, and the Slavs stand with Russia, whose strongest ally is France. It is therefore necessary for Germany, says the semi-official *Continental Correspondence* (Berlin), to be in a position to defend her eastern and western frontiers, but the measures she is taking are no "token of German hostility to France." Nevertheless, this paper says, the "repeated proofs that France is still thirsting for 'Revanche' have

THE FOOL AND HIS FOLLY.

—*Reynolds's Newspaper* (London).

absolutely compelled Germany to take the steps necessary to secure her military superiority in the case of a war breaking out." More reasons for the vast increase in Germany's war budget are thus detailed:

"The Triple Alliance has certainly gained in internal strength, but, from the military point of view, it has been weakened by Italy's occupation of Tripoli, which will compel the latter country to maintain a strong military force in this new territory for years to come, thus weakening her military strength in Europe. Austria-Hungary, on the other hand, altho as strong as ever from the military point of view, has been politically weakened, both in its home and foreign policy, by the accentuation of the Slav question. Serbia's success against Turkey has, of necessity, more or less influenced the political feelings of the Slavonic section of the Austro-Hungarian Empire; the increased importance of this Balkan state has converted it into a dangerous neighbor for Austria-Hungary. The increased power of the Slavonic states of the Balkans has rendered Austria's relations to Russia much more complicated than they formerly were. The *casus fœderis*, on which the alliance between Germany and

THE GERMAN FARMER OF THE FUTURE.

—*Dur's Elsass* (Strasbourg).

Austria-Hungary was based, has never been so near being put to the test since it was first concluded than was the case last autumn. Otherwise, the German Imperial Chancellor would not have felt himself called upon to say in the Reichstag: "If Austria-Hungary be attacked, we shall have to fight."

Even the improved Anglo-German relations, we are told; have done little to strengthen Germany. A union of the Slavs in an aggressive movement is now possible, for:

"Stirred by the victory of their kinsmen in the Balkans, the entire Slav world is seething with excitement. Should this feeling develop into a definite conviction that the Germanic races of Europe must give way before a great Pan Slavonic movement, not only Austria-Hungary, but also Germany, will be confronted by a highly dangerous situation.

"It is clear that France would have Russia on her side in the event of a conflict with Germany. Furthermore, the fact that about one-third of the population of the Hapsburg Monarchy consists of Slavs, makes it extremely difficult for Germany to reckon with certainty on the exact amount of help which she might expect to receive from Austria-Hungary in the case of a war with Russia. For all these reasons, it has become essential for the German Army to be strong enough successfully to defend its eastern frontier, and, at the same time, to be able to carry on an offensive war against France. And it is precisely with this end in view that the new Army Bill has been called into being."

SCIENCE AND INVENTION

A CURE FOR OUR FATAL RAIL FLAWS

ARE RAILWAY WRECKS due to unexplained rail-breakage to become a thing of the past? A French writer, Mr. A. Troller, describes in *La Nature* (Paris, March 8) the new Hadfield process of casting steel ingots that is to produce this happy result. Incidentally he accuses American steel-makers of criminal carelessness, and lays at their door the responsibility of most of our railroad accidents. The new process, he thinks, will mend things by making it possible to cast whole sound ingots, thus removing the temptation to save money by using unsound portions, which he asserts is now often done:

"It is a common occurrence for a piece of steel of fine appearance, after having passed through all the classic tests, to break

simply in heating the metal from above during the cooling of the ingot. When this is not done, cooling begins on all sides of the molds into which the molten steel is poured for casting, and the impurities collect at the center, where there is also formed an empty space that renders the ingot unusable. It is customary, therefore, to saw off the upper part of the ingot before subjecting it to the final processes of manufacture. Sometimes this amputation does not remove all the faults, and the result may be a wrecked train. We read on:

"Sir Robert Hadfield has set out to solve the following problem: To assure the progressive solidification of the ingot by horizontal layers from the bottom upward, keeping the upper parts in the liquid state as long as possible, so as to enable occluded gases to escape and impurities to collect at the top. The perfected ingot-mold shown in the illustrations has given him the desired solution.

"It bears a movable upper piece, furnished with a lining of refractory sand. The metal having been poured rapidly and the proper amount of aluminum having been added, there is placed on the upper surface of the molten metal a thin layer of cinders topped with a layer of coal. Compressed air is blown on the coal, which burns brightly, and thus keeps the head of the ingot at a good heat during a sufficient time.

"The results obtained are remarkable. They appear plainly in the illustration, where we see four ingots. The first is steel cast in the ordinary way and very full of blow-holes; the second is an ingot of the same steel, cast in the same way, but with .036 per cent. of aluminum, fewer blow-holes, but a very plain hole where the cooling metal closed together; the third is again an ingot of the same steel with .09 of aluminum. The blow-holes have completely disappeared, but the central space

SUPERIORITY OF THE NEW PROCESS.
1-2-3, old-steel ingots; 4, Hadfield ingot.

suddenly in normal service. An autopsy is held; then only is the fault discovered; hidden in the depths of the metal, it has escaped all exterior investigation. No matter what it is called, most often chance alone may with justice be held responsible for its presence. The piece has been made according to all the rules; thousands of others formed in the same conditions and subjected to the same tests have behaved irreproachably. . . . This type of accident . . . has caused many catastrophes—the rail that breaks as the train passes over it, the automobile axle that fails at high speed, the motor that suddenly goes back on the aviator. So the inventor of a metallurgic method that will eliminate faults of this type deserves to be hailed as a benefactor of humanity."

The latest, and perhaps the happiest, of these attempts was described by Sir Robert Hadfield, the English metallurgist, at the last congress of the Iron and Steel Institute. It consists

HOW THE FLAWS ARE AVOIDED.

At the left, steel cooling in an ingot-mold of the old form; at the right, in one of Hadfield's molds, kept heated at the top.

is enormous. The fourth ingot shows us the same steel treated by the Hadfield method; the ingot is perfect throughout its whole mass, except a very slight dropping in the upper part."

The writer believes that the United States should welcome the Hadfield method with especial joy. "Our readers," he

says, "know that that country holds an unenviable record for railway accidents." He proceeds:

"Investigations have proved that the fault lies with the very defective rails in use on the other side of the Atlantic. These rails are made with impure ore by the Bessemer process, which eliminates impurities only partially, whereas in Europe the Siemens-Martin process has long been preferred. This, however, is not the primary cause of rail-breakage. In recent years the American steel works, overloaded with emergency orders, have thought proper, with the consent of the railroad companies to depart from the severe rules that, in the Old World, continue to regulate the working of laminated products. They have stooped rejecting the whole upper third of the ingots and have only cut away a much smaller portion. Hundreds of travelers have paid for this wild economy with their lives.

"The introduction of the Hadfield process will doubtless contribute to modify this deplorable state of things, happily unknown in Europe."—*Translation made for THE LITERARY DIGEST.*

NEAR-DIAMONDS

THERE IS NO GEM that "looks just like a diamond." Still, several kinds of stones have so many of the diamond's properties that a skilful cutter can deceive all but the elect with them; and in former times such stones frequently passed the scrutiny of experts. Nowadays the tests of specific gravity, refraction, etc., easily bar these out, and there is little danger that a diamond merchant will buy a colorless zircon, topaz, or sapphire for the price of the finer gem. This was once not uncommon, and we are told by F. B. Wade, of Shortridge High School, Indianapolis, that even the so-called Braganza diamond, of the Portuguese crown jewels, is said to be only a fine colorless Brazilian topaz. Writing in *School Science and Mathematics* (March) on "Gems that Resemble the Diamond," Mr. Wade gives us the following list of "near-diamonds," followed by a discussion:

"First, the colorless or pale zircon, sometimes called in the trade the jargon;

"Second, the colorless sapphire;

"Third, the colorless true topaz;

"Fourth, the colorless beryl;

"Fifth, colorless phenacite;

"Sixth, colorless quartz.

"These and a few other and rarer colorless gems constitute the list of gems that resemble the diamond. I may say at this point that none of them resembles the diamond to the casual glance so closely as does the very brilliant lead glass used in making the so-called 'paste' or 'strass' imitations so widely advertised and sold under various fictitious titles in many cities. This artificial material possesses a very high refractive index and is capable of separating the various colors of the spectrum so widely that it affords a brilliancy and 'play' of colors that nothing but the diamond can equal. It is, however, deficient in hardness, being easily attacked by a file, and consequently it does not long resist dulling and scratching from wear, and hence does not hold its brilliancy. It is also easily attacked chemically by a number of things with which it is likely to come in contact in wear, and thus be still further dulled. In many of the imitation diamonds the tendency to scratch is partially prevented by using a thin slice of some hard gem material for the upper surface, making, in other words, a so-called 'diamond doublet.' This artificial gem has no real diamond about it, of course, altho formerly a few real diamond doublets were made in which the upper half of the stone was made of real diamond and lower half of some less costly white gem, the two being joined at the girdle by means of gum mastic or other transparent cement. The modern diamond doublet usually has an upper surface made of a very thin slice of garnet, covering usually only the table, as the

part subject to greatest wear. The garnet used is pale in color and so thin is the slice that hardly any color is visible. The remainder of the 'stone' is entirely of lead glass. Some of these 'works of art' are certainly very beautiful, and at a reasonable distance they would probably puzzle an expert.

"While none of the genuine gems I have listed quite approaches the 'paste diamond' in play of colors, many of them are nearly as brilliant in the lively play of white light which they afford when cut in a manner suited to such material, which cutting, by the way, should not be just like that most suited to the diamond.

"In regard to the order of precedence among them, I should put the colorless zircon first. This gem possesses adamantine luster in a high degree, that is, the amount of light reflected from its top surfaces, when properly inclined to the light, approaches closely to the amount reflected by a genuine diamond surface.

This effect must not be confused with the brilliancy of the flashes of light reflected from the interior rear surfaces of the stone. That is another matter. This adamantine luster gives what the French call *éclat* to the zircon. It is snappy, cold, and glittering in its luster. So closely does it resemble diamond in this respect that I was able to deceive a diamond-cutter in one of the best establishments in this country by a brown zircon which I wore in my scarf this summer. He referred to it as my 'brown diamond,' altho he was not above four feet away and looking squarely at it. Of course, in a stone of positive color, no large amount of prismatic 'play' is possible or expected, and so the lack of it in my brown zircon was not felt. The cutter would doubtless have detected the difference in a colorless zircon, but one not so expert might not.

"Of course, in hardness, in specific gravity, and in refraction the zircon is not like the diamond. It is much softer, . . . and it is doubly refracting, while diamond is singly refracting. It could thus be readily distinguished by any one who understood the application of the tests for the above properties.

"After the zircon in order of excellency I would place the white sapphire. Its index of refraction is higher than that of any of the other gems in my list except the zircon, and its great hardness renders it capable of taking and holding a polish almost equal to that of the diamond. It does not possess the adamantine luster, however. Its luster is probably best defined as splendid. It exceeds the luster of glass and of the other gems in my list which have what is usually styled the vitreous luster. Both the zircon and sapphire when well cut and pure white show a faint 'play' of colors and both give fine brilliancy in their reflections of white light. I have fooled many retail jewelers with a fine specimen of white sapphire which I have set in a ring. As in the case of zircon, so with the sapphire, a test of its hardness, specific gravity, and refraction will at once serve to distinguish it clearly from diamond. . . .

"Next to the zircon and sapphire I would place the white topaz. It gives a faint play of color, is hard enough to resist wear for years, and takes an extremely high polish. Many so-called 'white topazes' advertised by unscrupulous dealers are only lead glass, and many more are cut from the softer and cheaper rock crystal. I had one of the latter sent me recently under a guaranty that it was a genuine white topaz. It was a finely-cut and very brilliant gem, but it was not real topaz. I sent it back after a specific-gravity test, which I recorded on the inside of the paper in which the gem was wrapt, saying that I was sorry but I couldn't use 'that kind.'

"I have already referred to the Portuguese 'Braganza' as probably a white topaz. The fact that the specific gravity of topaz is very nearly that of diamond makes it a still more dangerous imitator, but its hardness and its double refraction serve to distinguish it.

"The other colorless gems in my list, phenacite, beryl, and rock crystal, very closely resemble each other and all give brilliant stones when properly cut. The phenacite and beryl are but slightly softer than topaz and would wear well. The rock crystal is the softest in my list, and while it will hold its brilliancy for some time it would dull in the course of a few years or even months if subjected to hard wear as a ring stone.

"Aside from the peculiar interest which attaches to these colorless stones from the fact that they may be and doubtless

THE NEW STEEL PROCESS IN ACTION.

many times in the past have been substituted for diamond, either ignorantly or with purpose to deceive, there is, I believe, a worthy interest in them, for what they really are, and for the real beauty which they undoubtedly possess."

WHAT THE EYE BETRAYS

THE KEY to the whole personality is often given by the expression of the eye, asserts Dr. Paul Cohn, in an article contributed to *Ueber Land und Meer* (Stuttgart, March 2). Dr. Cohn avers also that the whole bodily constitution, including its condition as regards health or disease, contributes to the ocular expression, which may hence be used in medical practise for diagnostic purposes. He suggests an atlas of color reproductions of eyes for this purpose, and he gives us half-tones of two-dozen selected orbs to illustrate his points and help to prove his case. Some of these are real eyes, while others are taken from well-known paintings, for Dr. Cohn believes that the maker of a portrait can not help painting into the eye of his subject something that is peculiar to himself. We read:

"The pictures from 1 to 7 represent eyes with different expressions; some of them belong to well-known persons. In Figure 1 the expression of cheerfulness is unmistakable; in Figure 2, that of grief. Figure 3 shows vexation, displeasure; Figure 4, terror. Figure 5 indicates an expression of condescending skepticism. Figure 6 shows a crafty eye, Figure 7 a nervous, distrustful eye; Figures 8 and 9 are eyes of the mentally unsound (from old paintings). Figure 10 that of a person with kidney disease (also from an old picture). From these last it may be seen that the expression of the eye may serve the physician for diagnosis. This is understandable, when we recollect that a man's whole constitution contributes to what we call the expression of the eye. To the wasted eye of the consumptive belong the sunken eyeball, its moist luster, the large pupil, the bluish white, the whole neighborhood, in fact, of the eye, including the long-drawn brows, the long lashes, the pale, bluish, transparent edges of the lower eyelid, the lack of energetic muscular action. . . . So every constitution has its peculiar expression of the eye, and it would be, in the present advanced state of color-photography, possible to compile an atlas of medical physiognomy, in which all such relationships should be brought together.

"The following are some eyes of noted persons: Figure 11 is that of Goethe, 12 of Voltaire, 13 of Bismarck. To whom the imperial eye of No. 14 belongs is easy to tell. That of Figure 15 is that of a noted painter. The painter's eye, with its large and free glance, belongs to a class of its own. . . . Nos. 16 to 18 are eyes from Raffael's pictures, 19 from one of Botticelli's, 20 from Guido Reni, 21 from Holbein. Figure 22 is one of Rubens' eyes, 23 one of Eistermann's. Figure 24 is from a picture by Murillo. The list might be extended indefinitely. Each well-known portrait-painter paints his own kind of eye."—Translation made for THE LITERARY DIGEST.

DANGEROUS CLOTH—A manufacturer of woolen tweeds has introduced into the British Parliament a "Fabrics Misdescription Bill" whose motive is said to be humanitarian, not commercial. The bill deals with flannelettes which are said to cause the death of 1,000 persons annually in Great Britain by burning. It is proposed that goods conforming to a specified standard of safety may be labeled "safe" and that "misbranding" shall be punishable. *The Textile World Record* (Boston, March) believes that this scheme is a trouble-breeder. It says:

"The fact may be so, but to see it in its right relation one would have to know how many tens of millions dress in flannelette and never get burnt. Flannelette for night-gowns is nearly the only wear of the poorer classes, being preferred to calico for its warmth and to woolen flannel for its price. The cheaper the cloth the more readily it flashes into flame, and there have been proposals to have such goods stamped 'dangerous.' Nobody of intelligence above the meanest is unaware that flannelette is dangerous. That is precisely the fact that is universally known, and recognition of it has its dangers. To make a sale, drapers may label as safe cloths which are really unsafe. The bill in Parliament would enable a standard of safety to be set up and provide penalties for those who misused the description 'safe.' It does not seem probable that the measure can satisfy those who presume on the supposed safety to the extent of letting their clothes get aight. Perhaps a more satisfactory arrangement would be to prohibit the use of the word 'safe' in this connection entirely."

"THE KEY TO THE WHOLE PERSONALITY IS OFTEN

GIVEN BY THE EXPRESSION OF THE EYE."

THE UTILIZATION OF CANCER

THE POSSIBILITY that the abnormally rapid growth of cancer tissue, which is one of the things that makes the disease a terror, should ever be put to use in repairing injuries in the normal organism is surely sensational. Yet we read that cancer extract has been found by Dr. Alexis Carrel to be a powerful agent in stimulating the growth of animal tissue. It is unnecessary to say that such experiments have not been tried on human beings. Possibly some less dangerous stimulant than cancer extract may be equally effective; and it has been reported that the experimenters of the Rockefeller Institute have found something of the kind. Says Bailey Millard, writing on this subject in *The Technical World Magazine* (Chicago, March):

"In experiments made by Dr. Carrel in collaboration with Dr. Burrows in 1911, it was found possible to activate the growth of chicken tissues when extracts of chicken sarcoma—cancer tissue—and chick embryo were added to the culture medium. Cancer extract is one of the most powerful agents in the proliferation of animal matter. Cancer is not, as is generally understood by the lay reader, destructive of local tissue, but rather induces cellular growth. This, as well as the other animal extracts used by Dr. Carrel, is obtained by squeezing the fluid out of the tissue. The cancer extract, known as *Rous sarcoma*, if applied to wounds or fractures in human bodies, would, it is believed, accelerate the reparative processes in a greater degree than any other known agent. It has been proved to do so effectively in the cases of dogs and other animals, and no cancerous affection has resulted.

"But dogs are dogs and cats are cats—they are distinctly not human. Still I am assured by a medical man high up in the profession that the application of the sarcoma to human beings would not necessarily produce cancer. Some day a daring person may come along and offer himself as a subject for experiment. Pending this remote probability, a few advanced medical gentlemen in New York, eager to try out this and other new ideas upon human beings, are urging that criminals condemned to die be turned over to the experimental departments of medical institutions to be used as subjects in behalf of humanity. Dr. Rambaud, of the Pasteur Institute, is foremost in making this appeal to the State authorities. Dr. Rambaud does not believe in capital punishment, and argues that because 'a man burns down my house I have no right to burn down his house in retaliation.'

"But while Dr. Carrel is probably more anxious than any other medical man to see his experiments with sarcoma applied to the quick healing of wounds and fractures, he is averse to risking the life of any person, even a criminal. I am told by medical men outside the Rockefeller Institute that the less dangerous extracts are being used there upon human subjects and with considerable success, but no official reports have yet been made of the result of these experiments, nor will they be given to the world until about the first of June."

Broken bones are healed in a day and deep cuts in eight hours by another preparation. As we read:

"During the past year Dr. Carrel has greatly improved his technic, and now reports that he has been able to study quantitatively the influence of tissue juices on the growth of connective tissue and some of the characteristics of their activating power. The culture medium was composed of one volume tissue extract and two volumes of plasma, or blood less the corpuscles. Some of the extract was obtained by the centrifugalization of embryonic tissue after it had been mixed with Ringer solution, which consists of sodium chlorid, potassium chlorid,

and calcium chlorid. The experiments were very successful. One of the strange facts demonstrated by them was that the acceleration of cellular growth was much more marked when the mixture of tissues and Ringer solution was allowed to stand in the refrigerator for several days before being centrifugalized than on being used a few minutes before that operation. In other words, the much condemned cold storage system is not only very favorable to the preservation of tissue, but it is an actual aid to cell growth!

"For instance," to quote Dr. Carrel's own words, 'in experiment 1734, Ringer solution containing embryonic pulp had been preserved for twenty days in cold storage before being centrifugalized. In twenty-four hours the area of new connective tissue was thirty times larger in the cultures containing the extract than in the controls. The extracts of tissues, cut into small fragments, mashed and frozen, were generally very active.'

"As to the application of these frozen extracts in the healing of wounds, it was proved that they were able to increase the growth of connective tissue *forty times!* In other words, a deep knife cut, which under normal aseptic conditions would heal in two weeks, would

heal by the new system in *eight hours*, while a leg fracture ordinarily requiring forty days to knit would unite and be cured in a day!

"Dr. Carrel believes that his discoveries will be useful not only in determining the growth of tissues but also in throwing light upon the unknown laws of cell dynamics. Altho he is extremely conservative in his statements as to their application to the healing of wounds in human bodies, a prominent vivisectionist tells me that there can be no doubt as to such healing, for if it will operate effectively in the case of a dog or a cat, as reported by Carrel, it certainly will operate effectively in the case of a human being."

WOMAN IN INDUSTRY A RACIAL EVIL

THE WORK OF WOMAN in industrial and professional occupations, so much in evidence in modern times, is "an unmitigated evil," declares *The Medical Record* (New York). This is qualified by the statement that the writer, as becomes the editor of a medical journal, takes solely "the point of view of health and of the good of the race." How much doubt soever there may be from the economic standpoint about the radical changes wrought in the commercial and industrial world by the appearance of women on the field, whether as aids or rivals to their masculine predecessors, he thinks that the hygienist and eugenist may stand here upon firm ground. He goes on:

"Considered from this aspect, the wholesale employment of women is an unmitigated evil. It goes without saying that if women refuse to bear and bring up healthy children they will not fulfil their physiological duty, and the nation must suffer. Woman's participation in industrial occupations has during the past decade effected great transformations, which have not tended to the advantage of her productive and reproductive strength. In short, industrial and professional work, to a great extent, unfit a woman for motherhood and domestic life, as is plainly shown by the unwillingness of the present generation of women to undertake the duties of motherhood and home. In addition it is distinctly against the interests of the race, mentally and physically, that a mother should engage in outside work. Infants should be breast-fed, which is impossible if the mother is working away from home; when young they should be constantly under the eye of the mother for the sake of their physical, mental, and moral health, and if this is not done they, and ultimately the race, will suffer harm. At the

present time a lamentable waste of women is going on, and the matter requires immediate attention. The fact must be recognized that the rôle of woman has changed, that this change is not for the better—at least, not from a medical point of view—and while allowing that the old state of affairs has gone, never to return, at the same time steps should be taken to endeavor to deal with existing conditions in such a manner that the race will suffer as little as possible. A necessary movement in this direction is to find out exactly how matters stand by initiating measures for the compilation and publication of national and international statistics relating to the participation of women in industrial pursuits."

PUMPING WATER TO PUMP MORE WATER

A BIT of American ingenuity in a hydroelectric station that pumps up water for supplying its own wheels is described in *The Electrical World* (New York, March 15). When we reflect that part of the water pumped by this plant furnishes energy to pump up more water, "and so *ad infinitum*," it makes one a little dizzy. There is no perpetual motion here, however, for the water is pumped up for only a small fraction of the distance through which it finally falls, so that there is always a good balance on the right side of the energy account. The pumping is only to bring the supply to the proper point to take the big plunge which really runs the plant. Says the writer:

"To the first thought of the uninitiated it seems a bit like lifting one's self by one's bootstraps, or carrying to a triumphant conclusion the favorite scheme of perpetual motion. On the contrary, it is a singularly clever and ingenious method of conserving water supply in a territory where water is precious and the available amount limited. The situation is briefly this: A plant working on the somewhat scant and variable supply of a mountain stream, fortunately rendering available a head of over 1,000 feet, at certain seasons of the year, found itself painfully short of water. Had there been a second stream available, it would have paid to go to considerable expense to add its flow to that of the primary source of power. This has often been done to meet the exigencies of increasing load and stationary water supply. In the present case no such auxiliary stream was available at or near the level of the main supply. A group of springs, however, at a lower level gave hope of additional water in paying amount, and the bold expedient was adopted of pumping this water supply to the level of the main head-works by electric power. And a cubic foot of water which one can drop more than 1,000 feet on to the wheels below by pumping it less than 150 feet is not a source of energy to be held in contempt.

"The project as actually carried out involves an automatic pumping station driven by the simplest form of induction motor directly coupled to a centrifugal pump capable of delivering 3.5 cubic feet of water per second against a head, including friction, of 138 feet. The little pumping plant requires no attention. The result is very interesting. Except in May and June, when the primary water supply outruns the capacity of the pipe line, it pays to pump the spring water. At normal load it takes 67 kilowatts to deliver the 3.5 cubic feet per second at the upper level, and this quantity of water represents 237 kilowatts at the generators below. There is, therefore, obtainable at the expense of the pumping plant 170 additional kilowatts

for ten months in the year, rising to a yearly output of nearly 1,250,000 kilowatt-hours. It is sufficiently obvious that this additional supply, as large as that delivered by the central station in many a small Eastern city, is a valuable asset. In point of fact, the saving would be more than enough to pay for the pumping plant in a single year. Altogether this installation is a startling example of the resourcefulness of the Western hydraulic engineer when he is really face to face with difficulties."

TRACKLESS STREET-CARS

WHY SHOULD we continue to lay tracks for our street-cars to run on? Tracks were necessary when rough, stone pavements abounded, but smooth surfaces of asphalt, tarred macadam, and wood-block are now common, both in city and suburb. Over these, automobile vehicles of all speeds and weights run easily and in vast numbers. Amid them lurches along the unwieldy street-car of the pattern of 1880, running on steel rails that are laid and maintained

at huge expense and serve only to make the otherwise smooth pavement dangerous to motor vehicles. The coming of a better day in more ways than one may be discerned; New York, Chicago, Washington, New Haven, and Indianapolis have had motor-busses for some time. Detroit is introducing city-owned busses to compete with the trolley-lines, and two companies are being formed to introduce motor-busses in Pittsburg. Says a writer in *The Horseless Age* (New York) in part:

"At no time in the history of the commercial vehicle has the outlook for business been so favorable in the Pittsburg district as now. Especially noticeable is the growth in sentiment in favor of automobile bus lines. The Pittsburg Auto Transit Company will apply for a charter with initial capital stock of \$75,000. The busses to be purchased will seat thirty-

four people, and it is planned to make a ten-minute schedule from the down-town district out to Shadyside, East Liberty, and the north Highland districts by way of Grant Boulevard.

"More than 75 per cent. of the route proposed is now used by automobiles to the exclusion of nearly everything else. Ninety-seven per cent. of the distance is paved with asphalt or wood-block.

"Orders have been placed with a prominent automobile company for sufficient machines of 60-horse-power capacity to start the service in good shape. The cars will be 30 feet long, mounted on 5-ton trucks, and will cost about \$6,000 each.

"Speaking of this enterprise the other day, Captain Oursler said: 'The means of transportation now afforded citizens of Pittsburg are entirely inadequate to the demand. Something must be done, and the motor-car is the solution of the problem. Through its use we will have 50 per cent. better service than is now supplied. The present company has been formed in the belief that real benefit will be conferred upon the victims of Pittsburg's deplorable street-car service.'

"At about the same time this spring the Alpine Motor Company will commence operations, using five motor omnibuses manufactured by well-known street-car builders. The cars are 50 horse power, 27 feet long, and will seat thirty-two persons each. They are modeled along lines used in street-car designs and are expensively furnished in mahogany with plush seats. The cars are heated by their own exhaust and are electrically lighted. The Alpine Company will charge a fare of ten cents."

LETTERS AND ART

SAN QUENTIN'S PRISONERS WATCHING SARAH BERNHARDT.

A dozen condemned to death occupy the front row in an audience of 2,000 before whom the great actress performed.

BERNHARDT TO THE PRISONERS

THE RARE QUALITY of human tenderness, described by Montaigne, was recently illustrated by one of the most gifted members of his people, says Mr. François de Tesson in *L'Illustration* (Paris). The incident occurred in California, on February 22, during the visit of Mme. Sarah Bernhardt. The Californian climate may have played a part in it, for the writer describes the State as "perhaps one of the most beautiful countries in the world," and he has an interesting theory that "the softness of its climate and the beauty of its gardens and vineyards appear somehow to influence the character of the people." "In the severity of the enforcement of the law," as he observes, "there is mingled a certain amount of liberality and kindness, and Californians look upon the man who has violated the statutes of the country as a creature who has rather been afflicted by a fleeting attack of disease than as an animal absolutely incurable who ought to be confined or obliterated." On Washington's Birthday, the Californian authorities invited Madame Bernhardt, then on tour in that State, to play before the prisoners of San Quentin. This must have furnished a new sensation for even Sarah, who has not led an absolutely quiet life. In her audience, we are told, were 2,000 prisoners of all races and nationalities, including Chinese, Japanese, mulattoes, and negroes. Women were not excluded. The McNamara brothers might have been picked out among the throng. The piece presented was written by the actress's son, Maurice, and is called "A Christmas Night During the Terror." In the account we are quoting, written by one whom Madame Bernhardt invited to accompany her, it is said that when the curtain rose displaying Sarah as *Marion*, the vivandière, the French contingent among the audience shouted lustily "*Vive la France! Vive la France!*" A Belgian who had murdered his wife and her lover "began to weep hot tears, then burst into hoarse laughter, which again melted to tears." Each scene ended with "frenetic bravos" and shrill whistles, a form of approbation that startled the writer, but which he explains as

an American sign of approval. At the end of the performance a prisoner appeared upon the stage and rendered a song that had been dedicated to Sarah by his comrades, entitled "Down from the Hill-tops." At the same time he presented a bunch of violets and read an address that had been composed by Abraham Ruef, acknowledging the kindness of the great actress. Ruef is described to the French as the "Alsatian Socialist, well known on the whole Pacific coast, who was condemned as a prisoner for twelve years for aiding the Socialist mayor, Schmidt, in his embezzlement of public money." The address may be translated as follows:

"San Quentin, California.

"MADAME SARAH BERNHARDT:

"In this life the most of us, outside or inside, are prisoners. It is only rarely that it is given us to be absolutely free. To those who are confined within strong walls and behind bars of unbreakable steel these intervals are at present things of the future, and to all appearance very far off. But to-day, for one short hour, these walls of stone have vanished, and—thanks to your marvelous personality and your enchanting art—we have been at perfect liberty in soul and mind, and captives only to the singular genius and incomparable art through which you have justly gained the title of 'The Divine Sarah.' For one short hour we have been free and untrammelled in our communion with the spirit of human greatness, that spirit which after all is the real basis of our belief in immortality. . . . This opportunity of making an address to you, and your kind presentation to us of your art, will be long remembered by those who are present, the humblest as well as the most important. The woman, the actress, the play, all have affected us greatly. The majority of us had never previously been accorded the distinction of personally seeing you, much less of tasting the delights of your incomparable art. Living as we do at a distance, we have looked upon you as the radiant star of dramatic art, crowned with the laurels of imperial success. As a result of the genius to which we all bow as absolute slaves, the highest ideals of life which we have ever imagined have been at this moment perfectly realized, and we present to you our grateful thanks for the glories and the splendors of the art which you have graciously enabled us this day to enjoy. We recognize

also the kindness and generosity which have prompted you to give such a vital pleasure to the unfortunate captives—the victims of the mutable lot of life.”

THE DECLINE OF BOOK-READING

A STRANGE THING about the appetite for fiction is that it seems not “to grow by what it feeds on.” This is the opinion expressed by Mr. George P. Brett, head of the great Macmillan house of publishers in this country; and his opinion is supported by the testimony of booksellers throughout America. In the *Atlantic* for April, Mr. Brett quotes a prominent bookseller as saying that “while the number of new novels published in any year was constantly increasing by leaps and bounds, the total number of such novels sold . . . was no greater than when the number of separate novels issued was less.” Instead, then, of the fiction-reading public growing with the population, it seems to be standing still. But perhaps it is only the book-buying public that is stationary. There are other reading supplies. The enormous growth of fiction magazines and the increase of Carnegie libraries are factors that Mr. Brett apparently overlooks. But the stagnation he mentions must also be even more true of the sale of serious books, essays, travel, poetry, thinks Mr. Brett, who goes on to give a curious statement of the faith of publishers in the face of this public apathy, as shown by their works:

“The number of books published in the United States has, in fact, increased very greatly in the last ten years or so. In the year 1901, which was an active one in the publishing world, about eight thousand volumes were produced, whereas in 1910 the much greater number of thirteen thousand new publications was issued, and the prospects for the current year indicate an even larger number of new volumes.”

The increase is especially remarkable in books devoted to the study of great human problems:

“The increase in number of books published is more or less uniform in all departments of literature, but it is especially notable, as might have been expected, in view of the present unrest and the discontent in existing conditions, that a very great increase has occurred in the number of books issued in the last few years on socialism and its allied subjects, while the growth of the spirit of humanitarianism in the country may be traced in the considerable number of new books which are being issued, devoted to social betterment and philanthropic studies and kindred topics.

“These two classes of books are among the most interesting signs of the times, the books on socialistic subjects showing how widely the criticism of our existing system has entered into the thought of our times, and how many persons must be devoting their efforts to attempts at the solution of the problems of the present unrest. And, on the other hand, the growth in the

number and importance of volumes issued in what may be called works of social betterment show conclusively the growth of the spirit of social service, looking toward the betterment of conditions for all classes of the community.”

Another curious fact brought to light is that “the life of a ‘best-seller’ novel is now little longer than a month, as compared with a period of popularity extending over several years, when the vogue of the ‘best-seller’ first became a feature of book-publishing.” When the falling-off of non-fiction readers is taken into account the situation becomes more serious. Mr. Brett’s explanation of the lack of proportional increase noted above is that “no publisher has yet been clever enough to solve the great modern problem of distribution.” Further:

“It was Dr. Edward Everett Hale, if I mistake not, who pointed out some years ago that no book of general literature had ever been adequately distributed or published (in the literal sense), and the difficulties of distribution, and more especially the costs of distribution, have greatly increased since then. To have published a worthy and distinguished book is, as I have already pointed out, a matter of high satisfaction to a publisher of the right sort, critics of publishers and publishing methods to the contrary notwithstanding; yet, to know, or to feel morally certain, that thousands of his fellow citizens would value the work as greatly as the publisher himself appreciates it, must be a matter for despair if no effective or practical means exists for bringing it to their attention.

“Some years ago the publisher’s task was a happier and easier one, for then there were, in considerable numbers, among the general public, book-lovers whose chief delight consisted in the discovery of the new author and the new book of merit. The discoverer would tell all his friends of his ‘find,’ to the great advantage

of the publisher and author. Many a dinner-table in those days was made pleasant by such bookish talk. It is, alas, very rare to-day. The late Goldwin Smith, the last time the writer saw him in New York, remarked that he had not heard a book mentioned at a dinner-table for several years.

“The publishers themselves are largely to blame for the disappearance of the book-taster, as a class, by having adopted for their wares the slogan of modern ‘efficient’ business: ‘Take the goods to the customer’—a method which results in my receiving twenty or so circular letters a day, which go into the waste-paper basket unread, and has so filled our blanket newspapers with advertisements that my eyes have become trained until I think I can say that I never see the advertisements in my morning newspaper. Perhaps this is a peculiarity of mine, but I suspect it is becoming general with the public. At least on one occasion lately an author complained to me that his book was never advertised. In reply I pointed out to him an advertisement of the book in question in the newspaper in his hand, which he confessed to have been reading on his way to my office.

“The publisher who discovers or invents a new method which shall be both practical and effective for the distribution of books of general literature will confer a boon upon the author, whose book will then be sold to all possible purchasers; upon the public, many individuals of which would gladly buy some books,

ABE RUEF'S ADDRESS TO THE ACTRESS.

Read by another prisoner, thanking her for her kindness to “the unfortunate captives—the victims of the mutable lot of life.”

now on the publishers' shelves, of which, under the present methods, they will never learn; and especially upon the publishers themselves, whose profits increase greatly as increasing numbers of copies of a work are sold, and whose lack of profits on publications of these classes is due almost entirely to their failure to find practical methods for the distribution of such books."

The solution of the problem of distribution tried by a firm of booksellers in Great Britain, where the difficulties are much less than with us, might point to a useful method for this country:

"These booksellers have made, or attempted to make, a card catalog of the book-reading population, classifying the book-buying public according to the subjects in which the individuals comprising this public are interested; and whenever a work comes into their book-shop which is likely to interest persons in this classified list, they are communicated with by post-card, giving a description of the book and author. Thousands of such cards are mailed daily. Unfortunately, such an experiment would be almost impossible of trial in this country with its many large cities scattered over a much greater expanse of territory, all of which are centers of interest and influence to their surrounding populations, and are, in addition, much more shifting and unstable than similar communities in the Old World."

AN OFFER TO IMPROVE OUR LANGUAGE

OUR FAILURE to improve the language appreciably since the days of Shakespeare, Milton, Addison and some others has not seemed to cause any great pessimism here, as far as we have noticed, but it is creating concern in Japan and brings a generous offer of help. As Western artists have revived and glorified the old art of Nippon, so Eastern writers may revise and improve the English tongue. The Japanese mind is astonished at what Whistler and Monet and others who gained inspiration from the East have found in the work of the despised "Ukiyoe school." This art "turned meaningless for us a long time ago," says the Japanese poet, Yone Noguchi and its "beauties were lost in time's dust." In his quaint English he tries to solve the question whether the interchange of literary methods between East and West can work as successful results as the painters achieved when they took their cue from Utamaro and Hiroshige. In the *London Academy* he begs permission "to reflect and consider" whether "we"—Japanese, we take it—"can pay any tribute to the English language when we adopt it for writing." Any language has "beauties and characteristics," he avers, which "can not be plainly seen by those who are born with them." He finds it, rather, "a foreigner's privilege (or is it the virtue of capital-lettered ignorance?) to see them and use them without a moment's hesitation, to his best advantage, as he conceives it." Such phrases, no doubt, exhibit to our eyes some of the difficulties; but we find from what follows that Mr. Noguchi takes another view of the matter:

"It may seem strange to think how the Japanese art of the Ukiyoe school, nearly dead, commonplace at its best, could work such a wonder when it was adopted by the Western hand; but, after all, that is not strange at all. And can we not do the same thing with language? Not only the English language, but any language, is bound to become stale and stupid if it shuts itself up for too long a time; it must sooner or later be rejuvenated and enlivened with some new force. To shake off classicism, or, to put it more abruptly, to forget everything of history or usage, often means to make a fresh start; such a start must be expected to come from one great enough to transcend above it, or from a foreigner. And the latter's ignorance (blessing is that ignorance) in his case becomes a strength and beauty; it is only he who can dare an extraordinary act in language such as no native writer ever dreams, and the result will be no small protest, sometimes a real revelation. That is why even we Japanese can make some contribution to the English language when we use it."

Proceeding, he takes a fall out of some of our moribund literary formulas:

"The English poem, as it seems to me, is governed too greatly by old history and too-respectable prosody; just compare it with the English prose which has made such a stride in the recent age, to see and be amazed at its unchanging gait. Perhaps it is my destitution of musical sense (a Western critic declared that Japanese are mostly unmusical) to find myself more often unmoved by the English rimes and meters; let me confess that, before perceiving the silver sound of a poet like Tennyson or Swinburne, born under the golden clime, my own Japanese mind already revolts and rebels against something in English poems or verses which, for lack of a proper expression, we might call physical or external. As my attention is never held by the harmony of language, I go straightforward to the writer's inner soul to speculate on it, and talk with it; briefly, I am sound-blind or deaf—that is my honest confession. I had no reply to one English lady the other day who wrote me to inquire concerning the underlying rhythm of my poetical work, as I had no thought about it when it was written; my mind always turns, let me dare say, to something else. I used to read the work of English poets in my younger days, but I soon gave up my reading of them when I thought that my literary salvation would only come through my own pain and imagination. As far as the language is concerned, I need not much of it for my assistance, because my hope is to become a poet without words. While some critic or poet accuses me for being faulty and even unnatural, I am quite content with my work, because, altho it may not be so-called literature or poetry, it is I myself, good or bad, noble or ignoble, high or low. And let me tell you what I understand by poetry."

"We treat poetry, tho it may sound too ambitious to the Western mind, from the point of its use or uselessness; it rises, through a mysterious way, to the height of its peculiar worth, where its uselessness turns, lo, to usefulness. When one knows that the things useless are the things most useful under different circumstances (to give one example, a little stone lazy by a stream, which becomes important when you happen to hear its sermon), he will see that the aspect of uselessness in poetry is to be doubly valued, since its usefulness is always born from it, like the day out of the bosom of night. You can not call it, I trust, merely a Japanese freakishness or vagary, if we appear to you in the matter of poetry to make too much ado about nothing. I dare say we have our own attitude toward poetry."

A FEMININE THEATRICAL MISSIONARY

THE NEW AGE of feminism has a fresh laurel in the fact that the most interesting figure connected with the theater in England is a woman. She is not an actress, but the owner and director of the Manchester repertory theater named "The Gaiety." The repertory idea, which is gaining a strong footing in other British cities, is said to be almost wholly due to the success of her example. Miss Horniman is the energetic person who has accomplished so much with the fortune left her by her father, the wealthy importer of tea. Johanna Sherrick, writing in *The Theater Magazine* (New York) for April, tells us that during his lifetime her father's "distaste for the theater extended so far that he prohibited his daughter from the childish joys of 'playing theater,' and in her young womanhood he kept her rigidly away from theatrical performances." After his death her sympathies were engaged by the theater movement of the Irish Literary Society, headed by W. B. Yeats and Lady Gregory, and it was through her benevolence that the Abbey Theater in Dublin was maintained during the first struggling years of that now successful and famous folk theater. After seeing the Irish theater standing on its own legs, she began an experiment with the repertory idea and fix upon Manchester, instead of London, as the best place for pioneer work. The writer recounts:

"She chose for her manager Iden Paine, a young actor native to the smoke, and he engaged a company which contained not a single famous name. A three-months' experiment at a concert hall enlisted the support of the press and public, and this

preliminary canter proved successful. Then Miss Horniman bought and rebuilt the Gaiety, redecorating and refurnishing the interior, taking out 100 seats to render it more comfortable, and adding space where scenery is built and painted and where wardrobes are cut out and made. She enlarged the company and set herself to the presentation of plays of a high standard. At the end of two years this woman manager's boldness had won out. The theater paid expenses, and when she launched into a short London spring season her compact little company and repertoire of fifty plays, most of them new, satisfied the critics and the paying public, and, what's more, gave the manager a world-wide reputation.

"For every year following, a short London season has been a feature of Miss Horniman's program, with such a degree of healthy appreciation that she has been urged to establish a repertory theater in that Babylon, to be conducted with the same aspiration toward high things that she has shown in Manchester.

"To-day the little Gaiety organization is at its height, for never has Miss Horniman had so excellent a company and staff. In Lewis Casson she has found a talented director, producer, and actor. He was one of the original members of the famous Court Theater company under Vedrenne and Barker, where so many interesting productions were made, and it is to him that Miss Horniman owes the well-rounded splendid productions which have kept up the Gaiety's standard in the last two years. 'Hindle Wakes' was last spring's London production, which further spread the fame of Miss Horniman, her producer, and her company. In 1912, also, they played a successful tour through Canada, appearing but once in the United States. Boston was the fortunate city to witness a matinee performance of John Masefield's 'Nan,' in which Miss Irene Rooke acted the name part."

During the past few weeks Miss Horniman has made her second invasion of this country, and has given a season at the Fine Arts Theater in Chicago. It is the one American city that rather prides itself upon its "repertory" achievements, naming over the work of Mr. Donald Robertson, the Drama Players, and its "New Theater of lamented memory." In the person of one of its critics, Frederic Hatton of the Chicago *Evening Post*, it told these intruders that it would "not like them if they come among us as evangelists attempting to convert the heathen." Rather—

"We would have them consider themselves as reinforcements to a battle which has long been waging locally and now, with the assistance which they and Lady Gregory are giving us, likely to result happily. For Miss Horniman's company has the most ambitious repertory of any similar company which has appeared here. The ideal organization of this sort is one in which the players are of such versatility that they may attempt with equally satisfactory outcome anything from genre drama to the loftiest of the classics. And such are the limits of the Manchester repertory. While the company has built up a new school of serious English drama, it has also brought to revival some of the finest works of past Anglo-Saxon dramatists. So far it has not concerned itself with foreign plays, a field which our Drama Players invaded courageously.

"'What the Public Wants' made an ideal opening effort. Tho it is laid in England, it has an international quality. There are plenty of *Sir Charles Worgans* among our publishers, and they would be quite as much characters on the stage if there were a Bennett here to prick them at the point of the pen to the footlights. One has some such feeling about *Worgan*. He seems to be so unwilling on the stage, a human machine, as it were, which resents the display of its workings.

"People who read plays—and they are legion in Chicago—need to be told little about 'What the Public Wants.' And those who do not read plays—they are super-legion—do not read reviews. But personally it was a surprise to see how well the play acted. Somehow we had not taken Bennett seriously as a playwright. One felt of 'What the Public Wants' that it was a splendid character study which by some act of the printer was divided into acts instead of chapters. It is filled with Bennett's delightful observations of public characters; also of his whimsical knowledge of women, dramatic critics, and the Five Towns; but so are his novels and his feuilletons."

After a variety of experience with the Manchester players, the same critic yields them enthusiastic praise:

"These Manchester actors undoubtedly are the envy of all English and American players who are on the monotonous treadmill of a single day-in and day-out rôle. Think, for instance, of the opportunities Mr. Rosmer has had this week as the critic in 'What the Public Wants,' as *Dick Garvil* in 'Nan,' as the tramp in 'Miles Dixon,' and as the poet in 'Candida.' It would take five years to accomplish that under the meth-

ods of professional production in America.

"And Miss Horniman's company is even more fortunate than Lady Gregory's organization because it has a much wider repertory. The Irish Players do not dare to wander off the native sod. The best part of these Fine Arts Theater engagements is that they are creating a public for repertory in Chicago, a larger public than exists in any other American city for this enlightened form of play presentation."

Miss Sherrick tells us that Miss Horniman follows the example of the Théâtre Français and "the actor who plays a duke one night may serve as butler in another play on the following night." Mr. Hatton gives some individual characterization of the art of these actors in Arnold Bennett's "What the Public Wants"—reprinted in *McClure's Magazine* a couple of years ago:

"The Horniman company in this piece not only gives an ensemble performance of distinction, but there are individual achievements which stand out as markedly as the *Nathaniel Jeffcole* of Mr. Lomas in 'Hindle Wakes.' Here the touch must be urban, and that is imparted with particular success by Percy Foster as the editor, *Sir Charles Worgan*, and by Milton Rosmer as the brother who becomes the dramatic critic. Mr. Foster brought out skilfully the determined egotism, the mechanical efficiency, the unletteredness, the sophistry, the professional air, and the amatory awkwardness of the striking and thoroughly Bennettesque character intrusted to him. No less delightful was the elegant, leisurely, thoughtfully cynical critic created from the author's lines by Mr. Rosmer."

MISS A. E. F. HORNIMAN.

Who has achieved a world-wide reputation as a theater manager, having first subsidized the Abbey Theater of Dublin, then founded the Gaiety Theater for repertory plays at Manchester, England.

RELIGION AND SOCIAL SERVICE

BUSINESS AND PROFESSIONAL MEN OF "TOM BLODGETT'S GOSPEL TEAM."

The smiling figure in the center is the organizer of the first "gospel team" of Wichita, whose example has been followed by twenty-three others.

THE GOSPEL TEAMS OF WICHITA

THE PROBLEM of getting laymen to do active church work has apparently been solved in the city of Wichita.

For Wichita laymen are going out into the highways and byways of Kansas and even over the border into Oklahoma, and, organized as "gospel teams," have brought about nearly 2,000 conversions in their year of activity. As a Wichita pastor explains it in *The Continent* (Chicago), the movement was the outcome of a Billy Sunday revival. Most of the 5,200 persons converted "were received into the fellowship of the churches, but not to be lulled into inactivity; instead, they were organized for Bible study, service, and sacrifice." Tom Blodgett's gospel team, the first one, was not planned, but came into existence, as the writer believes, providentially. It was like this:

"Soon after the close of the Sunday evangelistic meetings the pastor of one of the churches was to be absent for a Sabbath. He invited Tom Blodgett, of the wholesale firm of Cox-Blodgett, a convert of the late campaign, to take charge of the evening service. Mr. Blodgett invited some of the recently converted friends, all good fellows, to meet him at the Young Men's Christian Association at 6.30 p.m. Sunday, saying, 'We are going out to have a good time.' The men met in the parlor, Mr. Blodgett outlined the plan, and after general prayer they proceeded to the church.

"After the congregation had sung some gospel songs and each man had led in prayer—this was the first public prayer for most of them—each man in turn told in his own way what it meant to him to be a Christian, and what a friend and helper he had found Jesus to be. As a result, that night nineteen men came forward and decided to live a Christian life. To date no fewer than 476 converts are credited to the work of Tom Blodgett's team."

There are now in Wichita, says our informant, "no fewer than twenty-four 'gospel teams' or groups of men who conduct services in churches, theaters, halls, shops, or in the open air, and these teams have visited more than a hundred towns and cities within 250 miles." He goes on to tell of their work:

"Just one year from the organization of the first team, 1,913 men and boys have been reported as converted as the direct result of the work of this aggressive lay ministry. Converts in other towns in turn have organized teams and have extended the work into other districts, and report similar harvests. A

letter before me from a town in Oklahoma expresses gratitude for the visit of one of our teams, when forty converts were secured, and the writer adds significantly, 'We now have a team of our own and have visited a number of places, and down to date'—a period of about two months—"we have 125 converts."

"Shortly after the team work began the leaders of the Men and Religion Movement visited the city and added not a little to the efficiency of our organized men. The churches perfected a federation and secured a secretary who began at once to make dates for the teams and to give general supervision to the extension work."

These "gospel teams," it appears, are made up of men from all walks of life:

"There are bankers and barbers, capitalists and cattlemen, dentists and drivers, editors and electricians, lawyers and laborers, merchants and mechanics, teachers and traveling men, all bound together by one bond of faith in Jesus, one steadfast and consuming purpose to win men into the kingdom. These men walk long distances to hold meetings, go in automobiles, or charter Pullman cars, as the case may require, each man paying his own traveling expenses and hotel bills, giving freely of his time, substance, and service for the Master. Lately, however, our independent Kansas towns, when visited, prefer to pay traveling expenses and give entertainment.

"No two meetings are conducted exactly alike. Usually there is hearty singing, much prayer, earnest and direct, and the speaking is not unlike the testimonies given at the class meeting of the early Methodist movement when each one told his religious experience and what God had done for him. Often the meetings are continued long into the night, sometimes into the early morning hours, but seldom is a meeting held when there are no visible results, and as many as fifty-nine converts have been reported from a single night's work.

"Nor do the men confine themselves to Sabbath services or set times; they are ever on the alert to win men. One incident will illustrate:

"A few days ago some of the men of Tom Blodgett's team went on their annual hunting expedition. At supper time they arrived at a ranch-house some fifty miles away. Supper over, the big-hearted ranchman, to show the genuineness of his hospitality, brought in glasses and a well-filled decanter of old rye, and proposed that the boys have the usual 'good time.' Imagine his surprise when one of the team said, 'Since we were here last year we have been converted and have cut booze. Thanks; we don't drink.'

"With evident embarrassment and stammering apologies, the

big, broad-shouldered ranchman made a hasty retreat with glasses, decanter, and contents. On learning that there was to be a meeting in the church some two miles away the men proposed that all hands go. They did, and the night air rang with gospel songs as the men of the team, the ranchman, his family, and help walked through the moonlight to the rural church. After the leader said, 'The meeting is now open,' the team prayed, talked, and exhorted in turn, and never was such a service in that community.

"Next day the team hunted little for game; they had meat to eat the world knew not of, and all the country folk present the night before kept their phones busy inviting all their neighbors far and near to a service that night to be conducted by some business men from Wichita. The place was crowded, and the Spirit of God was there in manifest power, the ranchman alone seeming unmoved.

"Next morning when the team entered the auto to come home the ranchman asked that he might accompany them to the main road. This reached, all got out, joined hands, and then each member of the team prayed earnestly for the people of the community, but especially for their host. When the last man had ceased, the brawny ranchman, with bowed head and tearful eyes, uttered his first prayer, 'God be merciful to me, a sinner.' The Lord is adding to the churches daily those who are being saved. This is how Wichita is winning."

RELIGIOUS COMPLEXION OF CANADA

ONE FAVORITE FORM of innuendo offered the United States by foreign writers is the mention of the large number of adherents of different religions that it harbors. Put in the form of a Frenchman's paradox, we are "the land of forty religions and one sauce." The Dominion Government has lately issued a bulletin enumerating the religions to be found in Canada, and we discover that there are no fewer than 81 heads. Some of these are "rather non-informative," observes *The Christian Guardian* (Toronto), 290 adherents being dubbed "Undenominationalists," 640 classed as belonging to "various sects," and 32,490 "Unspecified." For all this, it is said, "there are nearly 80 different kinds or varieties of religion, or lack of it, to be found in Canada." The figures, we are informed, do not relate to membership in the churches, but indicate the ecclesiastical preferences of the people, as stated by themselves to the Government enumerators. *The Presbyterian* (Toronto) gives the figures of the principal denominations with certain statements of percentages and increase:

"Anglicans, 1,043,017; Baptists, 382,666; Congregationalists, 34,054; Jews, 74,564; Lutheran, 229,864; Methodists, 1,079,892; Presbyterians, 1,115,324; Catholics, 2,833,041; Unitarians, 3,224; Salvation Army, 18,834; Doukhobors, 10,493; Evangelicals, 10,595. Comparing these figures with the total population of the Dominion it appears that the Roman Catholics are now 39.31 per cent. of the total population; Anglicans, 14.47 per cent.; Methodists, 14.98 per cent.; Presbyterians, 15.48 per cent.; Lutherans, 3.19, and Baptists, 5.31 per cent. The increase per cent. in the different bodies was as follows: The Anglicans increased in ten years 53.05 per cent.; Roman Catholics, 27.06; Methodists, 17.78; Presbyterians, 32.39; Lutheran, 148.43; Baptists, 20.33, and Salvation Army, 82.71."

The picturesque religious complexity of our northern neighbor is further set forth by the *The Christian Guardian*:

"One striking thing is the fact that the religions of the Orient have come to us. Here are the figures: Buddhists, 10,012; Confucians, 14,562; Shintos, 1,289; Sikhs and Hindus, 1,758; while 11,840 are classed as Pagans. There are 74,564 Jews and 797 Mohammedans.

"The number of agnostics is very small, just 3,110, but there are 26,027 who come under the head of No Religion. It is evident that most people to-day want to be known as professing some religion or other, and the class who exulted in the name Infidel or Atheist has almost wholly disappeared. This does not mean that unbelief is dead, but that the battle-ground has shifted.

"It is somewhat bewildering to note the multitude of smaller sects, whose names to most of our readers will be almost meaningless. For instance, there are 28 Apostles, 15 Armenians, 582 Believers, 151 Carmelites, 88 Covenanters, 64 Daniel's Band, 55 Dissenters, 512 Gospel People, 20 Holy Rollers, 42 Marshallites, 297 Saints, and 39 Saints of God. We venture to say that even some of our college professors would be somewhat puzzled to identify some of these rather strange specimens.

"The Dowieites still survive, but they only number 55. The Millennial Dawnites have created quite a flurry in certain sections, and it will surprise some to know that they can only muster, all told, 407 individuals. Pastor Russell's following of Bible Students totals only 518. Evidently the pastor's printed sermons have not done the work they were expected to do. Our good friends the Christian Scientists have increased nearly 94 per cent. in the ten years, but even then they can only muster 5,073 persons. Evidently this singular delusion is not destined to make great headway among the people.

"Some of the most striking increases among the smaller bodies are worth noting. The Lutherans have increased 137,340, or nearly 150 per cent.; the Greek Church has increased 72,877, or 466 per cent.; while the Jews have increased 58,163, or 354 per cent."

The comments of the organs of the two leading Protestant denominations are not of a jubilant nature. Says *The Presbyterian*:

"For almost half a century the Methodist denomination has been numerically the strongest branch of Protestantism in Canada, with the Presbyterian second and the Anglican fairly close up in third place. Now Presbyterians lead by a majority of 35,432 over the Methodists, and the Methodists are only 36,875 more than the Anglicans.

"While Presbyterianism appears to have flourished during the past decade, it has scarcely held its own. Had Methodism not fallen back in its percentage of increase from 17.07 in 1901 to 14.98 in 1911 Presbyterianism would still be in the second place. We have come out ahead because the other fellow slackened up his pace.

"The British immigration will account in large measure for the great increase in our Anglican population. In point of numbers they gained more during the decade than any other Protestant denomination. Their gain was 361,523, while Presbyterianism gained 272,882 and Methodism 163,006.

"Our Methodist contemporary says that these figures will furnish material for some of its Church's statisticians, and says that it will be necessary to explain to the Church at large just how and why these things are so.

"Presbyterians, as well as Methodists, should pore over these figures. We have only kept the old pace of the past decades, and we have sagged somewhat at the tape, for our percentage of increase at 1911 is .20 less than it was at 1901. We have need, too, for intensive growth as Presbyterians, since, with our larger population, we have less communicants than the Methodists. The figures are—Methodist, 351,710; Presbyterian, 295,939. While we have 35,432 more people than the Methodists we have 55,771 less church members."

The Methodist figures "will give some who love to groan a good chance to exercise their peculiar gift," says *The Christian Guardian*, but this journal is not willing to admit, as some say, that its Church, "more than any of the others has lost her spiritual grip and fervor, is not preaching a full and satisfactory gospel, has been untrue to the Word of God, and faithless in presenting its truth." On the other hand, it declares, "the Methodist Church is receiving a far smaller number of members and adherents through immigration than are several of the other churches," and adds:

"Somehow we are not able to grieve much over this fact, if the explanation of it is that there are more Presbyterians and Church of England people coming to Canada than there are Methodists. But if the explanation is that the Methodist Church in Canada does not get a grip upon the Methodists that are coming into the country, as the other churches manage to with their people, then we have a real reason to feel sorry and rebuked. Whatever be the facts in the case just here, we are assured of this, that there is a very serious leakage so far as our own Church is concerned, and we must somehow search out the way of remedy."

UPSHOT OF THE CHURCH-UNITY TALKS

ARTEMUS WARD once declared that the rebellion must be put down even if all his wife's relations had to go to the front. To a lay observer of the discussions of representative denominationalists on church union that we have given from week to week, such is about the "measure of sacrifice" that the speakers have been willing to concede. The avowed purpose of the series of addresses given in Boston was to present a statement of what the respective denominations would be willing to sacrifice in the interests of Christian unity, but to the editor of the *Springfield Republican* "the speakers made more of the things they insisted on than the things they were to give up—the solidarity of their denominations than the cause of organic unity." The Unitarian and Congregational denominations are so small "as not very much to involve the discussion"—at least as this observer sees it. Leaving out the Catholic Church "as one of no possible concessions," we approach, for Protestantism, the grand problem, "when we take account of what the Methodists, Baptists, and Presbyterians have to say, to which we may add the Episcopalians, as having a certain importance not exactly measured by numbers." Without reviewing the arguments, which were given in brief in our series of articles, we subjoin *The Republican's* conclusions:

"Upon the whole, it would look from these addresses as if we should continue for a while longer to be a country of '40 religions,' if, perhaps, no longer of 'only one gravy.' There are 17 varieties of Methodists and 15 kinds of Baptists. It should be noted, however, that the Harvard Church course did not include any recognized advocate of unity. This may have been designed in order to get the average opinion. 'Those who think,' says the *Congregationalist*, 'that the project of church unity, initiated two years ago by the Episcopal Church of the United States, and subsequently indorsed by a dozen other communions, is a useless or even 'chimerical undertaking, are little aware of the strength of purpose behind the movement.'"

"The influences permeating from the Evangelical Alliance and the Edinburgh conference; the work of clergymen like Newman Smyth, Washington Gladden, and Albert P. Fitch, among Congregationalists, or Episcopal laymen like Robert H. Gardiner and Silas McBee, who has recently resigned the editorship of the *Churchman* to found the new *Constructive Quarterly*, are not to be overlooked, to say nothing of the Young Men's Christian Association with John R. Mott, who has been called the greatest living spiritual force. These are moving intelligently in a direction in which the Protestant Church is bound to move sooner or later. The unit in the church, as in business, is increasingly cooperation, but it is likely to pass through a first stage of federation."

The Congregationalist (Boston) seems to think that the editor of *The Republican* has "succeeded remarkably well in penetrating to the gist of the successive addresses." He also seems to arrive at a conclusion similar to that of Dr. A. W. Vernon, of Harvard Church, the instigator of the series. The position of the latter is thus summarized by his church paper:

"He said that the leading impression left on his mind was the disposition of the speakers to emphasize more what they were not willing to sacrifice in behalf of unity than what they were willing to give up. The general character of the deliverance had made him feel that church unity was far off, but that the next step should be the union of bodies most alike. President Horr's address, he thought, opened the way for a closer approach between Baptists and Congregationalists. Dr. Vernon thought that most Congregationalists would be willing to yield the use of water when presenting their infants in dedication to God, that they would be quite as well satisfied with the sign of the cross on the foreheads of their little ones. And he looked forward to the time when both Congregationalists and Baptists would dedicate their infants, would baptize only believers, and would permit baptism by any method the candidate preferred. Dr. Vernon expressed his belief in Episcopal supervision shorn of any sacerdotal pretensions. In Congregational-

ism and Presbyterianism to-day the pastors are too busy with local problems to do this larger work, and the secretaries of missionary societies do not carry the necessary authority for it. Where Congregationalism rules alone it may ruin. Our churches need men who will direct and inspire our common aggressive Christian undertakings. The one fundamental conviction that Congregationalists would not give up is the belief that the Church is the servant of the individual Christian and not his master. . . .

"On another point both Dr. Vernon and *The Republican* are apparently agreed, and that is the rather uncompromising attitude of Dr. Eliot, the representative of Unitarianism. Dr. Vernon was disappointed that the president of the American Unitarian Association did not recognize the Christian basis of unity, and *The Republican*, after noting the emphasis that Dr. Eliot put on freedom of thought and the right to private judgment, declares, 'If one may be a modern Sadducee, denying immortality, or replace the idea of heaven with a sort of Nirvana, or a personal God with a sort of unconscious soul of the world and still be a Unitarian because he is religious and thinks freely, the so-called orthodox denominations would find that here was something too shadowy to unite with.'"

A novel solution of the disunion situation of the Protestant churches is proposed by *The Universalist Leader* (Boston). This consists in the change of a single word:

"Every sect recognizes that it is but one member of the Christian Church, it strengthens itself that it may contribute larger service to the whole Church, and the recognition needs but to be made actual and practical and the way to real unity is open before us, for we have but to strike out from ecclesiastical literature the word 'DENOMINATION' and substitute in its place the word 'DEPARTMENT.'"

"How would it look?"

"The Congregationalist Department.

"The Episcopalian Department.

"The Methodist Department.

"The Baptist Department.

"The Presbyterian Department.

"The Unitarian Department.

"The Universalist Department of the Christian Church, etc., etc.

"Straightway all are united in the Christian Church and serving through that Department which gives to them greatest efficiency. The success of one is the success of all. Deadly competition is measurably eliminated, and even personal relations of members are affected for the better, for both belong to the same Church, and are simply working in different Departments.

"Of course all this is true already in the minds of many; is it true enough to be proclaimed? And by the changing of a word can we not set forward mightily the supreme purpose of this Christian hour?"

HOW LONG MUST THE CHILD WORK?—The Ninth Annual Child Labor Conference has passed into history, and the delegates from thirty-one States have returned from Jacksonville to continue at home their propaganda work. As *The Episcopal Recorder* (Philadelphia) summarizes the convention's work, we read:

"This Jacksonville convention had set before it the darkest sides of the present situation: the moral hazards of the night-messenger service; the low wages of adults in Southern cotton-mills, where more young children are working a ten- and eleven-hour day than in any other industry; the physical dangers of work in glass-factories, still permitted to boys under sixteen years of age in Pennsylvania and West Virginia; the interstate commerce in little children between the canneries and berry-fields of the Middle States, and the shrimp- and oyster-canneries of the South; the horrors of tenement-house life in New York and other large cities, and the mockery of good child-labor laws written on statute-books, with no sufficient provision for enforcement. But there was immense encouragement in the proceedings. More States were represented than ever before, and a deep seriousness and determination marked all the proceedings. An appeal was issued for a campaign of education. The people need to be acquainted with conditions and aroused to remedy them. This is the concern of all, but particularly, we think, of Federations of Labor and Manufacturers' Associations. The child-employing industries, while forming only a small percentage of industrial establishments, have brought the reproach of child-labor upon American industry itself."

MOTOR CARS

WHAT "MOTOR SPIRIT" IS AND HOW IT WORKS

WIDE interest has been taken by makers and users of cars in the announcement of a month or more ago that a new motor fuel had been found in "Motor Spirit." It appears now that "Motor Spirit" itself is not a new product of petroleum at all. It has been known and actually used for nearly ten years. The new thing about it is that a new process for producing it has been found. Patents for this process were issued early in the present year. By this process the fuel can be produced cheaply and in large quantities, while previous methods were so costly as practically to prohibit general use and in any case to make it impossible of use as a general substitute for gasoline.

Under the new process, it has been possible already to sell "Motor Spirit" in some parts of the country at three cents per gallon less than gasoline. The process is a monopoly of the Standard Oil Company of Indiana. Production by this process by any other company entails the payment of royalties to that company, or to the inventor, W. M. Burton, who is the analytical chemist, and one of the directors, of the company.

As described in *Motor World*, the new fuel, in appearance and in general characteristics, "is not unlike gasoline except that it is slightly yellowish in color and emits a more

pungent odor when permitted to evaporate in an open dish." In general, it may be described as a "low-grade gasoline of from 50 to 60 Baume." Under normal conditions, it burns "with a whitish smoke and leaves slightly more soot deposit in the cylinders than does gasoline." Careful carburetor adjustments, however, eliminate these undesirable features, which are "more than compensated for by the greater percentage of heat units for unit of volume, thus permitting the generation of greater power on slightly less consumption." "Motor Spirit" is a last distilla-

tion from the residue of petroleum that remains after the production of lubricating oils. Details on this point are given in *Motor World*:

"In the distillation of crude oil there

refined oil of commerce is made, after which there is produced a distillate known as 'paraffin distillate,' which, after being chilled and prest for the removal of paraffin wax, is again subjected to distillation, producing various grades of lubricating oils. It is the residue from this latter product, which upon 'special destructive distillation' yields 'Motor Spirit' in paying quantities. Thus, it may be made from any grade of crude oil; its boiling point is somewhat higher than that of commercial gasoline, which may range from 115 degrees to 350 degrees, tho by reason of the fact that it actually commences to boil at a lower temperature than does gasoline, there should be no difficulty whatsoever in starting an engine upon it. The final boiling point may be as high as 400 degrees, tho it probably flashes when heated to about 100 degrees."

The odor of "Motor Spirit," says a writer in *The Automobile*, is "stronger and more pungent than that of gasoline." When contained in the tank of a car no passenger would probably discover any difference, but, should any of it be spilled on the floor, the odor might be found unpleasant until it had evaporated. Evaporation, however, is a slower process than with gasoline.

The present production of "Motor Spirit" is estimated at about 15,000 gallons per day. Before the middle of summer, it is believed that much larger quantities will be on the market. At present, it is being used by several—perhaps by twenty—industrial concerns using trucks

in Chicago. In February, during average winter weather, "not the slightest difficulty was encountered in its use,"—so writes a correspondent of *The Automobile*. *Motor Age*, however, reports that, while it is "meeting with favor," only twelve concerns in Chicago out of twenty-one that had been supplied with quantities of it for use as a test, "were well enough satisfied to order further supplies."

Many of those who tried it "found there was little difference between it and gasoline." Such complaints as were made pertained to the odor, but only those who carried the supply under the seat seem to have suffered in this respect. In the matter

SECTION OF THE OLD NATIONAL OR CUMBERLAND ROAD.

Begun in Jefferson's Administration and for years the chief highway from the Potomac to the Mississippi valley. The picture shows the neglected state in which some parts of this road now are.

of mileage, one concern found that "Motor Spirit" gave about 20 per cent. more per gallon than gasoline gave. This result, combined with the difference in price—that is, 15 per cent. in favor of "Motor Spirit"—means a considerable saving in a year's bill.

One other concern, and this a large one,

72 or 73 degrees Baume, while the present commercial gasoline is about 10 degrees lower. While it probably has a little more fuel value gallon for gallon than the older grade, it makes starting more difficult. The 62-degree product now marketed as gasoline formerly was sold under the trade-name of benzine.

"No corporations or combinations of corporations are responsible for the in-

supply of the crude from which the gasoline itself is obtained.

"It is interesting to note that in January of last year when the oil men found that instead of drawing from storage as they had done before, the storage was exhausted and it took their complete production to satisfy the market, even partially, the wholesale price jumped 10 cents.

"Production in all the oil fields is falling off rapidly—the only fields not showing decreased output are California and Oklahoma, and the crude from those fields distills a very low percentage of gasoline. It was just when matters had reached a crisis that 'Motor Spirit' appeared."

On this point of production The Automobile remarks:

"The phenomenal and unexpected increase in the price of crude oil has been largely responsible for the increase in the price of gasoline during the past year. In round numbers crude oil prices have doubled in the past twelve months. Kansas and Oklahoma crude which a year ago sold at 45 cents a barrel at the wells is to-day selling at 90 cents. One year ago Illinois crude sold at 80 cents per barrel at the wells and is to-day selling at \$1.25.

"The increase in prices of crude must not be looked upon as an exhaustion of the supply within the grounds but rather an increase of demand by the refineries beyond the producing capacities of the wells. Some years ago owners of crude oil wells were making little money. The supply was vastly in excess of the demand. With the increased demand due to increased use of automobiles, there came a drawing on the available stored crude supply, which was equal to the requirements of two seasons. Immediately the price of the crude began rising and they have continued consistently ever since. With the increased demand and increased price there has been great activity in sinking wells in the crude territories; and this pronounced sinking of wells, or wild-catting as it is known, may result in vast increases in crude supplies or it may

THE OLD WAY AND THE NEW.

The above "prairie schooner" and motor-truck have both been employed by the same firm during its long history,—a Philadelphia firm dealing in paint. A truck, as well as a "schooner," has transported paint for this house as far west as Pittsburg.

reported the results of the test as less favorable. With a 1,500-pound vehicle, whose route included long runs to smaller towns, over bad roads, during a heavy snow which taxed the motor to the limit, "the car finally stuck in a drift, the new fuel not proving of sufficient power to pull it out." In general, results proved that "only by careful and painstaking carburetor adjustment can the new fuel be used with success," but with proper adjustment "it promises to work on an equal footing with its older rival."

It seems to be generally agreed that the use of "Motor Spirit" will be confined almost exclusively to trucks and delivery wagons. This, however, will prove a considerable boon to users of pleasure cars, inasmuch as it will release from use by trucks and delivery wagons a large amount of gasoline, and thus tend to increase the supply for pleasure cars, and so will lower the price.

Motor-cars and trucks have given to gasoline an extraordinary history as to price. Fifty years ago it sold at wholesale for about five cents a gallon. In each subsequent ten years, until the advent of motor-cars, an advance of only about one cent occurred in each period, the price finally reaching ten cents wholesale. *Motor Age* says further:

"The gasoline of the early days, which was bought so cheaply, averaged about

crease in price, it is simply that the production does not meet the demand. Reports of the United States Government show that the advancing cost of gasoline

The Fact-Backed FRANKLIN CAR— A Light-weight Car with Heavy-weight Ability

MIND you!—the Franklin is teaching and *proving* a mighty principle in motor-engineering. Just two words express it and explain it—*Light Weight*.

Suppose you went out in the market to buy a steam yacht, and somebody sold you a battleship on the ground of its greater weight, power, etc. Later, you find it takes a mint of money to maintain it! And who *needs* a battleship, anyway?

The first great Franklin Fact

The first great Franklin Fact—let it sink in and *simmer*. We give *all* the power, and *all* the speed, and *all* the comfort that most men want. And we do it without great *weight*.

This is made possible by the Franklin principle of "Balanced Construction," which saves extra pounds by means of extra pains in the matter of shaving weight in all essential parts without sacrificing power or speed.

The engine, the frame, the chassis, the body—all are so related and correlated that there is evolved the modern mechanical *prodigy*—a light car with heavy weight ability.

Another big Franklin Fact: reducing the "excess baggage" also reduces the excess of up-keep—light weight means light cost of maintenance.

Tires!—for instance. Let Franklin owners speak. Let Franklin figures talk. These reports are gathered from all over the country—they show service over *all* kinds of roads and under *all* climatic conditions.

In 1910, the average mileage, without a puncture, of 100 Franklin owners was 2750 miles. In 1911, the average of 135 reports was 3061 miles. In 1912, 181 owners showed an average of 3663 miles. This is going *some*!

Why?—because Franklins average at least 25 per cent. lighter than other cars of same size, giving at least 100 per cent. increase in tire service.

Still another Franklin Fact

Gasoline!—still another Franklin Fact. This car has broken every world's record for Gasoline Economy.

In an efficiency contest over Connecticut roads a Franklin went 95 miles on two gallons of gasoline. In another contest at Buffalo, a Franklin had traveled 46.1 miles at the end of time limit—and there was still a portion left of the original gallon!

There are more Franklin Facts about the Direct Air-Cooled Motor, the Entz Electric Self-Starter and other features that make for Service and Comfort. Get motor-wise before you buy.

The Fact-Backed Franklin is made as follows:

Franklin Six "38"	\$3600
Franklin Little Six "30"	2900
Franklin Four "25"	2000
Franklin "18" Runabout	1650

Equipment All Franklin 6-cylinder cars are equipped with Warner speedometer, top, trunk rack, wind shield, bulb horn, 5 lamps, electric lighting throughout, Entz self-starter.

This car uses less tires, less gasoline, travels faster, rides smoother, steers easier, lasts longer and costs less for up-keep than any car of equal size and power. Let us tell you WHY! See the Franklin dealer, or ask for catalogue.

not. Some experts on the supply of crude oil believe that there is not a sufficient quantity of crude west of the Rocky Mountains to meet the requirements."

THE "MERIDIAN ROAD" FROM WINNIPEG TO GALVESTON

Elsewhere is a map showing the route of the Meridian road—a highway now under construction from Winnipeg, Canada, to Galveston, Texas. For about one-half its length—that is, for a distance of about 1,000 miles—it is already regarded as a "first-class" road. Just before winter set in, an official inspection party toured over it from Winnipeg to Wichita, Kansas,—a distance of over 1,000 miles. Eight days were needed for this trip, the average mileage being 130. Items in connection with the route and the work yet to be done on the road are given in *Motor Age*:

"The International Meridian Road Association is less than a year old and in the first year of its existence there has been expended upon the Meridian road more than one-third of a million dollars. For the first six miles out of Winnipeg there is being constructed a cement road costing over \$30,000. Across South Dakota, for permanent bridges, cement culverts, and grading, \$40,000 has been expended; across the Coteau hills in Roberts county, South Dakota, an entirely new road is being constructed with maximum grade of 6 per cent, crossing an elevation 800 feet higher than the surrounding country and 12 miles across. In Coding, Kingsbury, and other counties, road-building bees were held and a first-class dirt road constructed by donation. In nearly every county new bridges, cement culverts, etc., were put in, and the expenditures in South Dakota will easily aggregate \$75,000. In Nebraska for permanent bridges, cement culverts and new grading, and improvements under the government supervision south of Columbus, in the Platte River Valley, there has been expended at least \$50,000. In Kansas, the Meridian road in seven counties was declared a county highway and is being constructed and maintained at county expense. Cowley county, in the construction of a concrete reinforced bridge across the Walnut River, has spent \$20,000 and built a rock road through Arkansas City and Winfield costing \$50,000, which rock road will be extended across the county next year. The total expenditure this year on the Meridian road in Kansas exceeds \$150,000.

"In Oklahoma, on the Chisholm trail, cement culverts and reinforced concrete bridges are going in and much grading is being done which will aggregate at least \$50,000. In Texas, \$1,000,000 in bonds has been voted for roads in Tarrant county and \$600,000 for bridges, while Dallas county has recently constructed over the Trinity River, between Dallas and Fort Worth, a reinforced concrete bridge costing \$700,000. Other counties have voted road and bridge bonds and in the near future Texas will have some fine roads.

"Motor-car traffic over the Meridian Road has grown rapidly but has been diverted this year to other roads on account of the large amount of improvement being made. On our inspection tour we found it necessary to go around scores of new bridges and new culverts. Signboards have been placed about one-half the way between Winnipeg and Oklahoma, and the road will be distinctly

posted all the way between Winnipeg and the Gulf of Mexico by spring, except possibly a part of the Texas and Oklahoma division, which will be sign-posted as soon as definitely located.

"Different methods of erecting the signs have been employed in the various States. In North Dakota the work of signboarding has been done in a very thorough manner, and the tourist can follow the road with ease from the signboards alone. A rule has been established that the signs be erected on specially prepared posts painted white with the sign six feet from the ground. At every turn two signs are used, and in most of the counties the names of the towns with mileage both ways have been painted on the signs, so that the tourist has very complete information both as to the route and as to where he may happen to be. In Kansas and Nebraska a map sign has been erected at each turn of the road, with the names of the cities thereon through which the road passes.

"The Meridian road passes through the Bread Basket of the North and between lakes and summer resorts of the Dakotas and Minnesota, through the fine corn fields of Nebraska, between wheat and corn fields and orchards of Kansas, into the immense cotton fields of Oklahoma and Texas, to the subtropical fruit region on the Gulf of Mexico. The road follows very closely the ninety-seventh meridian of longitude, and from sea level at the gulf rises to 2,000 feet, the summit of the Coteau hills thence sloping downward toward the north to 700 feet at Lake Winnipeg, without a hill too steep for a car to climb on high gear.

"It is the purpose and intent of the association to secure the construction of a road over every part of which a full wagon-box load or a car at high gear can pass, except in wet weather. It is anticipated that in the near future thousands of business men and retired business men will take their families in their motors and proceed northward at slow stages for their summer vacations, among the lakes in the north latitudes, and that in the fall the retired merchant or banker will take his family in his car and leave the rigorous winters of the North to spend a few months in the salubrious climate of the gulf coast. Our party proceeded over this entire route without an incident to mar the pleasure of the trip. Good hotels and good garages are to be found every few miles in the sixty odd cities between Winnipeg and the gulf.

"All along the route great enthusiasm over the project is being shown, and it is anticipated that it will not be long before the whole trail will be completed and ready for motorists."

EXTRAVAGANCE IN DRIVING CARS

It is contended by a writer in *Motor Age* that the driver of a car has within himself the means for reducing operating costs in ways which would largely counterbalance the increase in the price of gasoline. If drivers would "reform their methods of driving and controlling speed," the consumption of gasoline would be materially reduced. Much of the extravagance in consumption is due entirely to owners and drivers. In fact, there is so much waste that, "if more economical carbureters were fitted, it is questioned if owners would get more than a fraction of the economy." Owners and drivers alike desire "quick acceleration, but few realize how dearly they "pay for their whistle"; all is done at the expense of gasoline, "not to mention

Well-known Users of Dixon's Lubricants

The cause of friction and the cure

UNDER a microscope the highly polished bearing surfaces of your car show full of depressions and projections. When bearing surfaces meet, these projections interfere and cause friction.

Dixon's Flake Graphite introduced into a bearing by means of a vehicle, such as grease, interposes itself between the surfaces and prevents all metallic contact. Dixon's Flake Graphite as contained in

DIXON'S Graphite Grease No. 677

cures friction troubles

This graphite grease is unexcelled for transmissions and differentials. For sale by all good dealers. Try it.

Duke Lewis, who has used Dixon's Graphite Lubricants for the past three years, says: "I have just taken down my 5000x Car that I drove in all the races of the past season (1912), and I find every ball-face, every bearing, every piston perfect, and, if anything, in better condition than at the start of the season."

Teddy Tetelaff says: "Would rather pay \$5 per point for Dixon's Lubricants than use any other as a gift."

Hughie Hughes says: "Dixon's Automobile Lubricants not only reduce friction to a minimum, but their lasting qualities are remarkable."

For your car's sake, get our free book, No. 247, on "Lubricating the Motor." Send name and model of car. Write for copies of very interesting testimonial letters from the "Speed Kings of Motordom."

MOTOR-CARS

(Continued from page 838)

many other parts of the car on which quick acceleration exacts its heavy toll." The writer specifies other forms of extravagant expenditures in driving:

"But quick acceleration is not the only luxury that owner and driver delight to indulge in. Running so much on a low throttle is an equally important crime. Instead of shifting gears, the throttle is nearly closed, the result being that the suction of the cylinders is largely exerted on the gasoline spraying nozzle and too much gasoline is drawn out in proportion to the air entering. Only a fraction of this gasoline is actually needed, the remainder in not a few cases going through the motor in a poorly combusted form, and doing its part to aid in carbonizing the combustion chamber and valves. There is also a remedy for this, namely, keeping the motor speed up, keeping the throttle at a wider-open position and shifting gears more frequently. With the throttle opened more there is a greater quantity of air entering and the cylinder suction on the gasoline is correspondingly reduced, giving a mixture still over-rich but yet more nearly approximating the desired proportions for economical running.

"If the motorist will only analyze his own actions in driving, analyze his methods of acceleration, analyze his methods of driving with regard to amount of throttle opening, and analyze his driving so far as gear-shifting is concerned, he will invariably find that not a little of the unnecessary fuel consumption lies at his own door. He is breeding the luxury in driving that creates the extravagance, and do what he may the carburetor manufacturer will never be able to obtain that Utopian fuel economy until the driver, the owner, or the owner-driver is willing to do his share in the work.

"This luxury in motor-car operation dates back many years, almost to the time when four-cylinder machines made their debut. In those days the high-gear demonstration on the steep hill proved the kindergarten for the new driver. His appetite was whetted. He was schooled in avoiding the use of the gear-shift lever, and those elementary courses have during the intervening years been succeeded by constant high-gear arguments of the salesman and demonstrator until to-day thousands of owners look upon it as an indication of poor driving if they may have to shift gears on a hill where the car ahead of them on the road makes it on high. It is difficult, well nigh impossible with many, to convince them that it is much preferable to change to lower gears on a hill and keep the motor speed within its range of desired efficiency and economy. The luxury of driving instilled in the early days has become a habit, and what is more difficult to uproot than a deeply formed habit? Yet it is this very same habit that tends to increase the gasoline consumption.

"Fuel price looks to-day as the possible tutor that will accomplish the task, or that will at least give the first lessons in rational driving. The rising price of the last twelve months nearly stampeded not a few buyers. The floodtide was reached three or four months ago; there has been a slight ebbing ever since. The announcement of 'Motor Spirit' as a fuel for trucks, traction engines, and stationary engines will create a still faster ebb, but the thin edge of the wedge has been entered and the owner-driver will not forget the nightmare that he had a fleeting vision of and which four months ago promised to be such a reality.

"Owners and drivers can do much to solve the fuel-economy problem; the carburetor-makers must and will do their part; the car-builders must do their part by reducing weight wherever possible; the road-builders are doing theirs; and lastly the fuel-producers are focusing every effort to alleviate the situation. The fact that there is not any real danger of much increase in the price of gasoline during this year should not create a feeling of contentedness in present driving methods. Careless drivers should reform themselves."

SHALL HORSE-POWER BE REDUCED?

The question of a possible reduction in horse-power is discussed in a recent issue of *Motor Age*. Manufacturers and buyers of cars are represented as divided on the question. The personal equation, or what this paper calls "individual satisfaction," largely governs opinion. An owner who "wants plenty of power for high speed hill-climbing, is willing to pay for his whistle." So too the buyer who wants "a large, comfortable vehicle to carry seven passengers and as much baggage as he wants to take along also will continue to ask for power." The demand for smaller vehicles, for less horse-power, and a reduction in body weight, comes from "the economist who counts the cost of operation and who aims at getting the most miles out of each gallon of gasoline and the greatest distance out of a set of tires." The writer continues:

"So far as the question of speed on the public highway is concerned, horse-power rarely is a determining factor, because the medium-powered machine can make considerably more than the legal speeds—in fact, often more than double of them. The builder of high-powered machines cannot hope to sell on speed possibilities, although there are a few makers who are indulging in national selling campaigns and putting forward excessive, in fact impossible, highway speeds as the prime consideration. Such can bring about little more than general disappointment.

"There are, roughly speaking, three classes of buyers—the economist, the comfort type, and the speedster. Their numerical importance is in this order. To date the economist has been the determining factor with hosts of buyers; his ranks are steadily increasing. The comfort buyer is increasing slowly; and the speedster clan is steadily losing ground. Next season the economist division will be the dictator in more than 60 per cent. of the cars sold, and because of the majority he commands his requirements are bound to bask in the public eye to a greater extent than the other two divisions. He is demanding reduced horse-power, because he wants greater mileage per gallon of fuel, and he knows that this is only possible with the reduction of cylinder sizes. He asks for lighter body weights because a lighter body will give him increased mileage.

"From the indication of to-day it is certain that the economist buyer will be satisfied in the matter of reduced power. There are enough 1914 models now on the highway to assure this. These models are built with slightly longer-stroke motors and reduced bore. Next year will witness a slight increase in the bore-stroke ratio, and consequently a reduction in rated horse-power. The reduced horse-power will be welcomed for yet another reason, namely, that annual registration fees will be slightly lower—a needed reform, in view of the increase in registration rates.

Measure Automobile Values by the Features Combined in the New Detroit Electric Clear Vision Brougham

All advantages of electricity.
Electrically started.
Electrically lighted.
Electrically controlled.
Absence of complicated mechanism.
Clear vision in *all* directions.
Short turning radius.
Five speeds *without gear shifting*.
Silence.
Hill climbing ability (will climb any hill that any type of car will climb).
Adaptability to city traffic.

Long mileage for country driving.
Aristocratic appearance.
Large area of windows.
Suitable for all occasions—formal or informal.
Direct shaft drive "Chainless" power plant.
Minimum expense for upkeep.
Cheapest form of motive energy (Electric current).
Limousine advantages without expense of chauffeur.
Double set of brakes (their operation almost effortless).

Cleanliness.
Dominance of weather conditions.
Springs with elastic limit exceeding 200,000 pounds to the square inch.
Utmost comfort with cushion tires.
Aluminum roofs.
Aluminum body panels.
Aluminum "closed-in" fenders.
Aluminum window sash—one piece (no warping).
Horizontal control lever, *takes up no seat space*.

The public is just awakening to the fact that the electric is destined to be the popular automobile of the future.

Electricity is now available in over 6,000 cities and towns, although nearly one-third of the entire population of the United States live in 228 cities of 25,000 and over.

The Detroit Electric illustrated above will travel as much as one hundred miles on one charge.

Illustrated catalogue sent upon request showing eight different models ranging in price from \$2300 for the Ladies' Victoria, and \$3000 for the Clear Vision Brougham, to \$5000 for the Limousine.

MOTOR-CARS

(Continued from page 840)

that have been passed during the past winter in not a few States.

"It is going to be a difficult problem to reduce body weight. It has been going a little higher each year of late; going higher because of the additional equipment the buyer has demanded. Adding demountable rims, electric starters with their heavy batteries, windshields, tops, and other equipment has added hundreds of pounds, and besides the added weight in themselves, there is additional that extra weight incorporated in some of the chassis parts in order to make them adequately strong to care for the additional accessories. The net result is that Europe, which once built considerably heavier cars than America, is now leading America in the light-car field. America will have to reduce the weight of its cars intended for the economical trade."

ROAD-BUILDING IN THIS COUNTRY

The total expenditures in road construction in twenty-nine of the States of this country and in the District of Columbia last year were \$62,691,429. The other States, from which figures were not obtainable, either have no organized road departments, no system of accounts disclosing the figures, or are still in an experimental stage. It appears from an article in *The Automobile* that New York last year "spent more money than any other State in the Union," the sum for the year having been about \$15,000,000. More than 3,700 miles of new road were built and more than 10,000 miles "were shaped, crowned, and standardized as to width." Of the 80,000 miles of roads in this State, 11,000 are classed as "improved roads." Illinois, with a greater mileage (100,000 miles), spent last year \$7,500,000. Only about 10 per cent. of the mileage in Illinois is classed as improved, the remaining 90,000 miles being simply dirt roads, but many of these are excellent and well cared for. Facts as to roads in some of the other States are given as follows in *The Automobile*:

"Iowa has a total of 102,000 miles of highway, upon which it has spent during the past year \$7,000,000. There are but 2,500 miles of improved highway in the State, of which a very small percentage is macadam. There are between 2,000 and 3,000 miles of stone road in the State, while the remaining 100,000 miles are dirt. Scattered sections of the roads are faced with gravel or some bituminous material. Most of the roads built during 1912 were dirt, the small percentage of gravel and similar roads being negligible in comparison."

"Washington has 39,062 miles of highway. Of this 11,896 are improved; 7,826 miles of the improved roads are dirt, while the remaining improved roads are mostly gravel, the total mileage of macadam being but 184. During 1912 there were 400 miles of new roads built. These were chiefly gravel, with some bituminous macadam, water-bound macadam, brick and concrete. The mileage of highway improved last year is 2,600, the work done being chiefly reg grading, crowding, and draining, and in some cases by the addition of a hard surface. The cost per mile of improved highway was approximately \$450 per mile for the year of 1912."

"Kansas is another State which spent considerable money during the year of 1912 on roads. There are 108,000 miles of

highway in the State, of which but 450 miles are improved. The remaining 97,500 are principally dirt. In the construction of new roads and maintenance of the old the State spent \$4,975,000. The total of miles of improved highway, as given above, does not include the improved dirt roads, which comprise the majority of those listed in the mileage above. The State spent about \$50 per mile of road, which would indicate that very little work was done through vast sections of the State, and that it was possible to do what repairing was necessary at a very low figure on account of the great mileage of the dirt roads."

"Mississippi has a total road mileage of 44,072. Of this 1,000 miles are improved. Of the improved roads 40 miles are macadam, 30 miles are crushed stone, and about 500 miles are gravel. One-third of all the improvement work on road-building varies throughout the different counties of Mississippi, but on an average is somewhere in the neighborhood of \$30 per mile, according to statistics furnished by the Department of Agriculture and Commerce. Mississippi spent \$3,500,000 for roads during the past year. This makes an average of \$3,500 per mile of improved road, including the new roads built."

"Pennsylvania has a total road mileage of 86,000, of which 861 miles have been constructed by the State Highway Department. During the year ending September 1, 1912, 4,500 miles of road have been repaired and put in good condition for travel. Four million dollars have been spent on the construction of the new roads and the maintenance of the old. The money for the State highways is appropriated by the State legislature, which in May, 1911, voted sufficient funds for the two fiscal years ending June 1, 1913. This means that a total of \$2,000,000 per year during the years of 1911-1912 and 1912-1913 is available for highway use."

"Ohio has 80,000 miles of road. Of this 25,000 is improved highway. The percentage of improved highway, the total highway, is probably higher in Ohio than in any other State. Of the improved roads 10,000 miles are macadam and stone, 14,500 of gravel, and 500 of brick and concrete. There are 64,000 miles of dirt road in the State, most of which are unimproved, but which are passable in good weather. The money spent in Ohio up to October 1 during the year 1912 amounted to \$1,122,000."

"Missouri is another State which spent a large amount of money last year in the construction of roads, about \$3,000,000 being spent during 1912. There are 108,000 miles of road in this State, of which 4,750 are improved; 101,250 miles are dirt roads and are in good condition at favorable periods of the year. Of the improved roads the larger part are gravel, this type comprising about 3,400 miles, while the stone roads make up the remainder of 1,250 miles."

"Wisconsin has approximately 65,000 miles of highway. According to the United States Office of Public Roads there are 10,000 miles of these highways that have been improved, but the number is closer to 12,000. Most of the roads are dirt, but considerable work is being done along the line of macadam. Along the Fox River Valley experimental concrete roads have been constructed for the first time in Wisconsin."

"Not a few States are carrying on experimental work, such as work of determining the best surface by which road work of both pavements and macadam and at the same time to be moderately cheap. The State of Illinois, for example, built 10 miles of experimental roads of different types during the year of 1912. These are 108,000 miles of

MOTOR-CARS

(Continued from page 842)

ing the year 1912. Results from these are not yet obtainable, but are expected to be of great value in determining cost and advantages of roads of different type.

The vast stretches of roads throughout this country are still of the dirt or earth type. These make excellent surfaces in good weather, and after a stretch of bad weather can be restored by dragging. Where the percentage of dirt road is greater compared to improved roads and macadam, asphalt, and other artificial surfaces, it will be noticed that the cost per mile of the road is materially less even where the dragging is thoroughly carried out and the dirt road kept in the best possible condition. The main disadvantage of this road is, of course, its tendency to rut wherever traffic is frequent. In the neighborhood of the larger cities and towns throughout the country it is necessary that some such hard artificial surface be used.

"It has always been stated that American road construction was devoted too much to the building of roads and not enough to the maintenance."

CHAUFFEURS OF THE BETTER CLASS

It has been shown again and again that class distinctions exist in every form of human society, whether we consider financial, social, or intellectual conditions. Even in the lower walks of life and among savages marked distinctions are found. It has now come about that among chauffeurs there are distinctions. Point has been given to this discovery by the formation in New York, by a number of drivers and mechanics, of what is called the French Auto-Workers' Association, which has been critically described as "the aristocracy of chauffeurdom." This association comprises men who are employed by some of the wealthiest, or otherwise most prominent, car owners of the city. When all the chauffeurs who are eligible for membership have been enrolled in it the association will have a membership of not more than thirty-five or forty. Its origin dates from the garage of the Automobile Club of America, where a sort of clique had already been formed among chauffeurs employed on cars of French make. Membership in the association is not restricted to Frenchmen, however, altho a considerable number of members are of that race. The objects of the association are largely social. It is believed that benefits will result from the interchange of ideas and knowledge pertaining to foreign cars that will naturally take place. Permanent club rooms will be secured in some locality convenient to the garage of the Automobile Club.

The other social extreme among chauffeurs seems to be found in what has become known as the "garage loafer," a man who does not own or drive a car and never expects to have one, but who "likes to be identified with the good life fraternity," altho he does not want to work. His day runs from fifteen to about fifty; he commonly enters garages at the back door, is fond of seeing cars tested, and repairs made; is fertile in suggestions and converse without formalities with customers who drop in. The writer in *Motor World* continues:

"You have seen him stand a few times and suppose he was some one whose car

was being fixed; the first thing you know he is spending part of the time in front in the salesroom, spitting and dropping ashes on the floor and looking out at the people as they pass by. Later he takes to sitting in the driver's seat of your car—then back to the greater luxury of the tonneau. Perhaps by this time he has a friend or two with him and has made the floor covering in the tonneau look like the back door mat of an alley entrance. He is not blatantly offensive and oftentimes is well connected. You hesitate about ordering him out; perhaps you know his family; but after he has batted in once or twice you finally summon up courage enough to tell him to "Beat it!" You should have done it six months ago.

"Garage loafers of any age have no place in the automobile business. They are a menace and a nuisance. They are impossible! They should be swept out the back door at their first appearance, and if they persist in thrusting their obnoxious personalities on you further, the police should be invited to participate in the eliminating ceremonies."

AS TO THE OUTPUT OF ONE MAKE OF CAR

At a dinner in Detroit late in February, N. A. Hawkins gave an interesting talk, in which he set forth details as to what is meant by the making of 200,000 complete cars in twelve months—the output of a single maker in that city. Ten years ago this company was capitalized at \$28,000 and had an annual business of only \$200,000. It is "now the largest automobile factory in the world," having a capitalization of \$30,000,000, and is selling each year about \$200,000,000 worth of cars in all parts of the world. Other items in Mr. Hawkins's remarks are given below as reported in *The Automobile*:

"Profits are equivalent to maximum industrial earnings on a capitalization of \$200,000,000, and on this basis could probably, before the twentieth anniversary, return the equivalent of this amount to its shareholders. The January sales of cars were nearly \$9,000,000, or more than twice the gross receipts of the Grand Trunk railway system for the same month. In the last four months we did a business of nearly \$30,000,000, and two of those four months were not very good ones.

"The company has all the elements of a successful enterprise. It manufactures a useful article; its company is properly organized; it is amply financed, entirely within itself, to successfully carry on its operations; its business policy is clear and well defined; its management is capable, tactful, and honest; its factory is well designed, fully equipped, and suitably located; its product is perfect in design and quality; its selling force is efficient, the largest of its kind in the world, and backed by plain, honest advertising, with complete service to owners.

"The company is an organization of all young men. Not an executive head has been added to a single department of the business in more than six years, during which period the output of cars and annual sales have nearly doubled each year. All this great business has been built up from an original cash capital of only \$28,000 and without ever borrowing a dollar or issuing any paper. We used banks only as depositories to look up money and earn interest, and this season in planning a production of 200,000 cars we never consulted with a banker.

"We are at present employing in our

(Continued on page 846)

The "40" That Won World-Wide Prestige This Year

Here is the car which won the fight of the Forties, against 72 American rivals this year.

No other "40," in the history of Motordom, has offered so much for the money.

Hundreds of dealers, who know all cars, have conceded this fact. And so have experts from eleven foreign countries who have come to inspect this car.

The Critics' Car

The Michigan was built for the critical. And on both sides the Atlantic it has met the requirements of the most exacting buyers.

It has met their ideas of fine engineering. It has met their artistic requirements.

It has given them four forward speeds, vast overcapacity, oversize tires, left-side drive, electric equipment—the best that the best cars give.

It has given them 14-inch cushions, a 22-coated body, room and luxury. And the body designed by John A. Campbell, one of the two greatest body designers.

It has given all this at a price

which no equal car, American or foreign, attempts to meet.

Built by Cameron

This Michigan "40" is built by W. H. Cameron, who has built 100,000 very successful cars. It is his greatest car, and the only car with which his name has been publicly connected.

It embodies the ideals of this great engineer—the up-to-date features, the best modern practice, the oversize and the overcapacity which the best engineers demand.

It is built under his supervision, in a model plant of enormous capacity, modernly equipped. It is the only car in which Cameron and Campbell ever combined their genius.

Go Compare It

Go see this car and compare it with others. Compare every specification. See for yourself if it has any rival under \$1,950.

Then note that this car, completely equipped, is sold for \$1,585. The best men in the line have failed to find an equal offer anywhere. See if you can find it.

Write today for our catalog and the name of your local dealer.

MICHIGAN MOTOR CAR COMPANY, Kalamazoo, Michigan

Owned by the Owners of the Michigan Buggy Company

Michigan "40" \$1,585

With All These Special Features

Four-forward-speed transmission, as used today in all the best foreign cars.

Oversize tires—35 x 4 1/4 inches—making the Michigan practically the only excess-tired car in America.

Electric lights—with dynamo.

Center control.

Left side drive, to which all the best cars are coming.

40 to 46 horsepower.

Cylinders—4 1/4 x 5 1/4 inches.

Brakes—extra efficient—drums 16 x 2 1/4 inches.

Springs—2 1/4 inches wide—front, 37 inches long; rear, 50 inches long.

Steering post adjustable. So are clutch and brake pedals, insuring perfect comfort and fit to every driver.

Shortville wheels, with 19 1/2-inch spokes—12 to each wheel.

Demountable rims—Firestone quick-detachable, with extra rim.

Wheel base—118 inches.

Straight-line body, designed by John A. Campbell, finished with 22 coats.

14-inch Turkish cushions—The deepest cushions, we believe, and the most comfortable in use on any car.

Rear seat 50 inches wide inside—22 inches deep. Doors 20 inches wide. Tonneau room 50 inches either way.

Nickel mountings.

Headlights—electric—12 1/4 inches diameter, very powerful.

Sidelights—set in dash—flush with it.

Windshield built as part of body, easily inclined to any angle.

Mohair top, side curtains and envelope complete.

Electric horn.

\$50 Jones Speedometer.

Foot rail, robe rail, rear tire irons, tool chest, with all tools, under running boards.

Overcapacity. Every driving part made sufficient for a 60 horsepower motor.

Self-Starter

There is much difference of opinion about the relative merits of the various types of self-starters that we have not adopted any one type as regular equipment. We prefer to leave this selection to the buyer.

However, we equip with either the gas starter or a positively efficient electric starter, at a very moderate extra price. (108)

NORTH EAST MOTOR GENERATOR

NORTH EAST LOCK SWITCH

NORTH EAST STARTING SWITCH

The Noiseless NORTH EAST

Electric Starting and Lighting System

Combines Simplicity, Efficiency and Economy

SIMPLICITY—because there is nothing complicated to get out of order: merely a single machine—a motor-generator all in one—comprising a simple armature with one winding and one commutator, such as is familiar to every amateur electrician, and an automatic gear device to change from motor to generator with the starting of the engine. Has fewer parts than any other system, is entirely free from contact troubles, and cannot be disarranged from the driver's seat.

EFFICIENCY—because it has more power per unit of weight than any other electric starter, and will turn over the largest engines used in automobiles, starting them under the most adverse climatic conditions, and with the least current consumption from the battery.

ECONOMY—because there is no expense for upkeep or repairs. And because low current consumption means longer life for the battery.

The North East System cannot be installed on cars now in use. You can secure its advantages, however, by specifying

MOTOR-CARS

(Continued from page 844)

factories and at our branch houses 18,061 men, and all day-workers, not a piece-worker in the plants, and disbursing monthly about \$700,000 for pay-rolls. Every day, except Saturday, is pay-day, and our average runs between \$30,000 and \$35,000 daily.

"Our factory, which now covers practically 65 acres, is about as complete and up-to-the-minute as modern architecture and latest machinery and labor-saving appliances can make it.

"Our going inventories of raw materials, parts, accessories, etc., are running along now at an average of about \$7,000,000, and, mind you, every car that we build each day is shipped the same day, so none of this amount is for finished cars. Our total net assets are close to \$25,000,000.

"June 24 last a schedule of manufacturing our 1913 output was decided upon. To handle this production we require 1,000,000 lamps, 800,000 wheels, 800,000 tires, 90,000 tons of steel, the hides of 400,000 cattle to furnish the leather for upholstering the bodies, the hair or bristles from 6,000,000 hogs to stuff into the upholstering, 12,000,000 hickory billets for wheel spokes, nearly 2,000,000 square feet of glass for the windshields, 750,000 pounds of soft soap, 15,000 tons of molding sand to make our castings, 2,000,000 cubic feet of gas per day for heat-treating, etc.

"January 13 last we built and shipped 1,336 finished model T's—a business for one day amounting to nearly \$700,000 and requiring more than 200 freight-cars to handle the shipments, or five full train loads of more than forty cars to the train.

"On the basis of the mileage from Detroit to New York City—if we had delivered this day's output to our New York branch by driving the cars overland, we would have had a procession of model T's—just a half a mile apart—and when the first car was coming into New York the last one would be leaving the factory.

"During January we built and shipped 17,601 finished cars—a net volume in dollars and cents of nearly \$9,000,000—more cars than we built and shipped during the first five months of last season. By the end of February the close of our first five months for 1913—we will have shipped more than 56,000 cars as against 17,555 for the same period a year ago.

"In spite of our increased facilities for producing, our daily orders are in excess of our daily output as evidenced by the fact that in spite of all the great shipments we have made we still have on file for immediate attention 38,326 orders or a sufficient quantity to take us through to April 10, at the rate of 1,000 cars a day.

"Our traffic manager recently advised that we would require 35,000 freight-cars to move our 1913 output.

"According to our output this season and according to the most authentic estimates of other car-makers, we will produce every other car that is built in this country during 1913.

"One day last week we gave one tire concern our check for a little less than \$2,000,000, and every other single part that goes into the construction of our cars bears a similar comparison to the completed job—from cotter-pins and lamps to springs and tops—so that you can get some idea of quantity production.

"By September 30 we hope to have at least 400,000 satisfied users voicing our sentiments. Four hundred thousand owners means 400,000 voters for good roads, because most owners are their own drivers—and when good roads are linked up all

TIMKEN

AXLES & BEARINGS

Timken-Detroit Front Axle for Pleasure Car, with Timken Roller Bearings on the Spindles

Unseen Wonders of Motor-Car Axles

THEY are not complicated, yet each Timken-Detroit Axle is a mechanical marvel. In the two axles shown on this page there are 848 pieces, counting each Timken Roller Bearing as one. Of these 848 pieces, 723 are in the rear axle.

Every part in these axles has a duty to perform. Every part must be correctly designed for that duty.

It is one thing to make these hundreds of pieces of metal tight. It is another—and just as essential—to prove them right after they are made.

Both are equally important to your satisfaction—and to your safety.

You must be able to put your reliance on the steel—on the skill with which it is fashioned into the axle parts—on the proper heat-treating of these parts—on the measuring, unchanging accuracy with which they are assembled—on the unflinching thoroughness with which they are tested.

It's impossible for you to prove that each part and piece is rightly made.

But you can prove that it has been made by men whom you can trust—if it's a Timken-Detroit Axle.

"Timken" stands for an organization devoted wholly to one idea—the building of good motor-car axles.

And "Timken" stands also for another organization, whose product is the Timken Tapered Roller Bearing—the one type of motor-car bearing that combines greatest capacity for vertical load, and for end thrust; least tendency to wear; and perfect adjustment for wear.

You can get the full details of axle and bearing importance by writing for the Timken Primer's C-9 "On the Anatomy of Automobile Axles," and C-10 "On the Care and Character of Bearings." Sent free postpaid from either address below.

A Timken-Detroit Rear Axle for Pleasure Car.

Timken Axles and Bearings are also made for Motor Trucks.

At both extremes of size
and in between

Waltham Watches

have the supreme instrumental excellence

The watch on the left is the Waltham "Vanguard", the most widely used railroad watch in the world. In every country you will find trains running, and running promptly on Vanguard time. But we do not consider this the height of Waltham achievement, for the reason that large size watches such as railroad men use are not particularly difficult to manufacture.

A more severe test of watch-making occurs in the thinner and smaller models such as the lady's watch pictured above, the movement having the same diameter as a nickel 5-cent

piece. It is our sincere opinion that Waltham offers the first ladies' watches which can really be considered as serious dependable timepieces.

Most ladies' watches are made to be worn in the bureau drawer; Walthams are designed for actual use and accurate use at that.

Ask your jeweler to show you a Waltham Riverside model. It is worth a hundred "toy watches".

Riverside Watches are described and illustrated in a booklet, sent free upon request. Please mention "The Riverside Family."

WALTHAM WATCH COMPANY, Waltham, Mass.

IT COSTS MUCH LESS TO OPERATE YOUR CAR

If you use the *best* oils, because the frictional surfaces are protected from wear. You get more speed and power with less energy. Repair and cleaning bills are minimized.

If your dealer does not sell Harris Oils, send 80 cents for (1 gal. can) or \$1.75 for (2 gal. can) and we will ship same prepaid.

HARRIS OILS

America's Leading Lubricants

Made of Pennsylvania Premium Stock. Over 26 years of experience back of them. A little goes a long way and every drop counts. Prove the statement. Try HARRIS OILS.

MOTOR-CARS

(Continued from page 846)

over the country, I hate to think about our annual production to supply the demand for these individual transportation lines."

AROUND THE WORLD BY MOTOR

Melvin A. Hall and his mother recently completed a twenty-months' motor tour in Europe, Asia, and America, by which, combined with ocean travel, they have gone around the world. Mr. Hall's father was with them for a considerable part of the time—about seven out of the twenty months. Their motor mileage was 40,000. The great amount of mileage is explained by the fact that many side trips were taken. For example, in Java, about 2,000 miles were covered, altho the island is less than 700 miles long and in width is narrow. Mr. Hall's account of the trip is printed in *Motor*, from which the following descriptive notes and an illustration on another page are taken:

"The way the trip began was this: my mother, my father, and myself went abroad in June, 1911, just to wander through England around Coronation time, and perhaps take a run on the Continent, maybe a little outside the usual run of the 'Grand Tour,' and then return to this country. In England, however, it was suggested that it might be a nice trip to go to Delhi for the durbar, and that appealed strongly to all of us. It was not until several months later that this portion of the tour was undertaken.

"First of all, after the English and Welsh part of the journey was finished the car was shipped across to France. We motored through France and Belgium and then into Holland and Germany. A side trip up into Denmark followed that, and then there came a return into Germany. From that empire we made a run into those parts of Switzerland that are not closed to the automobilist, and after a trip over into Austria, we returned into Switzerland. Next we went down into Northern Italy and Austria, and followed that by a jaunt into Hungary, and then journeyed into some countries where the average traveler doesn't go.

"We negotiated the rough roads along the Adriatic through the wild scenery of Istria, Croatia, Dalmatia, Bosnia, Herzegovina, Montenegro, and Albania and the Balkan states that since have been the scene of the bursting of that well-known and familiar war-cloud that has been perennially hanging over them as long as any of us can remember. We tried to go on to Constantinople, but the roads were not open or good enough. I think they will be when the war is over. To sum up our European experiences, every country in Europe save Norway, Sweden, Portugal, and Russia, was visited.

"Thus far it has been nothing out of the ordinary, save that there was no direct running through any country, but zig-zagging along the roads that seemed most attractive. From Albania we returned into Hungary again, and so into Bavaria and Bohemia, then to France and down into Spain. A run along the Riviera to Southern Italy completed the European section of the jaunt. Practically every mountain pass, forty-seven in all, in the Swiss, Austrian, and Italian Alps, the Tyrol, the Dolomites, and the Pyrenees, was traversed.

"We sailed for Bombay from Naples, to take up the Indian end of the journey. The durbar at Delhi, whither we went at once, was the particular feature that interested us most for the time being, but later we ran up to Peshawur, beyond which into Afghanistan no white man ever

goes, and where, of course, automobiling 'isn't done.' Then we continued across the Rajputana desert, tracking first through a bullock trail, rough and just about wide enough for the tread of the automobile. Further along, this disappeared, and it was necessary to proceed by guesswork. One of our pictures shows the car being forced through a sand dune that had piled up directly on the route. The dune had to be cut through wide enough to let the machine get by, and then in the very soft going ahead of it camel-thorn grass was put down, so as to give something for the tires to run over. One day's motoring under such conditions was only fourteen miles.

"The motoring roads in India are trunk lines, stretching straightaway across the country along the lines of the compass and far from bad roads. In the rainy season no one can travel, and in the dry season it is easy to lose the direct road. This is because the places where the torrents run in the rainy season dry out so that the road goes right up to the edge of a ditch, and the only thing to do is to start straight across and depend on picking it up on the other side. Where there is a railroad line that runs near the road, not infrequently these wide gullies are crossed by means of planking laid over the ties, so that the car can run across the railway arch.

"Motoring in India isn't any solitary performance, as one might imagine. The trunk roads are crowded day and night with pedestrians, bullock trains, wagons, and what not. This is traffic driving with a vengeance and requires caution at all times.

"Whenever nightfall found us far from a hotel, there were always the rest-houses to fall back on. The charge for these places, which are designed primarily for the use of officials on their travels, is small. They are open to travelers in general when not otherwise occupied, and food can be had, always at low rates. Traveling in India is not expensive, except perhaps as regards the effect of the great heat on the tires of the car. Tires do not stand up well in a hot climate.

"After crossing the Rajputana desert, we motored clear up to Tibet, another forbidden country, which we could not attempt by automobile, and then ran down into southern India, whence we shipped the car to Ceylon.

"The conditions in the countries visited from then on until we got into the very Far East are bound to be surprising to those who have no idea of the good roads that are to be found in almost all other countries except our own United States. In Ceylon and Burma and all through the Malay States, from Penang to Singapore, we found roads that were excellent, of good surface and well kept up. Of course, in some places the highways were not as smooth as table-tops.

"In Java we found many miles of splendid roads, and put 2,000 miles of touring to our credit. If we went into a place and were told that there was a road that led perhaps fifty miles but didn't go anywhere and wasn't particularly interesting in point of scenery, that didn't deter us. We took it anyway, and frequently were well rewarded for our trip. Sometimes, of course, it wasn't interesting, and we might have to back down half the way that we came up before we could find a place to turn around in.

"It was after Java that we transshipped to Sumatra, where seventeen days of rain and a great many discomforts awaited us. The roads were so heavy that the car was frequently mired. The first time this condition was found, it meant a walk of six miles to a rest-house to find shelter for the night. I offered some natives there

For You or For Friction?

Friction steals mileage that belongs to you. In time its constant rub-rub-rub wears out every motor.

The time depends on the lubrication.

Every year hundreds of thousands of automobiles go over the road—lubricated—yes—but lubricated badly. Generally these motorists will say that their cars "seem to be working all right." But unnecessary friction is at work.

Its common results are:

- (1) Undue loss of power.
- (2) Unnecessary repair troubles.
- (3) An excess consumption of fuel.
- (4) An excess consumption of lubricating oil.

These losses are traceable to one common cause—careless and improper lubrication.

Any oil will lubricate to an extent. So will lard. But a lubricating oil, to have efficient lubricating qualities, must both wear well in use, and furnish proper protection under the heat of service.

Such oils are rare.

Given an oil with these qualities, (and remember they are rare), you must next make sure that the oil's "body," or thickness, meets the feed requirements of your motor.

Motors and feed systems differ widely. The oil suited to one motor will often be entirely too light or too heavy for another.

The problem presented is both serious and complex.

To establish a sound guide to correct automobile lubrication, we have taken a step of the utmost importance to the motorist.

We have done what had to be done. Each year we carefully analyze the motor of each make of automobile.

Based on this motor analysis and on practical experience, we have specified in a lubricating chart (printed in part on the right) the correct grade of Gargoyle Mobiloil for each make of automobile.

The superior efficiency of these oils has been thoroughly proven by practical tests.

If you use oil of less correct "body," or of lower lubricating qualities, than that specified for your car, sooner or later your motor must pay the consequences. Unnecessary friction must result. Ultimate serious damage will follow.

A booklet, containing our complete lubricating chart and points on lubrication, will be mailed on request.

These are the facts.

Your lubrication will determine the life of your car. It remains for you to decide on your lubricant for the coming season.

GARGOYLE

Mobiloil
A grade for each type of motor

The various grades, refined and filtered to remove free carbon, are:

- Gargoyle Mobiloil "A"
- Gargoyle Mobiloil "B"
- Gargoyle Mobiloil "D"
- Gargoyle Mobiloil "E"
- Gargoyle Mobiloil "Arctic"

In buying Gargoyle Mobiloils from dealers it is safest to purchase a full barrel, half-barrel or sealed five-gallon, or one-gallon can. Make certain that the name and our red Gargoyle appear on the container.

VACUUM OIL CO., Rochester, U. S. A.

BRANCHES: DETROIT BOSTON NEW YORK CHICAGO PHILADELPHIA INDIANAPOLIS
Food Bldg. 49 Federal St. 29 Broadway Fisher Bldg. 4th & Chestnut Sts. Indiana Pythian Bldg.

Distributing warehouses in the principal cities of the world

Explanation: In the schedule, the lower number the car indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means Gargoyle Mobiloil "A." "Arctic" means Gargoyle Mobiloil "Arctic." For all other grades, see Gargoyle Mobiloil "A." The recommendations cover both passenger and commercial vehicles under ordinary use.

Insure against Errors in Filing This Year

The "Y and E" Direct Name Filing System affords the *safe* method of preventing errors, because it is self-checking.

You re-file letters by number—
the quickest, safest way.

You find letters by name—
the easiest, most logical way

Direct Name System

of Vertical Filing

is a combination of the best points in the alphabetical and numerical systems, omitting the faults of both. It is logical and natural to look for letters under the concern's name. It obviates the task of remembering (or referring to) the arbitrary number which, in the numerical system, is assigned to each concern or individual.

But it is easier, quicker and safer, in re-filing letters, to follow consecutive numbers than alphabetical divisions. You note instantly when numbers are not in proper sequence.

That's why the "Y and E" Direct Name System prevents filing errors. Folders and guides occupy separate positions. Guides are of distinct colors. They cannot be confused with folders. Being celluloided, the guides last fifty times as long as ordinary manila guides. As they remain permanently in current file, no re-purchase is necessary after transfer—the folder tabs become the guides in the transfer cases.

a liberal sum if they would walk back to the car and stay with it overnight, to see that nothing was stolen from it. Altho the weather discomfort meant nothing to them, they were afraid of tigers, and wouldn't go back there, even to sleep in a machine on cushions that would have meant luxury to them.

"There wasn't a deal of motoring in Singapore and in Cochin-China. Tho there were some good roads, as would be natural in a place under French rule, they didn't lead anywhere much. That is to say, there were fine stretches of eighty or ninety miles that struck out from the towns, but they ended abruptly at nowhere, and we had to retrace our steps, so to speak. This was much the same condition that we found later on in Shanghai, where there were roads, but not any that aided in a continuous journey in any one direction.

"After Cochin-China we took the steamer to Hongkong, where there was little if any automobilizing. China, as a country for touring, doesn't exist on the motoring map.

"From Hongkong we went to the Philippines. There we were fortunate enough to encounter the head of the Department of Public Works, who was setting out on an inspection of the roads of the entire archipelago. Here was an opportunity not given to many automobilists to see and try all the roads. It would be an impossibility for a man arriving at any other time to do this.

"A coast-guard boat was fitted up, so that the car was carried on a platform in front, and each island of the archipelago was visited in turn. We motored over 2,000 miles of roads in the Philippines, visiting some islands where there were only a few miles of highway all told. On one of them, for instance, there were only five miles of road, so that it was just a case of motoring in and turning around and motoring right out again.

"The roads in the Philippines, in addition to being set in wonderfully beautiful scenery, are of the finest description. They are well built, smooth, and hard, and, what is more, they are being maintained under a system that insures their being always in the finest condition. For every kilometer of road surface there are fifteen depositories where road-repairing material is stored. There is one man on every kilometer of roadway who is charged with the inspection and repair of the surface, and the moment the least break shows he immediately patches it.

"After the inspection trip, a return was made to Manila, and we did a deal of touring around the island of Luzon. Crossing some small streams that had to be forded on the way up, we returned to find them slightly higher because of rains that had fallen in the interval. We didn't know that they were higher, however, until we ran into one and had our motor stall when the water rose over it. A crowd of coolies working nearby was enlisted, and that had to be done in a hurry, because the bottom was a species of quicksand, and the car might well have sunk too far. The coolies weren't quite up to the work, so a water buffalo that was in a field close by was caught and roped to the machine, and then, with buffalo and coolies all pulling, the car came out with a great rush.

"Some of the streams that were much wider and deeper had to be crossed on rafts. These, made of bamboo, are up to the weight of the average wagon all right, but an automobile's tonnage was rather too much for them. So it was necessary to get a great crowd of coolies around to help support the weight of the car by holding on to the edges of the raft and lifting the car up.

"There were some interesting things seen in the two months that were devoted to motoring in the Philippines, and we came away much impressed by the excellent work that the Government is doing to build and maintain a fine system of road-

Lawn-Mowing is never
child's play, but there's a vast
difference in Mowers.

"PENNSYLVANIA" Quality Lawn Mowers

have perfectly-adjusted bearings and parts, and automatically self-sharpening blades of the same steel as used in fine cutting tools. Each blade is oil-hardened and water-tempered—an exclusive feature. Even after a dozen years without re-sharpening—always in alignment—never rusted! The long wheel-base makes possible smoothest work over uneven lawns.

Mailed Free "The Lawns—Its Making and Care," an instructive book written for you by a prominent authority, gladly mailed free.

Box 1279 Philadelphia, Pa.

"State the State for Quality's Sake"

ways. In some cases, these are new surfaces laid over the foundation of well-built roads installed during the Spanish occupation.

"From the Philippines we returned to Shanghai, where there was not a great deal of automobiling to be done, as has been explained before. From Shanghai we journeyed over to Japan. The roads of the island empire are extremely narrow, and the houses encroach so on the highway that in some cases we had to keep the top always folded, and even had to remove it and the windshield in order to get through. The turns are all at right angles, and that necessitates a lot of reversing and twisting in order to get around some of the corners; the more so since occasionally there is found a clump of telegraph poles directly in the way.

"The Japanese roads, altho narrow, are good, having hard surfaces and being well kept up, altho occasionally rough. But the average may be said to be very good.

"Japan is the first country in which we were troubled by the size of the car. Our big Packard four seemed ridiculously big for this miniature empire. The country is fascinating, the accommodations good and the people obliging. The scenery is interesting and lovely. The roads, as has been said before, are mostly good, but the lack of bridges over the big rivers, the precarious condition of those over the innumerable small ones, the almost impassable corners and narrow places in the villages, the hordes of children, continuous meetings with frightened horses and more frightened drivers on built-up roads too narrow to pass on, and countless other delays and difficulties make motoring here rather a gamble and succession of risks."

L. B. Spencer contributes to *Motor Age* another article on the trip made by the Halla. He says that for the most part the car had to dispense with garages, many countries having none. Something like 5,000 gallons of gasoline were consumed and 118 tires used. Melvin Hall is about twenty-four years old. The party witnessed the coronation of George V., the Durbar at Delhi, and the funeral of the Emperor of Japan.

NEGLECT OF THE OLD NATIONAL ROAD

An enterprise of Jefferson's Administration which ranked in its day as to popular interest with the purchase of Louisiana—if, indeed, it did not exceed that enterprise now so much more famous—was the building and construction of what is known as the Old National Road, or the Cumberland Road. The aim of the projectors of this road was to secure a short and practical route from Cumberland, the head of navigation on the Potomac, to Wheeling on the Ohio, and thence to the Mississippi at St. Louis. The road was entirely completed from Cumberland to Wheeling only, but a large amount of work was eventually done on extensions further west. Robert Bruce, in *Motor*, remarks how the road "has fallen far short of the early expectations formed of it." The fault, however, lies not with the original survey, nor with the failure of the work actually done, but with the Government itself, which lost interest and ceased to exercise supervision over the road. In other words, the original purpose was not completely carried out. Mr. Bruce gives interesting facts as to the history and present condition of the road and elsewhere will be found a map of the road and a pic-

Take No Chances!

Always Carry WEED CHAINS
With You in Anticipation
of Sudden Showers

Look at the picture—it tells its own story. A joyous dinner party—everything pleasant and happy. No anticipation of the shower that had suddenly come up making the roads slippery and greasy.

Some had to take a chance by depending on "rubber alone"—they had neglected to carry Weed Chains, with the result that one skidded and smashed his car. The owner of the car in the foreground was *cautious*. He always carried Weed Chains. His chauffeur took only a moment to adjust them and drove him home absolutely safe and secure. Do you ever take these awful chances? Do you?

Weed Anti-Skid Chains

The greatest of all safety devices

No one may properly be called an efficient and safe driver of a motor car unless he has at all times complete control over the machine he is driving. No one driving over a slippery road or pavement has complete control of his car when the wheels are equipped with nothing but rubber tires. When equipped with WEED CHAINS *such a thing as skidding will not be possible.*

Are you still taking your life in your hands by refusing to take the necessary precaution against skidding? Are you still unwisely depending on "rubber alone" for the safety of yourself, the occupants of your car and other road users?

Make safety yours

—take no chances. Fully equip your car with Weed Chains today —insist for your own protection that other drivers do the same.

Weed Chains

cannot injure tires because "they creep." Are put on in a jiffy without the use of a jack or other tools—use them on all four tires.

petent observers state that parts of this stretch are in worse condition than they were five years ago, which is certainly not complimentary to Maryland.

"That part of the old Turnpike in Pennsylvania is not only in better condition now than the Maryland end, but it is already faring better in the way of improvements; several stretches have lately been resurfaced, and it is the expectation of State Highway Commissioner E. M. Biglow, to carry the work along as rapidly as possible to the West Virginia line. On both of the writer's trips over that part of the route in West Virginia, the road was found in good condition throughout. This brings us to the Ohio River at Wheeling, and the end of the mountain section, the next hundred miles west are quite hilly."

STORAGE CHARGES AS THE MAIN-STAY OF A GARAGE

W. J. Joseelyn, proprietor of a large garage in New York, is quoted in *Motor World* as having recently raised the rate for car storage by five dollars, and at the same time having declared that "storage must be the backbone of the garage business." He contends that to derive all one's profit from the sale of gasoline is "an unnatural business arrangement." A reasonable profit from storage is the only means by which the business "can be placed anywhere near where it belongs." It seems to be generally contended that substantial profits in this business have not been general. One cause has been the fact that the garage business is "largely an outgrowth of the stable business, and as such has brought with it the old stable charges, but with enlarged expenses." Even when garages have been started as a new line of business, the charges were not conducted with proper reference to running expenses. Mr. Joseelyn "graduated from the horse-stable business into the garage field." *Motor World* says further of his experience:

"At the time he raised his storage rate he fixt a retail price for gasoline which is but three cents above the wholesale price of 17 cents per gallon. It is his intention that the retail price will fluctuate with the wholesale figures and thus remove for the garageman that terror which ensues when the garageman, whose profit comes from gasoline, sees the advancing wholesale price cutting big holes in his net income.

Joseelyn's idea is that the cost of gasoline and storage should make the charges and that the charges should show a profit, just as the stable business made money. His garage may differ somewhat from some others in that the proprietor knows to a fraction of a cent where the expense money goes to and whence the profits come, and there is a rigid business system in the whole establishment; to find how much per car per month it costs for sponges or cleaning material, it is necessary only to look in the company's books.

"In the beginning of the trade, the first garage in New York City, and doubtless in many other cities, was opened by a dealer in cars who wished to care for those who bought cars of him; a man bought a car and on congested Manhattan Island it could not be kept at home, wherefore this dealer rented a building and charged a price which was as small as could possibly be made and bring in the rent. This was a beginning of present-day storage charges. This dealer made his money on sales; making profits on storing the cars was not his intention, and this evolved a new schedule which would not permit a

Don't Sacrifice Safety For Convenience

Have BOTH By Using

Prest-O-Lite

Gas lighting with an automatic lighter offers every convenience, plus safety, reliability and economy unequalled by any other system

No lighting system can be more convenient than gas when used with a good automatic lighter. We make one—the Prest-O-Lite. By its use you can have gas in all your lamps and can easily light or extinguish any or all of your lights from the driver's seat whether the car be running or standing. An automatic reducing valve attached to the tank regulates the flame to exactly the proper height at all times.

And should this convenience ever fail—you still have light and safety by the use of a match.

Whenever you drive your car at night, you place the safety of your passengers and yourself on the dependability of your lighting system.

Five hundred thousand experienced drivers can testify as to the absolute reliability of Prest-O-Lite.

It is a system so simple as to be trouble

proof. Prest-O-Lite agencies in every city and town and nearly every cross-roads village guarantee its service.

Prest-O-Lite has no delicate mechanism to get out of order—it is not affected by a downpour of rain or any other contingency of touring. Why should you complicate your lighting system so that in case of trouble only a factory expert can give you light?

As to cost. The average cost of Prest-O-Lite does not exceed \$10 per year. Figuring the cost of power used in operation and the cost of repairs and replacements, no other lighting system is so economical. Just one repair on any more complicated system may easily cost more than years of Prest-O-Lite's reliable service. But even if Prest-O-Lite cost more—instead of less—its dependability, its efficiency, its added safety, should make it twice as valuable to the experienced driver.

No matter what self-starter you have on your car—insist on gas lighting. Self-starter convenience is safeguarded by the use of the crank in emergencies. It is even more important that lighting convenience be safeguarded by the use of a match to insure light in emergencies. Almost any manufacturer will equip your new car with Prest-O-Lite and an automatic lighter if you insist. If your car is now equipped with Prest-O-Lite, any dealer or any of our service stations can install an automatic lighter at small expense.

By all means, before you decide on any lighting system, send for the vital facts on automobile lighting. The coupon attached will bring you a free book on this subject by return mail. Send for it NOW and know the facts.

profit to the man who wished to run a garage as a separate business.

Then there was the garage which sprang from the repair shop, and this is what Josselyn terms the second step in the development of the garage; those who have followed the automobile trade from its inception remember well the numerous repair shops which sprang up everywhere. This man's profits were made from his repairing work, and if he could persuade a man to store his car in a vacant part of the building or if the owner wished space and the repairman could accommodate him the shop owner figured that by having this kind of a hold on the car he was fairly sure of getting practically all of the repair work, which in the early days was no small item. Therefore there sprang up a low storage rate in this direction, first as in the first case by a man who did not care to make money on his rental of space because his profit was derived from some other source.

Many times the man who stored a car with these first two named classes of tradesmen had stored a horse and his carriage or carriages and, naturally, he did not believe he ought to pay more for car storage than for horse storage, and here enters the garage rate which has sprung from the stable rate. As Josselyn himself says, "We figured that if we stored a horse and generally two carriages for \$15 a month and had to feed the horse we were stepping into a fine thing when we turned our stable into a garage wherein we would store one car alone for \$15 and the owner would be paying for fuel, where before we had been paying for feed. We figured on a double profit." This was in 1900.

But that Josselyn "figured wrong" is indicated by receipts and expenditures, which show where the mathematical error cropped out; just as many men started up garages as a new business and charged what corresponded with the stable rate, or was less. Josselyn turned the 75 x 100 four-story building which had been a stable into a garage and proceeded to wonder why the investment did not bring the dividend which had been taken out regularly with stable equipment.

The systematic operation of the establishment soon revealed the true conditions. To start with, when the building was altered and improved, with concrete floors, electric lights where gas had been before, steam heating, gasoline tanks, and the numerous other necessary improvements, the rent proceeded to just about double up. Also, where there had, for the stable, been a superintendent and bookkeeper in the office, there now were necessary in addition a night superintendent, stock man, two telephone operators, a checker, and an engineer.

In the other parts of the establishment, there had been washers, floormen, and groomers, now there were needed more washers and floormen with doormen and elevator men, and the labor pay-roll nearly tripled. Two or three washers used to take care of the 220 or 230 wagons and the men got \$16 a week, but in the garage 10 or 12 washers were required to keep the cars in shape and their pay was in the neighborhood of \$20 a week. Cleaning as charged off against feed shows a saving in the garage, but it is not sufficient to offset the other increased expenses.

What Josselyn identifies as "Expense account" includes lights, heat, repairs, and other costs, and the increase is accounted for by the fact that where the lighting with gas cost \$40 a month, electricity cost \$4.00, heating the stable cost \$50 a month, the annual feed from the horses being a source of considerable waste, and now the heating poured in \$300 a month; three horses' feed, more repairs necessary in the garage.

The garage-men are an average of

two Novembers and Decembers, two of the busiest months in the year, and the stable expenses were \$3,157, while the garage cost \$4,345. The profits in the stable, which had a capacity of 115 horses, were derived from 112 horses, with which went generally two wagons for each horse, and at \$35 a month the income was \$3,920, which left a profit of \$763 a month. Now the garage could accommodate 120 cars, but in the months in question there were stored 107 'live' and 9 'dead,' the latter bringing in \$10 and the others averaging \$37.50, the number being about half-open cars at \$35 and half-closed cars at \$40. This totaled an income of \$4,102 and a net loss of \$243 a month.

How, then, may be asked, could the owner afford to keep up the business? The answer is 'gasoline,' and this same answer is the reason that garagemen have been so much more hard hit than owners by the climbing proclivities of that petroleum product; Joseelyn bought gasoline at 9 cents and sold it for 20 cents, and every car consumed about 100 gallons a month, most of which was bought at the garage. This meant a profit of 11 cents on 10,700 gallons, which amounted to \$1,177. Deducting from this the loss of \$243 on storage, and the Joseelyn garage made \$934 profit, which is \$171, or 22 per cent, better than the stable.

Then gasoline, about fifteen months ago, began to increase in price, and with every increase there disappeared a part of the garage profits; some garagemen went out of business, but the Joseelyn garage did not. The proprietor said, 'The business is on a poor basis; it is not businesslike. We will fix a storage charge which will allow a profit independent of gasoline sales, and, whereas we have been inclined to increase gasoline and continue extracting our profits from that, we will cut gasoline to a profit of 3 cents a gallon and make our retail price fluctuate with the wholesale price on a 3-cent profit basis; if the wholesale price goes up a cent we will raise a cent, and if it drops a cent we will drop a cent.'

This decision was made at the beginning of last October, but before going further it may be explained that Joseelyn had taken other steps to make more money; the first Joseelyn garage had been in the same space as the stable, but about two years ago, just after the date the comparative table describes, the space was doubled, a duplicate of the old stable building, also four stories and 75 x 100 feet, being acquired. This made it possible to double the number of cars stored without quite doubling the number of garage employees, and the office force was not increased at all. Also, certain efficiency-producing changes were effected; where there had been two washrooms on each floor, one washroom was made for each floor. This reduced the number of washers by cutting out waste time in the moving around of crews and by substituting pushers for washers in several instances, and at lower wages. Also, the new washstands utilized what had hitherto been a passageway between the two halves of the building, and the old washstand space was used for storage. Numerous changes such as this cut the labor pay-roll per month from \$2,962 for the winter of 1911-12 to \$2,764 for the present winter."

\$9.75 Difference.—"What do you mean by charging me \$10 for taking a cinder out of my eye?" said the indignant patient.

"I am charging you \$10 for locating and removing a foreign substance from the cornea," replied the specialist.—*Cincinnati Enquirer.*

It begins to look like were back numbers "Billy"

PROGRESS

Our wonderful nation is an ever-growing, ever-progressing one. We have planned, we have dug, we have plowed, we have built, we have mined, we have made and we have sold. We have neither inherited our wealth nor have we laid tribute upon weaker nations. But behold! We are the richest of them all.

Such is progress—the spirit that has made this nation the leader of nations.

Progress demanded something to replace "Old Dablon," and American genius replied with the first crude automobile. This evolved into the modern motor car, powerful and massive—its very hugeness making it swift and shed, undangerous life. So Progress demanded a safe-guard. Came the aluminum-plate metal studs, and the first far-from-satisfactory rubber knobs. And Progress called once more.

Then was invented the Republic Staggard Tread Tire, the tire that gave a real protection against skidding, an all-in-be-desired brake control, and a much-increased mileage—truly The Tire Perfect.

And Progress looked, and was pleased.

Pure Air Anywhere All Summer

Yes,—even in that back room or basement so stifling last summer that you gave it up as unusable during the hot weather.

Sturtevant Ventilating Fans

solve any ventilating problem no matter how difficult. They force out all the bad air and blow in a cool, steady stream of fresh air from outdoors.

The Propeller Type Fans are for use where large volumes of air are to be handled without piping. They are usually placed in top sash of window or in wall or partition, and force the foul air outdoors or into another room. They ventilate kitchens, billiard rooms, bowling alleys, laundries, restaurants, club rooms and work rooms.

Booklet No. DP4 describes these Fans.

Sturtevant Ready-to-Run Ventilating Sets are used when smaller volumes are required, or when it is desirable to remove or supply air a distance through piping. They are used in ventilating and cooling telephone booths, bank vaults, toilets, closets, show rooms, and for taking away odors and fumes in factories, laboratories, etc.

Booklet No. DR4 describes these Sets.

Don't wait until hot weather comes again, act now.

Write us about your ventilating troubles. Tell us whether you want to drive the fan by belt or electricity. Tell us what electric current you have—voltage, cycles, phase, etc.

Give us the size and location of your room. Our nearest engineer will advise you without cost to you. We can provide you with the proper fan to fill your exact needs.

CURRENT POETRY

IN these days of Masfield and his attendant company of realist poets, it is usual to consider the influence of Tennyson as no longer felt. It is true that the poets for the moment most in evidence display few of the characteristics of the author of "The Idyls of the King." And yet it is not safe to conclude that the Tennysonian tradition is absolutely extinct. Two of the most distinguished English poets now living, Mr. William Watson and Mr. Alfred Noyes, frequently write verses that not only in manner but in spirit suggest Tennyson's lyrics. And in America, at least, one poet shows clearly the beneficial effect of discipleship to him. In the *Yale Review*, Miss Fannie Stearns Davis publishes a series of poems called "The Hermit on the Dunes." In their passionate introspection, their questioning of life, their blending of things felt and things seen, their descriptive splendor, and their perfect finish, they are strongly reminiscent of "Maud." This is not to say that Miss Davis is an imitator. In these poems, as in all her work, she is strikingly original. That she is spiritually kin to Tennyson is, however, clearly shown in the poems mentioned, and is perhaps indicated in the two of them which we quote below, particularly in the first.

The Hermit on the Dunes

BY FANNIE STEARNS DAVIS

Far away to the south
Where the sea-hill heaps,
A gray gull wanders,
A gray sail sweeps.

Far away to the south
Where the sky leans low,
My gray thoughts journey,
My gray dreams blow.

In my house by the dunes
I have silence for wife,
Tho' the long shore shudders
With the surf's drawn strife.

Oh, she broods by my hearth
And she bends to my bed,
She is strange as the old Norse
And dumb as the dead.

Far away to the south
Where the sea heaps high,
The gulls fade ever,
The sails all die,—
—Far away to the south.

The Gold-haired Maid

BY FANNIE STEARNS DAVIS

I watched the endless gull-wings fade;
I dreamed my old dim endless things:
Looked up, and saw a gold-haired maid
Against the sea, with arms like wings

Spreading her green scarf to the wind,
Leaning and laughing to the sun,—
Ah, too, her brightness made me blind,
Till I could hardly see her run

White-footed down the thin white foam,
Slim-bodied up the slippery sands;
Like some wild sea-maid, dancing home
With shining feet and flickering hands.

—I crouched beneath the dune. She passed;
Her song, sea-smothered, and her gleams
Fading along the foam at last,
Like all the sun that haunts my dreams.

Compo-Board Makes the Most Practical Walls

COMPO-BOARD walls and ceilings are ideal from every standpoint.

Strength. They have actually held buildings together in California earthquakes.

Durability. In houses lined with Compo-Board twelve to thirteen years ago, they are still in good condition.

Fire Resisting. They will hold a fire in check long after a plaster wall would crumble.

Cold and Heat Resisting. They are absolutely air-tight; Compo-Board walls as far north as Alaska are known to keep homes comfortable.

Damp Proof. Thousands of homes are always dry and sanitary. Moisture cannot penetrate Compo-Board.

Beauty. Their smooth surface is easily and artistically decorated by any method; you don't have to panel Compo-Board walls, unless you desire.

Economy. Cheaper than lath and plaster, "Wall Boards," or substitutes in the long run.

Free Sample and Booklets Tell the Whole Story. Tell the unique construction of Compo-Board that gives it all these advantages, give letters from hundreds of users in evidence of these claims, tell of the many other uses of Compo-Board besides a wall lining. Write for this interesting matter. It's worth while.

Compo-Board is sold in strips four feet wide and one to eighteen feet long by dealers in most every town.

Furniture, incubator, novelty and other manufacturers have found Compo-Board the ideal material for many purposes.

Northwestern Compo-Board Company

4308 Lyndale Avenue N., Minneapolis, Minn.

BROOKS MANUFACTURING COMPANY
1804 Sidney Street, Saginaw, Mich.

—The brave day fades, too blue, too fair.
Sunset and silence and the night.—
O golden head and wild heart, where
Are you some glad home's lasting light?

The members of the Woodberry Society have published in a beautifully made volume three poems by the distinguished poet whose name they bear. It is called, from the initial poem, "The Kingdom of All-Souls." The verse is at once energetic and scholarly, full of splendid phrases and splendid ideas. We regret that lack of space necessitates the omission of several stanzas of the following thoughtful poem:

What the Stars Sang in the Desert

By GEORGE EDWARD WOODBERRY

I woke in the desert rude
O'erhung by the star-sweet sky.
And ever the radiant multitude
In the silence drew more nigh,
As if on my eyes to brood,
And inward glory nurse.
And out of the heart of the universe
Soared forth my singing cry:

"We are young—our song up-springing
The crystal blue along,
Creation's morning singing.—
It was but children-song,
Melodiously ringing,
Mysteriously forewarning
The realm beyond the morning
We infinitely throng.

"We are borne through darkness streaming
Wherein our glory glides;
We dower the deep with the beaming
Where prophecy resides;
Forevermore we are dreaming,
Still in the springtime blossom
Of thoughts that light our bosom
And beat our glowing sides.

"Wide the abyss; we span it,
Who showering a bright spark came;
And forever we smite and fan it
Forth from the forging flame.—
Life, flower of the planet,
Flower of the fire, supernal,
Burning, blooming, eternal.—
A million names are his name.

"Then with bright hands uplifted
We strike the thousand lyres;
The muse, on dreams drifted,
Pours all the world's desires;
And over the song is sifted
From the heart of youth forecasting
The unknown everlasting
That bathes us and inspires.

"We gaze on the far flood flowing
Unimaginably free,
Multitudinous, mystical, glowing,
But all we do not see;
And a rapture is all our knowing,
That on fiery nerves comes stealing,
An intimate revealing
That all is yet to be.

"When sheathed and glacial o'er us
Arcturus courses cold,
And dry and dark before us
Aldebaran is rolled,
Far-clustering orbs in chorus
Shall light the pealing sky,
And throne to throne reply:
'The heavens grow not old.' "

Round the desert wild and eerie
The starry echoes clung;
In a region weird and dreary
The golden song was sung:
Over lands forlorn and weary,
Where the drifting white sand only
Drifts alone the sand-wreath lonely,
The radiant silence hung.

COACH BUILDERS

WE HAVE BEEN OVER SIXTY YEARS

THE WEDDING COACH OF NAPOLEON I.

THE FAVORED CAR AT THE SHOWS

Rauch & Lang prestige among Electrics was unquestioned at the motor shows. The people who filled the Rauch & Lang booths were ample evidence of the fact. Society found its ideal in this car—in the finish and upholstery, in its general appearance, its atmosphere of style and refinement.

Men were pleased with the excellence of its construction. The coaches of Royalty, made famous in history, were no more staunchly built, nor more closely in keeping with their style periods. The time required to build one of these cars limits the number available each year. For that reason early orders are necessary from those who wish to be supplied.

Rauch & Lang agents will gladly demonstrate. Catalog mailed on request.

YOU can silver-plate the brass trims of last year's car at a cost of only \$2.00.

U-KAN PLATE

EXTRA STRENGTH

Applied as directed will give your car the 1913 white metal finish. Will also clean nickel and will silver-plate the worn parts.

A quart can (\$2.00) sufficient for the average car—of supply dealers or hardware men or by parcel post.

A. R. Justice Co. 609 Chestnut St. PHILADELPHIA

A Great Question.

A discovery in the human body, which has absolutely revolutionized the effect and possibilities of exercise, for the old and young.

Among the men who are entitled to be classed as benefactors of the human race, those who have placed before mankind knowledge that was before unknown are entitled to a conspicuous place. The phrase "Knowledge is Power" is trite, but it expresses a profound truth, and one who adds to the world's store of practical wisdom does as much, or more, than one who merely adds to the store of the world's wealth. It is safe to say that inventors and discoverers have contributed more to the happiness of mankind than all the warriors, statesmen, philanthropists put together, and among the most important are those whose object is preservation of life and health and the development of greater efficiency and perfection. It is doubtful even if the inventor of the telegraph and telephone has benefited mankind as much as he who gave to the world the priceless discovery of vaccination.

In these days the cure of disease and the prevention of specific diseases are of less importance than the conservation and full development of general health and strength. Conditions of life grow more abnormal every year, and the results are appearing on every side in the form of a general deterioration in the physical vitality and disease resistance of the race. In former times the law of the survival of the fittest kept up the standard of strength by the death of the weak and diseased, but now through the skill of modern medicine this tendency is largely counteracted; the weak are saved and grow to maturity, the diseased are kept alive, and all their constitutional failings are perpetuated in the succeeding generations, and nearly all are leading an inferior life in consequence.

One of the most potent factors in this progressive deterioration of the race lies in the general growing tendency to neglect physical exercise. Everybody admits its necessity, but few practice it intelligently. Exercise of the ordinary kind generally means inconvenience and loss of time, and loss of time means everything to the average American. He puts in the longest possible hours of work and there is no time left for that physical exercise that is as necessary to his well-being as food or sleep. Unless exercise can be combined with pleasure it is usually drudgery, and the average man has no time for anything uninteresting. If he can find an extra hour in the twenty-four he prefers to spend it at pleasures or duties.

The problem of how to secure adequate exercise in the most convenient form and with no loss of time has been solved only in recent years, and it is not too much to say that it is one of the inventions which is working the most important results for the general health of the people. A solution of this problem is the system of physiological exercise devised by Alois P. Swoboda, of Washington. By long experience, and an intimate knowledge of the needs of the human body that amounted to an inspiration, a method has been perfected which concentrates into a few minutes' time all the daily muscular exercise necessary to keep the human body in perfect health and to eradicate all functional weaknesses, to increase or reduce the weight, and at the same time continue its development, cultivation, and advancement, and thus actually raise the standard of health to what can be described only as the Swoboda kind of health and energy. The average man, when he tries to concentrate his exercise, merely overtaxes himself, and the result is harm instead of good, but the Swoboda method involves no over-exertion and offers exactly what the average man of business often wishes for—exercise without loss of time, a practical and sound method of self-cultivation and preservation.

The facts remain, first, that exercise must be taken in such form as not to be irksome in character and not to consume too much time, or it will not be taken at all by the average man; and second, that Swoboda has perfected a system that meets these requirements, with results truly remarkable. That is all that concerns the public. The obstacles have been removed that have hitherto prevented hygienic and full living, and an obstacle that exists in a man's mind and disposition is just as real as if it appeared in the form of a stone wall, as far as the practical results are concerned.

Mr. Alois P. Swoboda, of 227 Victor Building, Washington, D. C., will be glad to send free, to any reader of The Literary Digest, a full explanation of his wonderful method. He is willing that all become acquainted with his startling discovery. He believes that no one would be without this knowledge willingly.

The man who keeps the people in perfect health by a few minutes' exercise each day, as Swoboda, and thousands of patrons claim he can, is entitled to the gratitude of the world, and if he can make money out of it, no one will begrudge him his profits.

The Swoboda System is no experiment. It is taught daily to hundreds of pupils in all parts of the world. Among the pupils are doctors, judges, senators, congressmen, ambassadors, governors, business men, farmers, mechanics, and laborers. Women profit by it, fully as much as men, and some of the most prominent of this country are among his pupils. [Advertisement.]

From *Munsey's Magazine* we take this vigorous epigram:

Truth and Falsehood

BY CLINTON SCOLLARD

If some great falsehood with its mighty brand
Stalk, like Goliath, ravaging the land,
Fit thou the pebble truth within thy sling,
And then, like David—fling!

Here is a delicate and very human poem, simple in expression and sincere in thought. The stanza next to the last is not unlike the work of Lizette Woodworth Reese. It appears in *Harper's Magazine*:

In April

BY MARGARET LEE ANSLEY

If I am slow forgetting,
It is because the sun
Has such old tricks of setting
When April days are done.

The soft spring sunlight traces
Old patterns—green and gold;
The flowers have no new faces,
The very buds are old!

If I am slow forgetting—
Ah, well, come back and see
The same old sunbeams petting
My garden-plots and me.

Come smell the green things growing,
The boxwood after rain;
See where old beds are showing
Their slender spears again.

At dusk, that fosters dreaming—
Come back at dusk and rest,
And watch our old star gleaming
Against the primrose west.

Francis Thompson would have enjoyed the graceful and joyous verses printed below. Such lines as "Through a swift sunset-crevice in the sky" are poetry lovely and authentic. The idea of the last few lines is delightfully imaginative, and it is expressed with surest artistry. We take it from *The Westminster Gazette*:

Lines on Receiving a Child's Portrait

(To Ivy)

BY FRANCIS GERARD MILLER

I scarcely deemed it possible
To catch your swallow-self. Your very rest
Seemed to move swifter than your dazzling
flight.

I could not tell
Your many selves and fix them in one face,
Holding you silent without some swift change,
Still and intent.

And when I was most sure,
Your sunlight darted to another place,
And so the wonder is most strange:
For here is your own self, demure,
Emprisoned in a little golden frame;
And underneath, your name
As if you sanctioned such imprisonment.

O you were born at some sweet, riotous time
Of elfin revels, when blue-lidded eye
About the carfew-chime
Watched fairy-rings a-making and the earth
Grew drowsed with pulsing footfalls. I believe,
While stars danced madly down the dawning
skies.

Some late elf crept away, and at your birth
Wove for your young life dreams
Of movement and the spirit of dancing things;
And gave you smilingly
The airy grace that, lacking gossamer wings,

Double Security for Documents

Important papers, data and reports pertaining to one subject should be kept together and intact. There should be no risk of loss, or the confusion which results from a misplaced document.

Madame NORDICA Bath Powder

For Reduction of Weight

"I have discovered a harmless treatment for reducing weight that has proven wonderfully successful.

"No harmful drugging, special dieting or burdensome exercise.

"The endorsement of many prominent people, together with my experience, is contained in my book, 'The Dream of Fair Women'."

Lillian Nordica

Write today, sending five two-cent stamps for Madame Nordica's book "The Dream of Fair Women."

MADAME NORDICA'S BATH POWDER is for sale at many leading drug and department stores and specialty shops.

MADAME NORDICA'S COMPANY Studio 24, 8 West Ninth St., New York City

Excels them; and a spell of lucent streams
To light your heaven-reflecting eyes;
Wherein two fairies sit,
To play at hide-and-seek with passers-by,
And laugh for joy of it.

Dear, innocent you!
Who all the long day through
Light-heartedly
Wove nets to catch me with your pattering feet,
And then with shyly glancing eye
Drew me until my capture was complete.
I heard your serious baby-talk as one
Who listens to far angels whispering
Through a swift sunset-crevice in the sky
Before the hills fade, and night's shadowed wing
Hovers, and day is done.

Your laughter bubbled like the wren's glad song
Of chiming bells in Heaven;
And oft, to cheer the tired day, at even
The blackbird, the lush lilac-trees among,
Taking your laughter for his melody,
Embroiders it with all his cunning notes
So feebly;
Yet, ah! the sluring throats
Can never laugh so sweetly,
The daisy's dewy eyelid
Rosily smiled
To see the way you delicately tript
Among the flowers, and open-lipped
Their eager petals bent
To kiss you wheresoe'er your light step went.

Only your motion I remember. Yet
I have you fast!
Your errant sunshaft has been caught at last,
And (greater wonder!) set
Within four walls of gold.
But still I think that if a butterfly
Spread its bright wings and lit
Upon these flowers, and then rose lazily,
You would break through those brittle walls of
gold,
And, laughing, follow it!

This poem (from the April *Lippincott's*)
is more than cleverly phrased didacticism;
it has noble symbolism and admirable
economy of expression:

I Heard a Voice

BY FLORENCE EARLE COATES

I heard a voice say: "You,
Who worship, should pursue:
The good you dream of—do."

"Arise!—Perfection seek,
Surmounting what is weak,
Toll on from peak to peak!"

"Henceforth, through sun and shade,"
I answered, "unafraid,
I follow the shy maid:

"Yes, beauty to create,
Accept with heart elate
Whate'er may be my fate."

Then, in youth's ardor, strong,
I tolled my way along,
Upon my lips a song:

But as I climbed on high,
Toward the forbidding sky
Perfection seemed to fly:

And tho' I strove the more,
Still through some viewless door
She ever passed before.

Heart-wearied and forspent,
With body earthward bent,
I ceased from the ascent:

Then, when hope seemed too late,
Despairing,—at Death's gate
I heard a voice say: "Wait!"

Barrett Specification Roofs

A First-Class Roof on a First-Class Building

Every building of the first class, every manufacturing plant, every railroad roundhouse and depot, every flat-roofed building, from a residence to a skyscraper, ought to carry a Barrett Specification Roof.

These Roofs have won their standing on the basis of past performances.

Their first cost is below that of any other permanent roofing; their maintenance cost is nothing; their unit cost is about $\frac{1}{4}$ c. per foot per year of service.

They last twenty, sometimes thirty years, without repairs or care.

They do not need painting, as metal and ready roofings do.

They take the lowest rate of insurance.

For these reasons they are more popular than any other kind.

Copy of The Barrett Specification will be sent free on request.

PERSONAL GLIMPSES

THE NEW SENATORS FROM ILLINOIS

THE mere fact that they were elected at the same time does not mean that the two new Senators from Illinois are very much alike. As a rule we find Democrats practising, or pretending to practise, Jeffersonian simplicity, but in this case we see the rule reversed. Lawrence Y. Sherman, the Republican, elected to fill the vacancy occasioned by the unseating of William Lorimer, is noted for his simplicity, while James Hamilton Lewis, frequently alluded to as "Jim Ham," leads what might be called a princely sort of life. Lewis may believe in the theories of the Sage of Monticello, but otherwise his tastes seem to call for things that only the wealthy can afford. Sherman is a product of the rural districts, and he has remained in close touch with bucolic existence. Lewis, we are told, has always been known as a city man, tho it is said that he has been known to don rough clothes and work with his hands. When he was a very young lawyer trying to gain a foothold in Seattle, Lewis had a hard time keeping out of the bread-line, and on one occasion he had to take employment on the water front. It has been gossiped around the country that he was for a time what is known as a "dock walloper," but this story has been denied by his friends. But whether he was a "dock walloper" or not, Senator Lewis is now one of the leading lawyers of Chicago. He is also a great favorite as a speaker at fashionable society gatherings. He is an entertaining talker and the best dresser in the Middle West, but he is about as well known for his famous shock of "pink" whiskers, which are said to add to his popularity at pink teas. Speaker Champ Clark once facetiously described Lewis as "the biggest dude in America," and living down such allusions as this will be one of the Senator's troubles at Washington. He was recently in the public eye when he invited Governor Dunne to breakfast with him at a Michigan Avenue hotel and the Executive, a Jeffersonian disciple, refused to eat anything when he learned that Lewis was paying twenty-five cents a cup for coffee. The story of Lewis's career is told in the Chicago *Record-Herald*:

Mr. Lewis has shone alternately in politics, at the bar, and in the sartorial world as a figure of prominence. Throughout the nation he has been famed for years as the smartest dresser of the day. Not only have his clothes always been of the latest cut and style, his cravats gorgeous, his socks ditto, and his gloves and hat absolutely à la mode, but the dazzling pink whiskers never were ragged nor unbarbered—they were scissored to a nice point just where they should be at a point, and no

Enjoy a Shower In Any Bath Tub

New Kind. Easily Put Up. Needs No
Curtain. Don't Have to Wet Your Head

Try It 10 Days Free

Cost need no longer cheat you out of
the luxury of a daily shower.

Here is a new kind of shower fixture easily
put up on any bath tub. It's a revolutionary im-
provement. Yet costs less than half as much as
the cheapest old-style shower you can get.

And you can try it ten days free without hav-
ing to send us a single cent in advance.

Kenney Needle Shower
Only \$6.

Works on new
principle. Does
away with all need
for a shower, dis-
turbance, etc. No
overhead piping or
complicated parts.
That's why the
price is so low.
Guaranteed not to
splash out of tub.

Throws fine gen-
erous mist—spray
around. When you
stand erect, no
water touches your
head—all striking
direct against the
body from the neck
down. No rubbing
and needed to keep
your hair dry. But
you can close your head if you
wish by simply bending a little.

A very handsome return. All metal. Nothing to
wear out or get out of order. Never in the way.

Don't Send Any Money

Just order on your letterhead or enclose business card
or reference, and you'll get the shower prepaid for ten
days' free enjoyment. If you want to keep it, simply
send \$6 in full payment; if not, simply return it.

Better write for the free trial today—a cool-you-off
shower whenever you want it will help you stand the
hot weather.

BUFFALO SPECIALTY COMPANY
304 Liquid Veneer Building, Buffalo, N. Y.

While serving in an honorary capacity
on General Frederick D. Grant's staff for a
while in the Spanish-American War, it was
said of him that his desire to lift his hat to
the ladies or stop and shake hands with an
old friend seriously endangered regimental
order and dignity.

After serving as an attaché of the Joint
High Commission that sat in London and
thrashed out the Canadian boundary dis-
pute, he moved to Chicago and bounded at
once into prominence. He did much to pile
up a safe plurality for Mr. Dunne when he
won the mayoral battle in 1905, and was
rewarded with the office of corporation
counsel. He was a primary candidate for
governor in 1908, and despite the fact that
the Democratic chieftains had endorsed
Adlai Stevenson, Mr. Lewis, whose cam-
paign necessarily was circumscribed, carried
Chicago against the bosses, but lost in the
rest of the State. His decision to go before
the people last year for primary backing as
the Democratic candidate for the United
States Senate at first was laughed at. He
had no opposition.

Mr. Lewis is a man of courtly manners,
democratic, suave, plausible. He married
Rose Lawton Douglas, of Georgia, in 1898,
and of recent years the Lewises have gone
a great deal in Chicago society. In 1911 he
made a tour of Europe, was received by the
Pope, and interviewed in every capital.
There was a mysterious report that he was
abroad on a secret diplomatic mission. This
the State Department at Washington took
occasion to deny.

Senator Sherman's personality is almost
as attractive as that of Senator Lewis. He
is one of many public men who "look like
Abraham Lincoln." Tho he is always self-
possessed, his manner is a bit awkward when
he is in company. His voice is not very reso-
nant, but he is an interesting speaker. Like
Vice-President Marshall, he is "conspicu-
ous for his unpretentiousness." Mr. Sher-
man's wardrobe consists of two or three
good suits of sober design and a propor-
tionate number of other garments. We
read about him in the *Chicago Tribune*:

During his earlier days at Springfield,
when it was a constant struggle to maintain
himself against powerful enemies, he was
the joy and delight of all newspaper cor-
respondents. His caustic epigrams and
home-striking philippics always meant a
news item, and as a coiner of political slang
he is singularly gifted. It was Sherman
who named the Illinois and Michigan canal
"the tadpole ditch"; the political game
wardens, "the rabbit shepherds," and the
members of the Governor's staff in their
resplendent uniforms "the sunburst colo-
nels," and the terms still are familiar.

Sherman was speaker of the Illinois
House of Representatives for two terms,
and he and Governor Yates were bitter
enemies. When Sherman was a candidate
for a third term as speaker, Yates had him
defeated. Sherman became a candidate
for Governor in the State campaign of 1904,
and, some time before the contest got to be
very lively, a Republican "love feast" was
held. Here is what happened:

Flat for beauty

Tubular for strength

912 CHESTNUT STREET
PHILADELPHIA

In the front row of the stage in the arsenal sat Yates, Sherman, Frank O. Lowden, Congressman Warner, Attorney-General Hamlin, Charles S. Deneen, the candidates each with a carefully prepared speech in his pocket warranted so innocuous as not to scare a fly off a bald head.

Yates finished first and his audience, largely composed of State appointees, applauded enthusiastically. Yates, who always was theatrical, sat down, suddenly sprang again to his feet, and shaking the corner of a large hanging flag shouted, "I move that this magnificent audience stand up and give three cheers for the grand old party of the glorious State of Illinois."

It was "bunk" of the most flagrant kind, but most of the audience and everybody on the stage, except Sherman, stood up and gave the cheers. He sat unmoved in his seat. Thinking he could score a point, Yates shouted again:

"I have my opinion of the man who refuses to stand up and give three cheers for the grand old party of the glorious State of Illinois." Then everybody got ready for the fireworks.

Sherman was the next speaker. It is doubtful if he remembered he had a prepared speech in his pocket. If he did it was to wonder why he had wasted time writing it. He started out in a low voice and a "rabbit shepherd" in the rear shouted "louder."

"I'll make you all hear me before I get through," said Sherman, and he did. Such plain speaking was never heard in a party "love feast" before. Sherman reviewed Yates' administration and every word counted. He laid bare all the troubles of the party and traced them to their source. As he hurled invective, sarcasm, ridicule, and argument at his enemies the State office-holders in the audience hissed, Sherman's friends applauded, and the disinterested ones enjoyed, but the speaker kept up until the end. When he sat down the other candidates had to change their speeches also and a job lot of perfectly good but undelivered political addresses went into the waste-paper baskets that evening.

Deneen was nominated for Governor and Sherman for Lieutenant-Governor; both were elected, and Sherman dropt into comparative obscurity. He told his friends that he was "taking the rest cure," meaning that he did not intend to stay in the political background. He afterward became the head of the State board which controls the charity organizations, and six years ago he was a Senatorial candidate in opposition to Mr. Cullom, whose seat is taken by Mr. Lewis. *The Tribune* ends with a humorous bit:

About the new Senator have sprung up a host of stories in good-natured fun-making of his "country lawyer" habits. Many involve the strenuous fight necessary to get him to look favorably on a program of dress reform. He overcame his suspicion of cuffs and recognized the existence of more than one style of necktie. These concessions were fatal, for the declaration of his friends that he would have to wear a dress suit found his old contempt for sartorial

The Howard Watch

THE Chemist has a vital place today in American industries representing a yearly product of Fifteen Billion Dollars.

The scientist in his laboratory works with instruments of great precision, with the most delicate reactions, and with *HOWARD time*.

For the man in any line, who plans to achieve, who expects to

win high place in his chosen calling, there could be no better investment than a HOWARD Watch. Living with a HOWARD is the surest way to absorb the accuracy, the punctuality, and practical time-saving that America's successful men demand as a matter of course.

A Howard Watch is always worth what you pay for it.

The price of each watch is fixed at the factory and a printed ticket attached—from the 17-jewel (double value) in a Crescent Extra or Ross Extra gold-filled case at \$40, to the 21-jewel at \$150, and the Howard Howard model at \$150.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post card, Dept. O, and we'll send you a copy.

elegance weakened, and he consented to have one made.

The warning came too late. He was engulfed by an invitation of Governor Tanner, and that, to the speaker of the house, was tantamount to a command. There was no time to have the suit made, and John Corwin, then Springfield correspondent for *The Tribune*, was drafted for the emergency.

Corwin did some rapid work among the colony of correspondents, and returned in a few minutes with several suits. From these were selected a coat, trousers, and waistcoat. The rest of the equipment was obtained from a haberdashery, and the Governor's guest was apparently groomed. But on the way to the executive mansion there was an accident, a shocking one, and Mr. Sherman was hurried back to the hotel with a rent in the worst possible portion of the trousers. Time was short, and as an awning-maker was the nearest approach to a tailor in that vicinity, it fell to the awning-maker to repair the catastrophe.

His sewing-machine was of the double-seam variety, and filled with coarse cord instead of silk thread. The repair work was safe without being sane. Sherman remarked that it was about as comfortable as sitting on a rail fence. That night, it is recorded, he backed away from the reception line, and took up a defensive position with his back to the wall, remaining there until the laughing correspondents surrounded him and escorted him back to the hotel in safety.

SIDELIGHTS ON MR. MORGAN

WHEN J. Pierpont Morgan left college, his father arranged with the president of an insurance company to have him put on the board of directors so that he might learn something about corporation management outside the elder Morgan's banking business. Young Morgan attended practically every directors' meeting for a year, but never had anything to say beyond voting yes or no on motions. He just sat and looked and listened. The insurance president, the story goes, thought Morgan was hopelessly stupid, and, at the end of the year, went to the father and told him sadly but kindly that Pierpont did not seem to take any interest in the company's affairs and that his place would have to be given some one else. But the insurance man was not the only person that ever failed to size Mr. Morgan up just right. Failure to appreciate his shrewdness has on more than one occasion cost people with whom he dealt what to the average man would be considered large fortunes. His cleverness proved too much for even the canny, thrifty Mr. Carnegie in one of the biggest transactions in the history of the country. The *New York Evening Post* tells how it happened:

When Morgan, to prevent a disastrous war in the steel trade, conceived the plan of combining the great steel plants of the country, he asked Andrew Carnegie to put a price on his works. The iron mon-

New York City

ger, who not long before had offered to sell out to Frick for \$100,000,000, saw that Morgan was keen to buy, and that he had better name a good round price. He put it at \$300,000,000. Morgan surprised Carnegie by accepting. A year later, when the Carnegie works were making record earnings for the Steel Trust, paying several times over what Carnegie and his former partners were receiving in interest on their steel bonds, Morgan and Carnegie were crossing the Atlantic on the same steamer. One morning at breakfast Carnegie remarked to Morgan:

"I think, Mr. Morgan, I should have added another \$100,000,000 to my price on the Carnegie works."

"If you had," answered Morgan, "I would have paid it."

Carnegie worried long over that lost \$100,000,000.

And here is the story of another transaction which illustrates the great financier's resourcefulness, taken from the same newspaper:

A firm of jewelers who had received a fine pearl decided to send it down to Mr. Morgan and let him have first bid on it. The price was placed at \$5,000. The jewel was carefully sealed in a leather-covered box. Mr. Morgan read the firm's communication, opened the box, was delighted with the pearl, and thrust it into his pocket. Calling his cashier, he instructed him to draw two checks to the firm of jewelers—one for \$4,000 and the other for \$5,000. The \$5,000 check Mr. Morgan placed in the box that had contained the pearl. He had the package carefully tied and sealed.

The \$4,000 check he enclosed in a letter to the jewelers, in which he wrote that if the firm was willing to accept that amount for the pearl the box might be returned to him at once and the transaction considered closed. In the event, however, that the firm was unwilling to accept less than \$5,000 for the pearl, the \$4,000 check was to be returned without delay.

Mr. Morgan, with the pearl in his pocket, sent the messenger back, bearing his letter and the box. In less than an hour the messenger returned fetching the box in which was the \$5,000 check. The jewelers had decided to accept the \$4,000 offer.

Mr. Morgan met one of the members of the jewelry firm at a dinner later, and told him the story of the two checks. The jeweler averred that his firm had lost money by the transaction.

"If you were losing money," asked Mr. Morgan, "why didn't you keep the box, with my \$5,000 check?"

The jeweler answered, "I can understand now how it is that you have earned your place as the leading financier."

Mr. Morgan never wasted much time making up his mind about business deals, and he was never known to quibble. Ultimatums were one of his specialties. *The Evening Post* goes on:

The way he dealt with a certain owner of coal lands in Pennsylvania who knew that Mr. Morgan must have his property was characteristic. The owner had come prepared to exact a good price. Mr. Morgan kept him waiting a long time, and then allowed him to come forward. "I'll

Send for free booklet showing how to protect your valuables in your home and wall safe.

THE MELINK MFG. CO., 1865 Oakwood Ave., Toledo, Ohio

give you \$— for your property." And there the bargain was closed. His habit was to deal in ultimatums; he would say, "I'll do this," or "I'll do that." He seldom asked advice, even of his partners. No doubt his confidence in himself inspired confidence in others.

He was never known in Wall Street as a speculator or operator in stocks. His reputation has been that of a constructor, a repairer; his labors have been to the end of prevention and upholding. Perhaps no one man in the history of our finances has rehabilitated so much property threatened with ruin and final extinction. Of him a short time ago some one said, "Mr. Morgan's office is the repair shop to which the crippled must go." His endorsement of a new scheme went far, at least, to insure its success; there were investors and speculators who sought to know no more than Mr. Morgan's opinion and relation to justify them in action as to it.

The New York World tells us something about Mr. Morgan's family life and his whims and personal habits. We read:

On the personal side there was much of mystery about Mr. Morgan. Mystery, that is, so far as the public was concerned. He was devotedly attached to his home and to his family, and cared but little for society. At his office he was so immersed in affairs that he seldom turned from his desk, so that few in New York knew him, even by sight. His recreations were few, and these of a kind that never made him a cynosure.

The financier was twice married. First, in 1861, to Amelia Sturgis, who died the following year, and again in 1865 to Frances Louise Tracy, who bore him four children—J. P. Morgan, Jr.; Juliet, who married W. P. Hamilton, one of his father-in-law's partners; Louisa, who married Herbert L. Satterlee, and Anne Tracy Morgan, who remains unmarried. Eleven grandchildren were added to the family group in Morgan's life.

In Madison Avenue, between Thirty-sixth and Thirty-seventh Streets, all but the Hamiltons still make their home, the younger Morgan living beside his father, while the Satterlees live just to the rear of the Morgan library in Thirty-sixth Street. The Hamiltons live in Sterlington. The intercourse among the families was constant, and they made up a community of their own, even to having a school in the library for the children.

By odds the most extraordinary thing about Mr. Morgan was that he preserved his health by coddling. He never took a step that he could avoid; he never walked or rode in a public conveyance when he could ride in his own machine or his own carriage. He kept away from cold air zealously when he was indoors, and in every conceivable way, almost, did the things that health authorities say must not be done.

When he travelled he took with him his own food, to a considerable extent. On some of his voyages he carried along a registered cow from his country estate, Uragston, at Highland Falls on the Hudson, and he always took enough butter and eggs to last until he reached a tested source of supply. He imported his own tea, of which he was exceedingly fond, and paid

Your Investments

The safe and profitable investment of your money is a most important matter. Money is too valuable to risk in unsound investment. No securities should be considered that do not possess the fundamental quality of safety.

The Bond Department of this company will be glad to give suggestions and advice regarding investments, and you are cordially invited to make use of this service. At the present time we have a selected list of railroad, public utility, and industrial bonds yielding from 5% to 6% which we recommend for conservative investment, particulars concerning which we will be glad to send on request.

Ask for Circular V-244.

\$2 a pound for it. His cigars were made to his own order, and cost \$125 a hundred.

He never ate luncheon, and his breakfast seldom varied from eggs and bacon, toast and tea, and sliced tomatoes. He always had tomatoes, raising them in his own hot-houses, as he did the strawberries he rarely went without. His dinners were elaborate, for despite his two meals a day he was something of a gourmet.

His recreations were but three—playing solitaire, yachting, and music. Either at home or in the "room of silence" at the Union League Club he played solitaire by the hour, chiefly using a variation of the game devised by William Butler Dunne, his first employer. Occasionally he played "4-11-44," and in later years indulged occasionally in bridge whist.

Yachting claimed him as a devotee in 1881, when the *Corsair I* was built. She was succeeded in 1891 by the *Corsair II*, which he sold to the Government in the war with Spain, the craft becoming the *Oboussier*. The *Corsair III*, which he still owned at the time of his death, was bought in 1898. The year following he built the *Columbia*, which sent the *Shamrock* to defeat both then and in 1901. For the three years succeeding these victories he was Commodore of the New York Yacht Club.

Afloat Mr. Morgan liked to whistle and sing German student songs. He had a really excellent bass, and he liked to gather his companions about him and sing glees by the hour. At home nothing entranced him so as the singing of hymns with the family. For many years he was a director of the Metropolitan Opera House, and with regularity occupied his box, No. 35, but it was to this other music that he gave his heart.

Like most men of great wealth, Mr. Morgan feared all political measures which might upset economic conditions. He was about as conservative as Eugene V. Debs is radical. An account of Mr. Morgan's political views is given by Lord Northcliffe, the famous English newspaper publisher, in an editorial in the *London Daily Mail*. Lord Northcliffe also writes his general impressions of the financier's personality:

I had no knowledge of Mr. Morgan, the financier. The things we discoursed upon were politics and politicians. Knowing my interest in the press, he constantly led the conversation to that topic. It was no secret in the United States that he was not an admirer of most American newspapers. The only American daily journal I ever saw in his library was *The Sun*, which his friend and enemy Laffan conducted, altho many people thought Mr. Morgan financially interested in it.

He read our *Times* diligently and regularly, and it was somewhat surprising to find one so immersed in the money struggle still able to keep pace with our affairs. He regarded Mr. Lloyd-George, I remember, as a great danger to the United States.

I had heard most kinds of abuse of Mr. George, but had never encountered that special cuvée before, and asked him why. He answered me that American legislation constantly followed closely upon that laid down in England, and he gave many excellent examples, which I cannot remember

Alba Semi-indirect Illumination—First National Bank, Chicago

You get more work from your employes—more business—more profits—with less expense, if your lighting is right

Good lighting makes employes more efficient and customers more satisfied. It increases production and trade by making it easier to see and do things right.

Alba Shades, Globes and Lighting Fixtures

are best for business lighting, in factory, store or office. No other glass we know of (and we make every kind that is made) gets so much good illumination out of the current used as Alba does. It is handsome, too.

Try Alba in any place where you use light. You will find it makes all the difference between poor and good lighting.

Fig. 1. E. P. M. L.

For Stores, Offices and other Public Places—send for Catalogue No. 42-O (Alba Lighting Fixtures).

For Home Lighting—send for Illustrated Catalogue No. 42-O.

For Principles of Correct Lighting—send for Book No. 42-O.

at the moment, but the freeing of the slaves, the income tax, death duties, the Employers' Liability act (then pending), and the introduction of the parcel post were among them.

"Should Lloyd-George's Socialistic legislation make progress in your country," he remarked, "we shall follow you."

He had, I thought, an exaggerated fear of the danger of Socialism, but those shrewd, gray, glittering eyes had seen more than mine, and he may have been right. He obviously regarded English Conservatism as Radicalism, and English Radicalism as Socialism, and I fear I shocked him with a good number of my own Conservative views.

He was a John Bullish sort of man. Had he been born to country life in England a century ago he might have become a great squire, a sort of Coke of Norfolk, but a good deal more Tory than that progressive landowner. He had all the obstinacy, tenacity, and bulldog courage that we attribute to the old Tory squire. He was a diligent churchman of a kind not very common in the States, where Episcopalians occupy numerically but a small place. He was not merely a giver of gifts to churches, not merely a most magnificent donor to the great Cathedral of St. John the Divine, now slowly arising in New York, but he took an intense interest in all church matters. He well understood the meaning of the words, "unto whomsoever much is given, of him shall much be required," and gave systematically, splendidly, and without the publicity that attends so much modern giving.

I said good-bye to him last standing before a picture of his father, Junius Morgan, painted in England many years before. He told me a story which may not be known. A young painter presented himself one day at his father's London banking house and begged to be allowed to paint Mr. Morgan, the elder. Something attracted the banker to the painter and he gave half-humorous permission. The sittings progressed, and there was a small payment after each. The portrait was finished and the young man disappeared. Active and diligent search was made for the creator of what is admitted to be one of the finest modern portraits, but he was never again heard of.

THE SPICE OF LIFE

Defining a Dentist.—One who pulls out the teeth of others to obtain employment for his own.—*London Evening Standard.*

Evidently.—TEACHER—"What is a vacuum?"

BOY—"I know, teacher. I have it in my head, but I can't just think of it."—*Brooklyn Life.*

Busy Trip.—"I had a tough time delivering the mail yesterday," declared the postman.

"How was that?"

"Had a bulldog and a chunk of liver in the same delivery."—*Louisville Courier-Journal.*

Losing Faith.—OLD LADY—"I don't believe this sure-cure tonic is a-goin' to do me any good."

FRIEND—"It's highly spoken of in the papers."

OLD LADY—"Yes; but I've taken forty-seven bottles, and I don't feel a bit better. I tell you what it is, Sarah, I'm beginning to think these newspaper editors don't know everything."—*New York Weekly.*

Advising the Court.—A colored man was brought before a police judge charged with stealing chickens. He pleaded guilty and received sentence, when the judge asked him how it was he managed to lift those chickens right under the window of the owner's house when there was a dog in the yard.

"Hit wouldn't be of no use, judge," said the man, "to try to 'splane dis ting to you all. Ef you was to try it you like as not would get yer hide full o' shot an' git no chickens, nuther. Ef you want to engage in any rascality, judge, yo' bettah stiek to de bench, whar yo' am familiar."—*Chicago Record-Herald.*

Tonsorial Art.—BARBER—"Poor Jim has been sent to a lunatic asylum."

VICTIM (in chair)—"Who's Jim?"

"Jim is my twin brother, sir. Jim has long been broodin' over the hard times, an' I suppose he finally got crazy."

"Is that so?"

"Yes, he and me has worked side by side for years, and we were so alike we couldn't tell each other apart. We both brooded a great deal, too. No money in this business now."

"What's the reason?"

"Prices too low. Unless a customer takes a shampoo it doesn't pay to shave or hair-cut. Poor Jim, I caught him trying to cut a customer's throat because he refused a shampoo, so I had to have the poor fellow locked up. Makes me sad. Sometimes I feel sorry I didn't let him slash all he wanted to. It might have saved his reason. Shampoo, sir?"

"Yes!"—*Milwaukee Journal.*

Desirable Building Lots

in an established Seaside resort are regarded by many conservative buyers as good and safe investments. We are offering one hundred and ten lots, comprising one City block, in a section of Ocean City where values have been and still are advancing. The prices and terms bring them within the reach of anyone. Ocean City is located just South of, and, as a Seaside resort, is second only to Atlantic City in size and importance. Maps and full particulars upon request. STANTON & SCULL, Inc., 415 8th Street, Ocean City, New Jersey.

Golfers! Get in an Hour's More Play

Why waste valuable daylight getting to the golf links, when a motorcycle will make you entirely independent?

Go to the golf course on an

Indian Motorcycle

The Indian will take you anywhere at a moment's notice from 4 to 50 miles an hour absolutely without fatigue. Easier to ride than a bicycle. A twist of the wrist applies and releases the power. Upkeep costs next to nothing. Needs no garage. Saves its cost in no time by the added pleasure and the time you save. Why stop playing at the 13th hole to catch the "5:39"? Get an Indian!

Among the 1913 improvements are the Cradle Spring Frame, new style Luggage Carrier and Footboards giving choice of 2 comfortable riding positions. Most comfortable, powerful and reliable motorcycle on the market.

Prices:—4 H.P. Single, \$200; 7 H.P. Twin, \$250—f.o.b. Factory

Better Test.—CRAWFORD—"You can judge a man's character by the way he acts when he has a tooth pulled."

CRABSHAW—"I'd very much rather size him up by the way he goes on when he has had his leg pulled."—Puck.

Cautious, Anyway.—FATHER—"That young man of yours has more brains than I gave him credit for."

DAUGHTER—"Oh, papa, you don't really mean it?"

FATHER—"Yes; instead of coming to see me he called me up on the telephone."—Philadelphia Telegraph.

Edgar Knew Them.—The teacher was hearing her class of small boys in mathematics.

"Edgar," she said, "if your father can do a piece of work in seven days, and your Uncle William can do it in nine days, how long would it take both of them to do it?"

"They would never get done," answered the boy, earnestly. "They would sit down and tell fish stories."—New York Evening Post.

Wrong.—"Do you keep coffee in the bean?"

"No, madam, brains."—Boston Transcript.

Ponder This.—"You'll be sorry some day that you didn't marry."

"Well, I'd rather not be married and be sorry I wasn't than be married and sorry I was."—New Orleans Times-Democrat.

His Job.—"How are the plans for your new house coming along?"

"Splendidly. My wife has finally laid out all the cupboards she wants, and now all the architect's got to do is to build the house around them."—New Orleans Times-Democrat.

Warning Him.—REVEREND GIDE—"We Christians have a beautiful city made of solid gold, with streets of pearl, gates of precious stones, and—"

DEACON BULLION—"Great Scott, mab, chop that dope! Before you know it you'll have the Pujio bunch up here asking you where you got it."—Puck.

His Experience.—"What is your idea of high finance?"

"It is a school of fiction," replied Mr. Dustin Stax, "in which mathematics takes the place of language."—Washington Star.

In the Same Line.—"Think the Reds will cop the pennant this season?" asked the barkeep.

"Well," replied the souse, "I expect to see the team display some bunting."—Cincinnati Enquirer.

Corrected.—AMERICAN—"Those Dash-away girls are as much alike as two peas in a pod."

ENGLISHMAN—"Haw—but, me deah fellow, I say, don't y'e know, there's only one p in pod, y' know."—Town Topics.

Ever Ready.—"There is one vital difference between ball-players and politicians."

"Only one?"

"Well, one that is more noticeable than any of the others. You never hear of a political holdout."—Chicago Record-Herald.

Like Hearing the **Greatest Speeches** Ever Made

Without Stirring from Your Chair

The brightest thoughts of the World's most famous orators—the wittiest sayings of the wittiest men of the Nineteenth Century—epoch-making speeches that moved not only audiences but Nations. They are all here just as they were delivered by their distinguished speakers and gathered in such form as to instruct and entertain you where and when you will.

Modern Eloquence

Consists of ten beautiful, richly bound volumes, containing:

300 After Dinner Speeches

by Joseph H. Choate, Benjamin Disraeli, James G. Blaine, Wm. M. Evarts, John Hay, Oliver Wendell Holmes, Sir Henry Irving, Chauncey M. Depew, Henry Ward Beecher, Mark Twain, Henry W. Grady, Joseph Jefferson, Robert G. Ingersoll, Seth Low, Albert J. Beveridge, etc.

150 Great Addresses

by Lyman Abbott, Charles Dudley Warner, William Cullen Bryant, Rufus Choate, Theodore Roosevelt, Arthur J. Balfour, Jonathan P. Dolliver, Edward Eggleston, William E. Gladstone, Charles Francis Adams, John L. Spalding, Joseph Chamberlain, Grover Cleveland, Fisher Ames, Lawrence Barrett, Henry Drummond, James A. Garfield, Sir John Lubbock, Hamilton Wright Mabie, etc.

60 Classic and Popular Lectures

by Charles A. Dana, Robt. J. Burdette, Russell H. Conwell, Canon Farrar, John B. Gough, Andrew Lang, Wendell Phillips, Josh Billings, John Tyndall, Geo. William Curtis, Artemus Ward, Paul DuChailu, John B. Gordon, Newell Dwight Hillis, John Morley, John Ruskin, Henry M. Stanley, Wu Ting Fang, etc.

2000 Short Stories and Anecdotes

by Mark Twain, Chauncey M. Depew, Horace Porter, Champ Clark, Joseph H. Choate, John M. Allen, etc. Elaborately indexed, beautifully illustrated with over 50 photographs in Japanese vellum paper, press work and binding of the very highest quality.

A Wonderful Bargain

Send us the attached coupon, properly filled in, and we will tell you how these books may for a short time be secured at a very low price and on easy monthly payments. With our terms we will also send you

Henry W. Grady's Great Lecture "The Race Problem"—FREE

Reprinted from the work itself. Champ Clark says:—"The most famous after-dinner speech within the memory of any living man." Sending the coupon places you under no obligation to buy. If you are interested tear it off and send in now. Don't wait. The offer is limited.

This Great Work Is Sole Occupant of a New Field

It has neither predecessor nor competitor. The most brilliant men of the world today endorse it unqualifiedly. To read it is a liberal education—a treasure trove of information accessible in no other form. No intelligent man or woman can fail to be moved by the words gathered here—words which have brought men to tears or laughter, to pity or scorn, to indignation or repentance. Each address is a separate gem and from the standpoint of inspiration alone is priceless.

Are You Ever Asked to Respond to a Toast, To Write an Address, or to Make a Speech?

If so you will find these volumes the greatest help imaginable. Because they contain nearly every variety of good material for the various stages of oratory. And many an inexperienced speaker, chairman, toastmaster or honored guest, starting helplessly about him for a good story or appropriate remark, has found here just the inspiration he needed.

Each Speech, Lecture or Address Is Complete

Everything in this wonderful library is of proved value and interest, and is printed in its entirety. Speeches that have been floundered around the world, lectures that have been repeated again and again to never-tiring audiences, "occasional" addresses that have made men famous in a day, masterly orations that have molded public opinion and directed the march of progress—these are brought together for the first time in this remarkable library.

GEO. L. SHUMAN & CO.

Now is the Time to Choose a School

For a number of years the Literary Digest has conducted a school service in the interest of its subscribers. Hundreds of people have found satisfactory schools in this way, and have written us letters of appreciation.

If you are looking for a private school or college do not hesitate to enlist our services. Simply write us a letter stating the kind of school desired, location preferred and price of tuition you are willing to pay.

In reply we will advise you impartially and without fee now or later.

"People who are perplexed over this necessary but difficult aspect of social life, will find sensible and valuable suggestions in this book."—*The Standard, Chicago, Ill.*

CONVERSATION
What To Say and How To Say It
A new and widely commended book
By MARY GREER CONKLIN
"Books like this perfectly delightful one, simply thrill one with the imaginary joys of conversation, real conversation, not breathless chatter or the martyrdom of enduring having somebody talk when you want to, but a fair and even deal, heart and mind alert, and a companion for whose opinions you really care. This eminently intelligent book has so much that is good sense, and so much valuable advice to give that it warms the heart and stirs the imagination."—*Elizabeth Dring, Field, in the Herald, Lexington, Ky.*
12mo, cloth, 75c net; by mail 82c

FUNK & WAGNALLS COMPANY, 44-60 E. 23rd Street, New York, N. Y.

"Conversation" shows that its author has thought deeply concerning her theme, and followed many lines in her endeavor to ascertain why talk is so seldom worth while." — *Detroit Free Press.*

The Rough-Road Car

By R. E. Olds, Designer

After 26 years of experience, I tell you a car for the average road ought to be built like this:

Overcapacity

The builder must know the needed strength. Then he must add at least 50 per cent. as we do in this Reo the Fifth.

He must know his steel—have it made to his formula. Then analyze it twice to make sure of it.

He can't test gears with a hammer. He must, as we do, use a crushing machine of 50 tons' capacity.

Not Enough

Tires are expensive. But over-size tires are essential to low upkeep. We use 34 x 4.

Roller bearings cost five times as much as common ball bearings cost. But the right car must have them. In Reo the Fifth we use 15, eleven of which are Timkens.

Drop forgings are costly, but we

use 190 to avoid the risk of flaws. We use a \$75 magneto, big brakes and springs, a doubly heated carburetor, a centrifugal pump. And not an engine goes out until 48 hours have been spent in five radical tests.

Reo the Fifth, without these extremes, would cost in the building \$200 less. But in the next five years repairs and upkeep would cost you several times that much.

I Know

These are things I know. I have learned them from tens of thousands of cars in my 26 years of car building.

These extra precautions cost this concern two million dollars per year. We are not spending that without knowing the need of them.

We save by efficiency—by building all our own parts. We save 20 per cent. by building only one model. Then we spend all those savings on hidden parts. To give you a car which, year after year, will serve you as well as when new.

Look below the frills when you buy a car. All modern cars are attractive. Find out what the maker hides.

A one-summer car is built very differently from a car that is built for keeps. If you want an honest car—a car that endures—watch these inner features.

New Control

Reo the Fifth has our new control. All the gear shifting is done with one center rod, entirely out of the way. It is done by moving this rod only three inches in each of four directions.

There are no levers to clog the way of the driver. Both brakes are operated by foot pedals. And this car, like all the leading cars, has the left side drive.

A 17-coated body, nickel trimmings, electric lights, genuine leather—all the luxury you want.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

New Spring Books

J. B. LIPPINCOTT COMPANY

PUBLISHERS, PHILADELPHIA

JULIUS CAESAR

Edited by HORACE HOWARD FURNESS, Jr.

Being the Seventeenth Volume of
A NEW VARIORUM EDITION
OF THE

WORKS OF WILLIAM SHAKESPEARE

Royal 8vo. Cloth. Gilt top. Uncut edges. \$4.00 net. Half Morocco.
Gilt top. Uncut edges. \$5.00 net.

The publication of a new volume of the Variorum Edition is always an event in the literary world and it is therefore with pleasure that we announce the completion of the Seventeenth Volume.

The preparation of the new Variorum Edition of the Works of Shakespeare was the life work of Dr. Horace Howard Furness, who is acknowledged to have been the world's greatest authority on Shakespeare.

For many years he was assisted by his son, Horace Howard Furness, Jr., who has contributed two volumes to the set—Richard the Third, and a revised edition of Macbeth. The publication of these volumes demonstrated the wisdom of Dr. Furness in associating his son with this invaluable work, so stupendous as to be beyond the ability of a lifetime to complete.

To Horace Howard Furness, Jr., now falls the task of editing the remaining plays. This important work will, therefore, be continued along the same lines laid down by Dr. Horace Howard Furness. Descriptive Booklet of the complete Variorum Edition sent on request.

Enjoyable New Fiction

THE ROAD OF LIVING MEN *Second Printing*

THE UNFORGIVING OFFENDER *Second Printing*

By JOHN REED SCOTT. \$1.25 net. Postpaid \$1.37.
A brilliant story of social life, with a winsome heroine.

? WHEN TO SEND FOR THE DOCTOR ? AND WHAT TO DO BEFORE HE COMES ?

By Dr. F. E. LIPPERT and Dr. ARTHUR HOLMES

16 full-page illustrations. Frontispiece in color. 265 pages. 12mo.
Cloth. \$1.25 net. Postpaid \$1.37.

To fathers, mothers and teachers the critical question must occur again and again, "Shall we send for the doctor?" To answer this query in the simplest manner possible, this book has been written. It is the result of both medical and psychological experience gained in general and in clinic practice covering a number of years. There has been included a section dealing with emergencies and what to do before the doctor comes.

How to Buy Books

AS publishers we are greatly interested in the distribution of new books. The number of volumes issued each year grows steadily.

Very few book stores, even in the largest cities, can possibly carry in stock copies of each new book. In many average size cities and in the smaller towns there not only is no book store that is well equipped, but there is no book store of any kind.

Readers will benefit and aid the problem of distributing new books properly by taking note of the books reviewed and advertised in the magazines. The cost of advertising is considerable and the number of volumes brought out by the average publisher very large. It is, therefore, impossible to mention titles very frequently. Very often there can be but one announcement made of a new book.

We suggest that you read carefully the reviews of new books and the publishers' advertising, and where you are interested in a new book make a memorandum of the author's name and the title. If you live in a city where there is a good book store apply to the bookseller; if you live in a small town where there is no book store, we shall be pleased to refer you to the store nearest your town, or the publisher direct, who will promptly ship you the book.

The Literary Digest

In the issue of May 3d we shall publish for the reader's convenience a list of the new fiction just published or about to be published. You can select the latest volume of your favorite author, as the list will be alphabetically arranged as to the author's name.

THIRTY EDITIONS SINCE PUBLICATION

*We Earnestly Urge Parents to
Have their Children Read
Jules Payot's*

The Education of the Will

*It will Surely Help to Make Them Better
—More Successful—Men and Women*

The New York Evening Sun thinks:

"His treatise is the most thoughtful, the most systematic, and, if we may so express it, the most business-like we know of."

The Brooklyn Times says:

"It must be declared in uncompromising terms that this is a valuable, perhaps a great book. . . . In this haphazard, nervous age such a book as this is a tonic. It preaches the gospel America needs."

The Philadelphia North American declares:

"It is a prescription for the attainment of self-mastery which is procurable in the 'drug-store' of most any mind, and of which men in general stand in immediate need at the present moment."

CAUTION—Be sure that it is *Payot's* book that you buy as there is another book with the same title, but which has no relation to this.

THE EDUCATION OF THE WILL, by Jules Payot, Litt. D., Ph.D., translated from the French by Smith Ely Jelliffe, M.D., Professor Clinical Psychiatry, Fordham University, New York. 12mo, cloth, 450 pages, \$1.50; post-paid, \$1.60.

NEW YORK

Copyright, Hart Schaffner & Marx

YOUNG men will rejoice at the new models we've made for them this spring; suits and overcoats of unusual merit in style and finish. The Norfolk will be worn by men of all ages; more popular than ever before, for business, for sport, for town or country.

Notice the very smart lines of the new suit models; the long, graceful lapels; the patch pockets. Notice also the new overcoat model, a very striking and original design.

You can find these and many other good styles, ready; and the advantages gained in time and money saving, in assurance of quality, tailoring, fit, are the reasons for buying ready clothes.

You will want to see our special gift tag—Northfolk coast and “knickerkn,” it’s in the illustration above. The girl is wearing one of our new Northfolk dresses; young women seem to like them. You don’t see much, but sure the mark is in there—a small thing to look for, a big thing to find.

Send us yours for the Spring Style Book.

PRESIDENT WILSON DELIVERING HIS MESSAGE TO CONGRESS IN PERSON.

He thus revived a practise of Washington and Adams which had been discontinued for 112 years, and at the same time verified his impression that "the President of the United States is not a mere department of the Government, hailing Congress from some isolated island of jealous authority," but "a human being, trying to cooperate with other human beings in a common service." The picture shows the change from desks to benches in the House.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. Instructions for **RENEWAL**, **DISCONTINUANCE**, or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed

that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY

THE NEW TARIFF BILL

NO SANE human being, it has been said, would expect unanimity of opinion about a tariff bill. Perhaps this statement should somewhat mitigate our surprise at being informed by one set of authorities that the Underwood Bill "will bring industry after industry face to face with absolute ruin," and "will cost this country greater loss than the Civil War," while by others we are assured no less emphatically that it will "stimulate American industries," and "will save the consumers of the country approximately \$1,000,000,000 a year." But however opinions may differ about the effect of this measure, there is a general inclination to recognize it as embodying the honest efforts of the Democratic party and the Democratic President to redeem their tariff-revision pledges. Even such an old-line protectionist Republican organ as the *New York Tribune* admits that "it is a fair translation into legislation of the promises on which the voters put the Democratic party back into power," and *The World* (Dem.) notes that "even in the most adverse criticism of the Underwood Bill there is no impeachment of Democratic good faith." In fact, declares the *Jacksonville Florida Times Union* (Dem.), the bill as introduced promises "the first honest tariff reduction in fifty-six years."

This measure, framed by the House Ways and Means Committee and indorsed by President Wilson, aims, in the words of Chairman Oscar W. Underwood, to revise the tariff "to a basis of legitimate competition, such as will afford a wholesome influence on our commerce, bring relief to our people in the matter of the high cost of living, and at the same time work no detriment to properly conducted manufacturing industries." To this end it either removes entirely or greatly reduces the tariff on most articles of food and clothing which could be ranked as necessities of life, and arranges to reimburse the Government for the consequent loss of revenue—estimated at about \$80,000,000—by a new direct tax on all incomes of over \$4,000 a year. Its avowed purpose is to weaken the grip of monopoly and privilege, and to ease the burden of the poor. "Many items of manufacture controlled by monopolies have been placed on the free list," Mr. Underwood points out. The principal changes proposed by the new measure are thus summarized in the *New York Commercial*:

"All meats are on the free list, while live-stock rates are much cut in ratio, the reduction in duty ranging from one-half to two-thirds, the only exception being in swine, which go on the

free list. Sugar will be graduated to the free list three years hence, until which time a reduction of 25 per cent. duty is proposed. Wool is planned to go on the free list. In the category of clothing and its allied needs: Woolen cloths, knit fabrics, and manufactured goods drop from 97 to 33 per cent., white cotton goods are reduced from 42.74 to 26.69 per cent. Silk goods, a luxury, are reduced only 2.58 per cent., except in ribbons and partially manufactured forms, when the duties are a little greater. Linen fabrics are reduced from 60 to 45 per cent., with a little stronger rate in the form of handkerchiefs. Machinery in general is reduced all along the line of an immense variety of products, automobiles excepted, the rate on the average being cut in two. In the metals schedule, steel rails are placed on the free list and the reduction on all other manufactured forms is from one-third to one-half. Wood pulp will come into this country free, and print paper at 2½ cents per pound or less will go on the free list as well."

The *New York World's* Washington correspondent credits the Ways and Means Committee with the belief that this bill, if enacted in practically its present form, "will save the consumers of the country approximately \$1,000,000,000 a year"—this saving being due to the demolition of artificial prices which have been established and maintained by the protective tariff. We read in the same dispatch that the bill is regarded as "the forerunner of a new commercial and economic era in this country," an era of prosperity based on the natural laws of competition instead of on the artificial laws of protection and privilege.

SQUEEZING OUT THE GRAFT.

—Macaulay in the *New York World*.

ALL ROADS LEAD TO WASHINGTON.

—Bowers in the *Newark News*.

This idea, indeed, was uppermost in the President's message to Congress—a message delivered in person, as a notice, many believe, that he has assumed personal leadership in the tariff fight. In the course of this message, which dealt solely with the tariff, he said:

"For a long time—a time so long that the men now active in public policy hardly remember the conditions that preceded it—we have sought in our tariff schedules to give each group of manufacturers or producers what they themselves thought that they needed in order to maintain a practically exclusive market as against the rest of the world. Consciously or unconsciously we have built up a set of privileges and exemptions from com-

petition behind which it was easy by any, even the crudest, forms of combination to organize monopoly; until at last nothing is normal, nothing is obliged to stand the tests of efficiency and economy, in our world of big business, but everything thrives by concerted agreement. Only new principles of action will save us from a final hard crystallization of monopoly and a complete loss of the influences that quicken enterprise and keep independent energy alive.

"It is plain what those principles must be. We must abolish everything that bears even the semblance of privilege or of any kind of artificial advantage, and put our business men and producers under the stimulation of a constant necessity to be efficient, economical, and enterprising masters of competitive supremacy, better workers and merchants than any in the world. Aside from the duties laid upon articles which we do not, and probably can not produce, therefore, and the duties laid upon

TIME FOR STEADY DRIVING.

—Fitz in the Chicago News.

luxuries and merely for the sake of the revenues they yield, the object of the tariff duties henceforth laid must be effective competition, the whetting of American wits by contest with the wits of the rest of the world."

But he added this word of reassurance to those whose fortunes are involved in the conditions which he believes to be passing:

"It would be unwise to move toward this end headlong, with reckless haste, or with strokes that cut at the very roots of what has grown up among us by long process and at our own invitation. It does not alter a thing to upset it and break it and deprive it of a chance to change. It destroys it."

It is inevitable that this transition from a protective to a "competitive" tariff will take place to an accompaniment of protest from protected interests. As the protectionist New York *Herald* (Ind.) philosophically remarks, "you can not make an omelet without breaking eggs." It is also to be expected that the wool schedule, which Senator Aldrich described as the keystone of the protective-tariff arch, and the sugar schedule, which proved a stumbling-block to the Democratic tariff reformers of Cleveland's day, will form the "bloody angle" of the tariff fight. Thus S. W. McClure, secretary of the National Wool Growers' Association, informs the public that free wool will "destroy a \$580,000,000 industry in the Western States." And from the New Orleans *Picayune* (Dem.), we learn that "the fight for the preservation of the sugar industry . . . is a life and death struggle which takes precedence over all party affiliations." Free sugar, the organs of the sugar planters insist, will ruin both the cane-sugar industry of Louisiana, Texas, Hawaii, and Porto Rico, and the beet-sugar producers of Michigan, Wis-

THE FUNERAL ORATION.

—Morgan in the Philadelphia Inquirer.

consin, Colorado, Utah, California, and other Western States. The only sugar interest in the United States which would not suffer, says the *Philadelphia Inquirer* (Rep.), is the Sugar Trust, whose business is sugar refining, and which is free to buy the crude product in the cheapest market. To the cry of the wool and sugar interests that lack of protection will destroy them, the *Baltimore News* (Prog.) replies that those industries "are not worth to the country, in the broad social and economic sense, as much as it costs to maintain them." In the meantime, according to the Washington correspondents, practically every other industry which regards itself as injured by the Underwood Bill is preparing to demand the same three-year reprieve offered to the sugar growers, that they, too, may set their houses in order for the new dispensation.

But the wool and sugar interests are not the only ones that fail to recognize the Underwood Bill as an unmixt blessing. Thus the Washington correspondent of the stand-pat *Philadelphia Inquirer* quotes certain "conservative Democrats and Republicans" in the capital as predicting that the new schedules "will throw a million men out of employment and cause a cut of 20 per cent. in wages in the industries affected." W. F. Wake-man, secretary of the American Protective Tariff League, predicts that many American industries will be transferred "to such countries that have the lowest wage rates," and that the loss to this nation will be "greater than that caused by the Civil War." Even Byron W. Holt, chairman of the Tariff Reform League, who characterizes the bill as "only a fairly long step in the right direction, but not nearly long enough," prophesies that "we are going to have trouble and soup-houses, whether we do it right or by halves." Of its political effect Mr. Holt said to a representative of the New York *Evening Mail* (Prog.):

"The Democrats are sacrificing themselves on the altar of their principles. The tariff reduction is bound to bring forth soup-houses temporarily. It will kill some industries, including beet-sugar growing, and it will cripple others—the textile-mills in particular.

"The result will be a Democratic defeat in 1916. That does not mean a Republican victory, as I believe that you have seen the last Republican in the White House. Tho I am not a Progressive, I can see nothing else but a Progressive victory in the next presidential campaign."

Turning to those who view the tariff prospect through blue glasses, we find them predicting that the Underwood measure

\$198,260.

THESE SIX MEN WILL PAY AN ESTIMATED TAX OF \$4,000,000 ANNUALLY.

The New York Tribune, from which we take these estimates, places W. W. Astor's tax at \$138,260, Mrs. Hetty Green's at \$118,260, and W. K. Vanderbilt's at \$98,260. The J. P. Morgan and Marshall Field estates, it is estimated, will pay taxes of over a quarter of a million each.

THE INCOME-TAX PLAN

TO CARP at the income tax is said to be a popular and inexpensive method of giving friends the impression of large wealth, but when it comes to editors, of course we must acquit them of any such motive. Editors who object, in fact, base their claim mainly on the idea that the Democrats are imposing a war tax in time of peace. They protest that the only reason the amendment resolution passed Congress so easily four years ago was because of the constant assertion that "this odious tax would never be employed in the ordinary experience of peaceful national existence." The introduction of this measure, prepared by Mr. Cordell Hull, of the House Ways and Means Committee, as a device for making good the \$100,000,000 revenue loss expected to follow the new Tariff Law, brings a sad protest from the New York Sun (Ind.). Thus, it exclaims, "perishes the income tax as a resource to be kept for great national emergencies." The Albany Journal (Rep.) even calls the measure "an act of bad faith on the part of the Democratic party." And a Democratic paper, the Brooklyn Eagle, arguing "that a tariff for revenue is the Democratic plan, and that a tariff for revenue means revenue in excess of what a protective tariff raises," regrets that it was thought necessary to resort to what "should always be an emergency tax." There are, of course, both critics and defenders of the measure which was introduced into the House last week, but before any consideration of their arguments, it may be well to state briefly just what the bill proposes. In the first place, to quote a summary appearing in the Washington correspondence of the New York Tribune, it requires "every resident of the United States who earns more than \$4,000 a year to pay a tax of 1 per cent. on his earnings in excess of the exemption." Thus:

"The bill also would provide higher rates of taxation for persons with larger incomes, adding a surtax of 1 per cent. additional on earnings in excess of \$20,000, 2 per cent. additional on earnings in excess of \$50,000, and 3 per cent. additional on earnings in excess of \$100,000."

So that the great majority who earn less than \$4,000 a year would be unaffected; while taxes of those possessing larger incomes would run as follows:

Income.	Amount of Tax.	Income.	Amount of Tax.
\$4,100.....	\$1	\$50,000.....	\$360
5,000.....	10	80,000.....	760
7,500.....	35	100,000.....	2,260
20,000.....	160	1,000,000.....	38,260

The present law imposing a flat 1 per cent. tax on the earnings

of corporations, stock companies, and the like, is reenacted, the partnerships are exempted. Certain details of the new income-tax measure are thus briefly set forth in *The Tribune*:

"Incomes of taxable persons shall include gains, profits, and income derived from salaries, wages, or compensation for personal service of whatever kind and in whatever form paid, or from professions, vocations, businesses, trade, commerce or sales or dealings in property; also from interest, rent, dividends, securities, including income from property, income from but not the value of property acquired by bequest, devise, or descent, and also proceeds of life-insurance policies paid upon death of persons insured."

"The bill allows as deductions in computing net income all necessary expenses actually incurred in carrying on any business not including personal, living, or family expenses, interest accrued and payable within the year by a taxable person on indebtedness; all national, State, county, school, and municipal taxes not including local benefit taxes; losses incurred in trade or from fires, storms, or shipwreck not compensated by insurance or otherwise; debts actually ascertained as worthless and charged off; also reasonable allowance for wear and tear on property, but no deduction will be allowed for expense of restoration or improvements made to increase property value."

"It excepts also in computing net income amounts received as dividends upon the stock of any corporation, joint stock company, association, or insurance company which is taxable on its net income under the corporation-tax provision of the bill."

In view of certain discussions during the period of ratification, it is interesting to find that the Underwood measure excludes from taxation:

"The interest upon the obligations of a State or any political subdivision thereof, and upon the obligations of the United States the principal and interest of which are now exempt by law from Federal taxation; also the compensation of the present President of the United States during the term for which he has been elected and of the Judges of the Supreme and inferior courts of the United States now in office, and the compensation of all officers and employees of a State or any political subdivision thereof."

In so far as possible, tax collections are to be made at the source of the taxable income, all employers being required to make the requisite deductions from pay-envelops and to make the proper payments to the internal-revenue collector.

The New York Sun complains that "this is not taxation of revenue, but taxation of the few for the benefit of the many." This paper also finds fault with the complex and "over ingenious idea of collecting partly 'at the source' and partly from the actual recipient. For, by this dual system of collection, dual responsibility and dual disclosure, we get a confusion of provisions which a convention of lawyers might possibly resolve into

intelligibility after months of hard intellectual work by day and night."

But to the *New York Globe* (Ind.) such objections seem "babyish outbreaks," and they are answered briefly as follows:

"The income tax is designed to make taxation more equal between the poor and the rich. It is a corrective and counterpoise of levies that now bear more heavily on the poor, and to perform this function there must be an exemption. . . .

"Grading is merely an application of a principle as old as taxation, that men should contribute to the state proportionately to their ability. It is not open to doubt that a man with an income of \$1,000,000 is better able to pay 4 per cent. than a man with an income of \$10,000 is able to pay 1 per cent. In measuring ability to pay what is left is of consequence."

But for the present these provisions "will be examined with more of curiosity than concern" by both critics and defenders, observes the *Providence Journal* (Ind.), for as the *New York Commercial* points out:

"Probably in the thrashing debate, which, it is certain, will study the details of the whole Tariff Bill, and especially the income-tax section, there will be a good deal of change before the entire proposition is settled in its final form and goes to the President."

CALIFORNIA'S ANTI-ALIEN LAND BILL

THE PRESIDENT'S INCLINATION not to interfere with California's enactment of an alien land law—frankly aimed at Japanese farmers—is expected by the press to bring this question up to the Supreme Court for decision as to whether such a law conflicts with the treaty of 1911. The point at issue is whether a State has a right under the treaty to prohibit aliens from owning land or holding leases for long periods unless they are prospective citizens. Many American newspapers outside California argue in the negative, and so do some of the Japanese papers, as well as the Japanese Government authorities, who sent Ambassador Chinda to confer with Secretary of State Bryan about the affair. The acuteness of the situation in California is evidenced by a telegram sent to Congressman John E. Raker, at Washington, by State Senator J. B. Sanford, in which he said that "if the legislature refuses to enact such a law, the people will resort to the initiative." It has been suggested by some of the Eastern papers that discriminatory land laws would not only conflict with the treaty, but would also deprive the Japanese in this country of property rights similar to those enjoyed by Americans in Japan, to which the *Sacramento Bee*, one of the chief supporters of the Progressive State Government, makes this reply:

"As a matter of fact, the alien land bills before the legislature have no more application to the citizens of Japan than to those of any other nation. They conflict with no Japanese treaty right or obligation, and would not have the effect of denying to Japanese any right or privilege which Americans have in Japan."

"Furthermore, even President Roosevelt and Secretary of State Elihu Root, while opposing a bill for separate schools for Orientals, admitted there would be no cause for international objection to an alien land bill, applicable to all aliens, and said they did not protest against anything of the sort."

The *Asahi* (Tokyo), one of the leading independent papers of Japan, not only protests against the enactment of the Alien Land Bill, but threatens retaliation. It is quoted as saying that "American advocacy of equality is a hollow sham," and that "the Californians propose to treat their neighbors across the Pacific worse than negroes." The *Asahi* goes on:

"This anti-Japanese agitation will impress us with a keen sense of humiliation which will require many years to efface. Americans must be prepared for a cool reception when they come to Japan as tourists or settlers."

The Chambers of Commerce of San Francisco and Los Angeles asked the legislature not to pass the bill because it might cause the Japanese Government to refuse to participate in the Panama-Pacific Exposition. But there was no real cause for alarm on this point, if we are to believe press dispatches from Tokyo, which aver that the officials at the Japanese capital have no intention of withdrawing from the exposition. And the Tokyo Chamber of Commerce telegraphed to the California commercial organizations, thanking them for their efforts to defeat the measure, and begging them to continue their endeavors in behalf of friendly relations between Japan and the United States. Premier Katsura's party is reported as being in favor of the friendliest possible settlement of the controversy. The substance of the bill is given in a San Francisco dispatch to the *New York Times*, dated April 5:

"As amended, the measure provides that an alien may hold land for one year, or, in case of a minor, for one year after attaining his majority, but at the end of that time the property escheats to the State unless the owner has become or has declared his intention of becoming a citizen of the United States. An alien gaining land by inheritance may hold it for one year only under the same conditions."

"All property owned by an alien shall be sold or disposed of within three years from the passage of the act, unless declaration of intention is made, and leases shall run for not more than five years. Those in force when the act is passed shall be declared void at the expiration of five years."

"The provisions of the act are not to apply to property acquired prior to 1894, but the provisions do apply to corporations where the majority of the stock is held by aliens."

Article I of the treaty of 1911, regulating the rights of Japanese in this country, is the clause which the Japanese, and many of the American newspapers outside California, say the lawmakers at Sacramento would violate. It provides that:

"The citizens or subjects of each of the high contracting parties shall have the liberty to enter, travel, and reside in the territories of the other, to carry on trade, wholesale and retail, to own or lease and occupy houses, manufactories, warehouses, and shops; to employ agents of their choice, to lease land for residential and commercial purposes, and generally to do anything incident to or necessary for trade upon the same terms as a native citizen or subject, submitting themselves to the laws and regulations there established."

"The curious notion seems to prevail at Sacramento," remarks the *New York World*, "that the United States must be governed by the acts of the legislature of California," and it goes on to say that "a people with any sense of humor would stop before they made themselves ridiculous," and that if nothing else will restrain the California Legislature, "it will have to be taught the meaning of the Constitution of the United States." We read further:

"Within the borders of California there are 101,350,400 acres of land. According to the census of 1910, of the total population of 2,377,549, only 41,324 were Japanese, including men, women, and children, or less than 1½ per cent., of whom only a small fraction occupied land. Yet this is the awful peril which confronts California and has started all the clamor at Sacramento."

It is suggested by the *Buffalo Enquirer* that under national persuasion, California went slow at the time there was so much agitation against admitting Japanese to the public schools, and that "memory of that episode should aid it to go slow again." The *Indianapolis News* thinks that perhaps the Japanese Government will be difficult to deal with, but hopefully suggests that "what is demanded is fairness, and this doubtless will be forthcoming." And some justification of the California viewpoint is made by the *Indianapolis Star*, which observes that "no State would, of course, willingly embarrass the National Government, but it surely has the right to guard its own territory from any peoples it deems undesirable by any legal means."

RECOGNIZING CHINA

THO THE OPENING of the first National Parliament of the Chinese Republic on April 8 was not accompanied by the formal recognition of China's new Government by the United States, it seems to be generally understood by our press that this step has been decided upon by the Wilson Administration, and that its formal announcement only awaits certain "conditions." Washington dispatches told of Secretary Bryan calling together the diplomats representing foreign Powers, and presumably asking them to recognize China in unison with us. The responses, we are told, have not been satisfactory. Even Mexico, the dispatches tell us, takes advantage of a momentary rest between revolutions to convey her serious doubts about recognizing a Government so "unstable." The "failure of the *coup diplomatique* of his Secretary of State," has, according to the *New York Tribune's* Washington correspondent, compelled President Wilson to take the Chinese question into his own hands, and it has given unfriendly editors their opportunity to reflect upon Mr. Bryan's fitness for his post. As for China, it seems to the *Philadelphia Telegraph* that "until unity and brotherly love shall exhibit themselves in greater degree than is apparent just now, it would, perhaps, be more prudent for America to withhold recognition of the Republic until she is assured 'who is' the Republic, or until President Wilson and Secretary Bryan are sure they can pick the winner." And the *New York Sun* is frankly puzzled at the Administration's postponement of recognition of the provisional Government in Mexico, while it is "filled with a quixotic ardor to give its moral support to the Republic of China." They may be in doubt, *The Sun* admits, "regarding the ability of General Huerta to maintain his authority in every part of Mexico during the interregnum, but they have no means of knowing that Yuan Shih-kai can last thirty days after his election as President by the new Chinese Parliament." The new Parliament, with its two houses of 596 and 274 members, respectively, will draw up a constitution and elect a permanent President, and *The Sun* thinks it safe to assume that, tho he has several rivals, Yuan Shih-kai will be elected to the office. But he will have no easy task.

"The disorders that are common in Kiangsi, Sbansi, Kuangtung, Szechuan, and Yunnan are not taken seriously by experienced observers at this time, but if Yuan Shih-kai can not mold the new Parliament to his purpose the disaffected localities will give him a great deal of trouble. . . . As the Presidency of Yuan Shih-kai will be an experiment, made extremely difficult by an empty treasury and the lack of a liberal loan to meet fixt charges, it would seem to be the part of wisdom for the Wilson Administration to await developments."

But these counselors of caution find themselves in a minority. While they admit that "much is uncertain," a host of newspapers all through the country believe that the official recognition of China is "an act of international justice," and heap praises upon the Wilson Administration for doing something which, they declare, should have been done months ago. China, in the *San Francisco Call's* opinion, has "demonstrated her ability to establish a constitutional government inclusive of some progressive policies we have not fully assimilated. . . . has busied herself with her own internal affairs and their organization for governmental purposes," and "has preserved through it all a national dignity that has made a profound impression on the political thinkers of the world." This new national life, thinks the *Baltimore Sun*, "will be substantially strengthened by our formal recognition." Then, the *New York Commercial* believes that "this country, having taken the initiative, Great Britain and France, before whose governments this question has already come, will rapidly follow in official recognition." And—

"once China has assumed this status in the eyes of the world,

it will be of great advantage to her in many important ways. It will enable her to assume more definite and confidential relations with the foreign Powers; and it will remove many of her troubles in dealing with that great colony of foreign merchants who have all of the exporting and importing trade in their hands. Once China is generally recognized as an independent Power, and not as a government *de facto* merely, it will have smoothed away many of her immediate current embarrassments, aside from those of an empty treasury. It may, indeed, help to solve that difficulty as well."

Indeed, developments in banking circles have made it fairly certain, as the *New York American* sees it, that China will be "able to borrow all the money it needs, without resorting to six-

U. S.—"Hello, John!"

CHINA—"I saw you allee time."

—Minor in the *St. Louis Post-Dispatch*.

Power or five-Power syndicates, or to any kind of political underwriting by European Foreign Offices." Nor will China be the only gainer—the United States can now "win back its place of high distinction and prime consideration in Oriental affairs" that was lost "by the faltering Taft policy." So *The American* concludes:

"The struggle for economic leadership in the development of the new China is likely to be a mainspring of history in this century. The enterprise and organizing power of American business men, and the technical skill of American engineers and workmen, should dominate that struggle."

But there is a serious diplomatic objection to our recognition of China at this time, which the *Philadelphia Record* puts thus:

"Russia has recognized Mongolia as an autonomous state, independent of China, and, therefore, declines the proposal to recognize the Chinese Republic. More than this, since the authorities at Peking have not acquiesced in the secession of Mongolia, our recognition of the Chinese Republic might involve our indorsement of China's attitude in the matter. Wherefore it is intimated that this Government ought to defer recognition until China shall have accepted the separation of Mongolia as an accomplished fact."

The Record itself is hardly convinced by this argument. The Chinese, it points out, assert "that the secession and the subsequent compact with Russia were the acts of a very small number of Khans at Urga." Finally, the Chinese offer the Mongols "not a renewal of their dependency, but freedom and self-government under the flag of the Republic," and, after all, "Russia's interests in Mongolia, whatever they may be, are inferior to those of China."

THE SENATE POPULARIZED

ONE-TIME OPPONENTS of the popular election of Senators have become either so reconciled or so resigned to the change that the news of the ratification of the Seventeenth Amendment is received with little but welcoming comment. True, there are expressions of doubt whether the plan will work as well as its advocates predict, but even the most conservative editors admit that it was something the people wanted and that it could not be "stood off" much longer. Most of these writers take the occasion to point out that this prompt action of the States, less than two years after the Senate passed the proposal for amendment, disposes of "whatever may be left of the long-standing notion that the difficulties in the way of an alteration of the Federal Constitution are almost insuperable."

Few subjects have been so thoroughly debated in Congress, on the stump, and in the press as the change now accomplished. Senator Borah, the father of the Senate resolution calling for the amendment, other progressive Senators, President Wilson and Secretary Bryan are among the men high in official life whose expressions of gratification are most emphatic. Mr. Bryan took occasion to remark that as "Massachusetts was the first State to vote for the amendment, and as Connecticut is the last whose vote is necessary to ratification, New England can claim to have been the alpha and omega of ratification, altho it was not at the laboring oar during the twenty years of struggle for this great reform," and from the conservative *Hartford Courant* (Rep.), published in the capital of the State whose action "puts the amendment over," comes this statement of "some manifest advantages in the new arrangement:

"Take Connecticut for an example. See how a senatorial struggle breaks up a General Assembly. For a generation members were known as 'Hawley men,' or 'Fessenden men,' or 'Bulkeley men.' However they lined up on that critical issue, so they were classed for the session. This at times led to unnecessary and unfortunate divisions. Moreover, there have too often been rank charges of the use of money at senatorial caucuses. Maybe there will be just as many such charges, if the Senator is to be nominated in a State convention, but a State convention is over when its nominations are made and does not sit for five months making laws for the people. Better to have such a body corrupted than a General Assembly. This is plain English, and it strikes us as logical, too."

The quality of the Senate membership may not be greatly improved by the change, says the *New York Evening Post*, but there are other benefits:

"To have got rid of a prolific source of intrigue and corruption

is in itself an incalculable gain. . . . Under the new régime, the Senate will command a kind and degree of respect which, a few years ago, it was evidently in imminent danger of losing. And elections to State legislatures will be freed from a disturbing element that has gone far toward paralyzing all efforts to improve the quality of those bodies. With the election of United States Senators eliminated from the problem, it is not too much to hope that we shall, before long, acquire the habit of choosing members of our legislatures on the basis of State issues and the personal merits of candidates, instead of following party labels and playing into the hands of machine politicians."

There will be no more "dark horses" or legislative deadlocks, notes the *Washington Star*. The ratification of this amendment, observes the *Scranton Tribune-Republican*, "strikes one of the very hardest blows ever aimed at the rule of the boss in American politics." And the *New York American* calls the roll of undesirable Senators whose like will not appear in the Senate again.

Taking the change as an accomplished fact, the *New York Sun* points out that it is but one step in a world-wide process:

"What has now been accomplished with reference to the United States Senate was in another fashion done to the House of Lords in Great Britain. The French Senate and Chamber to-day have locked horns over a measure which would change the whole character of French legislative representation, and change it in the direction which has already been followed in America and England."

The Seventeenth Amendment to the United States Constitution reads as follows:

"The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures.

"When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies, provided that the legislature of any State may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct."

This means that the places of the Senators whose terms expire in 1915 will be filled by popular election. As the *Philadelphia Press* explains:

"The States will have to amend their laws so as to provide for the popular election of Senators. Where the legislature is not in session and has made no provision for the election of a United States Senator by the people there will have to be an extra session of the legislature to avoid the possibility of vacancies after March 4, 1915. If there are such vacancies probably the Governors will undertake to fill them."

FOREIGN COMMENT

MONTENEGRIN SIEGE-GUN BOMBARDING SCUTARI.

THE CAUSES OF TURKISH FAILURE

THE GROWTH of Russia and the shrinkage of Turkey during the three hundred years of the Romanoffs are noticed sadly in the *Ikdam* (Constantinople) and other Turkish papers, which are asking why the Turk has proved no match for his Christian neighbors. Naturally they do not put the blame on their religion. But the Armenian *Puzantion* (Constantinople) makes no bones about it, and in a long article, whose publication one is surprised to find possible under the present military censorship, it declares flatly that "be it Tartars or Turks, Persians or Turkomans, Egyptians or Arabs, the cause of their failure must be sought in their Islamic religion." And it goes on to explain:

"For all these Moslem nations their religion has been an important hindrance, because Moslem conquerors remained indifferent to Western advancement, and so have remained a foreign race among the nations under their rule. In Europe they are not European, as Russians, Magyars, and Finns are.

"The Turks, with the conceit of having a religion more sublime than the people of Europe, looked with indifference upon Western progress. The former Grand Vizier, Said Pasha, relates in his memoirs that after the defeat in the war of 1877-1878 Marshal Ahmed Ali Pasha, the naturalized German, stated in a high council that 'Turkey can not maintain her hold in Rumelia, but must retire to Anatolia and there start new life as an Asiatic nation.' They thought him demented!"

It is much to the credit of the leaders of the Ottoman people, in this hour of extreme humiliation and distress, that they are doing their best to keep their people from sinking into despair. The *Ikdam* especially persists in the effort to show why the Turks have fallen behind in the path of progress, and to rouse

a spirit of true and enterprising patriotism. In a long article by Ahmed Jendet Bey, the proprietor, who is at Vienna, appearing in the paper of March 21, written in very plain simple Turkish, he exerts himself to stimulate pride of race, love of work, and resolution, urging the Turks not to fall hopelessly behind their Christian fellow countrymen. What follows is an exact translation of the most telling portions of the article of Ahmed Jendet Bey:

"Turkish incompetence in the useful arts and in trade results from their lack of any national feeling. How different it is with our non-Mussulman neighbors. For example, here is the shoemaker Nicola (a Greek). Of the money he earns from Ahmed Effendi, Hassan Bey, Mahmoud Pasha, from Ali and Veli, he takes a part and gives it to Greek schools; he takes another part and gives it to the officers of his church, another part he gives to a hospital or other national benevolent institution. He leaves a part of his earnings to cover his own expenses and those of his family, to send his children to school and to clothe his wife and children neatly and becomingly. He eats and drinks well.

"Here is the shoemaker Bekir (a Turk). The shoes he makes are fit only for Ali and Veli. Neither Ahmed Effendi nor Hassan Bey nor Mahmoud Pasha buys ten piasters' worth of anything from Bekir's shop. The money he gets from Ali and Veli is barely enough to buy him bread and candles. His clothes are dirty. At home his wife is in rags; he has no money to buy a book for his children. The hut he lives in is such a tumble-down affair that the scurrying about of the rats in the ceiling endangers the heads of the family.

"The contrast between Nicola and Bekir extends to the communities to which they severally belong. The men in Bekir's community are like Bekir and those in Nicola's

THE POWERS—"Dear Mehmed, nobody is going to hurt your little lamb, but if anything should happen to it, we would each like to have a nice piece!"
—Kladderadatsch (Berlin).

community are like Nicola. As time passes the contrast between the two communities becomes more acute. Bekir and his wife and children fall into utter helplessness, but not they alone. The houses of Ahmed Effendi, Hassan Bey, Mahmoud Pasha, and their children see the source of their revenue drying up, and their feet also begin to press the path of want and wretchedness.

"It is because I know my people well that I affirm that their increasing poverty, their backwardness in trade and the useful arts are due to their lack of any national feeling or aspiration. So there remain to them the work of porters and common laborers, and the rudest of the useful arts. The Mussulmans, the Turks who care nothing for national sentiment, can not in other respects keep pace with their fellows in the race of life. Effort to organize companies for work has failed. A few men who have shown individual enterprise have given up the struggle. Nobody cared whether they succeeded or failed."

The writer then goes on in great detail to show how, in a hundred ways, the craze after the products of every kind, of foreign factories, coupled with indifference to all national enterprise, has ruined local industries.—*Translation made for THE LITERARY DIGEST.*

FOR A NAVAL VACATION

MR. WINSTON CHURCHILL, First Lord of the British Admiralty, has always favored the limitation of naval armaments. But his latest proposal, made in the House of Commons, is characterized by the French press as "fantastic," for he suggests that the foundries and dockyards of the leading Powers be closed for twelve months, and all concerned take a year's holiday from shipbuilding. "He put forth a similar idea in one of his speeches on last year's estimates," remarks *The Yorkshire Post* (York), "but it does not seem to have been regarded seriously anywhere." On the present occasion, adds this influential paper, he made his proposition "the basis of a specific appeal to all the nations, and especially to Germany." To judge from the German press his appeal is a signal failure, and has met with cold and even hostile comment. *The Kreuz Zeitung* (Berlin), the leading Conservative organ, takes pains to point out what it styles "the real reasons for these English proposals," and remarks:

"The clause which the English Minister wishes us to introduce into our naval budget would be entirely to our disadvantage. English industry, which has more than it can do, would be benefited, but German industry, which is in no such condition, would suffer. English factories are working day and night with a costly force of employees. It is not so with German shipyards and factories. England has a larger field than she can fill; that country requires time to complete orders." German industries do not demand this extra time.

"It is the same with the question of personnel. Mr. Churchill has abundant money at his disposal, but he has no dockyards for building new crews for manning his ships. He therefore wishes to have time for providing them."

It is a mere trick, an artful political move, intended to harass the German Government, which the First Lord is contriving, declares the *Deutsche Tageszeitung* (Berlin), the great agrarian organ, in which we read:

"The appeal of Mr. Winston Churchill seems to us to be addressed to a section of the German public who might then be induced to oppose the plans of the Government. These tactics seem to us eminently regrettable in view of the relations at present existing between England and Germany. We see in this proposition a total lack of that loyalty and sincerity of which Mr. Churchill is so constantly and noisily talking."

The Radical and Liberal organs are more moderate in their expressions. "The proposal is worthy of consideration," declares the *Berliner Tageblatt*, "but difficult of accomplishment." The important Socialist *Vorwaerts* (Berlin) naturally applauds the proposal "as very significant, because it presents to all the world a concrete plan for diminishing sea armaments." "To carry out such a scheme would simply be to end the senseless waste of money that is exhausting both countries." The article concludes with something like a threat:

"But there is only a faint prospect that the ruling classes of Germany will come to reason and put a stop to this foolish career of military preparation. Such an end may not be attained through the sagacity of the upper classes, but may come through the determined opposition with which the proletariat meets this frightful armament craze, an opposition whose results only the future can decide."—*Translations made for THE LITERARY DIGEST.*

THEY CAN NOT SING THE OLD SONGS.

WHAT TO DO WITH THE RAGING SUFFRAGETTES

ANOTHER PROPOSAL to dispense with the presence of the suffragettes in England and let some other locality enjoy them for a while is heard. We recently quoted one advocate of this plan. It is true that transportation as a punishment has for some years been abolished in British legal practise, the most recent example of its use being the imprisonment of the Boer soldiers in the island of Bermuda. Now some are viewing the abolition with regret. Can not a spot like St. Helena be discovered, where "the raging, ramping, roaring termagants" who style themselves suffragettes may be marooned, asks Lord Robert Cecil, in the *London Daily Mail*. Of course they have just cause for being angry with Mr. Asquith. "While a suffragette majority has at last been secured in the House of Commons, which is ready to vote overwhelmingly in favor of the principle of giving votes to women," the Ministry "always contrives to defeat any practical proposal to that effect." Taking up this side of the question, he remarks:

"It is not surprising that women should refuse to be put off any longer by parliamentary maneuvers obviously designed to deceive them. Where the members of the Women's Social and Political Union are, of course, hopelessly wrong is in thinking that their methods are morally defensible or practically effective. They are fond of comparing themselves to rebels. But they forget that rebellion and terrorism are entirely distinct."

This political wrong does not, however, justify the perverse and malicious conduct of the ladies. The militant suffragettes are anarchists, and society must be protected against them, continues this writer. Transportation would be like a divorce from these fair ones on the ground of cruelty. Imprisonment and forcible feeding have proved utterly inadequate. Why not try banishment, inquires Lord Robert Cecil:

"Why not empower the courts to sentence them to deportation to some more or less distant island, and once there, leave them at large, only preventing them from returning to this country? Food and lodging would be offered to them, but no compulsion would be put upon them to accept it."

"On the other hand, a sentence of deportation should be of long duration—probably not less than a year. It would be politically, tho not physically, a severe penalty. The women themselves could have no right to object to it, for it would be treating them like prisoners of war. Doubtless the high and dry legal purists and pedants of all kinds would disapprove. For would it not be treating these women differently from ordinary criminals? The answer is that they are different; and just as we have provided reformatories and industrial schools for one type of criminal, the Borstal treatment for another, indeterminate detention for a third, why should we not select an appropriate treatment for women who, with all their faults and follies, have shown that they possess characteristics of sincerity, endurance, and courage in which the ordinary criminal is conspicuously lacking?"

SLAV AGAINST TEUTON

THE UPHEAVAL of Slavic patriotism and a racial spirit of unification has set the beacon-fires ablaze from Tzernagora to the Ural Mountains. The Germans saw this when Nicholas of Montenegro defied Austria and Ferdinand of Bulgaria threw his sword into the scale when his claims upon conquered Turkey were being weighed by the Powers. A new war fund was immediately proposed by the German Chancellor and the whole country was set on the *qui vive*. How powerful this Slavic movement is and what a new impulse it has

received from the Balkan victories may be judged from what the St. Petersburg correspondent of *The Daily Telegraph* (London) says in describing a Slav demonstration of a recent date. We read of the scenes in the Russian capital:

"It was the first time in Russian history that the authorities swerved from the written and unwritten law and allowed a national manifestation to be organized systematically and legalized it in advance. They thus contributed to summon from the vast depths of popular passion unruly spirits which they may be unable to control by law."

"Scores of thousands of representative men of all classes, particularly the military, generals, and officers, members of the Duma, and of the Council of the Empire, dignitaries, professors, students, lawyers, doctors, and engineers, swelled the ranks of the opponents of the Government. The manifestation ended with the expression of deadly opposition to friendship or conciliation toward Austria and to a policy which alone can ward off a European war."

The enthusiasm extends far beyond the streets of St. Petersburg, we are told. The execration of the people is directed against Austria, whose policy is hostile to the Balkan Slavs. To quote further:

"The country is ablaze with excitement. The minds of the politicians of every color, including the Constitutional Democrats, are forced to consider the tormenting problem of the Slav against the German, to which in ordinary times hardly one in a thousand would pay even passing attention. The tide of popular passion is rising and may at any moment annihilate the paper barriers set against it by men who, tho well meaning and straightforward and loyal, are not born to rule a storm or ride a whirlwind. There is no sustaining genius on the side of peace."

"The root of the movement is twofold—namely, sympathy with their Slav brethren abroad and a desire for a radical, perhaps a revolutionary, change at home. The latter element may be largely unconscious, but it is operative. This compound movement, which may be termed anti-Austrian for shortness, is fast possessing itself of a force which without exaggeration may be called dangerous."

The pan-Slavs of Russia are in full sympathy with their brethren of the Balkans. They would drive Austria out of the Slavic provinces and institute war to the knife with Teuton usurpation or intimidation. Yet they also are partly actuated by the idea that the movement they are instituting may bring about great changes in Russia, too, and the same thought

RUINS OF LADY WHITE'S HOUSE.

Burned by the suffragettes.

strengthens the determination of the Government to stand pat:

"With the victories of the neo-Slavs the almost potent influences of the discontented classes and individuals are acquiring fresh confidence and fateful intensity. The most weighty consideration that now militates on the Government side and militates for European peace is the growing conviction among the Monarchists that if the Ministers once allow the reins of power to slip from their hands, as they are now on the point of doing, eager demagogues may snatch them up who would be more intent on domestic changes of a subversive character than upon succoring King Nicholas or winning Scutari for Montenegro."

HOUSING PRUSSIA'S POOR

THE HIGH VALUE of the land in places where the poor are compelled to dwell causes several very unfortunate conditions to arise. The buildings must be high and the apartments small, while every inch of ground has to be utilized, so that open spaces to give light and fresh air are seldom sufficiently provided for. This is the case in all great cities, and in Europe the state of things is such that legislation is being called upon to remedy this evil. The German Government, among others, seems to have risen to the occasion, and we read in the *Continental Correspondence* (Berlin) that the Conservatives, the Catholic Center, and the various groups of the Liberal parties are united on this question, and at this moment the Prussian Diet, or Landtag, which has in charge the local government of Berlin, is considering a bill which bids fair to bring about a better state of things. After enumerating some of the present evils of overcrowding, insanitation, etc., the *Correspondent* outlines the provisions of the proposed law as follows:

"Before building-plans are passed in the future, the requirements of the special class of tenants who are to occupy them are to be carefully considered, and by this means a check is to be placed on speculative building with its concurrent evils. Streets, squares—in fact, entire quarters—can be given over to a new style of building, in which the houses can be constructed in such a manner as to be more open to the air; they must neither extend back from the façade to the present customary depth nor must they exceed a certain definite number of stories. Under existing conditions it often happens that, for pecuniary reasons, building-sites in the midst of inhabited thoroughfares remain long untenanted, thus giving an unsightly air to the whole street; all this is to be done away with, and the municipal authorities are to have the right of purchasing and developing such sites at a fixed rate of compensation."

The building inspectors, too, are to be given larger powers and can condemn buildings already standing, unless they come up to the requirements of the Government, and we read:

"It provides them with the authority to take active steps even in the case of existing buildings which are badly planned or merely overcrowded. Furthermore, it contains definite and strict regulations concerning the exact area of square feet to be set apart for each person, both in the case of sleeping-apartments and other rooms. All rooms intended either for bed- or living-rooms must be duly passed by the authorities as suitable for the purpose for which they are intended. Each municipality is to have absolute control in these matters. Communities of more than one hundred thousand inhabitants must create a special municipal department to deal with these questions, whereas smaller communities are also entitled to take this step, if so disposed. These departments will also have to keep themselves informed concerning the existence of very small dwellings in their particular districts. As soon as a dwelling of this kind becomes vacant, the landlord will be obliged to announce this fact to the department in question, so that the latter will always be in a position to supply those seeking habitations of this kind with information concerning the existing vacancies. The authorities are to have the right to send their inspectors to examine all rooms intended for human habitation, and all the offices pertaining to them; at the same time, the landlord or his representative will be bound to supply any information that may be required by the municipal inspectors."

BRAZIL WELCOMING THE JAPANESE

IN CONTRAST to California's attitude toward the Japanese, Brazil is offering alluring terms to encourage the settlement of Japanese laborers on its farm lands. Japan has, of course, accepted the invitation with alacrity and is about to send a contingent of 3,000 emigrants. Should this experiment prove a success, she will send Brazil some 4,000 annually for several years to come. How anxious the Brazilian authorities are to attract Japanese settlers may be gathered from the inducements which they offered to a Japanese emigration company at Tokyo. As reported by the *Jiji* (Tokyo), these inducements include: (1) a free grant of 122,500 acres of land in the state of São Paulo; (2) the privilege of acquiring more neighboring land as the Japanese colony grows; (3) the establishment of agricultural experiment stations and schools at the cost of the Government, and (4) the payment by the Government of transportation for every immigrant. In consideration of these privileges the Japanese immigration company is under obligation to send to São Paulo at least 100 families of agricultural settlers a year for five years beginning with the current year.

The above offer was made by the state of São Paulo in 1910, when its legislature passed a special law authorizing the executive department to carry out the plan. Since then several Japanese agents have made a careful study of the soil and climatic conditions of the section where the projected Japanese colony is to be located. The investigation revealed, the *Jiji* informs us, that the land is eminently suited for the culture of rice, a staple which is in great demand in Brazil. Dr. Yazukuri, one of the agricultural experts who inquired into the matter on the spot, publishes the following statements as to the general prospects of Japanese immigration to Brazil:

"There are at present some 4,000 Japanese immigrants in Brazil, mostly employed on coffee plantations. These immigrants, like those from other countries, had the major part of their transportation paid by the Brazilian Government. As the chief source of its revenue is export duty on coffee, the Government is anxious to increase the production of coffee by attracting foreign laborers for the plantations."

"Both the Government and the public are decidedly friendly toward the Japanese. They seem to think that our laborers are more reliable, frugal, industrious, and less addicted to the habit of drinking and gambling than laborers of other nationalities. The Brazilian people entertain no prejudice against the Japanese. There is no discrimination against the Japanese in the matter of naturalization, altho the peoples of other Oriental countries are not admitted to citizenship. Any Japanese who owns land in Brazil or who has married a Brazilian woman can become a citizen."

"The leniency and large-mindedness of the Brazilian Government are almost amazing. The Japanese immigrants who are now in the country are mostly contract laborers, bound by contract to work on the coffee plantations for a certain number of years. But some of these immigrants do not observe the terms of the contract and seek more remunerative employment than that offered by the plantation. And yet the Government has never interfered with the action of such faithless immigrants, declaring that no legal action will profit the Government if the immigrant himself does not feel morally bound to adhere to the terms of the contract under which he was brought to the plantation."

Commenting upon the new enterprise of the Tokyo immigration company above mentioned, the *Jiji* says:

"Our present population is roughly estimated at 50,000,000, while our annual output of rice scarcely exceeds 250,000,000 bushels. As yet the supply of rice is fairly well balanced with the demand, but as our population is increasing at the rate of 500,000 a year, the balance can not long be maintained. The amount of arable land possessed by our farmers is only 2.45 acres each, while in England, Holland, and Belgium, the most densely populated countries in Europe, the average is 26.95 acres, 12.25 acres, and 4.90 acres, respectively. It is impossible to increase the production of rice in proportion to the increase of population."

SCIENCE AND INVENTION

THE ORGANS OF RACE

THAT the so-called ductless glands play an important part in the adaptation of the organism to a changed environment, and hence in the origin and differentiation of races, is suggested by Dr. Antonio M. Crispin, of New York, in an article printed originally in *The Monthly Cyclopaedia and Medical Bulletin*, and now issued in pamphlet form. Dr. Crispin's biological point of view is that the sort of adaptability by which organisms fit themselves to their surroundings is the deciding factor in the origin of species. The "ductless glands," by virtue of the internal secretions which they pour into the blood, are, he believes, at the bottom of all phenomena of this kind. He writes in substance:

"It is almost certain that climatic conditions, such as warmth, moisture, elevation, etc., exert a specific action on the activity of one or other of these glands. Owing to the accelerative functions of these organs, they constitute the most important factor in fitting the individual for different habits of life and conditions and thereby in the production of the different races. We know to-day that the thyroids, suprarenal capsules, and hypophysis are organs of immense importance to the organism, and that they play an important part in the regulation and maintenance of life.

"Thus we find that absence of the thyroid in children causes arrest of growth and cretinism, and absence of the same organ in the adult produces the disease known as myxedema. In animals complete removal of the thyroid results in death. While removal of the parathyroid causes tetanic symptoms, there seems to be a functional antagonism between the thyroids and parathyroids.

"The pituitary body seems to be in some way connected with the growth of the body, and to perform an important function in the organism. In 1886 P. Marie found that tumors of the hypophysis were associated with certain striking symptoms, such as overgrowth of certain parts of the skeleton, especially the extremities and jaws, and unusual stature or gigantism, the whole constituting a condition which he called 'acromegaly.'

"Certain glands of internal secretion supply the organism with a peculiar substance which, upon gaining access to the blood, neutralizes certain poisons or specific substances which accumulate therein. A fact of no less importance is the correlation existing between them; they interact, and thus profoundly affect metabolism in its various phases.

"The environment, by virtue of its action on these glands, would tend either to accelerate or retard their functions. It is probable that in certain localities the conditions are such that the thyroids, adrenals, and hypophysis are excited to greater activity. The influence of other localities would, on the contrary, be inhibitive, the conditions being such as to fail to stimulate the glands referred to or stimulate other glands the functions of which are known to be retardative.

"It is also a well-established fact that these glands exert a powerful influence on the nervous system, especially the thyroids and parathyroids, altho their actions are different. Removal of the parathyroids increases galvanic irritability.

"These ductless glands discharge into the circulation specific hormones, and probably play an important rôle in the production of immunity.

"Caution is, of course, needed in interpreting these interesting phenomena, but when we consider the functions of these glands,

and their vital importance to the organism, we can not but be impressed by their apparent value in the determination of adaptability and consequently in the production of the different races of mankind.

"Excessive pigmentation may be due to altered activity of the adrenal glands; of this we have sufficient evidence in the pathology of Addison's disease. May it not be that an excess of sunlight, combined with the well-known effect of altitude, has exerted a decided modifying action on the adrenal glands of the negroes?

"Altitude has operated in differentiating the inland people from those inhabiting the coast, and has exaggerated the ethnic peculiarities of given nations. The pigment of the skin tends, as a rule, to be lighter in the higher altitudes as well as in the higher latitudes. The influence of these two factors on the suprarenal bodies would appear to be the same.

"The effect of temperature is very marked not only on the body in general, but on the growth of the hair in particular. A low temperature is apt to result in the formation of a good protective coating, while a high temperature acts in the opposite way. High temperatures reflexly stimulate the adrenal glands to produce an excess of pigment, while diminishing the capillary covering. Low temperatures have opposite effects. A glance at the distribution of races shows that the greater amount of pigment obtains in the tropics, and that as one advances northward the complexion gradually lightens, being dark brown in Egypt, light brown in north Africa, deep olive in the Mediterranean, olive in south Europe, brunette in central Europe—until one comes to what has been called the faded brunette, or blonde, of the north of Europe. Similar effects have been produced on the original inhabitants of our continent, the Indians, in whom different shades of coloring obtain according to the latitude."

DR. ANTONIO M. CRISPIN

Who believes he has discovered in the ductless glands the factor that determines the differences of the races.

Abundance or scarcity of food is acknowledged to be a prolific cause of variability, and Dr. Crispin holds that it acts by accelerating or retarding the function of the glands in question. Certain kinds of food,

he says, have in all probability a decided influence on their function; thus, oatmeal is said to be stimulating to the thyroid gland. In the light of this view, the production of food, characteristic of or more easily obtained than others in a given locality, is likely to influence the internal secretions of the inhabitants thereof, and, accordingly, to affect their development. He goes on:

"The influence of food on the temperament of man occupied the attention of the earlier physiologists, who came to believe thoroughly in the different effects of various foods and condiments on the human organism. Liebig maintained that excess of meat-eating made man more violent and even ferocious. At present physiologists are more concerned with the nutritive value of food, as measured by the number of calories yielded, than with its effect on any particular system of the body. Still, there is here an uncultivated field, a virgin soil, capable of generously repaying the investigator.

"The question stands thus: How does the organism react to the environment? How does it adapt itself to new conditions? In this apparently mysterious process, it seems to me that the internal secretions play a preponderant rôle in that they permit the organism to adjust itself to external influences. The reaction

of the ductless glands to these influences tends to produce variations, which are likely to be transmitted to succeeding generations. Such advantages as the organism may have acquired through the continued readjustment of the ductless glands result in the survival of the individuals best fitted. The influences exerted being dissimilar in different localities, differentiation occurs, and this is the explanation of the existing variety in races."

NATURAL ICE-MINES

CAVES AND PITS where ice is found in summer are not infrequent. In many cases the ice is doubtless of the nature of a glacier—that is, it is consolidated, slow-melting snow left over from the previous winter; but there are well-authenticated instances where ice plainly forms in the cave while the weather is warm outside. Many reasons, physical and chemical, have been advanced; and one still occasionally hears the classical explanation, "The boy lied." According to Marlin O. Andrews, of Lehigh University, who describes in *The Popular Science Monthly* (New York, March) an ice-mine near Coudersport, Pa., there is no doubt about the facts; and his explanation is that the freezing agent is the stored cold of the previous winter, brought into play by a change of air currents. The discovery of this particular "mine" occurred while prospectors were looking for the precious metals, reputed by tradition to occur in the neighborhood. It seems that—

"Mr. John Dodd and Mr. William O'Neil were prospecting near Sweden Valley when, underneath four or five inches of moss, they found a thin layer of solid ice. After leveling off a space about fifteen or twenty feet square they dug a shaft about six feet square by twelve feet deep. At a depth of nine feet they found petrified wood, impressions of leaves, ferns, and other vegetation, also bones which were pronounced to be human. At a lower depth a peculiar kind of rock was found which they thought might contain gold or silver. Some of this was assayed and found to be of no value. At a depth of twelve feet an aperture was found from which came a cold draft. This was thought peculiar, but nothing was done to investigate farther and the work was abandoned.

"The following spring Mr. Dodd found a considerable amount of ice in the mine but thought that it had gathered there during the winter and had not yet melted. However, as the warm weather advanced, the quantity of ice, instead of melting, as was expected, began to increase, and by the middle of July the sides of the shaft were covered with a coating of ice a foot or more thick and large icicles were forming from the opening at the top.

"As winter again came on, the ice began to disappear until the cave was nearly free from the summer's product. This phenomenon has regularly been repeated each year since its discovery. . . .

"The Dingman Run Ice Mine is a more recent discovery, being found on June 15, 1905, on Dingman Run on the farm of Mr. Pelchy. Mr. Pelchy, with the help of another man, was clearing up some brushland for farming when, in order to get

a better foothold on the steep hillside, he tore away a little of the moss, which was several inches deep at that place, and found pieces of ice.

"Having heard of the ice-mine at Sweden Valley he began to dig in the hope of discovering a similar phenomenon on his own farm. He made an opening in the hillside ten feet deep by twenty across, finding crevices in the rock from which he took chunks of ice weighing twenty and twenty-five pounds. Nothing more was done to bring this mine to the notice of the public, and consequently it is known to but very few people even in Coudersport. . . .

"The explanation of this phenomenon appears to lie in the cold currents of air issuing from the crevices of the rocks along the sides of the shaft. The air must gain access to these fissures at some other point, which must be at a higher altitude than that of the pit, as will be seen from the following discussion.

"This being true, it is evident that in the winter time the column of air directly over the pit is cooler and consequently heavier than that in the rock passages. Therefore, it forces its way down into the pit and up through the rock strata, chilling the rocks to a great depth and storing up a vast quantity of 'cold.' We see, then, that the amount of 'cold' which is stored up, or the depth to which the rocks are chilled at the beginning of warm weather in the spring, depends upon the length and severity of the winter.

"As the warm weather comes on the column of air over the pit becomes heated and is displaced by the cold, heavy air flowing down out of the passages. This cold current of air freezes any surface water which flows over the edges of the pit and maintains a freezing temperature as long as the supply of 'cold' in the hill lasts, after which the circulation of air ceases and the ice formation melts. . . .

"It is evident that the rapidity with which this circulation takes place depends upon the difference in temperature of the two air columns. That is, the cold outward current is much more noticeable on hot days than on cool days in summer, and in winter the strongest inward current is noticed on the coldest days.

"This fact accounts for the common belief that the freezing takes place more rapidly and that the mine is colder on hot than on cool days.

"The temperature of the mine, or, in other words, of the air as it issues from the crevices, remains practically constant throughout the summer, which is proved by thermometer readings. However, the difference between this constant temperature and the temperature prevailing outside the mine is obviously greatest on the hottest days, and therefore, as one enters the mine, the contrast is more noticeable. This causes one to believe that the mine is colder when it really is not. It is true, however, that the ice is formed most rapidly during the hottest weather. This is not because the temperature of the mine is lower, as is generally supposed, but is due to the fact that the circulation of air is more rapid; that is, a greater quantity of cold air issues from the numerous apertures, and a greater amount of 'cold' is available for the formation of ice. . . .

"If this is the true explanation of this phenomenon, we may say, with truth, that in this particular instance it is the heat of summer which causes the ice to form, but, at the same time, we can not disregard the fact that it is the severity of the preceding winter and the natural arrangement of the rock strata which make it possible for the heat of summer to produce this peculiar phenomenon."

INTERIOR OF THE MINE.

Showing ice-covered steps at the right.

ANIMALS AS FOOD FACTORIES

ULTIMATELY we are all vegetarians. The nutriment that we take to replenish our bodies and renew our energies comes from plants; no animal can manufacture it. Where we get it from animal flesh we take it second-hand, and always at a sacrifice of energy, for much of the original energy of the animal's plant food went to maintain its own vitality. But, on the other hand, animals convert into human food many vegetable substances that could not be used directly, such as hay and grass. If there is a moral in this, it is doubtless that, looking upon the choice of foods solely from the standpoint of economy, we should exterminate all animals not available for human food and feed the remainder only on foodstuffs that are inedible by us. Grains and green vegetables, for instance, we should always eat directly; our hay, grass, and leaves we should take through the intermediary of beef or mutton. All this is treated editorially in *The Journal of the American Medical Association* (Chicago, March 22). Says this paper:

"The problem of the cost of production of our nutrients is one that appears to be growing in importance and seriousness from decade to decade. In the extensive use of animal foods, so common in most civilized nations to-day, it is rarely borne in mind that the production of this type of nutrient involves a conversion of plant food into animal foodstuffs—a transformation inevitably necessitating a sacrifice of considerable energy. The animal which devours the plant products requires no small proportion of the stored energy for its own maintenance, that is, its normal life processes; accordingly the residue available for the production of meat and fat or the secretion of milk, which may become available to man as dietary articles, must represent a correspondingly smaller portion of the actual nutrients originally stored in the plant ingested. One is, therefore, justified in asking to what extent it may be possible or desirable for mankind to attempt to avoid this intermediate waste of energy by making direct use in larger proportion of the plant products which are ordinarily converted to our advantage by the herbivorous animal.

"In attempting to answer this question we must bear in mind the diverse character of some of the plant products which are ordinarily consumed by man and the plant-eating animals, respectively. The latter utilize such natural products as straw, grass, leaves, etc., which ordinarily form no part of the human dietary. An inspection of these products reveals at once their relative richness in cellulose and related substances, which are not rendered available to the human individual in nutrition, but evidently are not without some nutrient value to the animals which consume them. Probably the most important factor in enabling the herbivorous animals to utilize such materials as have been referred to lies in the part played in them by certain types of alimentary bacteria which exert sufficient solvent action on the cellulose envelopes of various types of plant materials to liberate their more digestible contents for the subsequent action of the digestive juices of the animal, and, perhaps, also to convert the insoluble and unavailable cellulose into fermentation products which may still have a certain degree of nutrient value in the organism. At any rate, it is clear, from such experimental evidence as is available at the present day, that cellulose is disintegrated in the alimentary tract of herbivorous animals to an extent which never occurs in the digestive tube of man. The only comparable factor which can enable the human organism to liberate the foodstuffs from their impervious coverings in the cereals, etc., is the process of grinding

and milling which brings about an extensive comminution of these products. To a certain extent this is also accomplished by effective mastication, which, however, is ordinarily efficient to only a small degree in rendering the texture of resistant foodstuffs satisfactory for good utilization.

"It is interesting to note that all the vegetable foodstuffs which are easily digested by man are advantageously used directly in our diet. The ultimate value of animal production lies, in part, in the fact that it enables mankind to transform into more readily utilizable food products nutrient materials for which the human organism is not well adapted. It follows, therefore, that in order to furnish nutriment to the maximum population from the natural resources of the land, the more digestible vegetable products should be applied directly for the nutrition of man, whereas the more resistant ones should be converted to his use through the intermediation of the ruminating animals. The respective rôles of the two types of organisms ought to be borne in mind whenever conditions arise which call for a maximum utilization of the products of the soil for the maintenance of a large population."

ICICLES FORMING FROM THE TOP OF THE SHAFT.
In the Sweden Valley ice-mine.

ECLIPSES AND THE EARTH'S MAGNETISM—It has long been believed that the earth's magnetism is of solar origin, altho the connection

has never been satisfactorily explained. Violent disturbances on the sun's surface, such as those which appear to us as sun spots, are often accompanied by equally violent alterations in the earth's magnetic field. It would seem probable, then, that by interposing an opaque screen between us and the sun, so as to cut off all radiation, the influences that disturb the earth's magnetism might also be cut off. This is precisely what occurs when the moon steps in between sun and earth in a solar eclipse.

In a recent bulletin issued by the Observatory of Cosmical Physics at Tortosa, Spain, observations are described that indicate the cutting off of the solar magnetic influence by the passage of the moon across its disk. The report of the observer, Father Ricardo Cirera, S. J., is epitomized in *Cosmos* (Paris, March 13), where we read:

"A few days before the eclipse a perturbation was discovered in the curves recorded by the magnetographs of the observatory. It was of slight importance, and the observers had no great hopes that the eclipse, which was only partial at Tortosa, would have any clear effect. So they were agreeably surprised when, after the development of the film of the photographic record, they were able to prove that the perturbation of the day before had almost disappeared during the eclipse at Tortosa.

"After receiving the records and the magnetic curves of divers other observers, they were able to show that the perturbation observed at this time in Tortosa was local and not general, contrary to that which took place during the eclipse of 1905, which corresponded to a maximum of solar activity. But wherever magnetic perturbations, altho unconnected with that at Tortosa, existed, the same remarkable calm was noted during the eclipse. Thus, in the curves obtained at Malonne, in Belgium, on the exact line of centrality . . . the disturbances diminished and even disappeared for the moment, reappearing after the eclipse.

"Thus, whatever may be the general causes of the earth's magnetism and of its perturbations, it would appear that the phenomenon is dependent on the sun's radiation; for when the moon is between the sun and the earth, the value of the divers elements of the earth's magnetism undergoes a modification that results in bringing it nearer to the average daily value."—*Translation made for THE LITERARY DIGEST.*

JOINTED TROLLEY-CARS

THE ARTICULATED or jointed locomotives used on some far-western roads were recently described in these columns. A similar principle is now used in certain cars on the Boston street railways, where it is desired to accommodate the maximum number of passengers and at the same time

operated in the reverse direction the push-button cover is transferred by the conductor, so that only one button can be operated at a time. Four 500-watt Consolidated car-heaters are installed under the platform in the intermediate section, and these add greatly to the comfort of the conductor and to that of passengers entering the car in wintry weather, as the payment of fares is made in a reasonably warm compartment instead of in a cold vestibule. The ends of the end-sections are equipped with folding steps operated with the doors which are under the control of the motorman."

From "The Electric Railway Journal," New York.

THE JOINTED CARS TAKING A CURVE.

adjust the car easily to sharp curves. The jointed cars are made by connecting two old cars with a vestibule resembling somewhat that between two Pullmans, which is also used for the pay-as-you-enter feature. We read in *The Electric Railway Journal* (New York, March 29):

"The main object sought in the design of the car, aside from its effective utilization of a heavy investment in small rolling-stock units of low-carrying capacity, was to obtain a car capable of holding at least as many passengers as the standard semi-convertible cars owned by the company and to produce a piece of rolling-stock which could be used on narrow streets and on short curves without dangerous overhang, at the same time providing improved facilities for convenience and safety to passengers when entering or leaving. The first car of this type has been in service since early in September, 1912, and has met with complete success, both from the company's point of view and from that of the public. A second car of this general type has lately been placed in commission, and a number of improvements have been effected in its design, the most notable feature being the adoption of the principle of stepless operation. In the new car the floor of the center section, where the doors are located, is arranged with a lower level than the first car of the type, so that passengers step directly from the street into the intermediate compartment, which is located fourteen inches above the roadway. This is an unusually low height of step, and the car may, in fact, be considered stepless in the same sense as the so-called stepless center-entrance cars now operating in Manhattan and Brooklyn Boroughs, New York City.

"After the passenger has stepped into the center compartment and deposited his fare in a Johnson fare-box in the middle of the compartment, a second step of ten inches is taken in order to approach the doorway leading into either end-section, and this platform within the central compartment has a ramp with a rise of two inches between the outer edge and the step riser which is surmounted prior to entering the end-section.

"The car is equipped in the vestibules with electric bells operated by push-buttons located on the pipe framing which carries the fare-box. When the car is running only the bell in the forward vestibule and one in the center compartment are in circuit, a metallic covering being provided for the push-button which controls the bell in the rear vestibule. When the car is

TO MAKE THE WEATHER FORECAST ITSELF

THAT STORMS may be made to give warnings of their approach by the telephone, when used in conjunction with a plant for wireless telegraphy, has been known for some time. Thunderstorms have been detected at a great distance by this means. It has remained for a French meteorologist, Franck Duroquier, to show that every change of weather, great or slight, is accompanied by characteristic electric disturbances which, acting on a distant wireless system, give rise to specific sounds in a telephonic receiver connected therewith. So every change will send a warning of its approach, and the experienced operator can distinguish at once the group of sounds that signifies an approaching cold wave from that which heralds a fog, and so on. These sounds are due, Mr. Duroquier finds, to subsidiary or "para-

sitic" waves of the atmosphere that accompany all great disturbances and that vary in their number, character, intensities, and grouping according to the particular weather condition

THE CONNECTING VESTIBULE.

Which converts two old-style cars into a capacious, flexible, pay-as-you-enter vehicle.

that they attend. Says Mr. Duroquier, writing of his discoveries in *La Nature* (Paris, March 1):

"Every meteorologic disturbance is invariably accompanied by an electric disturbance that may be signaled, when it begins, over an extended radius, by Hertzian receivers sensitive to the parasitic waves that arise from the stormy meeting of the

atmospheric billows. Thus one of the unexpected advantages of wireless telegraphy is that it lends itself to the study of the electric state of the atmosphere and furnishes useful information in the prediction of the weather.

"Hitherto the aid given by the new science has been limited to the prediction of thunderstorms. Bells or writing devices, mounted on a coherer or on electrolytic detectors are in operation in most observatories; each outburst of a storm, acting at a distance on these devices, is revealed by a sound or by a sudden deformation of the graphic curve on a recorder. . . .

"A much simpler method of observation is that of listening to the telephone, a plan which has only just been discovered and which is able to give information of inestimable value over an immense circle of investigation.

"We have regularly studied the parasitic waves of the atmosphere in this way for a whole year . . . and have been struck, not only with the variety of these parasites, but with the special characteristics that they take on according to the nature of the atmospheric phenomena that they accompany or precede.

"Storm, cold, rain, and tempest announce their approach in the telephonic receivers of a wireless telegraphic post by characteristic signs that are easily recognized.

"Violent cracklings indicate a nearby thunderstorm, approaching if the noises grow more frequent, receding if they become less frequent and feebler.

"A hail-cloud passing near the antenna causes a slight whistling in the receivers, due to the rapid succession of discharges between the electrified hailstones as they encounter each other. . . .

"A fall of temperature, a spring frost, are always preceded by dry, infrequent, weak noises.

"If the wind is about to change, the parasites are of slight wave-length and seem to form in groups.

"Numerous cracklings, with which are mingled, from time to time, with some regularity, powerful detonations, precede great barometric depressions and herald tempests.

"The approach of rain, snow, or fog, by improving the conductivity of the air and soil, favors radiotelegraphic communication; cold and dryness, on the other hand, interfere with it.

"There are parasites of all intensities—of all kinds, and of all wave-lengths, just as there are an infinity of meteorologic phenomena. . . .

"It would doubtless be rash to base on our data alone a table for forecasting the weather, but we are persuaded that our study of the electric disturbances of the atmosphere will lead to an art of meteorologic prediction, and that sure prognostications can be obtained from general observations, organized with judgment.

"Governments that have established meteorological stations for the benefit of agriculture, commerce, and navigation, should surely be interested in the organization, at these stations, of aerologic investigation through the use of wireless telegraphy.

"The necessary material would not be expensive and would be easy to install; the methods of observation would be simple, and the staff of the station would not be overburdened. . . .

"Doubtless comparison of the data thus obtained with the ordinary meteorological bulletins will soon reveal a close relation between them—a relation of cause and effect, in accordance with which a new and exact science of weather prognostication may be developed."—*Translation made for THE LITERARY DIGEST.*

RIPENING FRUIT BY ELECTRICITY

FEW OF US KNOW what a really good banana tastes like, for most of us live at some distance from the place where the bananas grow. Obviously the fruit can not be allowed to ripen on the tree, and those that we get are ripened artificially, or more frequently not thoroughly ripened at all. A method of artificial ripening that shall rival that effected by the sun's rays while the bunch hangs on the tree is evidently desirable. A firm in Spokane, Washington, believes that it has solved the problem by the installation of electrically-heated banana-ripening rooms. Says *The Electrical Review and Western Electrician* (Chicago, March 22):

"The experiment was carried out by placing heaters on the side of the wall about two feet above the floor line, and altho the temperature varied five degrees in different parts of the room, it was proven that 100 per cent. of the fruit could be marketed, and a permanent installation was immediately put in both rooms. These rooms are 16 by 18 by 7 feet and have a capacity of 200 bunches each."

By means of a fan the air is blown through the heaters against a distributing board into the room. There is no appreciable difference in temperature in any part of the room, which ensures equal ripening. At first a thermostat was installed, but this was found unnecessary, as an even temperature could be maintained without its use. That other fruits are now ripened artificially on a considerable scale, and that there is probably a great future to this industry, we learn from a notice in the "Current Comment" department of *The Journal of the American Medical Association* (Chicago). Persimmons and dates, especially, may be treated in this way:

"FARE, PLEASE."

A feature not to be overlooked.

"It is found that dates in California and Arizona only exceptionally reach maturity, but, as shown by experiments of the United States Agricultural Department, they can be matured by artificial means. In an interesting article Prof. Francis E. Lloyd explains that fruits, the astringency of which in the unripe state is due to tannin, after ripening contain just as much tannin as before, but that it has undergone a change or combination with some other substance which prevents the solution of the tannin in the saliva and hence obviates its astringent taste and action. This effect may be brought about, in the case of dates and persimmons, by means of heat, alcohol, carbon dioxide, or acetic acid. The case of the California oranges recently condemned by the Federal Government under the Food and Drugs Act does not come in the same class. Oranges have no starch to be converted into sugar; hence the sweating process to which these oranges were subjected merely colored them artificially instead of ripening them. Indeed, the ground on which the Government seized and disposed of the fruit mentioned above was that it was misbranded as naturally ripened fruit. Fruit actually ripened by artificial means can not be said to be unwholesome."

LETTERS AND ART

INTERVIEWING A CUBIST

IF YOU DON'T "feel" a cubist picture, give it up. But above all things don't ask anybody who is supposed to know, or who insinuates that he knows, to explain anything. It puts him in a bad humor. If you should ever chance to meet Picasso, the Spanish painter and arch-Cubist, you would be put upon your honor not to mention the subject to him, for it would spoil the whole evening for him, and he would become morose and wouldn't talk at all. Kate Carew, the clever correspondent for the New York *Tribune*, met him recently in Paris, but had to be put under bond to keep the peace before the door was opened to this vision. Her hostess who arranged the meeting confessed that she understood all about these squares of canvas that emulate the paving-stones of the street, but she, too, refused to be drawn into any net of revelations. Only she did it "sweetly." "One can't explain these things. You must simply find them for yourself. . . . I always understand, of course." The correspondent tried to acquire the understanding mind before she encountered Picasso in person, and, under the benign smile of her hostess, exercised her ingenuity upon one or two pictures of Matisse, the first of the innovators:

"I was out in the cold. That was all there was to it, and me with such an eager, inquiring, young mind, too!"

"I looked at the biggest Matisse."

"It showed gentlemen and ladies, old enough to know better, very lightly clad for the time of year or any time of year."

"They appeared to be eating fruit and thinking."

From "The Evening Post."

THE RUDE DESCENDING A STAIRCASE.

A near-Cubist interpretation of a daily subway demonstration.

"Anything to do with the Garden of Eden?" I inquired, tentatively.

"It had."

"My first step in the right direction. I was getting on, and my head swelled a little."

"Thus encouraged, I progressed still further. I went and squinted at some pink and blue and yellow chrysanthemum-like splotches."

"Do you know," I said dreamily, "I seem to get a kind of Japanese feeling here," and I put my head a trifle to the side and gazed.

"There you are!" exclaimed my hostess triumphantly. "That's just it. That's what I mean. One can't explain these things. One must feel. One must not look for details, one must get an impression, an emotion. That is a portrait of Matisse's wife in her Japanese kimono."

"It seemed to have been an excellent guess. I was in luck."

"Now, between ourselves, I never did find Mme. Matisse in the picture, but I am practically sure that I traced the kimono; I found that among the chrysanthemum splashes."

"My stock jumped up with alacrity after that brilliant effort. I was treated as an equal."

This interchange was only by way of filling in time until the Cubist painter arrived:

"A short, stocky, boyish figure with one hand on the head of a huge snow-white dog. Amid a chorus of welcome he came further into the room, nodded amiably to every one and was presented to me, the only outsider."

"He looks very young. He is thirty-one, really, but he does not seem anywhere near that. He is built like an athlete, with his unusually broad shoulders and masculine frame, and his hands and feet are a contradiction, as they are very small and delicately formed. His hands look older than his face, for they are veined and knotted like the hands of the aged; yet they are artistic, with long, pointed fingers and sensitive, delicate finger tips."

"His face is another contradiction."

"It is the face of a Spanish troubadour."

"You instinctively long to see him with a sombrero and a cloak and a red rose between his lips, twanging a guitar."

"He has a smooth, olive skin guiltless of hair on cheek or chin or mouth. His features are perfect. A Grecian nose, beautifully formed mouth, eyes set rather wide apart under well-arched brows, and thick, black hair cut short except for one lock which will come straggling down over his forehead."

"It isn't the face of a fanatic or a dreamer."

"It isn't the face of a practical business man who sees possible sales in sensationalism."

"It isn't the face of a humorist who would enjoy spoofing a guileless public."

"No; it is the very handsome face of a simple, sincere artist, without much sense of humor, perhaps, but with conviction and strength."

"How he can ever paint such ugly figures as he does, when he has only to look in a mirror, copy what he sees, and turn out something worth the trouble, I can't understand."

From the New York "Tribune."

PICASSO AS SEEN BY KATE CAREW.

"His clothes were still another contradiction. They were well built and quite American in cut—that is, they were sort of loose and baggy and square in the shoulders.

"He wore a sack-coat suit of a warm brown, that golden brown tint the leaves take on in autumn, a black cravat most carefully tied, and a quite irreproachable collar.

"Not a touch of the Bohemian here. Those clothes might have just come from the Stock Exchange or an afternoon at the Country Club.

"I gazed from this nice, neat, little man to those conceptions of his brain and works of his hands which hung all around me, and I couldn't make things fit at all.

"I consider that Post-Impressionists ought to live up to their pictures. It is not fair that they should go around looking quite normal and natural when they are trying to make us see things in abnormal fashion."

The nearest approach to talk on art was evoked by some preliminary news from the New York Exhibition. It must be gratifying to all of us who have had our say frankly about Cubist art that for once our expatriates in Paris misjudged us. The hostess of the occasion here described came up and told Picasso that she had seen the report of the exhibition:

"Ah!" murmured Picasso in bored accents, exactly as if he hadn't anything in the show at all, and you know he has.

"Yes," she continued, "but it was a very short one, and there was no mention of you."

"Ah!" said Picasso, and the subject threatened to drop.

"I wonder what America will say to the pictures?" I queried, vivaciously, of no one in particular.

"Oh, I think people will say very little," volunteered the hostess. "They won't dare. They'll be afraid of saying the wrong thing, of criticizing adversely, lest they prove behind the times."

"Ah!" said Picasso, and the conviction reached me that he doesn't really care a bit what we say.

"I don't agree with you," I chimed in quickly, turning to the hostess. "America dares express opinions for herself. She is not like England, who never discovers, but waits to be told

"How did you find England funny?" he asked, turning his head toward me and fixing me with those steadfast eyes.

"He is exactly like a straightforward schoolboy when he asks a question.

"Oh, I mean the English didn't like to commit themselves by

From the Chicago Tribune

THE ORIGINAL CUBIST.

"I took the first prize at the fair last fall."

criticism. They walked round and round the rooms in stolid silence, stealing furtive glances at their neighbors to see how they were affected."

"And you think Americans are different?" pursued Picasso.

"Yes, very. I think you can count upon them to give their opinions."

"Ah," said Picasso.

"He had finished with the subject and with me for the present, so he dismissed us and leaned toward the hostess, addressing her in his low, deep voice:

"I didn't get any tickets for the fight next week," he said. "They were too dear. I will get some another time, when there is a less expensive fight going on."

"I stared in surprise. One doesn't think of artists regularly attending prize-fights.

"The hostess explained.

"I want Monsieur Picasso to take me to a fight," she said. "I have wished to see a real one ever since I saw the cinema pictures of the big Johnson fight."

Miss Carew reports that Picasso found some subjects upon which he was willing to talk. Woman-suffrage was one, tho he went little further than expressing surprise and wonder at the woman's "hike to Washington." Altogether he made a favorable impression:

"I shall never believe that he is anything but sincere. He has an idea. He works toward it. He can not help it if people do not follow him, he says; he must pursue his course, and he does.

"He seems interested in all things, and there is an inquiring note in his voice and a sympathy in his glance which makes you want to tell him much. Then back of all the childlike directness and frankness there is a tantalizing shade of something you do not reach, a hint of ideas he can not or will not express, a desire to go on alone, to keep the door of the innermost chamber closed. All that piques your curiosity to excess, and you long to search deeper, but, of course, if you are on your honor you can't.

"The hostess felt she had left us alone long enough, so she came up and commenced talking books, and behold! Picasso knew H. G. Wells and several other English writers, and for a Spaniard and a painter that is remarkable. I assure you the average Frenchman you meet could not give you a name in English literature of to-day, but, as I tell you, Picasso is a thinker and an inquirer.

"Life is of interest to him. There is nothing jaded in his point

From the New York Tribune

KUBELIK AS SEEN BY PICASSO.

what she must like and dislike. England was really funny during her first attack of Post-Impressionism."

"Yes," smiled the hostess. "I remember that, and I remember one daring soul wanted to know why you had put a violin in the portrait of Kubelik."

"Picasso smiled with evident enjoyment of this joke, and he showed two rows of strong, even, white teeth.

of view, and the only thing which it rather bores him to discuss is art. Possibly he pretends it bores him to protect himself. I am not sure about that, but I should think he is not subtle enough to keep up the subterfuge.

"I should be more inclined to suppose that it enthralls him to paint his weird imaginings and tires him to dissect them."

REFORMED SPELLING AS ENGLISH CONSERVATIVES SEE IT

IT IS SAFE to say that when so conservative a newspaper as the aristocratic *Morning Post* (London) prints an article that favors the cause of simplified spelling, ground is being gained in England. The writer, E. B. Osborn, summons the best of the arguments, and hopes that the adherents of the reform will get the Royal Commission of Inquiry which they desire, tho he hastens to add that even when their Blue Book appears he does not "propose to abandon the accepted system of spelling, which is, after all, as old as St. Paul's and picturesque in proportion to its complexity." He declares himself to be "middle-aged and a sentimentalist," and one who can not help "admiring the obstinacy of the foster-fathers of the Irish language . . . who are obdurately of the opinion that spelling should be a mystery altogether independent of pronunciation." He takes comfort in the distant prospect of the gained day for the simplifiers indicated by the fact that "the spelling reformers in this country are still outnumbered by the amiable maniacs who insist that Shakespeare's plays were written by Bacon, or even by the diminishing fraternity of the earth-flatteners." That the English society has for its president "Prof. Gilbert Murray, who is the greatest Hellenist of this generation and the master of an English style that never wastes a word or worries it"; and that his predecessor was Professor Skeat, "for whom the least word of English was a microcosm of English history," manifestly point to a cause that can not be laughed out of court. So, with abatements of haste and pressure in argument necessary for dealing with a people who move slowly, the favorable reasons are rehearsed:

"In certain foreign countries, as Professor Rippmann points out, many improvements in spelling have been made of late years. You have only to compare a German book recently printed with one dated before 1880 to see that Germany has not been as conservative-minded in this matter as might have been expected. In Holland momentous changes have been lately accomplished. In France the suggestions of spelling reformers have always been considered on their merits, and occasionally adopted; in Italy, where they write 'f' for 'ph' as in *filosofia* without compunction or repining, the scheme of phonetic spelling recently proposed by the learned Senator Luciani has many influential adherents. And in the Dominions, tho Canada is still steadfast in its official opposition to the innovations suggested by Mr. Roosevelt (during his second term as President) and other Americanizing authorities, there can be no doubt whatever that the movement in favor of simplification is slowly but surely gathering force. In questions of this kind, however, neither the example of the intelligent foreigner nor even the predilections of Greater Britain can be regarded as authoritative; the English language, that gigantic fabric of architectural sound or 'frozen music' (it is Madame de Staël's phrase) which has been a thousand years in the building, is the Englishman's chief heritage, and it rests with him to oppose any changes on the score of expediency which would involve the slightest loss of its ancient and momentous beauty."

The arguments from expediency are urged even more strongly in this country, so much so that we recently read that Philadelphia would soon introduce the reform in its public schools. England is not insensible to this plea:

"English children, we are told, waste too much of their invaluable time on the tiresome, tricky task of learning how to spell in the customary fashion; it takes them 2,320 hours to learn to read and spell with such fluency and accuracy as can be

acquired by the German child in 1,302 hours and by the Italian child in 945 hours. The eccentricities of the existing system have other unhappy consequences; every teacher knows, for example, that doubt as to how a word should be spelled which is readily used in conversation restricts a child's written vocabulary, and so prevents the acquisition of a fluent and easy style of composition. Even with grown-up people this factor of hesitation comes into play. (I frankly confess that I sometimes use a second-best word in writing against time, because it would be necessary to hunt up a dictionary to see how the *mot juste* spells itself.) No doubt the children, if they were allowed a voice in the matter, would vote unanimously for a change which would relieve them of the dismal necessity of memorizing lists of words in which the sound does not help one to see what letters should be used.

"We have all given precious hours to this doleful business, which might have been spent on the more humane games; such mnemonic gibberish as 'all the ceives, seize, ceiling, weir' is still to be found in the lumber-rooms of remembrance to show how difficult it was to acquire the craft of writing accurately. Teachers, a conservative race as a rule, seem to be agreed that something should be done to lighten this monstrous tax on the growing time of the modern child. Again, the spelling he learns by eye rather than by ear does not help him to avoid bad habits in pronunciation and conserve that 'beauty of the word' which is a jewel or a flower as the case may be.

"Secondly, the fact that our traditional spelling is so seldom determined by the actual pronunciation makes it very difficult for the foreigner to acquire a mastery of English. Our language is in many respects the best instrument of expression in existence; its grammar and method of word-building are as simple as effective; its vast vocabulary has absorbed and assimilated all that is most vital in the Teutonic and Latin families of language, and it has made better use of Greek elements than any other living tongue. It is a language of languages, and admirably adapted to conquer for itself the place which Latin held on the lips of all nationalities in the Middle Ages. Reform its spelling so that he who hears correctly may be able to write accurately, and nothing can stand in the way of English becoming the universal language."

Of course, as our English advocate sees, these "arguments have been duly enforced by Mr. Andrew Carnegie and Mr. Roosevelt and other persons of practical intelligence." Mr. Osborn, moreover, sees "other and subtler weapons in the spelling reformer's armory":

"The existing system is not, as they are able to show, so deeply rooted in ancient usage as most people imagine. The oldest English of all was, like old French and old German, written phonetically. Then came the Norman invasion, bringing in an army of new words, and the spelling of English was changed to suit the ideas of the invaders. To take an example, the vowel-sound in 'house,' which formerly had much the same sound as that in 'loose' (as it still has in certain dialects of Northern England), was written 'ou' because that was the Norman method of representing the 'oo' sound. Later on, when printing was invented, the spelling of English became to some extent standardized. Obviously the compositors could not be allowed to spell as they liked, and rules came into being for their guidance, tho these were never rigidly applied. Many of the early printers of English books acquired their craft in Holland, which explains a certain number of eccentricities, such as the intrusion of an 'h' into 'ghost.' The appearance of printed books, with their more uniform spelling, did not, however, prevent the pronunciation from changing; as time went on the discrepancy between the written and the spoken word became so great that the former ceased, as a rule, to have the power of checking changes in the latter, or even of reducing the rate at which they proceeded. Then came the age of the etymologists, during which spelling was stereotyped into its present form.

"The 'politest authors' of that period of an all-pervading Latinity looked on those who still strove to adjust the spelling to the pronunciation as tasteless barbarians who wished to 'confound all our etimologies,' and utterly vulgarize the language. (See the *Spectator*, No. 135.) It became the fashion among men of culture to glorify Latin at the cost of their poor, homely mother-tongue, and, naturally enough, everything was done to ennoble the latter by making its words more like their Latin equivalents to look at. So 'h' reappeared in 'debt' and 'c' in perfect, tho the words had lost these letters before ever they came over with William the Conqueror."

PROMOTING SOAP AND MUSIC

THAT the same methods effective in booming a baking-powder or a brand of soap may make, at least in Europe, the reputation of a musician will, perhaps, startle the unmusical, who accept, without question, the fiat that Paderewski or Hofmann or John Powell is the world's greatest pianist. The speaker delivers himself with so much assurance that to the uninitiated he seems to have access to fountains of wisdom or appreciation undreamed of by the non-elect. But the sacred fount is only a money-bag, we are assured by John Powell, the young Virginian pianist, who tells, in *Musical America* (New York), how reputations are made in the European musical world. The process ought to be of interest to us, since we are prone to accept what is any way widely asserted on the other side. "Sales of musical wares are promoted in some European centers" quite in the manner of the promotion of groceries, declares Mr. Powell. An artist who happens to have a strong financial backing may take several thousand dollars to a manager with the injunction, "Here is \$20,000—take this and make me a reputation in this city." The promoter may only use a third of this amount in making the reputation of the artist, says Mr. Powell, but if he could not have at least \$5,000 for himself he would not undertake the job. Mr. Powell rehearses a story that he read in a popular American publication that exactly furnishes the analogy:

"According to this yarn, a young man had become a traveling salesman for a brand of canned groceries and his territory was a section of the United States where rival brands of goods were much better established. As his employers did not seem disposed to boom their products in this section by advertising, the young man prepared a set of booklets, outlining the merits of each article in his 'line.' These he did not distribute to the dealers, but to the actual consumers in each town, going from house to house and leaving with his booklets a verbal bid for patronage.

"Most important of the salesman's aids, however, was a little band of 'boosters' which he organized in each city. Their duty was to talk up the virtues of this brand of canned goods, for which they were to receive a compensation in the form of a percentage on the sale of these goods in their town. As a result of these methods, the dealers in the various cities began to order this certain brand in larger quantities, until eventually it became the favorite brand of that section, with results of promotion, partnership, etc., for the adroit young salesman."

The reputation acquired by similar methods for the musician "will last as long as the money lasts, and probably longer," he admits. This is how it is done:

"In the first place, the name of the new artist will be on the promoter's lips continually. Every other musician will be assured that 'So-and-So' is the greatest living pianist or that 'What's-His-Name' is the only real violinist.

"The most subtle factor in the making of the artist's reputation is a coterie of so-called music lovers, who spread the evangel

of the new artist's fame in a manner similar to the 'boosters' of our friend, the grocery salesman. So unseen are the wires by which these persons are worked and so closely are they knit together, that it is impossible for an outsider to place his finger on them and say, 'These are the employees of the reputation trust.'

"Call them a 'free list,' if you choose, the fact remains that some time before the artist has even appeared in the city these supposedly disinterested advance couriers go around insinuatingly with such remarks as 'Wait until you hear "Such-and-Such," he is superb.' As these persons are supposed to be musical authorities, the suggestion germ gets in its work, and by the time the artist actually makes his appearance the less informed concert-goers are almost afraid to pronounce his work as being below the advance estimates of the 'boosters.'

"It is quite evident, therefore, that the last thing in the world to be welcomed by this reputation trust would be a widespread creation of real music appreciators. If the general public had a definite standard from which to judge the work of artists, the advance puffery of the 'boosters' would be of merely temporary value, for the public would simply set this praise aside upon hearing the performer, in case he proved unworthy. Nor would the seed of suggestion find fertile soil, for the simple reason that each music lover would be sufficient unto himself when it came to passing judgment."

Mr. Powell gives other curious side-lights on the psychology of the musical world. We are indifferent to our own pianists

Photo: Musical America.

POWELL, THE WRESTLING PIANIST.

Piano practice is all he needs to keep him in form to meet most comers, as was recently shown in a New York gymnasium. Here he is photographed wrong side up.

through an innate "tendency to desire all the good things in music one sees one's neighbor enjoying." It seems true the world over. Berlin "notices," he declares, "do not do an artist any good in Berlin, but he takes them to London, while the London criticisms have weight in Vienna, and so on." Whistler said in his famous lecture "Ten o'Clock": "There never was an artistic age; there never was an artistic people." Mr. Powell, perhaps in unconscious imitation, declares, "There is no such thing as a real musical public anywhere in the world." Elaborating the dictum in this way:

"We have yet to find a real musical public in any of our music centers. There are a number of persons in each city who do appreciate good music, and they are the ones whose education and instinct make it possible for them to get the best out of music. Other people know that it is nice to listen to music and like to have their ears 'tickled,' but such appreciation as they have is mostly a matter of suggestion.

"Those persons who do know what good music means may or may not be on the fringe of what is called 'society.' Individuals in this inner sphere who belong to the 'ear-tickling' class are apt to realize that being posted on musical affairs is quite the 'proper thing.' What is more natural, then, than that they should avail themselves of the guidance of acquaintances whom they believe to be well informed. If the latter have social ambitions, they will jump at the chance of becoming musical mentors to persons whose friendship will be so valuable.

"That is where the element of suggestion comes in, conscious suggestion, in this case. To be sure, you may insist that this is an extreme case, but there are every-day examples of unconscious musical suggestion. All this suggestion, whether intentional or unconscious, can scarcely help having something of a lasting effect—even upon humans so nearly lacking in souls as the more shallow social butterflies."

RELIGION AND SOCIAL SERVICE

MR. BRYAN'S RELIGIOUS WORK

THAT the Secretary of State is "a force for moral and religious life quite beyond any other man among his fifty thousand fellow citizens," is asserted without qualification by a clergyman of Lincoln, Neb. Mr. Bryan is a case of the prophet honored at home. He is "a model as a citizen and as a neighbor." He seems to have been a normally developed Christian boy, says the Rev. Thomas M. Shipherd in *The Congregationalist* (Boston). At fourteen he declared his faith, and from that time till now he has worked at this profession as he was given to understand it. We read:

"His has been an intuitive and positive faith. His interest in religion has been intellectual only as he has found arguments to buttress the faith that was in him.

"For him there are no intellectual difficulties—the soul of religion in its simplest forms was in him and is unshaken to this day. Doubt seems never to have dwelt in him, as is the case with many men. His participation in church work and life does not suffer vacation moods. He gives a tenth of his income to the work of the Kingdom. He has probably given more money, quietly and without special urging, to church-building enterprises in the city of Lincoln than any other citizen. He has done this in a way that has kept the fact from public knowledge.

"It is with undisguised pride that he will tell you that he holds the membership of longest continuous standing in the local Y. M. C. A. He keeps in the building a room which he uses very occasionally and which he provides as a guest-room at the disposal of the association. Not only have a great number of the religious organizations benefited by his generosity, but every public enterprise of importance appeals first to Mr. Bryan.

"So far as one can discover, Mr. Bryan has no spendthrift habits save that of the beneficent citizen and the titling Christian. No more unassuming citizen walks the streets of Lincoln or rides in its street-cars. There seems to be no craving for luxury, no concern for pretense. He is as open to approach as an unspoiled child. As he has a feeling for an audience and an intuition that guides him to a response from it, so he has a feeling for an individual and comes into sure comradeship with individuals. There is more than shallow policy, for herein lies the genius of the man, he is infected with an unyielding interest in folks. He is a good fellow because he likes fellows as he likes nothing else."

Mr. Bryan is a Presbyterian, but the little Methodist Church near his home at Normal often sees him. "His tolerably wide hand-shaking experience has not wearied or sickened him of plain folks." He is ever ready to defend the proposition, that the small village church is an institution more valuable, more Christian, than the stately, pretentious, chilled city church. Further:

"The children were brought up in the little neighborhood church; the mother long had a class of young people in the Bible school. One child has since become an Episcopalian and one a Congregationalist, while Mr. and Mrs. Bryan give their immediate support to the Westminster Presbyterian Church in South Lincoln that they may aid the new enterprise that went out from the mother church down town.

"In the establishment of a university pastorate by the Presbyterian Church three years ago, Mr. Bryan was a prime mover and a chief supporter. His word at the Congregational conference last year was effective in starting some of the slower brethren to the same end, and so the establishment of a university pastor for Congregational students at the State school is in a measure due to his influence.

"It is probably true that the Presbyterian Church at large would name him as their first layman, and yet he is like the laymen generally in this part of the country, he has no absorbed or exclusive interest in the Presbyterian Church as such. He is first a Presbyterian because this Church was his *alma mater*, but his prime interest is in the Kingdom and the Kingdom motive."

THE PULPIT AND THE "NEW DANCES"

THE DANCE CRAZE has awakened the denunciations of the pulpit, and only a week or two ago the historic rostrum of Henry Ward Beecher, as well as Catholic pulpits in Brooklyn and Montclair, heard these dances condemned. We should not venture to say there was a parallel in the case of giving a dog a bad name and killing him; but anything named a "turkey trot" could not emerge with credit. The Montclair clergyman, the Rev. Father William A. Brothers, declared that "indulgence in the turkey trot, the tango, and other objectionable modern dances is as much a violation of the seventh commandment as adultery." Father Brothers, to be sure, admitted he had not seen any of these dances in question, but he knows from the descriptions of them that they are indecent. Both the Catholic clergymen backed their arguments by reading an editorial on the subject printed in the *New York Sun*. Father Donnelly, of Brooklyn, enforced the effect of his reading by saying: "Now that does not come from a church paper, that is not from *The Catholic Times*, nor any other organ of the Church, but from a non-sectarian paper, one might call it a pagan paper." If newspapers are "so stirred up by the terrible conditions existing," he asks, "what should we of the Church think; what must be the truth; what must be our duty?" The editorial in question was named "The Revolt of Decency," and ran thus:

"That the police authorities of New York should be driven to a close inspection of the many dance halls now open to those whose idle or weak dispositions have drawn them to the mis-called 'new dances' was inevitable. Great as is the popularity of these graceless contortions and numerous tho their practitioners are, there remain a saving intelligence and morality in the community which recognize their significance and loathe their indecency.

"Let the seemingly incredible protestations that innocence and virtue may indulge in these excesses without realization of their origin and meaning be accepted. Politeness and optimism dictate this insult to intelligence. There remains on those possessing knowledge and conscience the inescapable duty of protecting the ignorant and the weak as much from their folly as from the designs of the vicious. The task is to exert every influence to prevent the loss of such ground as has been gained by society in its history-long struggle for moral progress, a loss that is inevitable if such dances as are now under consideration are tolerated.

"Far from being 'new,' these dances are a reversion to the grossest practices of savage man. They are based on the primitive motive of the orgies enjoyed by the aboriginal inhabitants of every uncivilized land. Their movements and steps have been described with exactitude by explorers and missionaries to those peoples we are accustomed to regard as inferior. The culminating extravagances are identical with the ends sought by the benighted heathen, save only that the heathen is redeemed by a frankness of terminology and conduct that has not yet been attained here.

"Preserved through all the ages by the habits of low resorts, by strumpets and their patrons, these dances have never lost their original reason for existence or been deprived of their appeal to the profligate and the debased. To-day, whether practised in the lowest brothel or in surroundings more expensive, they retain without change their meaning and are unmodified in their effect. That for a moment persons of respectable antecedents have injudiciously endured their introduction in places where decorum guards chastity has not changed their nature or obscured their menace.

"Official intervention, the blow society instinctively strikes for self-preservation, can do no more than circumscribe the field of sordid exploitation of mankind's basest passions and weaknesses. Yet, restricted tho the field of its usefulness is, it indicates wide-spread recognition of the necessity of preserving those standards of conduct that irk the reckless, . . . who in their folly forget that evil communications corrupt good manners."

THE "WAYS OF GOD" IN STORM AND FLOOD

ON EASTER SUNDAY "the choirs of Omaha sang 'I Know that My Redeemer Liveth,' and the whirling storm drowned out the anthem." True it is, continues *The Christian Century* (Chicago, Disciples of Christ), that "Nature, howling in the demon of the gale, Nature exulting in the fury of the fire, Nature dragging the great ship down into the black abyss, Nature overwhelming cities with the rushing flood, does not of herself assure us a sufficiently good God to satisfy the needs of a time when men sit in the midst of desolation." Yet this paper goes on to declare that the very doubt which overcomes believers in the face of such catastrophes as those which devastated the Middle West, is itself "an appeal to a goodness higher than nature," "a cry to the God that veils a smiling goodness behind the calamities of life." So, with the thousand ministers who, the *Chicago Advance* (Congregationalist) tells us, had to interpret "the strange ways of God" in their pulpits the Sunday after Easter, the editors of the church weeklies firmly assert their "new sense of the reality of that which can not be swept away by wind or flood." And such papers as *The Jewish Exponent* (Philadelphia) stand with their Christian contemporaries, voicing the belief that, as the *New York Christian Work and Evangelist* puts it:

"Such an accident as this, revealing, as it does, the impotency of man against nature, drives us back upon the higher things. There is no secure and safe resting-place out-

side of God. The failure of science, in these crises, drives us back upon faith."

But there are also those who see in "the helplessness of man, when opposed by these forces," not a reason for faith, but a conclusive argument against all belief in God. The editor of the *New York Freethought weekly, The Truth Seeker*, found an item in an Ohio daily telling how the only thing left in a certain wrecked apartment was "a scriptural text, framed and still hanging pathetically on a patch of miraculously preserved wall space. The placard read:

THE LORD
HATH BEEN
REMINDFUL
OF US."

This the writer simply labels "a piece of irony," but on his editorial page he takes up a serious argument, from which we quote a few characteristic sentences:

"The idea of a benevolent deity, of unlimited power, permitting these things to occur, involving as they do the destruction of uncounted lives with unmeasured suffering, gives the intellect such a wrench

that we wonder how any one can accept it and continue sane. . . .

"Hurricanes that lay a city low are followed by frost and snow that increase human suffering. After floods come hunger and disease. Nature, or 'nature's God,' is inexorable. It has no relief corps. The survivors must bury the dead and care for the living. Mercy and humanity are manifested only by man. God is sleeping or on a journey or has turned aside. Religion has failed; prayer is useless, and the resort is to medical and sanitary science—both infidel and unbelieving as regards the efficacy of prayer and intervention of Providence. . . .

"The delusion which lies at the foundation of religion and the Christian system is swept from the minds of all rational beings by the events that occurred Easter Sunday and since."

But such catastrophes, concludes *The Universalist Leader*

THE CHURCH IN FLOOD AND WHIRLWIND.

(Boston), are simply "facts in the development of the world," and who are we to characterize them finally as either good or bad? Indeed, such a disaster has certain good results, thinks the *Pittsburg United Presbyterian*. Men's characters are developed, their faith is tested, they are brought into closer fellowship with each other, they "come to have a better appreciation of safety"; "thus through a great sorrow does God sometimes open a life for his own entrance." These blessings are noted by President Ozora S. Davis, of the Chicago Theological Seminary, in *The Advance*, and he continues:

"It is not too much to say that the world will not be the same world again since the national disaster through which we have just passed. There will be a little finer temper of compassion among our people. Little children will remember what they have heard and read; and the final impression will not be that terrible storms came to wreck the homes of people who thought that they were safe; it will gather rather around the fact that when many people were hungry and cold many other people gave money and food and clothing that they might help the sufferers. This will be the permanent and beautiful memory of the great experience. It is a priceless blessing when a nation passes through a great common anguish and finds itself recovering with the mood of sympathy become a little more deep and permanent as a result. The price is indeed great; but the result is very precious.

"There is one other aspect in which man appears as a result of the experience of a national disaster which is still more noteworthy. Not every person, but a great number of persons come through such a trial and still are able to refer not only the events that bless but also the risks that bring disaster to a final source in a God of love. . . . They see that it is better to be endowed with the power to take the risk than it would be to remain shielded from all possible dangers and forbidden to exercise human powers against the elemental forces of one's surroundings."

Some of the flooded cities were built in dangerous locations, and part of the flood's violence is attributed to Ohio's old canal system and its many weak reservoirs, ready to give way and swell the torrent. So man was not entirely blameless. "Floods of Godless Men" is the name found for these catastrophes by Mr. Louis F. Post's single-tax weekly, the *Chicago Public*:

"Trace those floods back to their physical causes, and you trace them to moral causes. Scrutinize those moral causes, and you find them to consist of that deadly love for unearned dollars from which none of us is entirely free, and a wicked indifference to common rights, of which all of us are in some measure guilty.

"They are the 'floods of godless men'—of the unrighteousness that is in all men. . . . To stay the 'floods of godless men' our 'godless men' must be reduced to order. To make physical laws serve us well we must hitch them to the moral law."

If this be so, says *The Western Christian Advocate* (Cincinnati), to which a similar thought occurs:

"Such unprecedented calamities may awaken the people of America to a new moral consciousness and sensitiveness, and turn their thoughts from exclusive devotion to material interests to a new devotion to the welfare of humanity."

A CHURCH FOR SPANISH WORSHIPERS

ANOTHER LINK with Spain, our former bitter enemy in the late Cuban unpleasantness, will be forged on April 20, when the Spanish Church of Our Lady of Hope will be dedicated. This is the only church in New York built especially for Spanish-speaking people, tho there is a Spanish chapel—Our Lady of Guadalupe—in West Fourteenth Street, built in 1902, and really the parent of the new structure.

Both parishes are under the care of the Augustinian Fathers of the Assumption. One interesting thing about the appointments of the new church, which are lavish and beautiful, is that the King of Spain and many non-Catholics have contributed to the decorations. In *The Catholic News* (New York) we read:

"The new uptown church is a gem of architectural beauty, in a setting of unusually magnificent surroundings, including majestic buildings and beautiful terraces, and overlooking Riverside Drive and the Hudson River, with the Palisades of New Jersey in the distance. The church was dedicated to Nuestra Señora de la Esperanza (Our Lady of Hope). It stands on a high terrace and is approached by a flight of thirty stone steps. The church itself is rather small, having a seating capacity of only 500, including the gallery, but what it lacks in size it makes up fully in the splendor of its furnishings and decoration. The interior decorations are gold and dark green. The altars and sanctuary rail are of pure marble of exquisite design. They were donated

by Mr. and Mrs. Frederick C. Penfield. The fourteen costly Stations of the Cross were given by Thomas F. Ryan.

"The elaborate golden sanctuary lamp is the gift of Alfonso, King of Spain. It is a facsimile of the lamp in the cupola of the Church of San Antonio de la Florida in Madrid. The original was made by the famous Goya, and the replica is by a priest, the Rev. Felix Granda, of Madrid. The lamp contains the coat of arms of the Spanish King with a message of dedication from him. The chains on which it is suspended are imitations, on a much larger scale, of the chains of the decoration of the Golden Fleece, which the Pope awards each year. The whole is surmounted with the crown of the King of Spain.

"All the other furnishings of the church were donated, many of the donors being non-Catholics. The church's chief benefactor is Archer M. Huntington, a son of the late Collis P. Huntington. Mr. Huntington, who is not a Catholic, not only gave the ground for the new church, but also contributed \$30,000 towards its erection. Mr. Huntington, who is a lover of Spanish literature and art, is also the most active and prominent member and greatest benefactor of the Hispanic American Society, whose magnificent building forms a part of the square on which the new church is located.

"Miss Maria de Barril has been interested in the new church since its inception. She raised \$45,000 for the purpose of decorating the edifice and also supplied the handsome stained-glass skylight, which forms the greater part of the ceiling and contains the coats of arms of the Archbishops of Spain and South America. Other benefactors were Mr. and Mrs. Frederick W. Vanderbilt, the late J. Pierpont Morgan, whose death occurred a few days ago, Amos F. Enos, and Mr. and Mrs. William F. Sheehan.

OUR LADY OF HOPE.

This church, whose sanctuary lamp is a gift from King Alfonso, is the only one for Spanish worshipers in New York.

The Brown Bungalow In The Woods

SOMEWHERE in the woods or on the grassy shore of some lake or river, there is a knoll or grove of trees that, to you is one of the most beautiful spots that you have ever seen. Why not spend the summer there? It makes no difference **where** it is—you can pick out just the wanted place; where the train or car service suits you; where you can go by Auto or Motorcycle if you wish; it matters not—**wherever** you wish to go you can do so if you own a

Kenyon Take Down House

THE LITTLE BROWN BUNGALOW THAT
Costs Less Than a Summer's Rent

Being portable and easily erected, it can be shipped or carted anywhere, erected in a few hours and is easily taken down for re-shipment.

An abundance of fresh air comes in through the spacious windows, which are equipped with awnings and rust-proof screens.

Its Perfect Ventilation allows a free circulation of outside air, even in inclement weather, when the storm blinds are drawn tight.

Polished Hardwood Floors add to the attractiveness of the interior and make the bungalow both sanitary and easy to keep clean.

Germ Proof Treatment of all parts keeps out insects and vermin and renders the entire house exceptionally hygienic.

Its Independence of Permanent Foundations adds to its portability and your summer home may be located wherever **YOU** wish it and not where the landlord or hotelkeeper desired it.

TWENTY-FIVE SIZES in stock—A house for every requirement. Shipment the day orders are received.

Over ten thousand satisfied users testify to the exceptional merit of this house. One hundred stores in the largest cities of the United States and Canada display, sell and guarantee these perfect summer homes.

The Kenyon Bungalow Book Sent Free

The Kenyon Bungalow Book with its beautiful illustrations will explain how you too can spend a perfect summer, a more enjoyable and far healthier summer than you have ever spent before. Write us for this book; it will be sent free upon request.

THE R. L. KENYON CO., 303 ALBERT STREET, WAUKESHA, WIS.
MAKERS OF THE LITTLE BROWN BUNGALOWS.

DISTRIBUTORS FOR CALIFORNIA: Kenyon Pacific Company, 801 First National Bank Building, San Francisco, California.

The cooling of all outdoors when the sun is burning hot.

Where a woodland dell is your own private garden.

With the fresh purity of the woods and the noise of the city.

Where your friends come to find you spending a perfect summer.

REVIEWS OF NEW BOOKS

NOVELS OF THE SEASON

Locke, William J. *Stella Maris*. Pp. 357. New York and London: John Lane Company. \$1.35.

Again Mr. Locke has surprised us by his inventive genius. "*Stella Maris*" will add to his reputation. His characters and his plots are never trite, but his most ardent admirers will wonder at this new evidence of his power of invention.

Stella Blount, the "star of the sea," believes herself, and is believed by all, to be a hopelessly incurable invalid, unable even to lift her head from the pillow, but she has such a wonderfully sweet nature that her room has come to be a sort of "holy of holies," from which every unlovely thought and impulse is banished and she is adored by all who know or serve her. The aunt and uncle who guard her home and fortune never let their daily bickerings penetrate her sanctum. Her two best friends, John Risea, journalist, "*Great High Belovedest*," and Walter Herold, actor, "*Great High Favorite*," have catered to her happiness with almost religious reverence. It sounds like an impossible situation, but under Mr. Locke's magic power it becomes beautifully plausible.

Stella is not the only unique character in the book. John Risea had concealed from his dainty friend the sordid details of his marriage, his wife's imprisonment for cruelty to "*Unity Blake*," and his subsequent adoption of the poor little orphan as an act of restitution. Every one had concealed from her all that was not pure and good in life, so when she is cured has to take her place in the world and must face its tragic facts. There are passionate experiences and dramatic situations which cause many heartaches and much bewilderment.

The lovely friendship between Walter Herold and John stands fast through their unconscious rivalry for Stella's love. Poor little Unity Blake learns to love and suffer in silence, until she sees a way to rid her beloved "guardian" of the curse of his life, and in so doing gives up her own. There is every charm in the story, from the bewitching and delicate touch with which Stella's character is sketched to the rugged strength of a man's friendship and the passionate, dramatic thrill of the tragedy in John's life.

Ward, Mrs. Humphry. *The Matting of Lydia*. Pp. 512. New York: Doubleday, Page & Company. \$1.35.

It would be difficult to explain adequately the satisfaction one gains from a perusal of Mrs. Ward's books. Her characters are decidedly human. They have ordinary characteristics and quite human faults as well as virtues, but there is a something about her stories different from others—a smoothness of narration, a logical development of plot, and a completeness of detail that closely approach perfection. The title of this new book gives no hint of the author's masterly portrayal of the miserly Melrose, a man, who, warped by disappointment in love and a consuming and absorbing love for "collecting" antique art, has let every human

trait die and has fostered only the instincts of hatred, self-assertion, and ugliness. Lydia Penfield, the heroine, is a sweet, clever girl of modern attainments and ambitions, who desires to become a power through her painting. She refuses the love of young Lord Tatham, in spite of his millions and mansions, being drawn rather to the penniless young barrister Faversham. Unfortunately that young man fell under the power of old Melrose, and for a time it looked as tho his manhood and his love would be sacrificed, until tragic circumstances, which are the natural outcome of some dramatic events in the lives of all concerned, force a dénouement which satisfactorily solves all difficulties. The tremendous power of wealth over a man's soul is well illustrated by Faversham's terrible temptation, but innate nobility of character and the love of a good woman conquer in the end.

Johnson, Owen. *The Sixty-first Second*. Pp. 382. Illustrated by A. B. Wenzell. New York: Frederick H. Stokes Company. \$1.35.

Mr. Johnson is evidently unwilling to be known only as an interpreter of school lads, even when that reputation is unassailably high. He has here made a radical departure from all former work and written a detective tale involving metropolitan "high" society and Bohemian camaraderie, all combined with an atmosphere of the financial, social, and political life of a great city. Incidentally Mr. Johnson finds here an opportunity to express his own opinions of the problems and questions of the day. Even the reader who finds some of the situations a bit too strong for credibility will be attracted by an unusual and original detective story. Many types of character are introduced and made a vital force in the development of the story which moves rapidly and dramatically through sensational and thrilling scenes. Rita Kildaire's wealth and beauty had been enough to make her "accepted," and when at a Bohemian chafing-dish supper she misses a thirty-thousand-dollar ruby ring, she locks the door, turns out the light and insists that it must be returned before she counts one hundred. Every one hears the click of the metal on the table at the sixty-first count, but when the lights are turned on there is no ring. We hate to think that some of the conditions described are typical of New York society, but we become intensely interested in the commanding figure of John Slade and his wonderful progress in business and love. In spite of an assurance to the contrary, the great detective who finally solves the mystery seems to the reader like a well-known and prominent member of the force.

Porter, Eleanor H. *Pollyanna*. Pp. 319. Boston: L. C. Page & Company. Illustrations by Stockton Mulford. 1913. \$1.25.

Pollyanna's father was a missionary minister. His little daughter had known little outside his love except the "Ladies' Aid," and what came to her out of "the barrel." One Christmas when she longed for a doll, the barrel yielded only a pair of crutches and father invented a game—the game of being glad, this time glad because

(Continued on page 900)

Yes, Madam, there's a big demand for The New Food Drink INSTANT POSTUM

and the capacity of the factories at Battle Creek has been more than trebled within the past year.

"There's a Reason"

Instant Postum is just regular Postum so processed that only the soluble portions are retained.

No Boiling

A level teaspoonful in a cup with hot water, sugar, and enough cream to change the color to golden brown, produces *instantly* a perfect beverage having delicious taste and aroma.

Postum is absolutely free from the coffee drug, *caffeine*, or any other harmful ingredient—

But it *does* contain the vital food elements stored in wheat which nature uses for the sure rebuilding of the gray matter in the nerve cells.

Instant Postum is sold by grocers everywhere.

A 5-cup trial tin sent for grocer's name and 2c. stamp for postage.

"Do more than ask for Grape Juice—say *WELCH'S* and *GET IT!*"

FROM a dozen bottles in 1869 the present grape juice industry has grown. The first grape juice offered for sale was "put up" by Dr. Welch, and was then called "unfermented wine."

As the pioneer work and advertising of WELCH'S brought results, others entered the field, and to many of the "others" grape juice is a side line. With us it is everything. We study, think and work to one end—the production of

Welch's

"The National Drink"

Our advertising had to be educational. We had to create the market. The Welch ideals that were back of the original idea have proven practicable. Dr. C. E. Welch, who was associated with his father in those early days, shares with his sons the ownership and management of the business today.

The increasing popularity of grape juice for home use and as a beverage requires that you discriminate. It is true that to many people "grape juice" and "Welch's" are synonymous, but it is worth your while to be specific.

Perhaps, like many others, you have gone to a dealer *thinking* "Welch's," but in *ordering* have said "grape juice," with disappointing results when you opened the package.

Your dealer, if he is worthy of confidence, will give you what you ask for. He may have some "grape juice" to "work off," or a larger profit may cause him to push "grape juice"—but if you say "WELCH'S," you ought to get it. It is hard to find a dependable dealer who does not have Welch's. So we say:

"Do more than ask for Grape Juice—say *Welch's* and *GET IT!*"

The Concord grapes for Welch's must pass as particular a test as you would make in selecting them for table use. Our inspection begins with the vineyards, and we pay a bonus for grapes that meet our quality standard, rejecting all others. We wash our grapes and go to other extremes to secure cleanliness. No one could be more careful.

The Welch process is a development. By experience and by experiments in our laboratory we know that

through improved methods (many of them exclusive with us) Welch's supplies the pure, fresh juice of the choicest Concord grapes. From cluster to bottle the process is clean, quick and sanitary at every step.

Buy Welch's by the case and keep a supply in the house. Make it your first thought when you entertain.

If unable to get WELCH'S of your dealer, we will send a trial dozen pints for \$3, express prepaid east of Omaha. 4-oz bottle by mail, 10c. Booklet of recipes free.

REVIEWS OF NEW BOOKS

(Continued from page 898)

she didn't need the crutches. When father died, the "Ladies' Aid" sent Pollyanna to Aunt Polly, who received her simply because she considered it her "Christian duty" and treated her accordingly. In spite of her cold reception and her aunt's crabbed ways, Polly continued to play the "game" and won the hearts of every one with whom she came in contact. Love tangles of long standing are straightened out by the loving fingers of this winsome little maiden, who turns undeserved punishment into cause for rejoicing. Many pathetic, as well as humorous, incidents are related of her progress in the little town. It is a story of the wonders worked by a sunny disposition and shows the far-reaching influence of a child's love. Dr. Chilton described her thus: "As near as I can find out, it is an overwhelming, unquenchable gladness for everything that has happened or is going to happen. I wish I could prescribe her and buy her as I would a box of pills." It is a wholesome, charming book, moral, but not "preachy." The scenes develop naturally under the influence of Pollyanna's naive freshness and her irresistible individuality.

Bowen, Robert Adger. *Uncharted Seas*. Pp. 401. Boston: Small, Maynard & Company. \$1.35.

"The Uncharted Seas" of a woman's life prove to have been very stormy in this novel by Mr. Bowen. The ship of Theodosia Berrisford's life barely escaped shipwreck; it came into smooth waters after harrowing experiences involving great dangers. We have heard of provincial towns whose inhabitants looked with intolerance on the stage, but the women of "Danderton" exceeded all known bounds of rudeness when Madame Carola came to dwell among them. One exception to this opposition was Theodosia, who determined to be friendly even in defiance of her mother, who for some secret reason had permitted her daughter no friends except their neighbors, Vivian Earle and his mother. Camilla Berrisford's blindness did not excuse her for her treatment of the lovely "Dosa." Not even the facts that develop later prove an adequate reason for such selfish brutality. With the coming of Madame Carola and her agent, Max Revell, the placid waters are stirred. Dramatic scenes follow one another in quick succession. Camilla, in anger, finally reveals Dosa's irregular birth and the link that binds her to Madame Carola, but the reader has to go through some thrilling and dramatic situations before the mysteries are all solved and the skies cleared. Mr. Bowen has written a very readable love story, in which are some disagreeable characters.

Sedgwick, Anne Douglas. *The Nest*. Pp. 302. New York: The Century Company. \$1.25.

Anne Douglas Sedgwick's "Tante" has enjoyed such unusual popularity that it has seemed best to issue in book form some of her short stories which have appeared in a few of the best magazines. This collection includes, besides her latest, her first attempt, "Miss Jones and the Masterpiece," which she herself characterizes as "a very juvenile production." There are subtleties of psychological philosophy in her stories, a sort of inner vision of the

underlying meaning of certain apparently ordinary occurrences, which mark her unique power. Her love stories dwell on the feminine tendency of being in love with love, and she shows what terrible mistakes can be made under that emotion. "The White Pagoda" is replete with a keen sense of humor and true humanity and the "suicide" is wonderfully illuminating. Warnings are not labeled as such in these fascinating tales, but the perspicacity of her mental vision and her keen satire combine to make the stories helpful as well as entertaining and technically satisfactory.

Stewart, Charles D. *Finerty of the Sand-House*. Pp. 156. New York: The Century Company. 75 cents.

Mr. Stewart is well known for his "Fugitive Blacksmith." These new adventures are by the same "Finerty," who cusses and discusses all questions, important or otherwise, from woman's rights to the duties of presidents, with his irresistible Irish dialect as well as his Irish wit and philosophy. Under the fun there is often a bit of serious thought, but it is given as a joke. The little stories and side comments are full of laughs. Here is one: "Th' worruld is round like an apple. An' if th' Raypublican pa-a-arthy kapes on, there ain't goin' to be no core." They are clever little stories to read aloud.

Knibbs, H. H. *Stephen March's Way*. Pp. 277. Boston and New York: Houghton, Mifflin Company. \$1.25.

The whole drama in this little book grows out of misunderstanding and fancied guilt, but its atmosphere of the Canada woods, the genuineness of the big-hearted woodsmen, are wholesome, refreshing, and full of power. John Hope, junior partner in the Hope-Townsend Lumber Company, had a daughter and a temper. Only the former was under control. In an attempt to prevent the sale of whisky to the lumbermen, John loses his temper and thinks he has killed "Slink Peters." Loyal friends hurry John away from the clutches of the law, and a Frenchman, Jean Dubois, guides him to Whisper Lake, considered by most people totally inaccessible. Stephen March is sent to find and arrest the slayer of Slink. He reaches the country at the same time when Arlis Hope makes her way to her father's side. The meeting of these two has portentous results, but the situation is retarded by John's illness; he has a bad attack of smallpox, through which Stephen nurses him. Passionate undercurrents attend this unusual condition. The action is fast and fraught with perils and thrills, but the author's knowledge of his country is clear. He makes you feel the bigness, charm, and meaning of the forest life. After the usual complications of love and suspicion, it is discovered that "Slink" was never dead. Each then comes into his reward of love, exoneration, or justification. It is a book of tense situations and human suffering.

Wells, Carolyn. *The Maxwell Mystery*. Pp. 302. Philadelphia and London: J. B. Lippincott Company. \$1.25.

This is a pleasant, but rather conventional, detective story involving the usual murder mysteries, love stories, and amateurs with "detective instincts." Finally, we have a solution by Fleming Stone, the greatest of American detectives, whose "eagle eye and massive brain" always surmount difficulties. Philip Maxwell has a

(Continued on page 902)

The new Garford "Six" was designed contrary to the usual custom. Instead of utilizing, re-designing or substituting any old parts, this car is new in its entire construction.

From the smallest steel bolt to the handsome, graceful and noiseless one-piece-all-steel body, it is a distinct 1913 creation.

In it are embodied more new and practical six-cylinder improvements and conveniences than in any other "Six" built.

As one illustration, your attention is directed to the single, parabolic electric headlight, sunk flush with the radiator. This new method of lighting eliminates the rattling

cumbersome and unsightly headlights that were always in the way. It gives the car a much cleaner and much more finished appearance.

And this is but one of the many exclusive Garford features.

A Garford owner recently wrote: "It strikes me that in the new Garford 'Six' you started your improvements from where all the others left off."

So, if you are in the market for a "Six," we believe we can offer you even more for \$2750 than most other manufacturers can for double that price.

Literature on request.

Electric Starter, which never fails to start instantly—winter or summer
All lights are electric

Big, single electric parabolic headlight, sunk flush with the radiator
Electric horn

One piece, all steel body, steel Pullman car construction—no joints, no rivets, no wood

REVIEWS OF NEW BOOKS

(Continued from page 900)

house party at the home of his wealthy uncle with whom he lives, and whose heir he is, a party made up of fascinating young people and including even a "beloved Earl." On the night of the big dance, Philip is found murdered and in such circumstances that almost every one in the house comes under more or less suspicion. The tracing of clues gives opportunity for the development of detective and erotic elements. The reader has a chance to make brilliant deductions for himself before the perpetrator of the crime is tracked and punished. Exciting combinations of the expected and the unexpected attend the development of the search for the criminal. The suspense keeps the interest always at fever heat.

RECENT VOLUMES OF "THE CYCLOPEDIA OF EDUCATION"

Moore, Paul [Editor]. *The Encyclopedia of Education*. Vols. I-IV. New York: The Macmillan Co. \$6 a volume.

The first volume of *The Encyclopedia of Education* was noticed in *THE DIGEST* for May 6, 1911 (Vol. XLII, p. 898). Since then three volumes have appeared, Vol. II (726 pp.), in October, 1911; Vol. III (682 pp.), in October, 1912; and Vol. IV (740 pp.), in March, 1913. The last topic treated in Vol. IV is *Polyhedron*; that is, the work is three-fourths or more completed.

There were 128 special contributors to Vol. I (that is, contributors who signed their articles); 119 to Vol. II, 110 to Vol. III, and 150 to Vol. IV. About half the special contributors in each volume appear again in the succeeding volume, so that the four volumes are the work of between 300 and 400 specialists, to say nothing of the unsigned articles. When one considers further the staff of departmental editors, it is apparent that the present work is representative of present-day expert knowledge in the field of education, and that it must be accepted as authoritative.

The range of the work is extraordinary. Education is treated from every point of view. Educational theories and systems of the past and present, educational bodies, past and present, men who have contributed at any time, as investigators, as scientists, as reformers, to the development of educational ideals, methods, or means, the technical vocabulary of education, of educational psychology, and of medical physiology—it would be hard to find a topic or a term connected with the science of education at any time in the history of that science which does not receive treatment.

The need and the value of the work are evident from the fact (stated in the preface of Vol. I) that of new books in recent years—one out of every 25 in America, one out of 15 in England, one out of 9 in France, and one of 7 in Germany—were works on education. A literature so bulky must be condensed if its results are to be readily accessible to the majority of teachers and to others concerned with education; and even for the best informed a systematized account of the field is helpful as a guide. The present work serves that purpose; it furnishes something about every topic related to education, and by means of cross-

references becomes a complete text-book on every pedagogic subject.

Even to a general reader much of the matter is of interest. This is true especially of the historical articles, the descriptions of early schools and teaching, of early practises, sports, and festivals. For example, *Beating the Bounds* (I, 335), *Begging Students* (I, 340), *Boy Bishop* (I, 435), and the origin of Santa Claus, *Boarding Around of Teachers* (I, 403), *Cockfighting in Schools* (II, 41), *Medieval Gilds* (III, 107), etc. Of general interest, also, are other historical articles which give accounts of the great medieval scholars and of the great educational reformers and their work, as well as the articles on the very practical sociological problems in the recently widened field of education.

Of general and popular as well as professional interest will prove also much of the matter devoted to exposition of the educational systems and description of the chief educational institutions of the civilized world. To *Education in Germany* (III, 63), 38 pages are given; to *Education in England* (II, 459), 24 pages; *Education in France* (II, 656), 20 pages; in *Japan* (III, 518), 11 pages; in *the Philippine Islands* (IV, 674), 5 pages; and so on. The educational systems of each of the States, and of each important city in the United States as well as of the chief foreign cities, are described in some detail. One reads in detail of the different kinds of education—industrial, commercial, agricultural, etc.

The practical value of the work to those directly interested in teaching is very great. To the individual teacher it furnishes a treatment of his special subject, whatever it is, giving its history, academic status, courses in college, secondary or lower school, aims and methods, desirable equipment, etc. For superintendents and principals it discusses questions of school organization and management; for example, *City School Administration* (II, 16). For School Boards it tells of *School Architecture* (I, 183), of *Lighting* (IV, 26), *Heating* (III, 238), etc. How distinctly practical the information is appears in the article on *Blackboards* (I, 390, 4 pages), which treats of the construction and hygiene of blackboards, including discussion of the proper material and how to apply it, the proper position with reference to light, height of lower and upper edges for children of varying grades, and the proper form of tray to catch the chalk dust. (Better than any dust-tray, it seems to us, would be a moistened sponge to use as eraser; there would be no dust to float in the air or fall in a tray.) No part of its subject is too commonplace for this encyclopedia; it discusses *Cleanliness of the School Room* (II, 31) for the janitor, and *Clothing of School Children* (II, 40) for the mother.

Naturally, there is a good deal of technical matter in the work. It defines the terms of psychology and of pedagogical science (*accommodation, adaptation, adjustment, apperception, etc.*); it discusses *correlation of studies*, of school curricula with one another, of school work with life work. It considers the good and the evil of *Examinations* (II, 532), and the limitations which should protect pupils from evil effects. In the treatment of *Grading and Promotions* (III, 126), with its cross-references, teacher and principal will find suggestion and guidance.

What most impresses a layman who dips

MRS. WOODROW WILSON AS A LANDSCAPE PAINTER

A comparative few only know to what extent the Lady of the White House is a landscape painter, or have seen the actual work of her brush. Her two most representative paintings, personally selected by Mrs. Wilson and presented with her special permission, are given *in their full and original colors*, for the first time in any magazine, in the May number of

HEAVY CAR TYPE FISK TIRES

In the Construction of HEAVY CAR TYPE FISK TIRES Are Features Found in No Other Tires All Bringing Greatest Service

Fisk Tires are the tires of *Greatest Service*. HEAVY CAR TYPE is the name applied to the construction which makes possible this *Greatest Service*. HEAVY CAR TYPE is inseparable from the word Fisk. It is part and parcel of the Fisk Rubber Company, an expression of its experience, its knowledge of tire design and manufacture, its business integrity, its sole and constant effort since the coming of the automobile to produce the BEST pneumatic tire.

Each feature of the FISK HEAVY CAR TYPE Construction has been necessary to attain *Greatest Service*. There is a special reinforcement of the side walls to prevent rim cutting; an extra layer of rubber on the tread to increase the life of this part of the tire; two breaker strips instead of one, to lessen the possibility of puncture and a thick cushion of pure rubber (practical only with this construction) which greatly minimizes road shocks.

Look for "FISK HEAVY CAR TYPE"
On Every Tire You Buy

EVERY Automobile Tire made by the Fisk Rubber Company has molded in relief on its side walls the Fisk Trade Mark, the words, "Fisk Heavy Car Type" and its serial number of manufacture.

Insist that you get these very important identification marks on every tire you buy. They are an assurance of *Greatest Service* coincident with Fisk Heavy Car Type construction.

Fisk Pneumatic Tires are guaranteed when filled with air at the recommended pressure and attached to a rim bearing either one or both of the accompanying inspection stamps. When filled with any substitute for air, or attached to any other rim than those specified our guarantee is withdrawn.

into these volumes is perhaps the revelation they make of the new aims and new fields that education has of late taken, or been compelled to take, to itself. As the editor states in the preface to Volume I, the school has had thrust upon it almost the entire training of the child—physical and moral as well as mental. The teacher is to many children both parent and teacher. Whether it is well that training in morals and manners should become less and less a concern of the parent and more and more a task of the school is very questionable; but the fact is that many children in America get almost no proper training in the home. Altered ideals of education further widen the field of the school. The school now takes charge of the children's play-hours, very properly recognizing the educational value of pure play. Hence in these volumes, aside from a discussion of *Gymnasium and Gymnastics* (III, 196, 198), with numerous cross-references, we read of *Dancing* (II, 248), of *Festivals* (II, 600), of *Games* (III, 8), and of *Play and Play-grounds* (IV, 725, 728). The school is more and more beginning to watch over the health of its pupils. In this matter not only teachers and other school officials, but parents as well should read these books. *Medical Inspection of Schools* (IV, 182), *Contagious Diseases* (II, 191), with cross-references, *Infectious Diseases* (III, 454), the most common school diseases, as diphtheria, scarlet fever, measles, whooping cough, mumps; and likewise other diseases likely to spread among children, as infantile paralysis, meningitis, typhoid fever, grippe, tuberculosis, etc., and defects of sight and hearing—these topics receive treatment. The primary or grammar teacher is told what to do when a child complains of headache. Of grippe we read: "The reason that colds and grippe are so prevalent and so serious among school children in many sections of the United States is probably the habit of sleeping in closed rooms and of keeping the schoolrooms hot and dry, and the fact that when a child shows symptoms of a cold, instead of being put out of doors he is confined in the house" (III, 183). We use italics to emphasize the fact that most parents as well as many teachers will learn something from these volumes. *Education for Parenthood* (IV, 600) is one of the topics discussed. A more important matter for parent, teacher, and physician to consider is the physiological and psychological character of the period of *Adolescence* (I, 39, with cross-references).

But it is impossible here to follow to the end the series of interesting and valuable discussions which fill these pages. One notes with pleasure that they are usually fresh, broad, and practical. There is little dogmatism. Under *English Usage* (II, 483), for example, the teacher is cautioned against blind acceptance of the dogmas of a text-book: "Rhetorical and other books contain many dogmas which are often contrary both to practice and to effectiveness in language."

In mechanical execution the volumes are in the main attractive. The print is clear. Some of the illustrations ought to have been done more carefully; for instance, that of the single-handed manual alphabet (II, 260). Two very interesting tables (II, 91, 92) are almost illegible. Here and there the revision and the proof-

reading are not perfect. "This kind of a blackboard" is not good enough English for such a work. But it must be considered that the volumes contain an immense amount of matter which is here for the first time gathered together and systematized; and the task of correlating the articles, of revising them, of supplying cross-references, and overseeing the final details of manufacture, must have been perplexing and laborious. A serious defect, it seems to us, is the failure to indicate by means of some adequate phonetic alphabet the pronunciation of foreign and technical words.

The majority of those to whom the volumes will be of greatest service will feel the need of this help. With this exception flaws in the work are negligible. The cyclopedia ought to go into every school and public library in the land, and become accessible to every teacher and every school official, and to all others who have to do with the organization, administration, or teaching-work of our schools.

THREE BOOKS ON AFRICA

Torday, E. Camp and Tramp in African Wilds. Illustrated. Map. Cloth. Pp. 316. Philadelphia: J. B. Lippincott Co.

This volume is the fascinating record of the adventures of one who for nearly seven years lived in the Kongo—really in it—spending most of the time in the interior in close touch with many tribes whose customs and characteristics he has delineated here. As a record of travel and experience it is exceedingly entertaining, and as anthropological material important especially since he has used a clever device for questioning the natives. Inasmuch as they commonly answer direct questions in the way which they think will please, whether the truth or not, he has first secured a portion of information and then says, "Such and such a tribe say you have this custom. Is that so?" and in the discussion which follows among the natives the truth is not hard to find.

More important is the definite attitude of appreciation for the natives which the author's experience has given him. Their real courtesy, their reliability, their fine physique, have produced in him a real affection for them. The chapter in which he gives the fruits of his experience in suggestions to other white men in Africa's hinterland is very valuable. The failures in tact, in respect for native customs, and, alas! in honesty and square dealing return on the head of the white man. "It is only by studying a man that you can understand him, and only by understanding him that you can rule him." He also says a wise word in warning missionaries against giving an agricultural or pastoral people a clerk's education.

In this African centenary year it is interesting to note that Mr. Torday succeeded in locating a cape on Lake Tanganyika which Livingstone reported and which was used as a mark for the boundary between British Central Africa and the Kongo State. Former officials had been unable to find it because the lake had receded quite a distance. Says Mr. Torday of the great explorer: "Livingstone's memory is still cherished by all who knew him."

JACKSON "OLYMPIC"—\$1500

Four cylinders, 34 horsepower, unit power plant; long stroke motor, 4 1/4 x 4 1/4 inches; 115-inch wheelbase; 34 x 4 inch tires. Complete equipment, including Dima starter. Black and nickel trimmings. Electric starter and lights optional—\$225 extra.

"Majestic"—four cylinders, \$1075; "Sultan"—six cylinders, five passenger, \$1300; seven passenger, \$1650.

Buyers are judging car comfort by what they find in the Jackson

So much has been said and printed recently about Jackson comfort that thousands of automobile buyers are making it the basis of their comparisons.

This is the position in which you will find yourself when you inspect the Jackson and the various other cars.

You will not be able to ignore the Jackson nor to put it out of your mind as you examine other cars; nor to avoid comparing these others with it.

It is true that you will see many comfortable cars, because this year manufacturers are exerting unusual energy in this direction.

But you will find also that the Jackson dominates the entire field.

If you seek the reason for this you will discover that other manufacturers are beginning to do only now what we have been doing for years—providing for the passengers' ease.

Experience is always valuable; and the experience of eleven years has taught our engineers how to harmonize the details of motor car construction and produce maximum comfort.

Long ago experiment demonstrated that the full elliptic spring has 33 to 100 per cent. more action and resiliency than any other type; so all Jacksons are fitted with four full elliptic springs.

Jackson wheel bases are long; and they contribute to the riding ease because their ratio to wheel sizes, springs, car weight and load to be carried, is carefully worked out.

With ten-inch seat cushions, slanted a bit toward the rear, we build the backs to shoulder height and upholster them richly, too.

We have provided a motor of the long stroke, enclosed valve type, that is silent, sure and powerful.

And back of it a train of transmission and driving mechanism, fitted with ball and roller bearings throughout, developed to the high point reached in the motor.

All the Jacksons are equipped with self-starting devices—two of them electric and an electric starter optional on the third—which add the last touch to the convenience of their operation.

See the Jackson; have a demonstration of its remarkable comfort; and we are willing to leave the decision to your judgment.

Jackson Automobile Company, 1318 East Main St., Jackson, Michigan

Conklin's Self-Filling Fountain Pen

Fills Itself like this!

You can safely fill it while wearing your white dress gloves, for the ink can touch only the gold pen which you dip into the inkwell—and it is all done in four seconds. No bother with droppers—no loss of time in unscrewing pen. Just dip the **self-filling Conklin** in any inkwell and press the "Crescent-Filler." It's as simple and easy as A B C.

Every filling cleans the ink feed, so the self-filling Conklin is also the **self-cleaning Conklin** and always writes smoothly—without a blot or scratch.

Stationers, Jewelers and Druggists sell the **self-filling Conklin** on 30 days' trial.

Prices: \$2.50, \$3.00, \$3.50, \$4.00, \$5.00 and up. Write today for catalog and two little books of pen wit—all free.

REVIEWS OF NEW BOOKS

(Continued from page 904)

and thus his own acts alone have erected the finest monument that any traveler can boast of."

Stevens, E. S. *My Sudan Year*. Illustrated. Cloth. Pp. 305. New York: George H. Doran Co. \$3.50 net.

This book will form a very good companion to Mr. Powell's "The Last Frontier," making as it does a special study of one district in Africa in which the work of civilizing is being done with the utmost vigor. Where Mr. Powell has taken us with rapidity Miss Stevens travels with more leisure and no less vividness of narrative. Starting from Gordon's Khartoum up the Nile by paddle-wheel steamer, the writer, by unusual good fortune, was enabled to turn aside from the customary tourist trails up the Bahr-el-Ghazal, which drains a large district nearer the wilderness of native conditions than northern Sudan, and to see at first hand the venture of transforming the grassy traffic-blocking "sudd" into briquettes for fuel in an almost treeless, coalless country. This weedy mass covers a huge swamp thirty-five thousand square miles in extent which must some day contribute its share of usefulness to the world. One would think that traveling in such a district would be prosy, but far from it! Miss Stevens's narrative is full of reminiscences of the terrible days of the Mahdi, of incidents of British administration that remind one of Kipling, of bright comments on native life and customs, and of records of hunting. The chapters about Khartoum are delightful, and the reflections on education in the Sudan and the record of native songs are especially interesting. The tone of Miss Stevens's whole book marks her as an experienced writer and observer, who knows how to see and what is worth seeing and can tell the story of it worthily. To one who would know the life and atmosphere of the Sudan as it is Miss Stevens's book will be very satisfactory.

Stanley, Henry M. *How I Found Livingstone*. Centenary edition. With an introduction by Robert E. Speer. Illustrated. New York: Charles Scribner's Sons. \$2 net.

It is forty years since Stanley found Livingstone in Ujiji and a hundred since Livingstone was born. As men look back on that interval what great changes are seen to have come over the face of the world, and especially Africa itself. Europe has taken upon its shoulders the task of civilizing the Dark Continent. Empire builders are looking there for the foundation stones of their ambitious dreams. But it was Livingstone the missionary and Stanley the journalist who prepared the ground before them. Thus, the new travel books on Africa are appearing by the score—and excellent ones, too—the record of Stanley will ever prove a classic—an Odyssey of journalistic enterprise and high endeavor. To this centenary edition (printed from the old plates and thus somewhat uneven in impression) Dr. Speer's preface serves as a connecting link to sketch briefly what has happened to Africa since Livingstone and Stanley

—"passed like light across the darkened land, And dying left behind them this command, The doors are open. So let them ever stand."

Try This Good Pipe Tobacco! Sample Free!

Let Edgeworth bring a new joy into your life—Thousands swear by it.

OTHER BOOKS WORTH WHILE

De Pratz, Claire. *France from Within.* Pp. 368. New York and London: Hodder & Stoughton. \$2.

The author of this volume is of French blood, but she was born in England. Educated in London and Paris, she acquired the point of view of each country in judgments of the other, and was, therefore, qualified to give an interesting estimate of French character and home life. We are sometimes inclined to think of Paris as the "music-hall of the world," where licentious amusements can always be found. Such places, however, the writer asserts, are not frequented by real Parisians, but are designed and managed wholly for tourists as a business proposition. The French people are described to us as essentially and fundamentally feminine, tender, and gay, always adaptable and willing to learn from others, but in their home life they are not easy of approach. A foreigner rarely sees the intimate life home or learns to know the real French man or French woman. Naturally every nation has customs and rules peculiar to itself. This book attempts to remove our unjust misunderstanding of the modern Frenchwoman. She is "the noblest force in her country," and the best friend and counselor of her husband. The book contains an intensive and interesting study of such subjects as marriage, divorce, the *jeune fille*, the bachelor woman, the housekeeper, and the maid.

McCracken, Elizabeth. *The American Child.* Pp. 191. Boston and New York: Houghton Mifflin Company. \$1.25 net.

We have grown accustomed to the phrase,—"Children don't behave as they used to." We have accepted this confession with an air of—"Tis true, 'tis pity, and pity 'tis, 'tis true"; but here is a book that dares to assert the contrary, and to praise the American child at home, at play, in the country, in school and at church. This sounds like "a large order," but when one reads of the circumstances that have produced present conditions, we realize that parents of to-day are responsible for the change, which is not a deterioration but a reciprocity of advantages, and that children are now treated as intelligent companions, not as inferiors. The style of the book is easy and convincing. The author quotes from personal experiences with children of different ages, so that the narrative has life and natural color. From these pages the reader will gain comprehension and affectionate regard for the needs of the child and an appreciation of all that he can offer in the way of development and pleasure in the bringing out of individuality and specialized aptitude. The intolerant person who is childless will find much to enjoy in this little volume which should change his point of view.

Patrick, Mary Mills. *Sappho and the Island of Lesbos.* Pp. 180. Boston and New York: Houghton, Mifflin Company. \$1.25.

This little volume, written for "lovers of Greek poetry," gives a faithful account of the famous poetess, her home, contemporaries, work, and the customs and manners of her age. Sappho was born near the end of the seventh century B.C., an age deeply permeated by religious feeling and one in which the prominence given to music was noticeable in all social customs. Sappho is here considered in relation to her

This Adding and Computing Machine can easily be carried right to the work

\$175

Barrett Adding and Computing Machine

Portable: The Barrett weighs 17 pounds and the Computing Attachment adds but slightly to the weight. This means that this *handle-driven* adder goes to the work, can be carried about at will from desk to desk, from department to department. One Barrett can take the place of half a dozen heavy, unwieldy adders of the older type and yield vastly more convenient service at far less cost.

Simplifies Multiplication: The special Computing Attachment illustrated above travels over the regular Barrett keyboard. With it you only have to set the multiplicand **once** and it can then be automatically transferred one column to the left for as many numbers as the multiplier contains. This results in a remarkable reduction of time and labor in computation.

99,999,999.99: This large capacity renders the light, compact, easy-to-carry Barrett entirely capable of performing **all** the calculations of a big business. This adder is the last word in accurate, swift, pleasantly performed mechanical figuring.

Simple: Any one who can write can learn to operate the Barrett in **ONE HOUR**, so easily is it understood, so certain are its checks on error.

Economical: In the Barrett Adding and Computing Machine you obtain for \$175 all the calculating abilities of the highly expensive machines and at the same time, you secure a portable adder which represents the latest and highest phase of adding machine invention.

But SEE the Barrett for yourself! Send this coupon!

surroundings, her contemporaries, and her poems, which are translated and thoughtfully discuss. It is a relief to feel that the popular conception of her character is, perhaps, an unjust one. We read with eager interest of all she accomplished in her school of poetry and music. Her potentiality in literature is conceded by all literary critics. The translations given in this monograph show delicacy and poetic temperament. The book is concise and complete as a direct portrayal of her surroundings, associates, and accomplishments.

Lady Gregory. New Comedies. Pp. 166. New York and London: G. P. Putnam's Sons.

The advent of the Irish players and the spirited controversies excited last year by some of the plays presented quite prepared the public for consideration of any dramatic writings in connection with the "Abbey Players." That public will welcome this little collection of comedies—"The Bogie Men," "The Full Moon," "Coats," "Damer's Gold," and "McDonough's Wife,"—all of which, except the last, have been produced by the Abbey players. The plays are short and direct, taking us out of ourselves and should be read by all who are interested in this most unusual literary movement of recent times, the modern Celtic movement in Ireland. "Coats" is especially clever, and illustrates how easily a quarrel can be caused between two friends and yet be healed by a piece of "apple pie." "A quarrel, we are told, is so violent you think it can never be healed, but the ordinary circumstances of life force reconciliation." *The Nation* gives this estimate of Lady Gregory: "Lady Gregory has kept alive the tradition of Ireland as a laughing country. She surpasses the others in the quality of her comedy, however; not that she is more comic, but that she is more comprehensively true to life"—an estimate which will incline us all to read thoughtfully what she has to say.

Price, M. P. Siberia. Illustrated. Maps. Cloth. Pp. 308. New York: George H. Doran Co. \$2.50 net.

Those readers whose vague impression of Siberia has been that of a bleak land of exile will find their interest quickened and their outlook enlarged by Mr. Price's valuable record of a journey through that broad region, in investigation of its social and economic conditions. They will then add one more to the list of ancient lands now springing into new life. In Siberia also one finds a "new society passing through a fascinating phase of development." Mr. Price has made special studies in Canada, and is convinced that Siberia is now where Canada was a generation ago. "Just as the

English settler has become a Canadian, so the Russian settler has become a Siberian."

Siberia is awakening to an independent life. Will this people, essentially primitive but having all the material resources of civilization at its disposal, follow one of the old paths or mark out a new one for itself? For the discussion of this question Mr. Price provides abundant information, gathered by living among the people and learning from their own lips the simple story of their lives. In a quiet and unostentatious spirit, which is in itself convincing, he describes the real forces which are at work in the social structure of the Russian Empire, forces which will some day mold its policy and action. The close of his inquiry brought him face to face with another problem, the Mongolian question, for which the five-colored Republic of China must find solution. The student of political and economic science will value the results of Mr. Price's careful investigation.

✓ **Martin, Michael, S. J. The Roman Curia as It Now Exists.** Cloth. Pp. 423. New York: Benziger Bros. \$1.50 net.

In 1908, by an Apostolic constitution, *Sapientis consilio*, the organization of the Roman Curia was changed quite extensively, some of the Sacred Congregations being consolidated with others and one new one being created—the Congregation *De Disciplina Sacramentorum*—and their functions being in many cases enlarged or modified. This is of especial concern to all the clergy and officials in America, since at the same time America was removed from the sole jurisdiction of the Sacred Congregation of the Propaganda and put under the common law of the Church, and henceforth is to deal with the various congregations as do other countries not administered by the Propaganda. The larger part of this very serviceable book is a clear and readable commentary on this important constitution. It sets forth the jurisdictions and functions of all the congregations and of the tribunals and offices of the Curia briefly and lucidly and adds formulae for sending petitions and requests of various kinds to the proper departments, as well as the original Latin text of *Sapientis consilio* and of the rules of transacting business with the Curia. The book is, therefore, useful and important. The author is Professor of Canon Law and Moral Theology in St. Louis University.

✓ **Bancroft, Hubert Howe. The New Pacific.** 8vo. Pp. 543. New York: The Bancroft Company. \$2 net.

The opening of the Panama Canal and the San Francisco Exposition are events whose coming is awaited with interest. Mr. Bancroft is a skilful stage manager who here draws up the curtain and shows us the scenery in which these important events are to take place. He is a discursive writer, but presents many commercial facts which indicate the hopes and prospects of the shores and islands of the Pacific. His book will serve to aid not only the enterprise of steamship companies, but the plans of those who are emigrating to the Golden State.

Good Training.—"I don't want my boy to be fast when he grows up. What sort of training should I give him?"

"Why not make him a messenger boy?"
—*Baltimore American.*

A Bissell Electric Suction Cleaner Costs Less Than Going Without One

It saves you money—saves you time—gives longer life to your draperies, rugs, carpets and furniture and, above all else in the consideration of every thoughtful man, gives added comfort and healthful surroundings to the women of the household.

It has no superior at any price, either in portable or stationary machines, measured by efficiency at the tools. That blanket claim is made squarely on the enormous volume and high speed of air it handles; the only true basis of value in any cleaner.

We will rent you a Bissell Electric Suction Cleaner for a month—freight prepaid—for less than most other cleaners would cost you for three days. After that you can own it, if you wish, for

Only \$1.75 Per Week

The Bissell Electric Suction Cleaner gathers both the finest atoms of dust and the coarse litter that other cleaners won't take up.

Yet it costs you much less than any portable cleaner that even claims to be in its class.

Practically unbreakable, it is light enough to be carried by any woman from floor to floor, yet is so powerful that it gives complete satisfaction in the largest apartments, office buildings, churches, hotels and theatres.

Your own dealer can show you a Bissell Electric Suction Cleaner promptly—if you ask him to do so.

We have a special message for high grade salesmen and dry goods, hardware, electrical, furniture, music and department stores.

CURRENT POETRY

THERE are many critics who regard the poem of occasion and the poem of controversy as belonging rather to journalism than to literature. Poetry, they think, should not depend upon event and circumstance; it should arise naturally and its beauty should be its only excuse for existence. Undoubtedly, this belief has its justification; much of the world's greatest verse is independent of place and time. Nevertheless, the poet is needed to plead for causes and to celebrate events affecting the community of which he is part. William Vaughn Moody's "Ode in Time of Hesitation" is perhaps a more valuable contribution to literature than most of his excursions into Greek mythology and Arthurian legend. There are those who consider the "Battle Hymn of the Republic" the greatest American poem. And such poets as Mr. Percy Mackaye perform public services of real value when they mark occurrences of national importance by the exercise of their genuine talent.

The poem which we reprint appears in *The North American Review*. It is dignified, compact, and full of noble imagery. Its formality is proper to the occasion. The thought is well sustained, and the phrasing, particularly in the first four stanzas, is admirable.

Panama Hymn

BY PERCY MACKAYE

Lord of the sundering land and deep,
For whom of old, to smudge thy wrath,
The floods stood upright as a heap
To shape thy host a dry-shod path,

Lo, now, from tide to sundered tide
Thy hand, outstretched in glad release,
Hath torn the eternal hills aside
To blaze a liquid path for Peace.

Thy hand, enlaid in flaming steel,
Hath clutched the demons of the soil
And made their forge-fires roar and reel
To serve thy scaphim in toil;

While round their pits the nations, bowed
Have watched thine awful enginery
Compel, through thunderbolt and cloud,
The demigods to slave for thee.

For thee hath glaring Cyclops sweat,
And Atlas groaned, and Hercules
For thee his iron sinews set,
And thou wast lord of Rameses;

Till now they pause, to watch thy hand
Lead forth the first leviathan
Through mazes of the jungled land,
Submissive to the will of man;

Submissive through the will of us
To thine, the universal will,
That leads, divine and devious,
To world-communities vaster still.

The titans rest; intense, aware,
The host of nations dumbly waits;
The mountains lift their brows and stare;
The tides are knocking at the gates.

Almighty of the human mind,
Unlock the portals of our sleep
That lead to visions of our kind,
And marry sundered deep to deep!

The Coward Shoe

Arch Support for Women

The Coward Arch Support Shoe gives a springy support to the arch, holding it comfortably in its natural position. It relieves overtaxed muscles, corrects a falling arch and prevents "flat-foot."

Coward Arch Support Shoe and Coward Extension Steel, have been made by James S. Coward, in his Custom Dept. for over 30 years.

EQUIPMENT for BUSINESS What would you think if you handed you a piece of business paper with his name written on it, as his business card? You'd be rather surprised, wouldn't you? At least you would have a serious doubt as to his desirability as a business connection. In other words, his equipment for business does have an effect on you. You do judge him by his equipment—no deny. You are judging him by the same way. Just remember that? Just as a card is an indication of a person's equipment, your business paper with business name on it is the same.

Peerless Patent Book Farm Card
is an address with the printed, business card. You need this peerless patent book because it gives you a list of business names and addresses in your own city and in the states and in the foreign countries. Every card is printed in the perfect business card style. Every card you get from us is available for the use for which it is intended. Send today for a sample of the book and see what the card is, and how it is detached from the book with a smooth edge. You will be surprised and pleased.

The JOHN B. WIGGINS COMPANY
Engravers Die Embosser Plate Printers
77-79 E. Adams St., Chicago; New York Office, 350 Broadway

Many poets, including Alfred Noyes and Charles Hanson Towne, have written in memory of Francis Thompson. A recent issue of the London *Nation* contains the following sincere and beautiful lines. There is sound philosophy quaintly but effectively expressed in the stanza last but one.

Francis Thompson

BY WILLIAM H. DAVIES

Thou hadst no home, and thou couldst see
In every street the windows' light;
Dragging thy limbs about all night,
No window kept a light for thee.

However much thou wert distressed,
Or tired of moving, and felt sick,
Thy life was on the open deck—
Thou hadst no cabin for thy rest.

Thy bark was helpless 'neath the sky,
No pilot thought thee worth his pains
To guide for love or money gains—
Like phantom ships the rich sailed by.

Thy shadow mocked thee night and day,
Thy life's companion, it alone;
It did not sigh, it did not moan,
But mocked thy moves in every way.

In spite of all, the mind had force,
And, like a stream whose surface flows
The wrong way when a strong wind blows
It underneath maintained its course.

Ofttidst thou think thy mind would flower
Too late for good, as some bruised tree
That blooms in autumn, and we see
Fruit not worth picking, hard and sour.

Some poets feign their wounds and scars,
If they had known real suffering hours,
They'd show, in place of Fancy's flowers,
More of Imagination's stars.

So, if thy fruits of Poesy
Are rich, it is at this dear cost—
That they were nipt by Sorrow's frost,
In nights of homeless misery.

Here is one of those brief exquisite reflections of a mood which Mr. Towne writes with such skill. We take it from *Harper's Magazine*.

Waiting

BY CHARLES HANSON TOWNE

I thought my heart would break
Because the Spring was slow.
I said, "How long young April sleeps
Beneath the snow!"

But when at last she came,
And buds broke in the dew,
I dreamed of my lost love,
And my heart broke, too!

The following poem, equally brief, but greatly different in spirit, appears in *The Outlook*. The thought is, of course, very old, but it is here expressed with epigrammatic force.

Earth and Infinity

BY AUGUSTUS WIGHT BOMBERGER

There's part o' the sun in an apple;
There's part o' the moon in a rose;
There's part of the flaming Pleiades
In every leaf that grows.
Out of the vast comes nearness;
For the God whose love we sing
Lends a little of his heaven
To every living thing.

500 Shaves Guaranteed From 12 Blades

THIS razor is easily guaranteed, because the self-contained automatic stropping feature makes the stropping so simple, handy and efficient that you just naturally cannot resist the temptation to use it. That's the story of the Guarantee in a nutshell. The AutoStrop Safety Razor is the only safety razor which enables you to *strop* the blade automatically, *shave*, and then *clean* the razor without removing the blade from the holder.

which explains all this and tells you how to materially reduce the high cost of living—how to have better, more nourishing food—how to keep food longer without spoiling—how to cut down ice bills—how to guard against sickness—doctors' bills.

Monroe Refrigerator Co., Station 120 D., Lockland, O.

Guizot's HISTORY OF FRANCE

From the earliest times to the outbreak of the Revolution

Abridged by Gustave Masson from the Translation of Robert Black

With Chronological Index, Historical and Genealogical Tables, Portraits, etc.

"Mr. Masson has scored in his competent abridgement of Guizot's famous 'History of France' up to the Revolution. Even abridged the volume is large, but not unpleasantly so. To compensate for the necessary elision of the quotations from original commentators, the appendix contains a full list of contemporary sources. Much tabulated information, and a topical index, make the book thoroughly workable."—The Chautauquan, New York.

FUNK & WAGNALLS COMPANY NEW YORK

"The Right of the Child To Be Well Born"

A new book on the Science of EUGENICS

By GEORGE E. DAWSON, Ph.D., Professor of Psychology, Hartford School of Religious Pedagogy. It traces parenthood as the supreme duty of being. It selection and preparation as a necessary theory. 12mo. cloth. The next postpaid to Funk & Wagnalls Co. 44-46 E. 23d St., N.Y.

Your Feet Come First

YOUR bodily comfort and brain energy depend on them. You certainly know that tired, aching feet play havoc with your efficiency and make it impossible for you to feel fit and fine.

Are you giving Nature the help she needs to overcome the absence of elasticity in hard floors, hard pavements and stiff shoes?

If you would like to enjoy that delightful sensation of walking on carpeted green grass just slip a pair of Scholl's Foot-Easers into your shoes.

The SCHOLL Foot-Easer
"EASES THE FEET"
FOR MEN AND WOMEN

They fit snugly under the arches of your feet and as the weight is driven down, the Scholl Foot-Easer absorbs the shock, and distributes the pressure over the whole foot as Nature intended. Why not secure instant and permanent relief from tired, aching feet, corns, calluses, weak ankles, cramped toes, bunions, broken arch, flat foot, and bodily fatigue from any foot trouble?

Ten Days' Trial Bond

On to any shoe dealer or druggist and get a pair of Scholl's Foot-Easers. The dealer will give you a signed bond giving you a ten days' trial without risk. You need it to guarantee to look like you today. Price \$1 per pair.

Free—Ask your dealer for Scholl's Valuable Book—Treatment and care of the feet. If he hasn't a copy, write to us.

THE SCHOLL FOOT-EASER, 214 Webster St., Chicago, Ill. 214 King St., W. Toronto, Ont.

The "Foot-Easer" in the Shoe.

The *Smart Set* has recently called a poet to its editorial chair, and the April number contains a noticeably large amount of verse well worth reading. Of Bliss Carman's "Lyrics of Spring" we quote the second and third, and we regret that we can not spare sufficient space to give them all. Few contemporary poets are more keenly aware of wild nature's most intimate moods.

Lyrics of Spring

BY BLISS CARMAN

II

Oh, well the world is dreaming
Under the April moon,
Her soul in love with beauty,
Her senses all a-swoon.

Pure hangs the silver crescent
Above the twilight wood,
And pure the silver music
Wakes from the marshy flood.

O earth, with all thy transport
How comes it life should seem
A shadow in the moonlight
A murmur in a dream?

III

Over the wintry threshold
Who comes with joy to-day,
So frail, yet so enduring,
To triumph o'er dismay?

Ah, quick her tears are springing,
And quickly they are dried,
For sorrow walks before her,
But gladness walks beside.

She comes with gusts of laughter,—
The music as of rills;
With tenderness and sweetness,
The wisdom of the hills.

Her hands are strong to comfort,
Her heart is quick to heed;
She knows the signs of sadness,
She knows the voice of need;

There is no living creature
However poor or small,
But she will know its trouble,
And harken to its call.

Oh, well they fare forever,
By mighty dreams possessed,
Whose hearts have lain a moment
On that eternal breast.

It is easy to disagree with the somewhat shadowy philosophy of the following verses (from *The Englishwoman*), but that Mr. O'Meara has stated his belief interestingly can not be denied. The poem is excellently constructed.

The Woman-Tamer

BY THOMAS O'MEARA

He said, "She shall be my slave!
Lesser in all than I;
Feeble of body and brain,
She shall carry a golden chain,
And dwell until she die
In the golden cage I gave."

And he found a treacherous feature of hate and fear,
With teeth and claws that were ready when he came near!

He said, "She shall be my star!
I will set her high above

CRYSTAL DOMINO SUGAR

Made by THE AMERICAN SUGAR REFINING CO. FULL AND HALF SIZE PIECES

This dusty world of mine,
I will bow me down at her shrine,
Pray for the light of her love,
And worship her from afar."

But he found that the light of her love had been
withdrawn,
Leaving only a faint chill pity, a faint chill scorn.

He said, "She shall be my friend!
Side by side let us stand,
For I need your help and you,
Comrades true and true,
With my hand in your dear hand
We will see life out to the end."

And she turned and her eyes met his; and I think
she cried
(But she laughed through her tears) and she came
to her place at his side.

PERSONAL GLIMPSES

"THE MOSES OF THE NEGROES"

WHEN Harriet Tubman Davis was a pickaninny on a big plantation in Dorchester County, Maryland, she began to show an instinctive antagonism to the tyranny of master over slave, and one day, when only thirteen, she protested at the brutality of an overseer who pursued a slave with a club. The overseer turned on her and knocked her down, inflicting an injury to her brain which brought on fits of somnolency with which she suffered until after the war, when she was cured by a surgical operation at the Massachusetts General Hospital. The blow from the overseer's club would probably not have amounted to much had the head been that of some other negro child, but the knocking down of Harriet marked the beginning of an extraordinary career. Some of her acquaintances have wondered if the injury did not give her the wonderful cunning that characterized her in later years. Whether it did or not, she was one of the craftiest enemies the slave-owners ever had. She ran away long before the war and devoted her energies to helping others escape from their masters; and when the war began she became a nurse, scout, and spy for the Union. Among her own people she was known as "the Moses of the negroes," a title that was well earned. She died the other day at the Harriet Tubman Home for Indigent Aged Negroes, at Auburn, New York, an institution she founded. Tho her exact age is not known, she is believed to have been ninety-eight or a hundred. It is said that she was known and held in high esteem by Ralph Waldo Emerson, Phillips Brooks, John Brown, Horace Mann, William Lloyd Garrison, and other distinguished men of that period. The story of some of her thrilling exploits is told in the *New York Evening Post*:

Her master died, and word went around

The Winged Message

Noah's messenger was a dove. In Solomon's time, pigeons were trained to carry messages. Brutus used them at the siege of Modena. They served the Turks in their fights against the Crusaders. In mediæval wars they were more useful than ever before.

France had a carrier-pigeon mail service, with messages reduced by photography and read through a microscope.

Even today carrier pigeons are utilized as news-bearers in isolated parts of Europe.

In America, the land of the telephone, the carrier pigeon is bred only for racing. The winged word has taken the place of the winged messenger.

Pigeons may fly more than a mile a minute, but the telephone is as quick as speech itself.

The dove is the emblem of peace. The telephone is the instrument of peace. The telephone lines of the Bell System unite a hundred million people in one national family.

the quarters that the slaves were to be
"sold South," the thing most dreaded by
negroes of the upper tier of Southern
States. Harriet counseled the negroes to
run away, but none had the courage to fol-
low her. She knew only that if she followed
the north star it would lead her to freedom,
and one night she stole away.

Of the terrible journey north she remem-
bered little; her instinct guided her and
her great strength enabled her to stand the
privation.

She obtained employment and saved all
she earned. Then she disappeared and was
not seen for months. She had dared to go
back to the land of bondage to show others
the path to freedom.

It wasn't long before throughout the
plantations of Maryland and Virginia were
spread rewards for a negro woman who was
luring the slaves away from their masters.
The price for the capture, dead or alive, of
Harriet Tubman rose to over \$40,000, but
she was never taken. She made over nine-
teen trips into the very heart of the coun-
try where the head-money was offered. She
continued this work until the beginning of
the Civil War.

When the abolition movement became
active she went into it heart and soul.
Whenever she could get to a meeting she
went and inspired others with her great
faith. It was while on her way to attend a
meeting in Boston at the invitation of
Gerrit Smith that she fought the greatest
single battle of her career.

She had stopt off at Troy, and while
there learned that a fugitive slave, Charles
Nalle, a half-brother of the master who
followed him, and as white as his owner,
had been taken and was in the hands of
the officers, having been remanded back to
Virginia. She went at once to the office
of the United States Commissioner, collect-
ing on the way a large crowd.

The crowd held back the officers, who
were about to convey the slave to a wagon,
and bids for the slave's purchase began.
The owner offered to sell for \$1,200, but
when that was bid he raised his price to
\$1,500. A man across the street raised a
window and shouted:

"Two hundred dollars for his rescue, but
not one cent to his master!"

That fired the crowd, and when the of-
ficers tried to bring the slave out the
crowd surged around the wagon. Harriet,
who had kept her position at the door of the
Commissioner's office, shouted: "Here he
comes! Take him!" and led the assault.

Her enormous physical strength has been
spoken of. Breaking through the police
line, she seized the prisoner under the arm-
pits and began to drag him down the street.

"Drag us out!" she shouted to her
friends. "Drag him to the river! Drown
him, but don't let dem have him!"

A policeman hit her on the head with his
club, and, freeing one hand, she knocked
him back into the crowd. Another jumped
for her, but she caught him about the neck,
throttled him, and threw him over her
shoulder.

She was dragged down, but kept her
hold on the slave. Aroused to fighting
pitch by her splendid courage, the crowd
massed around her, and dragged her and
the slave to the river, where the fugitive
was thrown into a boat, which pulled out.

She founded a settlement of fugitive

slaves at Cape May, N. J., in 1852, avoiding Philadelphia, as the slave owners maintained a detective agency there. The colony was successfully managed with the aid of Thomas Garrett, the Quaker abolitionist, of Wilmington, Del. It is said that she personally escorted 300 negroes to freedom. We read on:

The Fugitive Slave Law enforcement made her work more difficult each year. Driven from Pennsylvania and New Jersey, she came to New York. The Dred Scott decision in 1857 forced her to establish her last station on the underground in Canada. At this time Auburn came into prominence as one of the underground stations, and William H. Seward, later Lincoln's Secretary of State, was one of Harriet's best supporters, giving liberally from his private funds to pay carfare for fugitives from Auburn to Suspension Bridge, whence they got into Canada.

When, in 1863, it was decided to use negro troops, Harriet pleaded to be appointed an army nurse. When the Fifty-fourth Massachusetts Volunteers marched away from camp at Readville, Mass., under command of Col. Robert Gould Shaw, Harriet left for the South with a commission in her dress pocket from Governor Andrew. Down at Port Royal, she cooked for Colonel Shaw, and dined with him, too, on occasion, when she had important information to impart.

When she was not acting as cook she scouted around the enemy's lines, where she listened, and returned to repeat many things to the Union officers that they were glad to know. On one occasion, she informed Major-General Hunter at Hilton Head of mines planted in the river, and several gunboats sent to the scene removed a lot of torpedoes that would have smashed an expedition that was about to pass over this dangerous place.

Harriet lived for a time at the home of Emerson, in Concord, and spent some time visiting the family of William Lloyd Garrison, the Aleotts, the Whitneys, Mrs. Hecate Mann, and Phillips Brooks.

Illustrative of Harriet's hold upon the officers of the North and their confidence in her, one of her many wartime passes may be quoted showing the privileges she enjoyed. It was issued to her by Maj.-Gen. David Hunter at Port Royal, near Hilton Head, headquarters of the Department of the South in 1863. It reads:

"Pass the bearer, Harriet Tubman, to Beaufort and back to this place, and wherever she wishes to go; and give her free passage at all times on all Government transports. Harriet was sent to me by Governor Andrew, of Massachusetts, and is a valuable woman. She has permission, as a servant of the Government, to purchase such provisions from the Commissary as she may need.

"DAVID HUNTER,

"Major-General Commanding."

After the war Harriet located in Auburn, N. Y., permanently. She was the widow of a man named Tubman, who died in the South, and later she married Nelson Davis.

In 1896 she bought a portion of what was known as the Beardsley estate north of her property, and founded in that year the Harriet Tubman home, converting the former dwelling into the home.

Statement Costs Cut Again by the Burroughs

The old pen-figured statement cost Blank & Co. \$2.00.

A tired brain or an interruption is bound to jumble up pen-figured statements.

One Result—Jones' bill is \$10 short. If he pays it, you are out \$10. He knows you are careless, too.

Another Result—Smith's bill is \$5.00 over. Smith kicks and Mrs. Smith now knows she has often been overcharged. Smith's trade is lost. Blank & Co.'s cost. Statements \$ 8.00 Under-billing 10.00 A customer lost

To make out his statements in the old pen-figured way took R. F. Brune (retailer), in Sawtelle, Cal., 5 days a month (and then were not always correct).

After Mr. Brune put a Burroughs in operation he wrote us: "My bookkeeper now finishes my monthly statements in six hours—they're correct, too."

Do you realize that just about one-half the time spent in making out statements by any one is used in handling the paper—placing, adjusting to alignment, and moving the sheets?

This new attachment almost doubles the capacity of this machine—one motion throws out the finished statement and immediately places another statement sheet in printing position. In short, this device would allow Mr. Brune to get his statements out in about three hours.

A Burroughs is built to do much more than just ordinary adding. Send for our bulletin, "Monthly Statements," describing this machine. Ask us to make out your statements next month; no cost nor obligation.

BURROUGHS ADDING MACHINE COMPANY

49 Burroughs Block, Detroit, Michigan

European Office: 26 Cannon St., London, E. C., England

Makers of adding and listing machines, listing and non-listing calculating machines, tape-reckard, variable-printing adding machines—in different models in 402 combinations of features—\$150 to \$500; easy payments, if desired.

The machine-figured statements cost Blank & Co. \$1.00.

These Burroughs statements are business-like and always correct; machines do not get tired—day.

Another Result—The machine made out the statements the first time they were sent to Smith's store. He was very pleased.

Advantage of machine over pen figuring:
\$ 5.00 time saved.
\$10.00 under-charge saved.
1 customer saved.
Other customers made.
Quicker collections.
Mistakes avoided.

A Low Cost Permanent Roof for Finest Homes

Guaranteed for 10 Years

Red, Garnet or Gray-Green. Natural-Color Shingles of Finely Crushed Slate or Granite, which add distinction and character to modern dwellings.

Fire-resisting, frost-defying, rain-proof, wind-tight. Cost no more than wood shingles, yet last longer. Lie perfectly smooth and flat—cannot warp, crack, split, curl, or blow off. Never need painting. Always hold their color. Light, strong and durable—easily and quickly laid—no reinforcing of roof necessary. Adaptable to every style of pitched roof. Nonconductors of heat and cold. Save part of insurance cost.

REYNOLDS Asphalt Shingles

These are not an untried experiment. We are the ORIGINAL MAKERS of Flexible Asphalt Shingles, and tested our product for ten years before putting it on the general market. Right here in Grand Rapids, where climatic changes are extreme, our shingles, after ten years' exposure to every kind of weather, look as good as the day they were nailed on. Why waste your money in buying and installing wood shingles, which catch fire from the first spark? Conform to size—4 in. x 12 1/2 in.—held 4 in. to the weather. Made of pure asphalt, covered with finely crushed slate or granite, present in under tremendous pressure.

La Grange St., Christian Bldg., Church
GRAND RAPIDS, MICH.
Roofed with Reynolds Asphalt
Shingles

Four building materials are found in asphalt shingles: asphalt, sand, gravel, and glass. These ingredients are put into a mold and pressed into a shingle. The shingle is then covered with a layer of finely crushed slate or granite. This makes the shingle fire-resisting and durable.

HOW CONSTANTINE WON HIS OWN PEOPLE

IT has not been long since the Greeks regarded the man who has just mounted the throne as unfit to rule the kingdom. On more than one occasion he has heard the mob demand his eldest son, Prince George, as ruler, and suggest that the father and grandfather make way for him. He has had the Military League of his own army against him to the extent of mutiny. The Parliament has criticized him bitterly and the newspapers have denounced him for political reasons. But that is all past now. Greeks at home and Greeks abroad regard him as the liberator of their country from the thrall of the Turks and welcome him not only as their king, but as commander-in-chief of the army that won back some of the glory that was Greece's in ancient times. The New York Sun tells the story of his career:

Konstantinos, Duke of Sparta, eldest son of King George, was born at Athens August 2, 1868. He was educated by tutors who were brought from Leipzig. One of the accusations against him has been that he has always shown the effects of German influence. Tall, soldierly in appearance, quiet, reserved almost to the point of shyness in the ordinary court functions, he has always made every endeavor to avoid the crowds. He is a soldier, a soldier of caution rather than dash; a Moreau rather than a Ney.

King Constantine is a brother-in-law of the German Emperor, altho it is said the brothers-in-law have not spoken to each other for six years. He was married at Athens October 27, 1889, to the Princess Sophia of Prussia, sister of Emperor William, and his trouble with the German Emperor started when the Princess became a member of the Orthodox Greek Church. The Kaiser is a Lutheran. He objected to the change of faith.

There are five children by the marriage—Prince George, now the Prince Royal, was born July 19, 1890, and was with his royal father at the front; Prince Alexander, born in 1893; Princess Helene, born in 1896; Prince Paul, born in 1901, and the Princess Irene, who is 9 years old.

King Constantine undoubtedly did much to keep his father on the throne so many years. There had been threats against King George, but none of them very seriously bothered the monarch. He declared that he would not abdicate. They could put him out on a pension. For years he preferred the delights of Paris and the baths of France to his own kingdom.

Constantine always acted as regent. He administered with all the firmness that an exceedingly jealous kingdom would permit. How jealous the Greeks may be was shown in their attitude after the Cretan fiasco, when the present King was accused of involving his country unnecessarily.

The most recent trouble of King Constantine was the little revolution of Lieutenant Typaldos in October, 1909, when the ardor of some of the members of the Military League got the better of them.

This was driven out of mind when the

That completed the triumph of Constantine. If King George had lived it is doubted whether or not he would have remained on the throne to celebrate his golden jubilee.

COLONEL ROOSEVELT has always been as versatile in athletics as in almost anything else that ever occupied his attention. In a number of instances his methods of exercise have caused conventional-minded persons to take him for an eccentric, and much oftener his set-toes with professionals have resulted in broken ribs, bruises or muscular strains for himself and his opponents. When obliged to live in cities, he found that boxing and wrestling enabled him to get a good deal of exercise in condensed and attractive form, and when he became Governor of New York, the champion middleweight wrestler of America happened to be in Albany, and the Colonel had him come around three or four afternoons a week. A wrestling-mat was needed, and Colonel Roosevelt promptly bought one. When the bill was presented to the Comptroller for auditing, that official refused to approve it, explaining that the Governor could have a billiard-table, billiards being recognized as a proper Gubernatorial amusement, but that a wrestling-mat symbolized something unusual and unheard of and could not be permitted. The wrestling champion proved to be too much for the Governor, but he always took care of the Colonel as well as himself. When the professional wrestler left, an oarsman took his place. The oarsman could not take care of himself, much less save Colonel Roosevelt from the hard jolts, and by the end of the second afternoon one of the oarsman's long ribs

An Invisible Policeman Guards Your Fingers From Ink Smears

HIS name is *Capillary Attraction*. And he is on "fixed post" at the lower end of the feed tube in every Parker Lucky Curve Fountain Pen.

There he stands and arrests any ink drops that would like to get out around the writing end of the pen to smear your fingers when you remove the cap to write.

For when ink drops stay up in the narrow feed tube of a fountain pen in your pocket, there's trouble. The heat of your body—98 degrees—heats the air in the pen (see X-Ray diagram), and this hot air expands and pushes up the feed tube to escape, pushing those ink drops up and out around the writing end of the pen.

Now the Parker feed tube is curved and touches the barrel wall. See X-Ray. This touch creates Capillary Attraction—which is that curious natural force that makes sponges absorb, blotters take up ink, etc.)—and the instant you turn your Parker point up, Capillary Attraction just yanks down any ink drops that try to stay in the feed tube, and drops them down into the ink below.

Result—empty feed tube for the air to expand up into. This curved feed tube is the famous Parker Lucky Curve.

PARKER FOUNTAIN PEN

Besides not leaking and smearing, Parkers write smooth as polished marble, because their 14K gold ribs have tips of hardest iridium. The ingenious Parker Spear Head Ink Controller insures even, regular flow—no hitching or skipping. The new Parker Disappearing Clip clings close to any pocket, but smoothly reappears when you remove pen cap. Price 25c extra on any standard Parker.

Standard Style Parker Lucky Curve Fountain Pens \$2, \$2.50, \$3, \$4, \$5, \$10 and up, according to size and decoration.

Parker Jack Knife Safety Pen is built so ink-tight that you can carry it anywhere without its leaking. Handy and small. Prices \$2.50, \$3, \$4, \$5 and up.

Get a Parker from your dealer on 10 days' trial. If you're not pleased, he'll refund any time within ten days of purchase. If he doesn't sell Parkers, send us his name and we'll mail you handsome, complete catalog.

had been caved in, and two of the Colonel's short ribs were badly damaged and his left shoulder-blade shoved so nearly out of place that it creaked. All these facts are found in "A Possible Autobiography," published serially in *The Outlook*. Here is the ex-President's own account of some of his experiences with professional prize-fighters:

When I was in the Legislature and was working very hard, with little chance of getting out of doors, all the real exercise I got was boxing and wrestling. A young fellow turned up who was a second-rate prize-fighter, the son of one of my old boxing teachers. For several weeks I had him come round to my rooms in the morning to put on the gloves with me for half an hour. Then he suddenly stopt, and some days later I received a letter of "wo" from him from the jail. I found that he was by profession a burglar, and merely followed boxing as the amusement of his lighter moments, or when business was slack.

Naturally, being fond of boxing, I grew to know a good many prize-fighters, and to most of those I knew I grew genuinely attached. I have never been able to sympathize with the outcry against prize-fighters. The only objection I have to the prize-ring is the crookedness that has attended its commercial development. Outside of this I regard boxing, whether professional or amateur, as a first-class sport, and I do not regard it as brutalizing. Of course matches can be conducted under conditions that make them brutalizing. But this is true of football games and of most other rough and vigorous sports. Most certainly prize-fighting is not half as brutalizing or demoralizing as many forms of big business and of the legal work carried on in connection with big business. Powerful, vigorous men of strong animal development must have some way in which their animal spirits can find vent. When I was Police Commissioner I found (and Jacob Riis will back me up in this) that the establishment of a boxing club in a tough neighborhood always tended to do away with knifing and gun-fighting among the young fellows who would otherwise have been in murderous gangs. Many of these young fellows were not naturally criminals at all, but they had to have some outlet for their activities. In the same way I have always regarded boxing as a first-class sport to encourage in the Young Men's Christian Association. I do not like to see young Christians with shoulders that slope like a champagne bottle. Of course boxing should be encouraged in the Army and Navy. I was first drawn to two nasal chaplains, Fathers Chidwick and Henry, by finding that each of them had brought half a dozen sets of boxing-gloves and encouraged their crews in boxing.

When I was Police Commissioner, I heartily approved the effort to get boxing clubs started in New York on a clean basis. Later I was reluctantly obliged to come to the conclusion that the prize-ring had become hopelessly debased and demoralized, and as Governor I aided in the passage of and signed the bill putting a stop to professional boxing for money. This was because some of the prize-fighters themselves were crooked, while the crowd of hangers-on who attended and made up and propped

Smoke Five With Me

Here is the sweetest smoke that I ever knew, and I've smoked for 40 years.

The tobacco grows in a mountainous district of Cuba. A resident expert—a rare connoisseur—picks it out for me. I have it made up for my private use as a Panatela, the size of this picture. It bears my own monogram band.

The aroma is rare, mild, sweet and exquisite. I have never found anything like it in a ready-made cigar.

I have long supplied these cigars to my friends, and the circle of users has grown into thousands. Now it occurs to me that many others would be glad to share this discovery. So I have decided to let some of them do it. Not for profit so much as a hobby.

I will supply a few men who love good Havanas, and who want something exceptional, at close to my cost. I send them by Parcel Post.

If you crave big, heavy, strong cigars, these of mine won't please you. But men who enjoy something mild and exquisite can find nothing like these, I think.

Five Cigars Free

I will mail you five samples free of charge. Just send me 10 cents to partly cover expenses and I will supply the cigars. I only ask this 10 cents to pick out the right sort of people.

If you are delighted, then order as wanted. The price is \$6 per hundred—\$2.00 for 40—all charges paid. If you wish, I will open a charge account. Write now for the five cigars.

METAL SHELTER CO.

21-22 Water Street, St. Paul, Minn. Exported Metal Shelters Co., 200 Western Bldg., Winnipeg, Canada

by the matches had placed the whole business on a basis of commercialism and brutality that was intolerable. I shall always maintain that boxing contests themselves make good, healthy sport. It is idle to compare them with bull-fighting; the torture and death of the wretched horses in bull-fighting is enough of itself to blast the sport, no matter how great the skill and prowess shown by the bull-fighters. Any sport in which the death and torture of animals is made to furnish pleasure to the spectators is debasing. There should always be the opportunity provided in a glove fight or bare-knuckle fight to stop it when one competitor is hopelessly outclassed or too badly hammered. But the men who take part in these fights are hard as nails, and it is not worth while to feel sentimental about their receiving punishment which as a matter of fact they do not mind. Of course the men who look on ought to be able to stand up with the gloves, or without them, themselves; I have scant use for the type of sportsmanship which consists merely in looking on at the feats of some one else.

Some, as good citizens as I know, are or were prize-fighters. Take Mike Donovan, of New York. He and his family represent a type of American citizenship of which we have a right to be proud. Mike is a devoted temperance man, and can be relied upon for every movement in the interest of good citizenship. I was first intimately thrown with him when I was Police Commissioner. One evening he and I—both in dress suits—attended a temperance meeting of Catholic societies. It culminated in a lively set-to between myself and a Tammany Senator, who was a very good fellow, but whose ideas of temperance differed radically from mine, and, as the event proved, from those of the majority of the meeting. Mike evidently regarded himself as my backer—he was sitting on the platform beside me—and I think felt as pleased and interested as if the set-to had been physical instead of merely verbal. Afterward I grew to know him well, both while I was Governor and while I was President, and many a time he came on and boxed with me.

Battling Nelson was another staunch friend, and he and I think alike on most questions of political and industrial life; altho he once expressed to me some commiseration because, as President, I did not get anything like the money return for my services that he aggregated during the same term of years in the ring. Bob Fitzsimmons was another good friend of mine. He has never forgotten his early skill as a blacksmith, and among the things that I value and always keep in use is a penholder made by Bob out of a horseshoe, with an inscription saying that it is "Made for and presented to President Theodore Roosevelt by his friend and admirer, Robert Fitzsimmons." I have for a long time had the friendship of John L. Sullivan, than whom in his prime no better man ever stepped into the ring. He is now a Massachusetts farmer. John used occasionally to visit me at the White House, his advent always causing a distinct flutter among the waiting Senators and Congressmen. When I went to Africa he presented me with a gold-mounted rabbit's foot for luck. I carried it through my African trip; and I certainly had good luck.

Why Not Enjoy Maximum Success in Manufacturing?

The wide difference between *mere* success and *maximum* success in manufacturing is clearly illustrated in a recent analysis made by hard-headed Indianapolis business men.

They show that there are *six* essentials in *successful* manufacturing. They demonstrate that the manufacturer who, in his *combination* of these essentials, has 100% efficiency in each essential, achieves *maximum* success.

They show that in the Indianapolis "combination" of essentials, each essential is most nearly 100% efficient. They are ready to offer proof.

These Indianapolis business men know that the factory that would *thrive best* in Indianapolis *belongs* in Indianapolis. They believe *you* are interested in getting the *greatest* possible efficiency in *each* of the six essentials. They say *this* to you:

"For the factory that belongs in Indianapolis we have a proposal that will bring that factory to Indianapolis."

Let them place in your hands their explanation of the "Six Essentials of Successful Manufacturing"—together with any other facts you may desire. A request from you will bring it, with their compliments.

CHANCE'S CHANCES

NO baseball manager will be watched more closely this year than Frank Chance, the new manager of the New York Americans. He is already famous as a manager and player—else he would not receive what is said to be a salary of \$25,000 for a season's work—but if he succeeds in pulling the New Yorks out of the second division this year, he will be hailed as one of the ablest baseball generals in the history of the game. Grantland Rice, one of New York's best known sporting writers, predicts that Chance's team will be about third from the bottom at the wind-up, but it seems that a majority of baseball writers have better hopes for the former Hilltops. Mr. Rice does not, however, think that the failure of the team to climb into the first division would necessarily indicate that Chance is not a great manager. Harry F. Schumacher, of the New York *Evening Mail*, the same paper that Mr. Rice writes for, takes a more rosy view of the New Yorks' future. He thinks that if Hal Chase can learn to play second base as well as he used to play first, there is no reason to doubt that the team will be near the top of the list at the finish. Mr. Schumacher sizes up the New Yorks in a special article for the *Boston Traveler*. We read:

On Chase's success or failure will pivot the fate of his club. Barring that one position, second base, the Chance outfit looks stronger and faster than any New York American league team since George Stallings landed the Hilltoppers in second place back in 1910; in several respects it is a better club. The entire infield has been made over since then; three members of the quartet are new, or playing new positions, this year. And both infield substitutes are players who were in the minor leagues most or all of last season. The outfield—with Birdie Cree, Harry Wolter, and Bert Daniels and Jack Lelivelt doing bench duty—is about the same, the Lelivelt was with the Rochester International leaguers until last fall. . . .

The pitching staff bears some slight resemblance to the 1910 hurling corps, with Russ Ford and Jack Warhop supplemented by Ray Fisher, Ray Caldwell, and George McConnell of the veteran brigade, and Ray Keating, brought up from Lawrence, Mass., of the New England league toward the close of the 1912 race; Al (Heinie) Shultz, late of Savannah, and probably George Davis, the Williams College phenom. This year's sharpshooting brigade lacks a southpaw of the Jim Vaughn class, but Shultz is a young bird of rare promise, with tremendous speed, fine curves, and splendid control. The box corps, with spitball pitchers predominating, has only to work up to spring training form, however, to earn even higher rating than that accorded the great staff that labored three years ago.

The catching staff, as a staff, is not so well rounded as when Stallings had the club, and there may be trouble there, should anything happen to Big Edweeney. The Cook County giant is in better form

The Apostle's Creed

and The New Testament

A new book by JOHANNES KUNZE, authorized translation from the German by GEORGE WILLIAM GILBERT, M.A.

"In this book we are given a history of the Apostle's Creed, followed by a defense of this Creed from the attacks of those who do not believe it accords with the highest interpretation of the scriptures. The author argues that the Creed is, in essence, and particularly in its origin, anterior to the New Testament, and evolved by the ecclesiastical necessities of the pre-Pauline apostolic mission to the heathen. The argument is developed carefully and in language of much simplicity."—*Protestant Post*.

Cloth, 75c, net; by mail, 82c.

FUNK & WAGNALLS COMPANY, New York

dition now than ever before at the start of a season. He is faster, hits better than he usually does at this time of the year, and his throwing to the bases has been uncommonly strong and accurate. Bob Williams and Charley Sterrett, his understudies, are not in the same class, however. They are good second-string men, but lacking in more than one of the many little things that are essential to catching greatness. Sweeney, however, expects to do practically all his club's backstopping this season.

Cree and Wolter, both forced out of the game last season with broken bones—Cree's wrist was broken by a pitched ball and Wolter fractured a leg sliding into a base—are thoroughly sound again. Cree's wrist has mended perfectly and still works smoothly. Neither his throwing nor his batting seems to have been affected in the least. Wolter's ankle was badly wrenched when his shin bone was snapped and that injury has caused him more real bother than the break. During the entire training siege he had the ankle wrapt in a Gibney brace for each workout. It slowed him up slightly, but so strengthened the joint that he expects to start the season practically as "good as new." Cree and Wolter are both splendid fielders, clever base runners, and heavy hitters. Both are normally .300 men, with Cree very apt to exceed .340.

Chance is not so well satisfied with the prospect for filling the third outfield position. Bert Daniels is clever in many respects, but he is declared clumsy when it comes to running back for long drives or throwing to the home plate. To conclude:

Roy Hartzell, at third, is the only survivor of last year's infield, or the only one, rather, who will linger in the same position. Roy went to Bermuda with Chance and had two weeks of hard work under his belt when the rest of the infielders arrived. Hartzell never has been and does not threaten now to become a brilliant third sacker. But he is hitting as well as he ever did, which means that he should be good for .310 or thereabouts and his legs are in far better shape. Constant pounding on the thinly covered rock on the Hilltop threatened to make a cripple of Hartzell last summer, but six weeks on the soft, yielding turf at Hamilton have restored the Hartzellian props to all their former strength and agility. Roy always has been a steady, constant fielder.

Derriek, one-time Philadelphia Athletic, is probably the most improved ball player on the entire squad. He is not a great hitter; probably never will be. But under Chance's coaching he has been cured of several faults in his position at the plate and his swing at the ball. Derriek is by far the best fielding shortstop the Yankees have had since Kid Elberfeld was in his prime. Long, rangy, loose-jointed, armed with unusually long arms and big, muscular hands, Derriek gets in front of everything and hauls down most everything he reaches. He should be a valuable man for the Yanks this season.

Chance, at first, has been a revelation. He stated, just after he joined the club, that he would play first base—if his legs

A Great Little Cleaner

Here's the youngest member of the celebrated Western-Electric-Sturtevant family of vacuum cleaners. It weighs only 13 pounds, and for the small home or bungalow or apartment it is the machine to buy. It costs only \$47.50.

Western-Electric Sturtevant Vacuum Cleaner

Such a combination of low cost and high quality makes easy the problem of selecting your cleaner. It is now no longer a luxury, but a household necessity as essential to cleanliness and health in the home as is sanitary plumbing.

A complete line of cleaners, in both portable and stationary types, ranging from \$47.50 to \$400. If your dealer cannot show them, write to us for booklet No. 6-D, and let us arrange for a demonstration.

HENRY F. MICHELL CO., 519 Market St., Philadelphia

come of a craving on the part of the modern young girl for adventure. These adventures are naturally surrounded with grave dangers for those who take part in them. But more often than not the missing are discovered and placed in the care of their relatives. In order to avoid very just admonition, the culprit often resorts to inventing an "abductor."

Neither is this an entirely modern feature.

Early in the eighteenth century a girl named Elizabeth Canning disappeared from her home and evaded all efforts to discover her. She returned after a month. Her story was that the gipsies had stolen her. For this certain gipsies in the district were brought to trial, and two of them were sentenced to death. After further investigations pending the execution they were reprieved and Elizabeth herself was charged with perjury. She was found guilty and sentenced to transportation for a period of seven years.

It was suggested then that the girl fabricated the story in order to avert punishment. There seems little doubt that neurotic young girls of to-day who leave home in a state of hysteria resort to a similar plan to avert parental wrath.

Too much Puritanism on the part of their parents drives many boys and girls from home. Frequently nagging is also responsible. To proceed:

A few years ago a young man of nineteen was reported to the police as missing from his home. Search was made for him and the matter was placed in the hands of the police. Finally he was discovered among the queue waiting outside a theater. The young man was quite frank in his explanation to the police. "My people," he said, "object to theaters, to music-halls, and to any form of social entertainment. I could stand it no longer." Since leaving home he had been to the theater every night.

The middle and upper classes figure largely in the list of the missing. The number of men and women in good social positions, trusted and loved by friends and relatives, apparently sound financially, who cut themselves adrift is remarkable. The fact that they leave broken hearts at home, cause endless hours of intense anxiety to friends, is left unconsidered in the sudden wave of circumstance which prompts them to walk out into a new world. Of the 3,260 who have gone never to return many must have committed suicide; possibly some have been the victims of undetected crimes; but there must be many still alive, safe in hiding among the mass of humanity, the greatest hiding-place possible.

An interesting case of past years in which boredom with the conventionalities of society caused a man to vanish was that of Waring, who figured in a poem of Robert Browning, entitled "What's Become of Waring?" Waring was a great figure in the social life of the time. One day he was absent from his usual haunts. He was never heard of nor seen by friends for some twenty years. Then a friend discovered him by chance abroad, and Waring explained that he had simply become sick of death of the restrictions which social etiquette and formality placed upon his movements.

Modern ideas in building construction find their best, their most artistic, their most economical expression in—

Utility Wall Board

For office interiors it is the most sanitary and satisfactory wall and ceiling that can be built.

It takes the place of lath and plaster and is cheaper than the old fashioned lath and plaster wall.

It does away entirely with the muss attendant on wall building and once up, set by either novice or expert, you are done forever with cracked walls, falling plaster, unsightly stains, etc.

It will not warp, crack, nor shrink, and is sound and moisture-proof; fire resisting and as durable as the building itself.

Successfully used in all types of building construction. Hundreds of modern homes are walled and ceiled entirely with Utility Wall Board.

It may be decorated in any way you would treat a plaster wall.

Write for sample and booklet.

THE HEPPES COMPANY
4507 Fillmore St. Chicago, Ill.

Silver City New Mexico

TIME is the determining factor of Tuberculosis. The more advanced the case the longer it takes for effective treatment and the less chance there is of a permanent cure. Many think that because the weather is warm, it will do no harm to "wait until winter" to get away for treatment, not appreciating that every day's delay lessens their chance of recovery.

Warm weather does not arrest Tuberculosis!

The summer climate of Silver City is favorable for the treatment of tuberculosis not because it is warm but because of the high altitude, the wonderful outdoor sunlight and the pure, dry air.

A wide open, unobstructed, protecting landscape. Silver City is a sunny summer resort that is never overwarm during the day and that is sweetly cool at night.

The U. S. Government chose this section for its 41st 50th Anniversary because the winter and summer climate here has been ideal for the treatment of tuberculosis. The Government realized that an effective treatment requires more than one season, and that a patient should have the advantage of the most favorable climate all during treatment, without having to change locations.

The high altitude here is also of proven advantage in the treatment of tuberculosis.

The environment here is beautiful—no arid desert, the ground is wooded near town and heavily wooded back towards the mountains. Beautiful scenery, good roads. Silver City is a modern town of 4,000 with telephones, electric lights, good water, etc. Reached via Santa Fe or Rock Island and Southern Pacific.

Plan your affairs now so that you can come here this summer and receive the benefits of this wonderful climate and the splendidly equipped sanatorium.

DOCTORS: The question of climate is of great importance—you do not wish to send patients to distant parts of the world, results can be obtained here. Let us submit evidence by number of your own physicians about the unquestionable advantages of the climate here.

Secretary, 401 Chamber of Commerce, Silver City, New Mexico

\$100—\$65=\$35
That's What You Save

It will pay you big to investigate the Pittsburgh Visible before buying a typewriter. \$35 is a good piece of money to save on a single purchase. Yet this machine at \$65 actually means one-third less in cost than typewriters not one whit more efficient, durable or finer appearing.

We sell mostly by mail. That means no salesman's salaries—small branch-office expense. Our overhead expenses are small and our organization of highest efficiency. Is there small wonder, then, that we can offer the

Pittsburgh Visible Typewriter

(A Standard Machine for Twenty Years)

at such a modest price? We also have a unique co-operative selling plan, by which you can obtain this machine in your home and at the same time save money. Made with all the latest improvements, including back spacer, tabulator, two-color ribbon, perfect touch, quick action, absolute alignment, universal keyboard, and writing always visible.

Detachable Type Basket

Entire keyboard can be removed as a unit. This affords quick cleaning of type and keys; also best way of getting at working parts of the machine. Have \$10 by mailing the coupon now.

PITTSBURGH VISIBLE TYPEWRITER CO.,
Dept. 77, Union Bank Building, Pittsburgh, Pa.

Here is an ideal investment for savings or idle funds—

SIX PER CENT CERTIFICATES

Payable on demand at any time after two years.

And amply safeguarded by first mortgages on improved real estate, deposited with one of the strong trust companies of Baltimore.

These certificates are issued in even multiples of \$100.

Interest checks are mailed regularly every six months.

In over 18 years there has never been a day's delay in the mailing of these interest checks or in repayment of principal.

Write for the Six Per Cent book—it is interesting.

The Calvert Mortgage Company
1045 Calvert Bldg., Baltimore, Md.

Another celebrated disappearance of the past was that of Mr. Jasper Pyne, M. P. for West Waterford, who took a ticket for Ireland and was never seen or heard of again. The disappearance of Grimaldi's brother was equally mysterious. Grimaldi was playing at Drury Lane in the year 1803. His brother called for him at the stage door and together they went to the greenroom. Grimaldi left him there for a moment to talk to some friends. When he returned his brother had gone. Grimaldi never saw him again.

As the years have passed it has become a much more difficult task for people to cut themselves entirely adrift from the circle in which they have lived. Wireless telegraphy, better police organization, and, above all, the newspaper pictures have made the path of those who are anxious to disappear no easy matter. More people are discovered to-day in their efforts to vanish than was the case a few years ago.

Times of great disaster afford an exceptional opportunity for the person with the ambition to start life all over again. Many more people "went down" in the *Titanic* than were on board.

THE NEW MANAGER OF THE NAVY

JOSEPHUS DANIELS, the man who will run our battle-ship department for the next four years, is more than an ordinary popular politician. He is one of the hustling, up-to-date men who are helping the South to come into her own; and the reactionaries down in North Carolina—and proportionately there seem to be as many of them in the Tar Heel State as in Pennsylvania or Massachusetts—have never been able to put a bridle on him. And while the Secretary of the Navy is in Washington his newspapers keep on preaching the gospel of progress. The *New York Herald* gives us this brief but felicitous sketch of his personality:

He does not smoke, drink, chew, nor swear.

He owns three successful newspapers.

He wears white socks the year round.

He wears a crash suit and "little neck" collars in the summer time.

He is infatuated with hard work.

He has a charming wife and four fine, healthy boys.

He hasn't much money and doesn't care.

He is a veteran member of the National Democratic Committee.

He is one of the best liked men in the Cabinet.

Walk right up and slap him on the back. He is not a bit warlike despite his belligerent title.

He will be fifty-one years old on May 18, and it's been a battle with him the greater part of the journey. There were no silver spoons in the Daniels family when Josephus arrived. His parents were in a position to give him a name, and that's about all; but it must be admitted they hunted around until they found a fancy one. No danger of any one forgetting such an imposing front name. You're not going to meet persons scratching their heads in an effort to remember who is Secretary of the Navy. His name stands out in President Wilson's

Flake Form of Graphite

The pure product as mined, and combined in Dixon's Greases, is wonderfully soft, smooth and oily.

Teddy Tetzlaff

DIXON'S Graphite Greases

have won the unsolicited praise of the "Speed Kings of Motordom." Teddy Tetzlaff, holder of the world's record for road racing, says:

"I would rather pay \$5 per pound for Dixon's Automobile Lubricants than use any other as a gift."

Try DIXON'S GRAPHITE GREASE No. 677 in your transmission and differential. Will make them run quietly.

Send name and model of car for free booklet, "Lubricating the Motor," No. 247.

My 3 References Are.....

Administration like the Adam's apple in a giraffe.

The name Wilson has played a prominent part in his busy career. He was born in Washington, N. C., but not long after the family moved to Wilson, in the same State. Newspapers always had a powerful fascination for him. While he was helping himself to the "three R's," he got the idea that it would be a grand little thing to own the most powerful paper in his native State. The schoolroom door had not closed behind him before he laid the foundation for his goal by starting an amateur newspaper. He was only eighteen at the time he began molding public opinion. He studied law and was admitted to the Bar, but never had any idea of abandoning the route he had mapped out for himself.

His progress in the newspaper business was rapid. He bought the *Raleigh Chronicle* in 1885 and took the opposite end of every argument advanced by *The News and Observer*, a rival newspaper. The fight was red hot while it lasted and ended with Mr. Daniels taking over his competitor and consolidating both sheets under the name of *The News and Observer*. He worked fifteen to twenty hours a day to make that paper a success. He installed modern machinery as fast as his limited capital would permit, adopted modern methods, and ran the circulation up until the newspaper goal he set out for had been attained. It is one of the most powerful papers south of the Mason and Dixon line, and he is still giving it all the attention he can spare from his public duties.

Mr. Daniels is of the likable, old-fashioned, easy-going type, but there is no use trying to bluff him. He won't stand for it. Beneath his quiet, half-serious, half-smiling manner, there is something that warns you that you had better play fair with him.

He is closer to William Jennings Bryan than any man in this country. Like many other Democrats he got writer's cramp putting crosses under the star for the Lincoln statesman, but, unlike fair-weather Democrats, he did not get peevish when his party failed to win in the nation. The fact that the Democratic entry in the Presidential race didn't get in until three or four days after election didn't freeze Josephus one bit.

Mr. Daniels does not take up much room. He is a man of medium height, with a shock of black hair that is just beginning to fade about the edges. His face is deeply lined and you are sure he is severe until he smiles. Then you wonder what made you think so. He is a fast talker—so fast that he would have a dictagraph yelling for help in a few seconds.

He has never shown any inclination to grab sartorial honors.

What the "best dressers are wearing" doesn't bother him.

He dresses for comfort.

That's Josephus Daniels.

Shakes and Shake-downs.—NEW PATIENT—"Doctor, what ails me? I'm shaking like a leaf."

DOCTOR—"Malaria. Take whisky and quinine. What's your business?"

NEW PATIENT—"I'm a police captain."

DOCTOR—"Never mind the whisky and quinine. Take a trip to Europe."—*Puck*.

Corn Chicanery

Trying to Cheat One's Feet

Thousands of people pare their corns—merely take off the top layer.

Thousands of others use liquids and plasters, just for brief effect.

Yet every corn can be removed in two days. Every corn pain can be instantly ended.

Anyone can do this in a scientific way. It is being done on a million corns a month.

The entire corn comes out, root, callous, everything. And without any pain or soreness. You simply apply a Blue-jay plaster and then forget the corn.

You are cheating yourself when you use makeshifts in these modern days. The use of Blue-jay ends the corn.

A in the picture is the soft B & B wax. It loosens the corn.
B stops the pain and keeps the wax from spreading.
C wraps around the toe. It is narrowed to be comfortable.
D is rubber adhesive to fasten the plaster on.

Blue-jay Corn Plasters

Sold by Druggists—15c and 25c per package
Sample Mailed Free. Also Blue-jay Bunion Plasters.

Prevented—Stopped

MOTHERSILL'S, after thorough tests, is now officially adopted by practically all the Great Lakes and New York Steamship Companies running south, and many Transatlantic lines.

Four years ago Mr. Mothersill gave a personal demonstration of his remedy on the English Channel, Irish Sea, and the Baltic, and received unqualified endorsement from leading papers and such people as Bishop Taylor Smith, Lord Northcliffe, and hosts of doctors, bankers and professional men. Letters from personages of international renown—people we all know—together with much valuable information are contained in an attractive booklet, which will be sent free upon receipt of your name and address.

Mothersill's is guaranteed not to contain cocaine, morphine, opium, chloral, or any coal-tar products. 50 cent box is sufficient for twenty-four hours. \$1.00 box for a Transatlantic voyage. Your druggist keeps Mothersill's or will obtain it for you from his wholesaler. If you have any trouble getting the genuine, send direct to the Mothersill Remedy Co., 407 Scherer Bldg., Detroit, Mich. Also at 19 St. Bride St., London; Montreal, New York, Paris, Milan, Hamburg.

THE SPICE OF LIFE

So It Seems.—STELLA—"No man is indispensable."

BELLA—"But some man is."—*New York Sun.*

Refuted.—"There's always room at the top," said the Sphinx.

"Take a look at us and guess again," replied the Pyramids.—*Cincinnati Enquirer.*

No Facilities.—"They say that Cupid strikes the match that sets the world aglow. But where does Cupid strike the match?—that's what I'd like to know."—*Cornell Widow.*

Variable.—OLD LADY—"How old are you, little boy?"

BOBBIE—"I'm under five years on the street-cars, and over sixteen when I go to the movies."—*Puck.*

Poor Girl.—"May I tell you the old, old story?" he asked.

She looked down, blushed, and nodded her assent.

So he told her for the twenty-seventh time how he once won the game for Yale.—*Brooklyn Life.*

Revenge in Art.—"That," said the futurist, pointing proudly to the canvas with which he had just finished, "is my attempt to interpret the infinite."

"What did the infinite ever do to you?" asked the innocent bystander.—*Chicago Record-Herald.*

Only Dared Think It.—"Father," said a little boy, "had Solomon seven hundred wives?"

"I believe so, my son," said the father. "Well, father, was he the man who said, 'Give me liberty or give me death'?"—*Town Topics.*

Brevity.—BARBER (beginning the haircut)—"Have you heard the story about the guy that—(resuming business)—want it short, sir?"

CUSTOMER (a tired editor)—"Yes; a mere synopsis will do!"—*Judge.*

A Guess.—They were newsboys and had strayed into the Art Museum. At the moment they were standing before the Winged Victory of Samothrace.

"Say, Bill, what's that?" asked one of them in an awed whisper.

"Aw, I dunno," replied the other. "Some saint wid his block knocked off."—*Christian Register.*

A Non-Resident.—An English tourist was sightseeing in Ireland and the guide had pointed out the Devil's Gap, the Devil's Peak, and the Devil's Leap to him. "Pat," he said (all English tourists call Irish peasants "Pat," just as they call little boys "Tommy"), "the devil seems to have a great deal of property in this district!"

"He has, sir," replied the guide, "but, sure, he's like all the landlords—he lives in England!"—*Manchester Guardian.*

Misplaced.—FIRST CINDER—"Why so angry?"

SECOND CINDER—"I've been wasting time in a glass eye."—*New York Sun*.

Ambiguous.—Grafton Hall, the seminary for girls, is without heat or light. Hundreds of chickens have been drowned by the flood.—*Milwaukee Wisconsin*.

Superfluous.—LOVER—"Please send a large bunch of roses to this address, and charge it to me."

FLORIST—"Yes, sir; and your name?"

LOVER—"Oh, never mind the name. She'll know."—*Judge*.

Doctor's Orders.—"My husband is just getting over a spell of sickness and I want to buy him a shirt," said Mrs. Binks.

"Yes, mam," replied the clerk. "Would you want something in a stiff bosom?"

"No, sir," said Mrs. Binks. "The doctor says he must avoid anything with starch in it."—*Cincinnati Enquirer*.

They're Hanging of the Cubists in the Morning

"What are the Cubists painting for?" said Critics-on-Parade.

"Can't make it out, can't make it out," the Art Reporter said.

"What makes you look so white, so white?" said Critics-on-Parade.

"I'm dreading what I've got to watch," the Art Reporter said:

For they're hanging of the Cubists, you can see the colors gay,

Green pyramids and yellow squares, they're hanging them to-day.

'Twould make you burst your buttons off, the things the people say.

And they're hanging of the Cubists in the morning.

"What makes the rear rank breathe so hard," said Critics-on-Parade.

"He thinks they're sold! He thinks they're sold," the Art Reporter said.

"What made that front-rank man fall down?" said Critics-on-Parade.

"That purple sun, that purple sun," the Art Reporter said.

They are hanging of the Cubists, and the crowds are marching round,

They've halted by what seems to be a Brainstorm done in brown;

And they'll swear in half a minute that they've hung it upside down.

Oh, they're hanging of the Cubists in the morning!

"What's that so black against the sun?" said Critics-on-Parade.

"They say it is a flight of stairs," the Art Reporter said.

"What's all that wreckage overhead?" said Critics-on-Parade.

"A 'cubic' nude is passing down," the Art Reporter said.

For they've finished with the Cubists; you can feel your hair's turned gray;

The visitors are in column, and they're marching them away.

Ho! the nervous ones are shaking, and they'll want their beer to-day.

After viewing of the Cubists in the morning!

—Edwin W. Goodwin, in *The Independent*.

John Burroughs calls it "the divine abyss." John Muir speaks of "wildness so Godful, cosmic, primeval." Joaquin Miller says "color is king here."

You and I, after seeing the Grand Canyon of Arizona face to face, will be glad that this titan of chasms is in our own land, U. S. A.—rather proud, in fact, and rightly so.

That popular slogan, "See America," necessarily includes Arizona's world-wonder. But the Grand Canyon is more than a spectacle, more than a vision.

It is a place where you can spend days and even weeks, muleback, horseback or afoot. You may join the usual sightseeing parties, a la Cook, or go alone on special trips. You may hit the trail to the depths and back. You may stay down in the Canyon awhile and follow the trails along the inner plateau. You may traverse the rim boulevard, in coaches fit for a king. You may leisurely follow the rim bridle paths, on foot or in the saddle. You may canter briskly through the fragrant pines of Tusayan forest.

The air is like wine, with this difference: that the morning after is just as delightful as the day before. At the Canyon top you are nearly a mile and a half above sea level. The Colorado River is a mile below you. Between the two is found as many climates as a woman has moods, except that there are no tears—the atmosphere is so dry.

Here, O tired traveler, you have rest, recreation and earth's most startling scenic spectacle.

And the Indians.

And John Hance.

And Fred Harvey's El Tovar Hotel.

Speaking of Indians—this is the very heart of the red man's country. One favorite camping trip is to Cataract Canyon, a tributary of the Grand Canyon, where the Havasupai Indians live, far down beneath earth's pie-crust. Fifty miles distant from El Tovar is what the guide books say. Centuries back, in race evolution, is what the ethnologists say, though the Supais slowly are being civilized. You may meet Supai children named Mary Washington and Patrick Henry, who wear store clothes and speak English. Yet at heart, they are pagans, like their parents.

It isn't such a hard lot, either, that of being a bronzed pagan in the year nineteen thirteen, if the corn crop is good, if melons and peaches ripen in the sun, and the gods of the underworld rule benevolently!

The Bedouin Navajos often come to the Canyon, also the home-loving Hopis, and an occasional Wallapai. They spin and weave, and make silver ornaments. They live the simple life in primitive hogans and adobes.

In the woods you may come across a bobcat or a deer. Birds are plentiful. The flowers are many and brilliant-hued. Pines and cedars give a touch of green and afford friendly shade.

You may meet John Hance, the pioneer guide, noted for his true stories of things that never happened. Canyon old-timers are in a class by themselves. The wilderness breeds self-reliance, an observing eye, a reflective mind and a quiet humor.

You will enjoy luxurious El Tovar Hotel—chiefly because it is unlike other hotels. Bright Angel Camp annex caters to those who prefer lower priced accommodations. Both are under Harvey management.

The great big Canyon itself, though, is reason enough. One never tires looking at it.

Imagine a gulf of gorgeous color and gigantic forms, a mile deep, two hundred miles long, and thirteen miles wide. At the bottom a river flowing through a narrow granite gorge, itself subordinate to the main chasm. Terrifying? Yes. Lovely? Yes. It grips you, thrills you, calms you as does the sea or the desert.

The trip thither is easily made on the Santa Fe. Merely a short railroad ride from the main transcontinental line at Williams, Arizona. In a Pullman all the way, if you choose. Only seven and a half extra dollars for railroad fare. Stay three days, at least; you ought to stay a week. You will find complete information about sights worth seeing, and the cost, in our illustrated book, "Titan of Chasms." The cover is a four-color reproduction of a painting of the Grand Canyon by W. R. Leigh. The text comprises articles by Major Powell, Chas. F. Lummis and C. A. Higgins. Address your request to W. J. Black, Passenger Traffic Manager, A. T. & S. F. Ry. System, 1064 Railway Exchange, Chicago.

Real Estate

FLORIDA

Lake Wales and Iron Mountain

Subtropical Florida's most picturesque region. Modern hotel open. Splendid hunting, fishing, boating. Are YOUR TAXES Too High?
Farm Mortgages are Tax Exempt in Oklahoma, if held by non-residents. They are 4% interest—collected free. Otherwise 6%. Highest references furnished. Established 1892. Write today for Mortgage List No. 573 and interesting booklet which describes our investment service. OKLAHOMA FARM MORTGAGE CO., Inc., Oklahoma City, U. S. A.

BIOCHEMISTRY

Send stamp for leaflet. Twelve lessons in the science of Biochemistry \$1.00. Address DR. GEO. W. CAREY,
P. O. Box 284,
Los Angeles, Calif.

English Grammar Simplified

"Fernald's Working Grammar of the English Language."

"Is as readable as a novel; there is no mystery about it; it is clear, concise, satisfying."—*San Francisco Bulletin*.

Direct statement—not "inductive method" used.

The purely conventional in grammar laid aside.

The essentials without encumbrance.

English presented as English—a grand world-language.

"Originality of treatment is interesting."—*Buffalo News*.

"Excellent for students out of as well as in school."—*Phila. Inquirer*.

"Practical, simple, comprehensive."—*Prof. Hunt, Princeton University*.

12mo, Cloth, 341 pp. \$1.50, net; by mail, \$1.64

4167, 4169, 4171, 4173, 4175, 4177, 4179, 4181, 4183, 4185, 4187, 4189, 4191, 4193, 4195, 4197, 4199, 4201, 4203, 4205, 4207, 4209, 4211, 4213, 4215, 4217, 4219, 4221, 4223, 4

"The Next Trunk I Buy Will Be An Indestructo"

200,000 travelers have
already proved the
sterling worth of
Indestructo Trunks.

Each one bought an
Indestructo Trunk to
answer some specific
requirement.

Some asked *Service*—"The Most
Miles for the Least Money"—

One Indestructo owner says: "I
have never owned a trunk that gave
me such service—100,000 miles
for \$25"—

Others asked *Convenience*—

A very prominent globe trotter
writes: "My Indestructo is my
portable home—without it, travel
would mean discomfort and incon-
venience."

Some asked *Price*—

Indestructo Trunks are sold from
\$15 to \$100.

Others asked *Protection*—

Your Indestructo Trunk is guaran-
teed to travel without accident for
5 years—or you get a new one free.

Ask all of this, and more, and you
will find the correctness of your de-
cision to buy an Indestructo Trunk.

National Veneer Products Company
804 Beiger Street, Mishawaka, Indiana

CURRENT EVENTS

Foreign

April 5.—Two race-track amphitheatres in
Scotland are set on fire, and one of them de-
stroyed; suffragettes are blamed for the crimes.

April 7.—The Canadian immigration authorities
say that during the fiscal year just ended 345,000
immigrants entered the Dominion, 119,000 of
whom were United States citizens.

April 8.—The first Parliament of China convenes.

April 9.—A Lima dispatch says Peru has recog-
nized the Chinese Republic.

April 10.—Brazil recognizes the Chinese Re-
public.

A Mexico City dispatch says twenty are killed
in the wreck of a trainload of refugees from
rebels in the state of Hidalgo.

Domestic

WASHINGTON

April 4.—Japan, through Ambassador Chinda,
protests to the State Department against the
proposed enactment of an anti-alien land law
by the California Legislature.

April 5.—It is announced that Majority Leader
Underwood will recognize the Progressives in
the House as a minority party.

April 7.—Congress convenes in extra session.
Champ Clark is reelected Speaker of the House.
The Ways and Means Committee introduces
the Underwood Tariff Bill.

Representative Henry introduces a bill pro-
viding for the purchase of homes for American
Ambassadors in thirty-five capitals.

Senator Hitchcock introduces a currency-reform
bill.

The Senate and the House pass a concurrent
resolution inviting the President to address
them in person instead of sending his message
to be read.

April 8.—President Wilson reads his message to
Congress.

The Democrats in the House reject a resolu-
tion providing for open caucuses.

April 9.—The President goes to the capital to
confer with Senate leaders on the Tariff Bill.

Attorney-General McReynolds refuses to sanc-
tion the revised dissolution plans of the Union
Pacific and Southern Pacific railroads.

President Wilson refuses to interfere in the con-
troversy over California's proposed legislation
to prohibit the ownership of lands by aliens.

Senator Chilton introduces a bill to fix a mini-
mum wage for women employed by individuals
or concerns engaged in interstate trade.

A bill to prohibit Senators and Representatives
from accepting employment as counsel for
interstate commerce corporations is introduced
by Senator Borah.

Senator Cummins introduces a bill to prevent
railroads from limiting their liability on lost
shipments.

April 10.—Representative Cary introduces a
bill to appropriate \$100,000,000 to be used in
reconstruction work in the districts laid waste
by the recent floods.

GENERAL

April 4.—The Red Cross Society says that 454
lives were lost, 4,200 homes destroyed, and
40,500 persons were made homeless by the
recent floods in Ohio.

April 5.—William D. Haywood, I. W. W. leader,
recently arrested on a charge of disorderly
conduct in connection with the silk-mill strike
at Paterson, N. J., is released from custody.

April 7.—Governor Major, of Missouri, signs a
"blue-sky" law regulating the organization
of investment companies.

April 8.—The election of United States Senators
by popular vote is made certain by the rati-
fication of the Seventeenth Amendment by
the Connecticut Legislature.

Woman suffrage is defeated in Michigan by a
majority of 41,000.

April 9.—Governor Major, of Missouri, vetoes
a bill that would annul a decision of the State
Supreme Court ousting the Standard Oil Com-
pany from the State.

April 10.—A Honolulu dispatch says business
men are preparing a petition asking Congress
to permit the Territory to withdraw from the
Union in case sugar is placed on the free list.

Prison stripes and the solitary cell are abolished
in the Indiana penitentiary.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use
of words, the Funk & Wagnall Standard Dictionary is con-
sulted as arbiter.

Readers will please bear in mind that no notice
will be taken of anonymous communications.

"L. J. L." New Orleans, La.—"(1) Which is
correct, *mariner's* compass or *mariners'* compass?
(2) Is 'Go get the book' correct? If so, punctuate
the sentence, and parse the verbs, *go* and *get*."

(1) Both forms, *mariners'* compass and *mariner's* compass are in use. THE STANDARD DICTIONARY chooses the first—*mariners'* compass—in accordance with a principle adopted for all such expressions, namely, that an instrument for use by a group or class of men should be designated (if at all), by the plural form of the name of the user; as, a *carpenters' chisel*, a *blacksmiths' hammer*, etc.

(2) The sentence, "Go get the book," is a condensation of either of two forms: *go and get*, *go to get*. As ordinarily spoken, *go get* in such a sentence is virtually a single expression equivalent to simple *get*. If felt as a separate word, *go* should be followed by a comma: "Go, get the book." Both verbs are here imperatives.

"T. W. M." Pittsburg, Pa.—"Are these two sentences right, and why? (1) 'Neither men nor angels are perfect.' (Use of 'are' the point of dispute.) (2) 'It was thought to be he.' (The point in dispute is the use of the pronoun 'he'.)"

(1) The plural form *are* must be used because the subject is plural: *men*, *angels*. Singular subjects connected by *or* or *nor* would call for a singular verb: "Neither man nor angel was."

(2) In the sentence "It was thought to be he," the phrase *was thought to be* is virtually a single expression; the sentence consists of a subject, *it*, a verbal compound, *was thought to be*, and a predicate-nominative, *he*.

"M. W. E." Charles City, Ia.—"(1) 'I should like to know whether it is proper and necessary to use a hyphen in such words as *re-open*, *re-issue*, *re-deposit*, and *co-operative*.' (2) I should also like to know the correct form of addressing correspondence to a clergyman, whether to address him as Rev. John Doe, or simply Mr. John Doe."

(1) THE STANDARD DICTIONARY prints such words as *reopen*, *reissue*, *redeposit*, *cooperative* without hyphenating them and without the diacritical mark over the second of two successive vowel letters. Formerly, it was the custom (and still is to some extent) to use either hyphen or diacritical mark in order to show that the adjoining vowels stood in different syllables; as, *co-operate* or *coöperate*.

(2) A man's profession as a minister is indicated by the words "The Reverend" placed before his name: "The Rev. John Doe." In purely business matters, having nothing to do with his calling, there is no reason why he should not be designated as Mr. John Doe. In the same manner, there is no reason why a teacher should be addressed, in business matters, as "Professor So-and-so," a physician as "Dr. So-and-so," except on occasions where the calling of the man is of significance.

"W. M. G." Tribune, Kansas.—"(1) Please distinguish between the meanings of the words 'as' and 'so,' and is the sentence correct: 'Bad spelling is not so bad as the wrong use of words.' (2) Is this sentence correct, and if not, please tell why: 'John is doing fine in his new position.'"

(1) THE STANDARD DICTIONARY recognizes a shade of difference between *so* . . . *as* and *as* . . . *as* when these words make comparisons. The distinction is seen in negative sentences only; or in positive sentences only when they virtually have negative force. In "John is not as tall as James," there is no indication that the speaker regards either John or James as tall. But in "John is not so tall as James," the speaker shows that he is conscious of James as distinctly tall. That is, *as* . . . *as* merely makes a comparison; *so* . . . *as* expresses or suggests the presence, in a distinct degree, of the quality which is the basis of the comparison.

(2) In the second sentence, *fine* is wrongly used. It is an adjective. The structure of the sentence calls for an adverb, as *finely*.

THE LITERARY DIGEST

Collier's

THE NATIONAL WEEKLY

5 cents

per copy - \$2.50 per year

On and after May third, 1913

SEVEN THOUSAND five hundred dollars for short stories is offered by Collier's as follows:

Best Story . . .	\$2500
Next Best . . .	\$1000
Next Eight, each .	\$500

This money will be given *in addition to the regular rates paid for the stories.*

For conditions address Short Story Contest, Collier's, 417 West 13th St., New York City.

SYMBOLISM OF THE COVER DESIGN.—Our cover design represents Pheidippides, the Greek courier who ran from Athens to Sparta, about 150 miles, in two days, to ask Sparta's help against the Persians. He symbolizes the news-bringer. The painting is the work of Mr. Harold Nelson.

What do you know TO-DAY?

It's Not Enough That You Graduated from This University or That College

The world asks, what do you know TO-DAY?

THE WORLD IS MOVING FAST. Sciences change over night. Discoveries are of last week. Inventions of yesterday. The man or woman who progresses is keeping abreast of the times.

Encyclopædias that served you well within the last decade are now practically obsolete. They tell nothing of the U. S. Census of 1910—statistics of population, agriculture and manufactures; the Presidential election of 1912; the 1913 Parcel Post Law; the present Balkan War; the Panama Exposition; the Antarctic exploration, including the Scott expedition and its sad events; the revolution in Mexico; President Wilson and his Cabinet, with full page photograph, and the thousands of subjects of to-day or to-morrow. The one Encyclopædia that keeps up with you and you up with the times is

NELSON'S

Perpetual Loose-Leaf

ENCYCLOPÆDIA

& Research Bureau for Special Information

The Only Infallible Reference Library BECAUSE—

That Little Bar and Nut Has Solved the Problem
Bound in 12 Handsome Volumes

included with Nelson's Perpetual Loose-Leaf Encyclopædia, which is bound in twelve handsome Loose-Leaf Volumes, contains 70,000 subjects, treating over 1,000,000 topics, with 7,000 illustrations, 500 new maps and plans, models, manikins, and colored plates, is a Free Membership to Nelson's Co-operative Research Bureau for Special and Scientific Research which will prepare special reports on any information desired.

authorities, and
NELSON'S PERPETUAL
LOOSE-LEAF ENCYCLOPÆDIA
& RESEARCH
BUREAU FOR SPECIAL
INFORMATION. This
incurs no obligation on my part.

IN 1907, THOMAS NELSON & SONS—ESTABLISHED for over a hundred years in Edinburgh, Scotland—perfected and patented a Loose-Leaf Binder, a volume so practicable that by simply turning a nut the pages are loosened, when the old, obsolete pages can be easily removed and the new pages substituted. The publishers issue to subscribers, twice a year, not less than 250 revised pages each—in

March and in October—thereby making Nelson's Encyclopædia *always new* and abreast of the times.

NELSON'S REFERENCE AND RESEARCH SYSTEM is adopted and used by Governments and Government Departments, Libraries, Colleges, Universities, and Educational Institutions in all parts of the globe. It is indispensable to all Scientists, Scholars, Professional and Business Men, and Men of Activities in all walks of life.

THE AUTHORITY WITH AUTHORITIES

Nelson's Perpetual Loose-Leaf Encyclopædia and Research Bureau for Special Information is an authority in all parts of the civilized world. It is used by the King of England, President of the United States, Emperor of China, Mikado of Japan, Viceroy of India, Premier of Canada, Chief Departments of the United States Government, Universities, Colleges, Libraries, Schools and Educational Institutions everywhere.

EXCHANGE

We are constantly receiving inquiries asking us to make an allowance for old encyclopædias to apply as part payment on Nelson's. We have therefore prepared a price list, stating the amount allowed, which will be mailed upon request.

Opens Sept. 23th. Half million dollar plant. Two new buildings, one a modern school hall, gymnasium and swimming pool. Twelve schools—including Academic, College Preparatory, Music, Art, Domestic Science, Expression and Physical Education. Attendance limited. Send today for catalogue. Address JENNIE TAYLOR MASSON, Registrar, Box P.

Now is the Time to Choose a School

For a number of years the Literary Digest has conducted a school service in the interest of its subscribers. Hundreds of people have found satisfactory schools in this way, and have written us letters of appreciation.

If you are looking for a private school or college do not hesitate to enlist our services. Simply write us a letter stating the kind of school desired, location preferred and price of tuition you are willing to pay.

In reply we will advise you impartially and without fee now or later.

Life, Death and Immortality

By William Hanna Thomson, M.D., LL.D.
Author of "Brain and Personality"

The Independent, New York:

"Life, Death and Immortality is a book which supplies
much food for thought. Dr. Thomson's conclusions will
induce a serious study of Christian Faith in immortality."

Examiner, Chicago:

"It is especially interesting in that the author, a scientist
and physician, points on his conclusions immutability to
the discussion of the immortality of the soul. Readers will
appreciate the value in handling a discussion of perennial
interest."

Harvard, Boston:

"Dr. Thomson's book is a study upon the nature of
immortality. He maintains that the nature of life has never
yet been discovered and that from a scientific point of
view, everything points to immortality."

Philadelphia Telegraph:

"The statements of this book for immortality on scientific
grounds is clearly stated, and is a most original and novel
view upon immortality as not only possible but most
probable."

Harvard-Republican, Salt Lake City:

"Dr. Thomson will send you book and find in it (I dare
say) what you think will move."

Price cloth \$3.00 net; by mail \$3.10.

scientist—Just Published.

The Psychological Origin of MENTAL DISORDERS

By DOCTOR PAUL DUBOIS

In this book Dr. Dubois shows how
mental derangement may be caused by
the exaggeration of ideas and emotions,
impressionability in the face of the
vicissitudes of existence, disappointed
ambition, worrying temperament, ten-
dencies to fear or indolence, unre-
strained anger, vengeance, amorosity,
etc. He contends that insanity is more
a Psychical unbalancement than a
Physical disease. He would prevent or
cure the great bulk of mental disorders
by developing the patient's reason, and
inducing him to control his feelings
and correct his follies.

HAVE YOU INVESTIGATED THE MOTOR-TRUCK FOR YOUR DELIVERIES?

If you are handling your business transportation by horse-drawn vehicles and have not investigated the possibilities of the Motor-Truck as a substitute for your present system we suggest that you give this subject immediate attention. Whether you could operate a motor-truck at the present time with advantage or not you should investigate the system. It is stated that the majority of horse-drawn delivery wagons are being operated under wasteful methods. Are yours? You should know and we believe it will pay you to look into the three essential qualifications of the gasoline or electric commercial vehicle.

FIRST—GREATER ECONOMY

In many lines of trade the Motor-Truck is showing immense savings over the old horse-drawn vehicle. In some instances these savings are running as high as 200%. Whether you are a retailer operating a few wagons or a great manufacturer having thousands of tons to transport, there is a strong probability that the Motor-Truck will pay you substantial dividends on the investment.

SECOND—GREATER EFFICIENCY

While the Motor-Truck in ninety-nine cases out of a hundred will enable you to move your goods at less cost it will make it also possible for you to move them much more quickly. In every branch of your business transportation the commercial vehicle effects a concentration of service.

THIRD—GREATER POSSIBILITIES

Entirely separate from its comparison with the horse-drawn method, the Motor-Truck should receive your consideration as providing you with a transportation system *wholly beyond the limits which can be reached with horses.* Thus if you have retail deliveries to make you can easily double your delivery zone. If you have factory transportation you can handle far more than double the tonnage carried with horses. The Motor-Truck has introduced to road and street transportation not only vast improvements over old methods but a system *which cannot be measured by any of the old methods.*

LET US HELP YOU

Our Motor-Truck Department is maintained to help those who desire information on Motor-Commercial Vehicles. If you are interested, write us fully. We can tell you what Trucks are best suited to your needs and we can put you in touch with Motor-Truck experts who are able to give you accurate facts and figures. This service is gratis.

WHOLE NUMBER 1201

TOPICS OF THE DAY

TARIFF REBELLION IN THE SUGAR AND WOOL STATES

ACRY FOR HELP comes from the wool and sugar producers, shuddering before the Democratic preparations to tear down their section of the tariff wall and expose them to the untempered winds of foreign competition. Other interests hit by the proposed reductions, such as the cotton-manufacturers, the paper-makers, the California fruit-raisers, the Minnesota millers, and the Texas cattlemen, are contributing to the expected chorus of protest, but their voices are almost drowned by the Louisiana sugar-planters, the Western beet-sugar men, and the sheep-raisers of Ohio and the Western ranges. If the wool men are at the moment less audible than the sugar producers a plausible explanation may be found in the statement of a Washington correspondent that they "are so mad they can scarcely speak." "Wool and sugar, taken together, present the crux of the tariff situation," remarks the *Baltimore News* (Prog.), and the news columns are full of rumors of a tactical alliance in Washington between the Democratic Senators from wool and sugar States to defeat the provisions for immediate free wool and for free sugar at the end of three years, even at the price of defying the party leaders and disrupting the party program. Since the party in power has a majority of only six in the Senate, it is argued, a very small group of Democrats, by cooperating with the enemy, could bring about this result. Yet, in spite of all protests and rumors, Majority Leader Underwood confidently declares that "the bill will pass the House just as it is approved by the caucus," and the President, after a conference with the Senate Finance Committee, assures the newspaper men that "we don't see any difficulty in standing together on any sort of party program."

President Wilson, according to the Washington correspondents, is unbending in his demand for free wool at once and free raw sugar in three years. These features, Mr. Underwood informed Congress, are the President's own contributions to the framing of the Tariff Bill, and to repudiate them would be a slap at the Administration. "Out of four thousand and more items in the bill," said Mr. Underwood, "the President made only these two suggestions. It seems to me that we should accept these two suggestions from the President of the United States." The opposition to free wool in the House comes chiefly from Ohio,

Indiana, West Virginia, Pennsylvania, Missouri, Michigan, California, New Mexico, and Arizona. That this opposition sees little prospect of victory on the main issue may be inferred from the following statement of Congressman Ashbrook, of Ohio, to a *New York Times* representative:

"We demand that if raw wool is put on the free list, manufacturers of wool also be put there. There is no valid reason why the farmer who raises the wool should be hit and the manufacturer who uses that wool be protected. If the farmer is to be hit, the manufacturer should likewise suffer. To put wool on the free list without treating manufacturers of wool the same way would not cheapen the price of woollen clothing."

Leaving the manufacturers out of the question for the moment, says the *Philadelphia Inquirer* (Rep.), "free wool means the destruction of the flocks of American sheep." Thus, according to the secretary of the National Wool Growers' Association, will be destroyed "a \$580,000,000 industry in the Western States." In an article published in the *New York Herald* he backs up this statement with the following statistics:

"According to the last census we had in the United States 500,000 wool-growers, owning 52,000,000 sheep worth \$232,000,000. In addition to the value of the sheep we have the value of the lands and equipment needed to maintain them, which amounts to \$350,000,000. Therefore the aggregate investment in the sheep industry is \$580,000,000. This is more money than is invested in all forms of wool manufacturing in the United States."

"Free wool is going to annihilate this industry as effectively as if Congress had passed a prohibitory law against the raising of sheep in this country," exclaims the *Denver Republican* (Rep.), which adds that "in the matter of wool Colorado is on the firing line, as in the matter of beet sugar, live stock, and ores." Under the present tariff, says *The Republican*, wool-raising in Colorado brings in \$1,500,000 a year; and it continues:

"If Colorado had voted for free wool, free sugar, free live stock, and ores, it might be argued that the State desired a trial of the costly sort of experimenting the Democratic Ways and Means Committee would put into effect. But the Democratic vote in this State is not a majority vote, and no sort of juggling with words will set the members of the Colorado delegation right if they vote for free wool."

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. Instructions for **RENEWAL**, **DISCONTINUANCE**, or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not

assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 44-60 East Twenty-third Street, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

The prospect of defeating free wool in the Senate seems bright also to such papers as the *Salt Lake Tribune* (Rep.) and the *Portland Oregonian* (Rep.). It is evident, says the *Salt Lake* paper, that the President's proposition can not carry "except

MARY'S LITTLE LAMB.

—Rivers in the *Newark News*.

by the aid of Democratic Senators from States that are vitally interested in wool-growing"; and it goes on to analyze the situation as follows:

"The Senate is composed of ninety-six members. Of these fifty-one are Democrats and forty-five are protectionists, including two Progressives and forty-three straight Republicans.

"On the wool question there are at least four Democratic Senators, two from Montana, and two from Oregon, whose constituents are vitally interested in the wool tariff. It is not in the least likely that those four Senators could be induced to vote for free wool; but taking those four Senators out of the Democratic column there would remain but forty-seven free wool men in the Senate, to forty-nine in favor of a wool tariff. Doubtless the two Democratic Senators from Colorado would range themselves on the same side of this question, so that the likelihood of free wool disappears at once on the consideration of the membership of the Senate and of the probability of the votes of Democratic Senators from wool States. . . .

"It is a plain case that the Democratic Senators from the States that are vitally interested in wool, sugar, lead, and zinc have the matter in their own hands, and will be able to force compromises with respect to the tariff on these commodities that will protect the interests involved, and correct the views of the radicals."

Advocates of free wool, on the other hand, contend that it will not destroy the wool industry in this country; but that if it does, an industry that can not stand on its own feet after all these years of coddling and protection lacks an economic excuse for existence; and that the loss to the wool-raiser will be a small matter compared to the gain to the general consumer. Thus in the *Providence Journal* (Ind.) we read:

"Owing to the great increase in the values of wool abroad, amounting to from 50 per cent. to 80 per cent. in the last ten years, and to the fact that values for domestic wools have not increased in like proportion, several grades of domestic wools are even now within 10 per cent. of an export basis. Certainly no great decline can be expected on those grades, comprising more than one-half of the United States clip, and this applies to the sheep that are raised primarily for the wool and not for the meat, that is, the so-called territory wools from Oregon, Montana, and Nevada.

"It should be remembered, too, that the decreasing number of sheep in this country has resulted in a large advance in the price of mutton and lamb to a point where in many locations

the value of the fleece is a secondary consideration. These same tendencies of decreasing flocks and advancing prices for wool are true the world over, and it is reasonable to expect still further advances.

"A careful study of the facts will lead to the conclusion that except for a temporary derangement of prices, brought on by the fears of timid holders, no great drop in the price of domestic wool is to be expected. And with the other advantages accruing from the general revision of the tariff duties no injury will result to the sheep and woollen industry of the country from the placing of wool on the free list."

Even under ample protection, says the *Springfield Republican* (Ind.), the domestic wool-clip has proved utterly unable to keep up with the demands of our woollen textile industry, and free wool has therefore "become the right of the manufacturer." "The removal of the duty on wool will stop the taxing of the whole people for an industry which can not be made to flourish in America outside of its present boundaries because our land is more profitable when used otherwise," says the *New York World* (Dem.). And in *The Times* (Dem.) we read:

"After all, the greatest good to be got from free wool is that, on the one hand, it removes all excuse for the outrageous network of 'compensating' duties imposed on woollen goods, and, on the other hand, greatly helps the enterprising and skilful manufacturer. With free wool and proper reduction on woollens the consumer is bound to gain. He will not gain as much or as promptly as some of the advocates of reduction predict, but he will, as much as the conditions of the world's markets permit, unquestionably gain."

Turning to the sugar schedule, we find the battle raging around the proposal to reduce the tariff on raw sugar to one cent a pound now, and to commit it to the free list at the end of three years. The present duty is 1.685 cents per pound. The President is convinced, according to the Washington correspondent of the *New York Journal of Commerce* (Com.), that the domestic producers "can adjust themselves to free sugar within three years, and that within that time they will be in a position to compete with foreign sugar producers." But from a statement

PRESIDENT WILSON—"I seem to be having some difficulty keeping these two planks in place."

—Evans in the *Baltimore American*.

made to Congress by Mr. Underwood it would seem that the President's words applied only to the beet-sugar industry. Referring to the problem confronting the cane plantations of Louisiana, Mr. Underwood said:

"The sugar-growers of Louisiana have been brought up as a

Photograph by Griffin. From "The London Republic," Gloversville, N. Y.

A WHOLE TOWN PROTESTING AGAINST TARIFF REDUCTION

The town of Gloversville, New York, closed all its mills, factories, stores, cafés, restaurants, and offices during the afternoon of April 14, while the entire citizenship took part in a demonstration against the proposed reduction in the rate on gloves.

hot-house growth, that is true. They have invested millions in their industry. Free sugar will destroy them; that is conceded, and it is only proper that their industry must give way.

"The President felt that it would be fairer to all concerned that these sugar-growers be allowed three years in which to liquidate; they have much paper in the banks; they have suffered from two bad crops, and to put sugar on the free list to-day would damage them greatly. By giving them three years in which to liquidate we will give them time to get their houses in order."

Not in Louisiana alone, but "throughout the Union and its dependencies," says the *New Orleans Times-Democrat* (Dem.), will "the malign influence of free sugar be felt"; and in *The Picayune* (Dem.), of the same city, we find the following exposition of "the free-sugar fallacy":

"The claim that placing sugar on the free list will cheapen the cost of that important article of general consumption is so transparently wrong that it is surprising that Mr. Wilson and his advisers have been so easily deceived. Past experience warrants the belief that the moment that this country removes the tariff duty on sugar the foreign producing countries will place an export tax on their shipments. There is no more available subject of taxation in the great sugar-growing countries than sugar itself, and an export tax could be easily and equitably collected. The experience with coffee, which now enters free of all duty, should be a sufficient warning to the free-sugar advocates. The consumer in the United States now pays more for the coffee he uses than he paid when the delicious bean paid a duty on entering the country. Free coffee, therefore, increased the cost of the article to consumers, and the experience with free sugar will be identical should Congress ever be foolish enough to pass a free-sugar act. . . .

"The plea that free sugar is desired by the people as a means of punishing the Sugar Trust is sublimely ridiculous. The refiners would profit largely by being able to import the raw sugar they handle free of duty, as they being the only importers would be able to exact a much larger margin of profit on the refined article than they now do. Moreover, the destruction of the beet-sugar industry by free sugar would eliminate the present competition of the 600,000 tons of beet product, which goes on the market in a refined state, with the product of the trust refineries."

Similar protests come from Porto Rico, Hawaii, and the Philippines, and from many Western papers on behalf of the beet-growers. One view of the sugar situation as a whole is presented in the following concise and apparently dispassionate statement in the *Philadelphia Public Ledger* (Ind.):

"When the relative cost of production is considered, adequate protection of Louisiana sugar plantations seems to be as extravagant a demand as Senator Tillman's humorous plea for protection of the two tea plantations in South Carolina. But Porto Rico, Hawaii, and the Philippines, and the beet-growers, perhaps, are in a different situation. They produce sugar on a more or less competitive basis; that is, they do not require such heavy protection, and the relative volume of their production is such as to warrant an effort to give them the incidental protection that might justifiably follow the use of sugar as a revenue producer. They need moderate protection; Louisiana requires exorbitant protection."

The Modern Sugar Planter (New Orleans) also insists that free sugar "would mean the elimination of the beet-sugar industry along with the cane." According to the *Washington Herald* (Ind.), one of the reasons the Louisiana sugar-planters are at a disadvantage compared with planters in the tropics is that the growing season in Louisiana is too short for the cane to mature properly, and, consequently, the amount of sugar in their cane is 50 per cent. less than in Cuban cane, for instance. The *Philadelphia Record* (Dem.), however, not only argues that the beet-sugar producers could hold their own without protection, but that even Louisiana planters need not really lose by the proposed tariff changes, since they can devote their land to other crops, as their neighbors do:

"It is by no means certain that the destruction of the sugar interests would hurt Louisiana. For some time past, and wholly regardless of proposed tariff changes, we have been told that the Louisiana planters were dissatisfied with their profits, and found the returns better from rice and vegetables. Market-gardening has been highly remunerative in a warm climate whose products can reach the great markets of Philadelphia, New York, and Boston while still perfectly fresh.

"And a further consideration is the relative importance of the cane-sugar interest. Less than one-third of a million acres are planted in sugar-cane, and more than 200,000,000 acres are planted to cereals. We believe that if the Louisiana planters have to face competition they can do it, and that there are other crops at least as profitable, and in the opinion of some of the planters, more so than sugar even under present rates of duty. Finally, there are the interests of a third of a million acres against over 200,000,000 acres of cereals, not to speak of the millions of acres in hay and potatoes and miscellaneous crops and the half of the population of the United States which lives in towns and buys everything it eats.

"This question has got to be decided with reference to the interests of the nation as a whole."

SPREADING THE COMMISSION IDEA

THE COMMISSION PLAN, which has been described as an "extremely democratic form of municipal government in its initiative, but a highly centralized form in its operation," is now to be tried in a large Eastern city. Commission government in Jersey City excites the interest of the metropolitan press not only because that city boasts of 267,779 inhabitants (census of 1910), but because it lies just across the Hudson from New York, and may show the larger town how to reform itself. Nor is this application of the "efficiency idea" to government to be confined to our municipalities. A modification of the plan has lately been seriously suggested as a substitute for State legislatures, and one South American country has replaced her single president by a board of nine commissioners.

Jersey City is the fourth city of over 200,000 inhabitants to adopt commission government. Its action reverses that taken two years ago, a favorable majority of 4,306 succeeding a negative one of 1,483. Three other New Jersey cities, also voting under the Walsh Law providing for commission government where it is wanted by the people, rejected it. But taken altogether, says the *Newark News*, last week's election in New Jersey showed "a strong growth of sentiment in favor of commission rule." *The News* goes on to say of the New Jersey situation:

"The outcome will be encouraging to other cities desiring to escape from unsatisfactory governmental conditions. . . ."

"There are now sixteen municipalities that have adopted the commission plan as against nineteen that have rejected it."

President Wilson, who has by no means lost his interest in New Jersey politics, finds the result gratifying "because it again expresses the desire of the people of New Jersey to make their municipal governments more efficient and responsive." The scheme adopted, explains the *New York Evening Post*, "is a combination of that evolved in Des Moines and Galveston:

"The voters elect five commissioners—they may elect only three in municipalities of less than 10,000—and these commissioners select the Mayor. The commission has all the administrative, judicial, and legislative power previously vested in the Mayor, the City Council, and the other bodies."

So, observes the *New York Journal of Commerce*, "we are to

have the experiment of municipal government by commission tried at our very doors where we can closely observe its effect, if so disposed." "Municipal government by commission," so it seems to *The Wall Street Journal*, "should be better than our own government by omission." And another paper in the greater city, the *Brooklyn Eagle*, says:

"The experiment of really eliminating party politics from city government has had much success in the South and in the West. It has never got so close to our City Hall before. If it is a complete success in Jersey City, no combination of politicians, Tammany or anti-Tammany, or both, can prevent the question of its adoption by Greater New York from becoming a vital question in the minds of our city voters."

Commission government for States has been broached before, but its advocacy by Governor Hodges, of Kansas, in a message to the State legislature has compelled editors to give it more thorough discussion. The Governor suggests a single chamber of eight or sixteen members. He thinks our present system of assembling legislatures annually, or biennially, as in many States, is very much "as if the head of an important department of some other big business should give only fifty days every two years to its management." He would prefer a smaller body in continuous session. This idea of "press-the-button government" is received with characteristic scornful irony by the *New York Evening Post*:

"Our new legislature must sit continuously. If an economic condition should change overnight, we shall be ready the next morning without the formality of a governor's message calling an extra session. If any citizen thinks of a law that he imagines would look well on the statute-book, a special-delivery letter will get it before the commission-legislature in no time. Floods and panics will lose their terrors, if indeed they dare to happen at all, when prosperity can be restored by the pressing of a button. In a word, what Cerberus was to Hades our new kind of legislature will be to Kansas. The 'biennial exhibition of inefficiency' will be a thing of the past, and in its place we shall rejoice in the continuous performance of such a government as never was on sea or land."

But such a change in the form of our State governments has long been looked on with much favor by *Collier's Weekly*, and in a recent issue it quotes a number of newspaper editorials advocating or predicting it. *Collier's* itself declares that, "this idea has been set forward during the past few weeks by the

ANOTHER FLOOD PROSPECT.

performances of many legislatures in session." And the Philadelphia *Record* agrees that "one of the strongest arguments for the plan is provided by the legislative bodies themselves:

"The experience is common to all States, and regardless of the political complexion of governors and legislative majorities. Good measures are mutilated by amendments in one or the other house, or they die in committees or through deadlock. There is no adequate sense of responsibility, and a vicious measure originating in one house will be passed by the other on trust; and in the hurry of a session of 60 or 90 days it is impossible to give proper attention to the 2,000 bills (which is about the average) presented, or even to the 200 or so that are usually passed.

"In a unicameral body of about 15 members, as suggested by Governor Hodges, deadlocks, for one thing, could not occur. There could be no shifting of responsibility from one chamber to the other. There would be no pigeon-holing of bills, for there would be no committees, and every measure introduced would be before the house until disposed of. There would be no last-hour rush of bills, with all its attendant evils; for the legislative commission would be in session the year around, or as long and as frequently as there was public business to be attended to. There would be no lack of deliberation; on the contrary, legislation by commission might be too deliberate."

But tho the Pittsburgh *Dispatch* reminds us that Governor Hodges' "State government by Commission" is nothing but a suggestion for a smaller, more compact and more efficient legislature, it goes on to say that a "national commission plan has actually been put into operation":

"Down in the Republic of Uruguay they have officially proclaimed a proposition for real commission government of the whole nation. The Congress, consisting of 19 Senators and 75 Representatives, will be left undisturbed except that it will be deprived of the power to elect a President, which it now exercises every four years. Instead, the office of President will be abolished and nine commissioners elected by popular vote, who will select their chairman, upon whom will devolve the duties of President. The chairman of the board will serve two years and may be reelected, but he may also be recalled by a two-thirds vote of his fellow commissioners.

"The whole plan is based upon the conception that the nation is a great corporation, of which the voters are the stockholders and the commissioners the directors. The terms of the directors or commissioners will be nine years, but at the beginning the term of one shall expire each year and his successor be elected for a full term. The whole board will have the power to approve, criticize, or veto the acts of the Congress, to submit recommendations for legislation to the lawmaking body, to fill the offices subject to Congressional ratification, have direction of the Governmental departments, army and navy, and make treaties with the approval of the Senate and alliances with the approval of the whole Congress.

"The extension of the commission plan to National Government will be a remarkable experiment which will be awaited with interest the world over."

MORE AID FOR MOTHERS

THE ACTION of Ohio, New Jersey, and Pennsylvania in the East following that of Idaho in the West, means that seven States have now adopted the policy of helping destitute mothers to provide for their little ones in their own homes. The Ohio law, we are informed by the press, provides for pensions of \$15 a month to dependent widows with one child under fourteen, and to mothers with one child under fourteen whose husbands are helpless or in prison, or who have abandoned their families. There is an extra pension of \$7 a month for each additional child under fourteen years. The court, we read further, "must satisfy itself that the child is living with its mother, that without the pension the home would be broken up, that it is beneficial to the child to stay with its mother and, after investigation, that the home is a proper one." This mother's aid measure, the Cincinnati *Enquirer* notes,

"is in reality an extensive codification of the juvenile delinquency laws and a revision of acts relating to children's homes, occupation of youths, and the management and direction of private and public orphan asylums and refuges. Its ramifications are extensive and will affect many industries employing females under twenty-one years of age and males under eighteen."

In New Jersey the pension is fixed at \$9 a month for dependent women with one child of school age; \$5 a month is added for a second child, and \$4 more a month for each additional one. So, as one editor compares the laws in two States, while "in New Jersey a dependent mother with five young offspring would get \$30 a month, in Ohio she would get \$43."

Such aid to mothers, explains the New York *World* in its news columns, "is a taxpayers' money saver, while increasing the self-respect of both mothers and children." The expensive supervision in State institutions is replaced by the home supervision of the mothers. And the Columbus *Citizen* defends the new legislation adopted by its State, on the ground that "children were meant to grow up in homes, not in institutions."

Yet the New York *Times* points to the allegations of weaknesses in the workings of the motherhood pension law in Illinois, the pioneer State in this movement, which were noted in our pages March 1. And the Brooklyn *Eagle*, discussing the proposals for similar legislation in New York, believes that tho "the pension system, according to the theorists, is better than any other plan of relief," it probably "never could be carefully administered, and the opportunity for extravagance developed from sentimentalism is gravely apparent." Objection to the description of this reform as "mothers' or widows' pensions" is made by the New York *Evening Post*. "Motherhood has not been endowed," it carefully explains:

"The State is merely giving some assistance to needy children

and older persons while allowing them to remain at home, instead of following the more usual procedure of putting them into an institution. The 'pensions' are not to be spent at the free will of those who receive them, as an old soldier may spend his, but under strict regulation by the courts. They are payments for certain purposes rather than pensions. For such an arrangement there is much to be said. Where a mother has the strength and the capacity to take care of her children, but cannot do so if she must employ her time away from home in earning their bread, it is surely wiser to give her the money that will enable her to make useful citizens out of her children, than to turn them over to professional caretakers, however worthy the latter may be. Nor will there be objection to such payments to indigent widows without children as will keep soul and body together, if the whole matter is carefully supervised. Preservation of the home is worth all it may cost in this way. But let us not carelessly talk as if a new and large section of society were about to be pensioned for life."

LESS WORK FOR JUDGE LYNCH

LITTLE PRIDE may be felt over the fact that there were sixty-four lynchings within our borders last year, but Dr. Booker T. Washington deems it "especially encouraging" that there should have been only sixty-four. And Mr. Frederick L. Hoffman explains in the *New York Times* that "the country may well be satisfied with the fact that, with a single exception, this was actually the lowest number of lynchings during the last twenty-eight years, and, without exception in proportion to population, the lowest rate of lynching during the period for which the historical record has been preserved." The most important fact, in Mr. Hoffman's opinion, is the tendency of lynchings to decrease, allowing us to hope "that since the rate

THE DECLINE IN LYNCHING.

"The most important fact is not so much the actual number of lynchings as the relative tendency of lynchings to increase or decrease, in proportion to population."

has steadily gone down the time is not far distant when lynchings North or South, will be practically a thing of the past." The accompanying diagram, prepared by this writer from figures gathered by the *Chicago Tribune's* statistician, shows clearly just what this means without need of further discussion. But certain conclusions reached by Dr. Washington with regard to the Southern lynching problem, and published in a letter to *The Times*, make interesting reading in this connection. The one great cause of lawlessness, "whether between members of the same race or between the two races," says the head of the Tuskegee Institute, "is ignorance and poverty." He continues:

"We must not expect any sudden change so far as making the people law-abiding is concerned until ignorance is removed. This, of course, means years of hard, patient work on the part of all of us. But, in my opinion, we need not wait for the removal of ignorance to have the laws in the South enforced, but we must not make the mistake that some communities and States, I fear, have made of feeling that you can reform people and make them law-abiding by merely putting them in jail or in the penitentiary. One has got to go deeper and remove the cause of crime."

"While waiting for education and civilization to do their work, it is important that those who are placed in authority in the South—the Governors, Judges, sheriffs, etc.—do their complete duty in preventing lynching, and that every citizen do his duty in removing the causes that provoke lynching."

"My own belief is that lynching is unjustifiable, however, for any cause."

While Dr. Washington still finds much to discourage him and his fellow workers, he declares that he is

"able to state, without hesitation, that within the last ten years the public sentiment among the white people in the South favoring the enforcement of law has grown fast, and has taken a deeper hold than has ever been true in the history of the Southern States."

But perhaps the most potent influence toward the decrease of lynching and kindred lawlessness, adds the negro educator, is that of the Southern white daily press:

"A few years ago the daily press in the South was either silent on the question of lynching, or, in a few cases, approved it for certain crimes. To-day in the South there is practically no daily paper of any standing that does not openly condemn lynching and all forms of mob violence. These daily papers all speak against these crimes more forcibly than has ever been true in the history of the South before, and their utterances are making a better and saner public opinion on this subject."

"BLUE-SKY" LEGISLATION

THE JAIL SENTENCES given to Messrs. Freeman, Hawthorne, and Morton for the fraudulent exploitation of Canadian mining property were generally indorsed by the press as a sign that the law is no respecter of names. But the fact that these men succeeded in inducing their fellow citizens to part with some \$600,000 before they were caught has been used to back up the demand for laws to protect the investor against the operations of investment swindlers. Indeed, with "blue-sky laws" under consideration in thirty-six States, it seems now quite permissible to speak of a "nation-wide movement" in favor of such legislation. In Kansas, the first "blue-sky law" is said to have worked well, but to require amendment in some particulars. A bill of this sort has just been signed by the Governor of Missouri, while another has been vetoed by the Governor of Indiana. In New York, Assemblyman Goldberg's measure is receiving its share of criticism in the financial center of the continent.

These laws, notes one editor, derive their name from the fact that they are "aimed to stop the swindling operations of promoters 'who sold blue sky.'" The methods whereby such business is to be prevented may be divided into two heads—publicity and supervision—explains Vice-President Lewis B. Franklin, of the Guaranty Trust Company of New York, as quoted in the *New York Journal of Commerce*:

"Publicity.—As a rule the blue-sky law provides that before offering securities to the public the dealer must make known his general plan of doing business, give information as to the make-up of his firm or corporation, and in some cases give references as to his integrity. He must have a definite place of business in the State, where he can be served with papers when necessary. The unscrupulous dealer in fraudulent securities will thus be compelled to have a definite place of abode where he may be reached by the State authorities. This, in itself, is a strong measure of repression."

"Supervision.—The proper State authority, be it Secretary of State, Securities Commissioner, or any one else appointed for that purpose, is given the right to obtain from dealers full information about any securities about to be offered, and if in his opinion they do not offer a fair opportunity for the investor he is given the right to prevent their sale. He is also given the right to inspect the books of the firm or corporation offering the securities and see that they are solvent."

Now, as Mr. Franklin goes on to show, investment bankers and dealers in legitimate securities have not the least objection to such regulation as this. But they do find fault with the Kansas law (which is being used as a model in many State legislatures) and the Goldberg Bill because it seems to them that

in addition to the suppression of the sale of fraudulent securities the business of legitimate dealers is interfered with to an almost prohibitive extent. They see no reason why reputable firms of stock-brokers should be made to submit full details regarding the financial status of every new security they offer for sale in the State. Certain publicity features seem too drastic, and, in Mr. Franklin's opinion, would enable the public or a newspaper to get access to confidential information which ought to be the exclusive possession of responsible heads of firms. Another objection is thus stated by the New York Chamber of Commerce:

"The distributors of the lowest grade securities to which the consent of the examiner had been obtained would give the fact of the approval all publicity possible. The marketing of the weakest securities approved, particularly among the small and inexperienced investors, would be materially facilitated."

So the Investment Bankers' Association of America, after a committee had communicated with a score of Kansas bank cashiers and presidents and learned that the principle of the law was generally favored, have prepared a model "blue-sky law." They have drawn the measure, as they believe, in such a way that if enacted into State law, it "would have the effect of preventing the sale of fraudulent securities, at the same time placing no considerable difficulties in the path of the legitimate dealer." Copies of the model bill have been sent to all banking commissioners and to the State legislatures. Its features, we learn from the *New York Evening Post's* financial comment,

"include, first, the provision that all banking houses or institutions dealing in securities shall file with the Superintendent of Banks the names and addresses of all partners or officers; second, a statement from two officers of savings-banks, national banks, State banks, or trust companies testifying to the good repute of the bankers; third, a designation, by a non-resident house, of some attorney within the State for legal service; fourth, authority by the Superintendent of Banks to require, if need be, a statement from bankers describing in detail the character of any security offered; fifth, authority by the Superintendent of Banks (subject to review by the courts) to order a banker not to sell or offer any objectionable security, and, sixth, exempting State and public securities, commercial paper running not more than nine months, and stocks and bonds put out by certain well-established corporations."

Since the experience of Kansas is being used as an argument both for and against the enactment of "blue-sky laws" in other States, it may be well to note what State Bank Commissioner Dolley has to say. According to a statement which the *Springfield Republican* quotes on its editorial page, he is firmly convinced of the worth of the Kansas law, but concedes that it has imperfections and should be amended. According to the Commissioner:

"The Kansas law has saved the Kansas people more money during the time it has been in operation than it takes to run our entire State government, and this money was largely saved to a class of citizens who can least afford to lose it, whose knowledge of business is limited, and they are more or less at the mercy of the dishonesty and shrewdness of this class of confidence men and thieves. I believe that any law which accomplishes such results should be upheld by our citizens. . . ."

"I believe that the Kansas law is founded on exactly the right principles, with the exception that special provision should be made for the investment banker, or any other person, firm, or corporation dealing exclusively in stocks and bonds. The Kansas legislature when it meets next month will be asked to amend the law so as to provide for a special blanket permit for the investment banker and others dealing exclusively in stocks and bonds, requiring them to file the statements, etc., required by law in regard to their own bank or firm, so that the banking department may investigate their reputation, both as to the class of securities they handle and along other lines. When they satisfy the banking department that they handle nothing but first-class securities, and their reputations along other lines are found satisfactory, the bank commissioner may issue them a permit. . . . With this provision in the law I see no reason why any legitimate investment banker should object to the law."

FRUITS OF THE "TITANIC" DISASTER

THE TRAGIC MEMORIES invoked last week by the first anniversary of the sinking of the *Titanic* raise the question: To what extent, in these twelve months, have governments and steamboat companies applied the lessons driven home by that appalling disaster? While some editors detect a tendency on the part of the public to forget those lessons and to relax the pressure of its demand for reforms, all agree that ocean travel is safer to-day because of that terrible sacrifice of 1,503 men, women, and children in the icy waters of the North Atlantic in the early morning of April 14, 1912. "The com-

Showing the construction of the *Imperator's* double hull, a feature also of her two sister ships. New inner skin put in the *Olympic*, sister ship to the *Titanic*, at a cost of over \$1,000,000.

ONE LESSON THE "TITANIC" TAUGHT—THE DOUBLE HULL.

parative safety of those who now go upon the sea in the great liners is the service done for them by the 1,500 souls lost with the *Titanic*," says the *Springfield Republican*, and in the *Brooklyn Eagle* we read:

"Some good comes out of every great calamity and some good has come out of this. We have abandoned as a fallacy the theory of the unsinkable ship. The preaching of many marine architects in favor of the double hull would not in a dozen years have carried the conviction at once brought home to shipbuilders when the full story of the wreck became known. The agitation of legislative 'reformers' all over the world would not have forced owners to increase their equipment of life-boats and life-rafts so promptly as they themselves increased it without compulsion when need for the increase was tragically demonstrated. Marconi himself could not have argued so forcefully for the perfection of wireless service at sea as did the want of a perfected system on ships that answered the *Titanic's* call for help. If the catastrophe of April 14, 1912, is recalled with grief for those who perished bravely and uncomplainingly, it will be remembered also that the dead died not in vain."

Perhaps the most important development in steamship building since the loss of the *Titanic*, says the *New York Times*, has been the double-skinned steamship, the ship within a ship, with transverse bulkheads extending between skins to the upper deck. The new Hamburg-American liner *Imperator*, the largest vessel afloat, was designed and built on this principle, while the White Star liner *Olympic*, originally built with a single hull, has been

reconstructed at a cost of a million and a quarter dollars, the principal change being the addition of an inner skin. Another result of the *Titanic* disaster, says *The Times*, has been to check the speed mania that had taken possession of both the traveling public and the steamship companies. Moreover, an ice patrol has been established on the North Atlantic steamship lanes, the life-saving equipment of the liners has been increased, and in some cases two or more captains have been allotted to each ship, in order that the safety of the passengers shall not depend upon the judgment and alertness of an overworked officer. *The Imperator*, for example, carries a commodore and three staff captains, one of whom will be always on the bridge. In the *New York World* Mr. George Uhler, Supervising Inspector-General of the United States Steamboat Inspection Service, bears witness as follows to the increased precautions against disaster at sea:

"Since the *Titanic* went down I have inspected many transatlantic liners, and I know of my own personal knowledge that nearly every steamship landing at the port of New York now carries a sufficient number of life-boats and rafts to care for every passenger on board in case these boats were called into use. I also know that the officials of the big lines have cut down the number of passengers to be carried in order to fulfil promises made regarding a sufficient number of life-boats for passengers and crew.

"It is likewise true that every large steamship now carries two wireless operators, one of whom shall be on duty constantly. As to the number of drills on the part of the crew, I also have knowledge that the companies are doing everything in their power to have the crews so trained that all life-boats and rafts may be properly manned and operated in cases of emergency. Just how frequently these drills take place I cannot state.

"Before the *Titanic* disaster, the question of boatage was

regulated by the tonnage of the ship, without regard for the number of the passengers. That has been changed; the number of boats now depends solely on the number of persons carried. I may add that every American vessel engaged in overseas trade is equipped with boats and rafts to accommodate every person on board.

"In the lake, bay, and sound trade passenger vessels are required to have lifeboats and rafts for all passengers only between May 15 and September 15, the season when the passenger-carrying trade is greatest. At other seasons they are required to have boats for but 60 per cent. of their passenger capacity. This is sufficient, for our coastwise passenger trade in the winter months is very light."

On July 23, 1912, the United States Congress passed a law forbidding any passenger ship, American or foreign, carrying fifty or more passengers, to leave any American harbor without a wireless apparatus capable of transmitting and receiving messages a distance of one hundred miles, with an auxiliary power-plant sufficient to operate it for four hours if the main machinery is disabled, and not less than two skilled men to send messages. In July of this year an International Maritime Conference is expected to assemble in London to bring about an international agreement "for a system of reporting and disseminating information relating to aids and perils to navigation, the establishment of lane routes to be followed by the transatlantic steamers," and other matters affecting the safety of ocean travelers. Says *The Times*:

"Within the year so many measures have been taken to guard against a repetition of this disaster that we may be sure that it will not be repeated. No ship in the plight of the *Titanic* will be lost again under similar conditions."

FOREIGN COMMENT

MONTENEGRO AGAINST THE WORLD

LITTLE MONTENEGRO fired the first shot in the Balkan War; little Montenegro seems likely to be the last to cease firing. Europe expects Nicholas obediently to give up Scutari before long, but his dogged pertinacity astonishes everyone. The fall of Adrianople has practically ended the war, but the Powers are disputing about the spoils—the Rumano-Bulgarian and the Albanian frontiers, in which last question is involved the fate of Scutari, at whose walls Nicholas has been pounding away, in defiance of Vienna, Berlin, London, and St. Petersburg. As Russia has agreed with Austria and the other Powers that Scutari shall be included in the new Albanian kingdom, Montenegro is generally considered by the press of Europe to be in for a sharp disappointment, and some pretty caustic criticism of the doughty mountaineers is being heard. The Montenegrins are treated as mere mountain brigands, seizing what they want without regard to the rights of property. They are called rebels, despising that august but impalpable authority, the Concert of the Powers. Thus the

Again, we read in the *Fremden-Blatt* (Vienna), an Austrian official organ, the following warning to Montenegro.

"That the final decision concerning the future appropriation of this Albanian city will be enforced by the Powers is beyond all doubt. . . . The great Powers now find themselves in a

DANGEROUS.

THE LITTLE FOLK (Montenegro and Servia)—"If we could only get them to fight each other!"

THE BEAR—"There would not be much left of you little folk if you did!"

—*Westminster Gazette* (London).

dilemma, yet we may safely expect that Europe intends to bring its will to fulfilment."

The strong determination of Austria to keep Montenegro out of Scutari is more plainly expressed in the following utterance of the *Reichspost* (Vienna):

"Unless Montenegro respects the will of Austria-Hungary

THE NEW BOUNDARY OF ALBANIA

As the Powers would draw it, giving Scutari to the new Kingdom. The light broken line is the old frontier, the heavy one the new.

Rivista d'Italia (Rome), a journal representing the lettered class of a country which has just annexed Tripoli, solemnly says:

"What are the arguments upon which the Montenegrins base their claim to occupy Scutari, the adjacent towns of Ipek and Djakova, and their territories? These arguments may be practically reduced to one, the argument of highwaymen: 'We are poor,' they say to the travelers; 'we are also armed; we have the right to live; we should find your purse particularly useful to us. We must have it. Your money or your life!' No doubt any people, by a similar argument, could, as in the Middle Ages, take the life or property of others, reckless of their rights, and backed, like Montenegro, by a force which is not their own."

Montenegro, says the *London Times*, will gain a great accession of territory as a result of the war, but not Scutari, "for the excellent reason that neither by history nor by population has she a just claim to it." There is something almost naive in its pompous assumption that the Olympian deities known as Powers must not have their serene authority disputed:

"That it is the bounden duty of the Powers to prevent her from storming Scutari is plain for many reasons. The Powers can not allow their admonitions to be disregarded without great injury to the prestige upon which the authority for good of united Europe depends. If they suffer Montenegro to defy them with impunity, how possibly can they expect that others will pay attention to their wishes?"

THE PROTECTOR.

AUSTRIA—"I must take Albania under my protection."

—*Novoye Vremya* (St. Petersburg).

and the decision of the Ambassadors' conference, the Monarchy will be compelled to take strong measures."

But in case Francis Joseph sent his troops across the frontier, St. Petersburg would interfere, says the London *Westminster*

THE NEW TERROR: A ZEPPELIN OVER THE BRITISH FLEET AT THE NORE.

Considering that any of the six Zeppelins can carry tons of explosives and long range and machine guns, and can attain a speed of up to 55 miles an hour, and travel at night as well as day, and that the anti-British sentiment in Germany is strong, says *Flying*, it is no wonder that England is alarmed.

Gazette, thus "destroying at one stroke the laboriously constructed fabric of the European Concert."

As for "the European Concert," Mr. Jaurès, in his *Humanité* (Paris), jeers at it with saturnine bitterness and remarks on the phrase employed in the note to Nicholas—"unanimous Europe":

"The lie of the 'European Concert' has never appeared so flagrant as at this moment.

"The situation is exactly this:

"Europe 'unanimously' decided that Scutari should belong to the future state of Albania, and Montenegro's attack on that stronghold must immediately cease. But this decision was not 'unanimous,' unless it had been received in a benevolent spirit by the King at Cetinje. If he braves 'unanimous' Europe, Europe's responsibility is at an end.

"It was all a trick arranged beforehand. And King Nicholas knew it right well.

"The consequence of this hypocritical 'unanimity' is that Austria has nominated herself the policeman of Europe to carry out a European decision that at least the half of Europe—the Triple Entente, towed by Russia—does not care to see realized.

"And thus it is that the essential peril, the unique peril, remains the same since the outbreak of the Balkan War. The cause, the ultimate cause, of the complications which have ever threatened and still threaten the general peace is the profound division of a Europe which plays at unity and 'unanimity' merely to win the applause of the gallery."

"ZEPPELIN IV" INVADES FRANCE

LUNÉVILLE, in the east of France, where a treaty was signed in 1801 between Germany and Austria on the one part and France on the other, has been the scene of a curious and almost coincidental event. The great dirigible *Zeppelin IV*, a triumph of German airship building, suddenly crossed the frontier of Lorraine and descended on French soil in the midst of a brigade of French cavalry then engaged in their maneuvers. The German press is horror-struck from the fear that France may learn some of the secrets of her aeronautics, while such Paris papers as the *Aurora* suspect espionage. According to the *Matin* (Paris), photographic apparatus and plates were seized on board the airship. A clear account of the incident is to be found in a letter from the Paris correspondent of the London *Daily Mail*, in which we read:

"While a brigade of cavalry was maneuvering at 1.30 on the Champ de Mars, the vast parade-ground at Lunéville, a fortress, a great Zeppelin airship descended from the clouds and hovered over their heads.

"In a few moments the entire population was out of doors and staring up. While the soldiers and the people gazed, the giant ship, with its twin cars carrying several uniformed figures, began to descend.

"Driven by a brisk easterly wind, the airship drifted dangerously near the roofs of the houses, and the men in the car could be seen making signals to the men below. French soldiers seized the rope thrown down to them and quickly secured it. The officer commanding the Lunéville garrison then telephoned and requested the occupants of the *Zeppelin*—four officers in uniform and seven mechanics—to explain their presence in French territory.

"The commander of the airship is reported to have said that he set out at 6.40 A.M. from the Zeppelin station at Friedrichs-

FRENCH OFFICERS BOARDING THE "ZEPPELIN IV."

hafen, Lake Constance, on a private trial trip. After cruising about for several hours they lost their course in the clouds. They were not aware that they had crossed the frontier.

THE GERMAN "ZEPPELIN IV" ON THE FRENCH PARADE-GROUND AT LUNÉVILLE.

"The French officer then informed the visitors that he would be obliged to seize the airship and detain the occupants.

"Four battalions of soldiers were placed round the airship to keep back the immense crowd of curious sightseers who had gathered on the Champ de Mars. The attitude of the people was distinctly hostile.

"In its descent, the airship, which is 550 feet long, with a diameter of 30 feet, lost a large quantity of gas."

The same paper tells us that the hostile attitude of the people was changed into amazement and even enthusiasm under the following circumstances. During the morning after the arrival of the dirigible:

"The maneuver-ground swarmed with people. All Lunéville took a holiday. Every officer in the garrison was there, and many had brought their wives. The people did not say much, but looked at the *Zeppelin* and smiled. French sappers, holding down the airship, wore a broad grin. The peasants were massed behind and kept up a running fire of chaff.

"The bantering note of the crowd turned to real enthusiasm when, at about 10.30, a little point showed in the sky and an aeroplane piloted by a French Army airman from Épinal glided to the ground, skimming low over the top of the *Zeppelin*. Another machine appeared, and then a third. They came down so close to the airship that their wings almost touched it. Then they flew above its length from stem to stern. Everybody was wild with delight."

The Germans have paid dearly for their rashness in sailing so close to that French frontier which seems to fascinate them, remarks the *London Standard*, and it goes on to say:

"The German authorities have plumed themselves greatly on possessing unique superiority, not only in degree, but in kind, and they must be suffering considerable chagrin at the upshot of the 'too clever by half' tactics of the trial trip. There was no reason whatever why the *Zeppelin IV* should not have kept to German territory. The do-

minions of the Kaiser are broad enough for the evolutions even of the latest *Zeppelin*. But the temptation to sail along the French frontier seems to have been irresistible, and the irony of fate has given the French authorities the opportunity of casting curious and by no means unintelligent eyes on the very last word in aerial dreadnoughts."

On turning to the German press we find the *Taegliche Rundschau* (Berlin) observing: "The officers of this airship can only be adequately dealt with in the way France dealt with Marshal Bazaine for the surrender of Metz—by court-martial." "It was the unquestionable duty of the senior officer of *Zeppelin IV*," remarks the *Post* (Berlin), "to blow up the airship and all on board," instead of thus permitting its "priceless secrets" to be revealed to the French.

The most serious view of the matter as regards England is taken by the *London Pall Mall Gazette*, which utters these significant words of "warning":

"The German officers who were compelled to land their new *Zeppelin* in the midst of a regiment of French cavalry at Lunéville must be feeling pretty small. It is the kind of ignominious end which will, inevitably, overtake a certain number of aircraft in war. No doubt, the French Government will accept the proffered explanation that *Zeppelin IV* got above the clouds, lost her way, and so unwittingly violated French territory. There will be no disposition to put an ugly interpretation on the incident. But we can not help saying that it has a considerable significance. The airship has not yet been taken over by the German Government; she is, therefore, still technically a private craft, and, if she had not been forced to descend, the presence in her of German officers in uniform would

not have been known. Had she been seen in the air, the Government would have disclaimed all responsibility for her.

"It was under precisely similar circumstances that the airship suspected of having made a trip over Sheerness was flying. A German airship was doing her acceptance trials at that time,

THE FANTOM AIRSHIP.

HAMLET—"Do you see yonder cloud that's almost in shape of a camel?"

POLONIUS—"By the mass, and 'tis like a camel indeed."

HAM—"Methinks it is like a weasel."

POL—"It is back'd like a weasel."

HAM—"Or like a whale?"

POL—"Very like a whale, but besides they all look like German airships."—(*Hamlet*, Act III, Scene 2.)

—Lustige Blaetter (Berlin).

and the German Government were able to say that no army airship had been flying on the day in question. But the *démenti* did not exclude the possibility that the new vessel had made an experimental trip on her own account. Very likely, it is the zeal and enthusiasm of the officers on board, rather than the orders of the Government, which dictate these adventures; but the lesson to foreign Powers remains the same in either case. It is as far from Friedrichshafen to Lunéville as it is from Cuxhaven to Harwich; it is proved, therefore, by the erratic *Odyssey* of *Zeppelin IV*, that aerial reconnaissance or invasion of these islands is easy, in the absence of any sufficient aerial fleet to resist the enterprise."

The *Daily Mail* sees in the affair a weakness of the German dirigible, for "an airship which is apt to be blown out of her course by a slight wind and suddenly find herself within the lines of a hostile army is still a very imperfect weapon."

ADRIANOPLE AND PEACE

THE WAR ENDED with the capture of Adrianople by the Bulgarians, believe most of the European press, who go on to discuss its influence on the peace terms. Adrianople was considered the key to the Balkan situation. The fortifications were constructed on the most modern plan, and with all the resources of scientific engineering. It was no mere Plevna—a rude and primitive array of breastworks. It was equipped with the latest triumphs of German artillery, manned by a large garrison and commanded by a man, Shukri Pasha, whose prestige was scarcely diminished by his defeat. Such is the accordant testimony of the European papers. Has Turkey lost all when she has lost her mightiest stronghold? Can Bulgaria now dictate her own terms, claiming even an indemnity?

These are the problems that agitate the minds of Europe's writers. The *Paris Soleil*, organ of the Royalists, a broad-minded and brilliantly edited journal, remarks:

"After the fall of Adrianople it seems as if a treaty of peace between the Balkan Powers and Turkey must immediately follow. The capture of this fortress was the problem which raised all the difficulties on which Kiamil Pasha made shipwreck and the negotiations of London met their defeat. Adrianople taken, it seems most illogical and useless that an arduous and bloody struggle should still be continued up to the lines of Tchataldja."

The *Peeter Lloyd* is much of the same opinion, and thinks the Allies should now be satisfied and rest on their laurels:

"All that their victory could bring the Allies in the shape of honor, fame, and increased power it has brought them. They now possess a fertile and favored stretch of country whose natural gifts, increased by agriculture and fostering energy, will yield wealth in abundance. Their name will go down into history as victors in a noteworthy war. They have freed their connationals from a yoke under which they have been crushed for centuries. Nor has our monarchy or the other Powers been grudging with regard to the long-discussed question of the Albanian frontier."

It is time to call a halt to Czar Ferdinand and his Bulgarians,

thinks the *Hamburger Nachrichten*, which is losing patience, and advocates peace:

"If King Ferdinand rightly understands his business as a statesman, he must use the emotion which has been excited among his people on the fall of Adrianople for the political end of securing peace and settling with Rumania. Unless he does this, he may meet with a reactive movement which will prove dangerous. . . . This makes it all the more imperative on the Great Powers at this critical moment of Adrianople's fall to impress upon Bulgaria that this wild recklessness must be checked."

The *London Daily Mail* thinks that now "any prolongation of the conflict would be folly." But the *London Nation* believes that the capture of Murad II.'s ancient capital—the sacred home of ancient Islam—will not necessarily end the conflict. To quote the editorial of *The Nation*:

"The fall of Adrianople is good news, but it will not end the war unless it serves as a spur to European diplomacy. The Bulgarians are now free to hurl their entire army upon the Tchataldja lines. They have, quite naturally, resolved to accord no more truces before the final peace. It seems to follow that the Turks must either accord the full conditions of the victors, including a crippling indemnity, or else that Europe must intervene, not merely to define the terms of peace, but also to stop the operations of war. . . .

"There will be further fighting only if Bulgaria supposes that the Concert—the reestablishment of which should bring peace when the doctrine of the Balance only induced strife—is not unanimous and not in earnest, and reckons on extorting an indemnity by forcing her way to the Straits from which the Powers are resolved to exclude her. The continuance of the war under the influence of such a calculation as this would be a humiliating commentary on the weakness of European diplomacy; but, above all, it would be a criminal waste of human life."

The next step will be the capture of the Tchataldja forts,

declares the *London Times*, and it appeals to the Powers to intervene. Yet this organ hopefully concludes:

"We trust that an honorable peace will now be concluded between the combatants without further useless bloodshed. Tho the fate of Adrianople was a foregone conclusion, it has hitherto been somewhat difficult to prescribe a new frontier for the Ottoman Empire in Europe while the Turkish flag was still flying upon various strongholds outside the fresh boundary proposed. The surrender of Janina to the Greeks, the capture of Djavid Pasha and a large Turkish force by the Servians, and the crowning of the patient hopes of the Bulgarians at Adrianople are all events which will facilitate the now imperative cessation of hostilities. . . . The storming of the Adrianople forts ought to terminate the war. That is the wish of Europe, expressed in terms to which both Turkey and the Allies are bound to pay heed, and we hope that the fighting reported at Tchataldja is not the prelude to an attempt to storm the lines which defend the Turkish capital. There are indications that already the Allies are more willing to listen to proposals of mediation, and the internal condition of Turkey should preclude the further pursuit of unavailing hopes at Constantinople. Europe has passed through great dangers, and at the moment of emergence the Powers will not brook without impatience any further attempt on either side to continue the struggle. The word must now go forth for a general sheathing of swords.—*Translations made for THE LITERARY DIGEST.*

EUROPEAN DIPLOMACY TRYING TO CATCH "PEACE."

—Pasquino (Turin).

SCIENCE AND INVENTION

COLOR PSYCHOLOGY IN BUSINESS

AN IMPORTANT PART in salesmanship, and even in the wider conduct of affairs, is played by the psychology of color, believes Mr. Will Bradley, writing in *System* (New York, April). Mr. Bradley's posters, book-covers, and illustrations have made him famous, so he speaks on a subject like this with some authority. We understand too little, he thinks, the way in which colors are affected by juxtaposition, by daylight and by colored lights—yet these qualities, and their appeal, or lack of appeal, to human sympathy, are well worth our careful attention. Of two men with equally well-situated stores and the same goods in stock, one may outsell the other simply because he knows how to make his place attractive by color-groupings. The customer prefers one store to the other, but he does not know why. Mr. Bradley thinks that one man may even get the better of another in a business deal by wearing a scarf-pin of a disconcerting color—but of this more anon. We read:

"Red is the most popular color. It is the first choice of the uneducated and of savage and barbaric people. It excites and enrages animals. A child who is given a toy paint-box will use more red than any other pigment. Green, when low in tone and inclined to yellow, as in nature, is a restful color, and next to red the most popular. But a combination of primary red with primary green presents two active and excitable colors. One is the complement of the other, and, when placed together, each is shown at its greatest intensity. The red then appears redder and the green greener than under any other conditions.

"Women, because they give more constant thought to the selection of articles for personal adornment and the decoration of the home, are more sensitive to the personal appeal in color than are men. Every shop window, every store shelf, every counter, gives an opportunity for the use of color in making this personal appeal. Properly used, it is an ever-present silent salesman.

"Among the uneducated, the color sense is crude and barbaric. With education comes refinement. For example, a woman of the peasant type will wear a green skirt and a red waist with each color of full primary strength. While the personal appeal of these two colors is as great to the woman of education, her sense of refinement suggests a full suit of green, so low in tone that it is almost black, to which she will add only a touch of red, such as a single rose.

"Nature employs green in large masses, tho seldom in its absolute purity. In the spring, when nature displays but a few colors, the green in the grass and leaves is at its brightest, but as other colors come, the greens grow darker and grayer, forming only a background. Red in nature is never found in masses, but only as in flowers, a few birds, and the spots on butterflies. A child will fill its arms with red roses. A woman of refined tastes will arrange one red rose with a few sprays of green leaves. This one fact is a key to color in salesmanship. In the appeal to popularity colors are used in large quantities which nature uses sparingly. Refinement demands the discriminating choice shown in nature. . . .

"With an understanding of these general principles, salesmen will realize that it is unwise to allow a customer to view consecutively several pieces of merchandise of practically the same color or to allow a customer to give any extended visual consideration to one color without permitting the eye to see the complementary colors.

"Inasmuch as one color appears of a different hue when placed beside another, and loses purity when viewed without its complement, care should be given to the display of goods on shelves and the showing of goods on counters. . . .

"Unless for a permanent exhibit in which it forms a definite part of the color scheme, a store window should never have a background of highly finished wood of any definite color. Stained wood of any tone should only serve as a background for material which is used or worn under similar conditions. Men's clothing constantly associated with desks and the paneled walls of offices

and clubs can be shown against stained wood. But if the windows throughout are in one strong tone, clothing in colors not complementary to that tone will suffer by contrast."

Now comes in Mr. Bradley's engaging theory of the disconcerting scarf-pin. He leads up to it gently, thus:

"A directors' room or an office to be used for conferences that require concentrated thought should be arranged in a harmony of low tones, such as olives, browns, russets, and grays. When the desk, tables, and chairs are in any of the brown stains usually applied to oak, the rug might be in an olive-green of about the same shade as the oak. These two tones—brown and olive—may be either dark or light and the room will remain restful. If the room is kept in a harmony of one tone throughout, such as olive-brown, or in blue-gray, red-gray, yellow-gray, or silver-gray, it can not be occupied for any length of time without tiring the nerves. Light tones of gray-green are restful to the eyes, but every office that is continually occupied should be provided with the complementary color to relieve the eye-strain. Obviously this color note can not be in the shape of a single bright spot, such as a bouquet of red roses in an olive-green room or yellow chrysanthemums in a blue-gray scheme, as this one strong note would focus attention and divert thought. In one instance an emerald scarf-pin, worn in a room colored throughout in tones of brown, was so conspicuous as to become confusing, and placed the man who had to look at it at a disadvantage over the wearer. A ruby would have the same effect in an olive-green room.

"To cite an illustration:

"Imagine a man wearing an olive-brown coat and hat, a brown suit, brown shoes, reddish-brown cravat, and in his cravat an emerald. Suppose that he enters an office which is furnished throughout in tones of brown, and places his hat and coat where it can be seen by himself but not by his conferee. Immediately we have a subtle setting for a melodrama. He has his companion at a disadvantage. If he wishes by a sane and logical presentation of his case to furnish a convincing argument, he will be handicapped. While the olives of his coat and hat so harmonize the browns as to rest and not excite his own eye nerves, the emerald, because it is the one vivid complementary color note to the brown, will so focus and hold the eyes of the observer as to distract his attention from the subject under discussion."

DOES BIG GAME SPREAD DISEASE?—It is proposed by Dr. Warrington Yorke, an English physician, that the extermination of big game, instead of being deprecated, should be encouraged, on the ground that the animals spread disease. Especially, the large African mammals are accused of perserving and disseminating the dreaded "sleeping-sickness." The plan has not met the approval of naturalists, but *The Hospital* (London, March 29) thinks there is something to be said for trying it in a limited area, to see whether the results bear out Dr. Yorke's theory. Says this paper:

"It is hardly surprizing that Dr. Warrington Yorke's proposals for exterminating big game, on the assumption that they are the chief permanent reservoir of sleeping-sickness, met with little sympathy from an audience at the Zoological Society, which included men whose interests are bound up with the preservation of animals of all kinds, such as Dr. Chalmers Mitchell, the curator of 'The Zoo,' and Mr. Walter Rothschild, to mention two only. Yet all that Dr. Yorke really appeared to urge was that a thoroughly scientific experiment should be undertaken in some particular district of the fly area to see what effect the extermination of the game would have on the spread of the disease. A good case can be made out for the preservation of the wild life, as well as the wild animals, by naturalists, zoologists, and scientists generally, but we have much less sympathy with the selfish and superficial claims of the mere sportsman."

WANTED—AN ALASKAN AERO MAIL

AN AEROPLANE mail-service for the snow-clad wilds of Alaska is proposed by Lieut. Gerald E. Cronin, of the 9th U. S. Infantry in *Flying* (New York, April). During the last session of Congress the postal authorities asked for means to try the experiment, but were refused, largely owing to the opposition of Representative Moon, of Tennessee. The editor of

Horse in less than two hours, assuming the machine to be traveling at the average rate of between fifty and sixty miles an hour, which is now the standard speed for aeroplanes. At White Horse, machines could be changed for the next stage of the journey to Selkirk, 272 miles distant. The trip from White Horse to Selkirk could be made in little over four and one-half hours, as against the present time of twenty-four. Within another three hours Dawson would be reached. At this point considerable delay could be eliminated by the aero-mail service, and a five-and-a-half-hour flight would bring it to Fort Yukon which lies under the Arctic Circle.

"Almost any of the aeroplanes that pass the U. S. Army tests could be used for mail-carrying, altho larger surfaces and inclosed body would be more suitable. The new requirements for the scout aeroplane will develop a suitable type, which can be fitted with automatic stabilizers, to afford additional safety. The inclosed body, heated with the heat derived from the motor, will make it possible to travel in the coldest weather when horse sleds and dog teams are held up.

"While it can easily be expected that an aeroplane of this type will travel for four hours without stopping, at a minimum speed of fifty-five miles an hour in straight line, in the beginning the stations could be closer, say, 100 or 150 miles from each other, which could easily be covered at a single flight. Allowing a load of between 50 and 150 pounds of mail to each flight, which is only a fraction of the load which the machines must

carry to pass the military tests, the problem of mail-carrying in Alaska would be happily solved, and the great handicap of inaccessibility being removed, Alaska would start in a new period of development, industrial and social.

"The rivers are the commercial arteries of Alaska. In summer steamers ply; in winter dog sleds glide over the frozen surface. Real business activities continue in Alaska only during the summer months; in the winter those people who do not 'mush' out to Seattle and civilization merely exist until the next season.

"The southeastern coast is girt with the greatest mountains and glaciers of the continent; but the broad northern valleys of the shoal Yukon and its tributaries, and of the streams that flow toward the Arctic, are mostly low-stretching country, bare hills of not much ruggedness, and great plains of tundras, or moss ridges, and soggy lagoon-dotted marshland.

"Along these streams that are too shallow for navigation, and over this low, bare country, the aeroplane, adapted for water work as well, could be of a most excellent and practical service to-day, linking the now isolated camps and settlements of the interior and Arctic coast with the markets of civilization. It is Uncle Sam's business to serve all of his citizens, not merely those dwelling conveniently in cities.

"And who can say that, once initiated, an aero-mail service would not be found feasible to extend to take the place of the slow steamer and sledge service now maintained?"

A UNITED STATES MAIL TEAM NEAR NOME, ALASKA.

This is one of the best mail-carrying teams in Alaska. In the yearly races for large prizes the best team has made a time of 82 hours and two minutes to cover the distance of 412 miles between Cripple Creek and Nome. This stands as the record time; and when not racing it takes teams from three to five times that long to cover the distance. The aeroplane, flying in a straight line, cuts the distance down to half and covers it in between four to five hours.

Flying expresses the opinion, in a preliminary note, that Mr. Moon's acquaintance with the subject is not of the best, and he endorses Lieutenant Cronin's views on the subject. Alaska, he says, is as easily traversed by the air route as the Alps, the Pyrenees or the Apennines, all of which have been flown over. "Aero mail," says the editor, "can do more good for Alaska than anything else that Congress can give it." We read:

"To the people who live in the Central States where the mail is collected and delivered many times a day, and the combination of fast trains, automobiles, and other up-to-date facilities, unrestricted by any physical obstructions, affords them quick and reliable mail-service, aero mail may seem a vagary, and they may smile at Harry Jones's attempt to compete with the fast Boston-New York express and parcel post in carrying baked beans to bean lovers along the Boston-New York route. But to those who live in the isolated places in northern Alaska, and in the Arctic Circle, and have to wait weeks and months for their mail for news from the active, outer world, aero mail looms up as a veritable relief. And one who is in touch with the swift developments of aviation conceives of an aeroplane line over the White Pass, or from White Horse down the Yukon to St. Michael and Nome, and looks forward to the establishment of such a line with eager expectancy.

"A hydroaeroplane fitted to carry a hundred-pound load of mail could fly from the steamer's dock at Skagway to White

TIME REQUIRED FOR MAIL TO REACH DIFFERENT POINTS IN ALASKA FROM SEATTLE AT PRESENT, AND ADVANTAGE TO BE GAINED WITH AEROPLANES.

	Summer	Winter	Aeroplane
From Seattle to Nome (all sea route)	8 days no changes	40 days	5 days 5½ hours

OSCAR BIDER IN HIS FIVE-HOUR FLIGHT FROM PAU TO MADRID.

This picture shows the thorough practicability of using aeroplanes for carrying mail in mountainous and isolated places. This flight was over a distance of close to 250 miles; other flights over mountains have been made by a score of aviators. Compared with an aeroplane the dog team shown on the opposite page looks absurdly primitive—and it is in many ways.

CUTTING RED TAPE TO SAVE LIFE

THREE unprecedented things done by President Wilson, in connection with the recent Ohio floods, are warmly commended by *The Journal of the American Medical Association* (Chicago, April 5). While highly significant of the attitude of the President and the new Administration toward the activities of the Federal Government, these steps were taken so quietly, and so much as a matter of course, that most of those who read of them in dispatches from Washington probably saw no significance in the orders. The Presidential acts so highly praised were as follows:

"The first was that the crews and equipments from the life-saving stations on Lake Michigan and Lake Erie were ordered to proceed at once to the flooded districts to assist in saving lives. Like all simple but unprecedented acts, the common sense of this move commends itself at once to all. Boats were lacking, and the Government had them. Experienced men were needed, and the Government had them. The season of navigation on the lake is closed at present, and there was no great need for the life-saving crews at their stations. What more natural than to use the trained men and the special equipment of the Life-Saving Service to save lives in the flooded districts?

"The second was to direct the Secretaries of the Treasury and of War to send at once into the afflicted districts all of the available medical officers of the Public Health Service and of the Army. Government surgeons have been sent before to establish quarantine, and to stamp out existing epidemics. But so far as we know, this is the first time that the health officers of the Federal Government have been ordered into a region to prevent the breaking out of epidemics and disease. Again,

the quiet common sense and disregard of governmental red tape on the part of the President must win the commendation of every sensible citizen.

"The third thing the President did was to order ten thousand vaccine points and a thousand ampules of anti-typhoid serum sent at once into Ohio and Indiana for use in preventing epidemics of smallpox and typhoid. He did not expect the Government surgeons to go to their work without being properly equipped. They were to be given all the aid that science could give them. Modern bacteriology and sanitation have proved that smallpox, which generally breaks out following great disasters, can be

prevented and stamped out by vaccination. Extensive experience in the United States Army and elsewhere has proved positively, in the last three years, that typhoid can be prevented by proper vaccination.

"The nation is fortunate in having as its Chief Executive a man who does not fear official red tape, moss-grown precedents,

MAIL ROUTES IN ALASKA.

or the opposition of the ignorant and fanatical followers of fantastic cults, but who will calmly, fearlessly, and sensibly place at the disposal of any stricken or afflicted community all the available resources of the Government and of modern science for the prevention of disease and the saving of life."

MIRACULOUS HARVESTS

AT FIRST GLANCE there seems something fabulous about the report of a method of cultivation whereby twenty seeds of grain yield an increase of over 700,000, and that within a year! But the tale is sober fact, accredited by competent and trustworthy witnesses. A detailed account of the method is given in a late number of *Le Correspondant* (Paris). While the prodigious increase mentioned was obtained in an exceptional case with a personal attention and care making it equivalent to "laboratory work," it is declared that practical experiments on a larger scale were very successful. We read:

"The principle is simple. It consists in preparing seed-beds in widely spaced lines on very mellow land; then at the end of two months dividing the tufts springing from each grain, replanting each of these rooted shoots thus detached; and finally in hoeing and earthing up these new plants many times in such manner as to provoke at all the points brought into intimate contact with the earth the growth of numerous adventitious shoots, each of which bears an ear.

"It is, in sum, a combination of 'slipping,' transplanting, and pruning.

"The system is, in truth, not new, but a very ancient one, used immemorially by the Chinese, and to it is due the enormous yield of their fields, which have been treated like gardens.

"While our peasants throw broadcast handfuls of grain on the harrowed earth, offering rich pasturage to pillaging birds and rodents, the Chinaman, after furrowing the earth with his wooden plowshare, without turning it, crumbles each lump in his hands till it is like fine powder. This done, at planting time he walks slowly down each furrow carrying a grain-drill which is a marvel of ingenious simplicity.

"Picture to yourself two pointed plowshares about twenty inches apart and connected by a transverse bar supporting a hopper filled with grain, from which issue two slender bamboo tubes designed to conduct the grains so that each will drop in the wake of one of the shares. The diameter of each tube is just great enough to allow the passage of one grain at a time without letting it drop until it receives the impulse of a slight shock given by means of the handles which complete the apparatus.

"The sower pushes the drill in front of him, inclining it now to the right and now to the left, in such sort that each inclination causes the issue of a single seed, which is instantly prest under by the track of one foot or the other. The seed-plot is thus made in the form of a 'quincunx,' each planted grain being at a distance of sixteen to twenty inches from its neighbors in every direction.

"At the end of a few weeks germination begins. When the young plant is ten or twelve inches in height, there are a score of stalks about its stem each provided with a fringe of rootlets. The farmer covers each with loose earth by means of careful hoeing, thus raising the level of the furrow. Each stalk again proliferates, and there are soon fifteen to twenty new stalks around its stem, which detach themselves. All are the indirect issue of a single grain, which proves therefore to have been the parent of 300 to 400 stalks, each bearing an ear.

"Transferring this method to experimental fields and perfecting it, it has been found possible to separate from the stem each of the primitive stalklets with its own roots, transplant it, and then treat in the same way each of the new plants thus formed.

"Thus Philippe Miller planted a seed in the experimental gardens at Cambridge in June, 1776; in August, 1777, he obtained as a harvest from this single seed 576,000 seeds. For unknown reasons the experiment was not repeated until June 12, 1903. On this date our own compatriot Bellenoux treated in this manner twenty grains of wheat planted in one square yard of carefully mellowed earth. On August 9 he separated and replanted the numerous stalklets springing from the earth. On October 8 of the same year, then on March 3 of the next year, and finally on May 13 he repeated the operation. On July 30, 1904, each of his twenty grains had produced 604 clumps bearing 28,388 ears, containing a total of 709,761 grains.

"This prodigious harvest corresponds to a yield of nearly three tons to the acre."

To the objection that this was essentially a laboratory method, and therefore impractical, it is replied that recent experiments have proved its success on a large scale:

"Toward the end of October, 1911, a Frenchwoman, Mlle. Louise Chevalier, residing at Tiflis, in the Caucasus, planted one grain of barley. As soon as the young plant issued from the soil it was earthed up with care, and produced fifteen stalks. In February and March, 1912, two new earthings produced ninety-nine stalks. By May 12, the single grain had produced 212 stalks, and on June 10 our compatriot harvested 236 stalks, 212 ears, and 5,300 grains.

"This yield of 530,000 per cent. encouraged her to put 2½ acres of land under cultivation. One of our Tiflis readers, to whom we owe these interesting figures, tells me that the field is now (December) in its first earthing, and that from a planting of one grain in a space eighteen inches square there have sprung 20,000 clumps, each of twelve to fifteen stalks, which will be correspondingly multiplied this spring.

"Further still, an Algerian colonist, Mr. Bourdiol-Humbert, has been planting wheat and oats in the same fields for five years, without the application of manure. He makes his furrows thirty-six inches apart and plants the seeds therein at a distance of twenty inches from each other. Then he harrows the earth constantly, stirring the soil, destroying its parasites, and keeping it pulverized. For five years, without fertilizing, without distribution of crops, and without rotation, he has harvested an average yield of 1,800 pounds of oats per acre and 1,600 of wheat; while his neighbor's yield was a scant 830 pounds of oats and 500 of wheat."

The writer concludes by warmly urging the undertaking of similar experiments in France, and they would be doubtless equally fruitful of good in America.—*Translation made for THE LITERARY DIGEST.*

TO WARN LINERS OF ICE

THE BREAK-UP of the ice off the North Atlantic coast is to be watched this spring by a vessel whose business it is to be to warn Atlantic liners of possible danger. Every steamship will know hereafter just when there are bergs or ice-fields, and how and when they are moving. Last year two of our scout-cruisers acted as ice-patrols after the *Titanic* disaster, and this year the derelict-destroyer *Seneca* and the revenue cutter *Miami* will patrol the steamship lanes. Another sentry will also be on duty. Says *Science* (New York, March 28):

"We learn from the *London Times* that an arrangement has been made for . . . stationing a vessel for ice observation to the north of the steamship routes across the North Atlantic. In accordance with the advice of a special conference summoned by the Board of Trade to consider the best means of giving effect to this recommendation, it is proposed that a vessel should be stationed off the east coast of North America to the north of the steamship routes during the coming spring to watch the break-up of the ice and to report its movement on the way to the routes. The *Scotia*, a whaler, formerly employed in the Scott Antarctic Expedition, has been chartered to carry out this work, and it is anticipated that she will be ready to leave Dundee, where she is at present lying, about the end of this month. The vessel is being fitted with a Marconi wireless installation having a long range, so that she will be able to keep in touch with the wireless stations in Newfoundland and Labrador. The cost of the expedition will be shared between his majesty's Government and the principal Atlantic steamship lines. In order to make the necessary observations in connection with the movement of the ice, there will be three scientific observers in the *Scotia*. As the vessel will from time to time be stationary, it is expected that these observers will be able to make oceanographical and meteorological observations as to currents, etc., which will be of general scientific interest, as well as of direct value to the work in hand. The *Scotia* is a wooden bark of 357 tons, built at Drammen in 1872, and is fitted with an auxiliary steam-engine."

"TUBULAR" HALOS PRODUCED BY THE FLOW OF RADIOACTIVE SOLUTION ALONG MINERAL VEINS.

URANIUM AND RADIUM HALOS IN ONE ROCK SPECIMEN (URANIUM HALO ON RIGHT).

CONCENTRIC HALOS PRODUCED BY RADIUM E AND RADIUM C.

GREATLY ENLARGED PHOTOGRAPH SHOWING SEVERAL CONCENTRIC HALOS.

HALOS IN ROCKS

CURIOUS TINY HALOS occurring in certain minerals are described and discussed by Prof. J. Joly, one of the world's authorities on subjects of this nature, in the Huxley Lecture delivered at the University of Birmingham, England. It is published in the new English scientific periodical *Bedrock* and reprinted in *The Scientific American Supplement* (New York, March 1). Professor Joly believes that the halos are due to specks of radioactive matter entangled in the minerals, which have sent out, through long ages, a bombardment of particles so small that they travel straight through the solid substance until finally stopped by the atoms in their way. The halo marks the limit of their progress. Some interesting deductions are made from all this by Professor Joly, who says:

"In certain minerals, notably the brown variety of mica known as biotite, the microscope reveals minute circular marks occurring here and there, quite irregularly. The most usual appearance is that of a circular area darker in color than the surrounding mineral. The radii of these little disk-shaped marks when well defined are found to be remarkably uniform, in some cases four hundredths of a millimeter and in others three hundredths, about. These are the measurements in biotite. In other minerals the measurements are not quite the same as in biotite. Such minute objects are quite invisible to the naked eye. In some rocks they are very abundant, indeed they may be crowded together in such numbers as to darken the color of the mineral containing them. They have long been a mystery to petrologists.

"Close examination shows that there is always a small speck of foreign body at the center of the circle, and it is often possible to identify the nature of this central substance, small though it be. Most generally it is found to be the mineral zircon. Now this mineral was shown by Strutt to contain radium in quantities much exceeding those found in ordinary rock substances. Some other mineral may occasionally form the nucleus, but we never find any which is not known to be specially likely to contain a radioactive substance. . . . When the circle is very perfect and the central mineral clearly defined at its center we find by measurement that the radius of the darkened area is generally 0.033 millimeter. It may sometimes be 0.040 millimeter. These are always the measurements in biotite. In other minerals the radii are a little different. . . .

"The question arises whether the darkened area surrounding the zircon may not be due to the influence of the radioactive substances contained in the zircon. The extraordinary uniformity of the radial measurements of perfectly formed halos (to use the name by which they have long been known) suggests that they may be the result of alpha radiation."

What "alpha radiation" is and how it may account for these curious halos are thus explained:

"It is now well established that a helium atom is expelled from certain of the radioactive elements at the moment of transformation. The helium atom or alpha ray leaves the transforming atom with a velocity which varies in the different radioactive elements, but which is always very great, attaining as

much as . . . a velocity which, if unchecked, would carry the atom round the earth in less than two seconds. . . .

"When an alpha ray is discharged from the transforming element into a gaseous medium its velocity is rapidly checked and its energy absorbed. . . . A highly remarkable fact was found out by Bragg. The effect of the atom traversed by the ray to check the velocity of the ray is independent of the physical and chemical condition of the atom. He measured the 'stopping power' of a medium by the distance the ray can penetrate into it compared with the distance to which it can penetrate in air. The less the ratio the greater the stopping power. The stopping power of a substance is proportional to the square root of its atomic weight. The stopping power of an atom is not altered if it is in chemical union with another atom. The atomic weight is the one quality of importance. The physical state, whether the element is in the solid, liquid, or gaseous state, is unimportant. And when we deal with molecules the stopping power is simply proportional to the sum of the square roots of the atomic weights of the atoms entering into the molecule. This . . . obviously enables us to calculate what the range in any substance of known chemical composition and density will be, compared with its range in air."

This being the case, Professor Joly points out, we can at once account for the definite radius in the halos as simply representing the range of the ray in biotite. The furthest-reaching ray will define the radius of the halo. He goes on:

"Now here we possess a means of at once confirming or rejecting the view that the halo is a radioactive phenomenon and occasioned by alpha radiation; for we can calculate what the range of these rays will be in biotite, availing ourselves of Bragg's additive law, already referred to. When we make this calculation we find that radium C just penetrates 0.033 millimeter and thorium C 0.040 millimeter. The proof is complete that we are dealing with the effects of alpha rays."

How this phenomenon may give us some clue to the age of the minerals in which it occurs, and also to some of the peculiarities of the earth's crust itself, is thus explained:

"Finally, there is one very certain and valuable fact to be learned from the halo. The halo has established the extreme rarity of radioactivity as an atomic phenomenon. One and all of the speculations as to the slow breakdown of the commoner elements may be dismissed. The halo shows that the mica of the rocks is radioactively sensitive. . . . We are evidently justified in the belief that had other elements been radioactive we must either find characteristic halos produced by them, or else find a complete darkening of the mica. The feeblest alpha rays emitted by the relatively enormous quantities of the prevailing elements, acting over the whole duration of geological time, and it must be remembered that the halos we have been studying are comparatively young, must have registered their effects on the very sensitive minerals.

"And thus we are safe in concluding that the common elements, and, indeed, many which would be called rare, are possessed of a degree of stability which has preserved them unchanged since the beginning of geological time. Each unaffected flake of mica is thus unassailable proof of a fact which, but for the halo, would probably have been for ever beyond our cognizance."

LETTERS AND ART

AMERICAN AND FRENCH CARICATURE

IN WHAT may be termed our new school of cartoonists—Robinson, Minor, Cesare—one is often reminded of a French counterparts, Forain. Whether they derive from him or are merely coevals is a problem yet to settle. Mr. R. L. Roeder, who takes up the question and treats it in part in the *Boston Transcript*, is content to call our fellow workers merely "counterparts" of the Frenchman whom he judges "the first of living caricaturists." To compare him with the American group would, he declares, be "a flattering estimation" of them. In the pages of the *Paris Figaro*, Forain's drawing has for years

on their backs, a man giving aid, a tender, impotent priest bending with a ritual gesture, behind him an acolyte, robust and quiet, waits patiently for the end of the ceremony; no more than that. Description usually magnifies the idea of death and invests it with horror; here it depreciates it and produces another kind of terror, far subtler, because here the inference reflects on life. It is as if the artist, evoking the scene, threw you this sharply nonchalant question: 'Life being what it is, what is there so terrible in death? Look there!' But this pity of indifference at the supreme moment, when the end and the delivery are in sight, becomes yet more keen when it considers a scene in which life, unrelieved by death, is the subject. You have there the drawing of the paralytic woman. Three figures compose the design, each inclining toward the other. A nun is standing, raising by the arm an old peasant woman, who, bent with age and disease, rises, assisted by her husband, from a wheel chair. She is the central figure; we see merely her back and head, then the stiffened arms, supported on either side; with that the whole story is told. There is no attempt to render it by the expression of her face, a doubtful expedient, and one apt to miscarry; but it appears in the few hurried lines of her body and in the attitudes of her companions. Nothing could be more troubling than Forain's observation at this point: The distinction between the solicitude of the nun and that of the man. It is more eloquent in praise of the artist than a set eulogy. The man's eyes are on his wife; the nun's are downcast. Her impassive expression is not indifference, tho if he raised his eyes and caught it, he might think it such, for he frowns with distress. Her bitter patience

BLESSING THE TROOPS.

A few strokes picture regiments. Forain "expresses his idea without a superfluous mark."

been a feature of the Monday's issue. In any assembling of his work, as Mr. Roeder points out, "one begins by observing his great respect for the people." He was the son of a workman, and "no other class is so kindly observed." This fellow-feeling has "provoked his finest conceptions," and, moreover, it is "the law of his suggestive style." We read:

"I speak of sympathy in a caricaturist; essential if his ridicule is to prove of influence. It implies in this case a profundity of character above intellectual triviality. In Forain it has outgrown the barren province of satire and emerges in a recent series of etchings, executed at Lourdes, in the improvisations of an excited imagination, at last noble in expression; at this point the satirist passes away, burns himself out, and the naked mind celebrates Lourdes with all its powers of compassion, the shrine where miracles are invoked to restore sick creatures from the death that would cure them; but the shiver of hope can not pass his bitter pen. He gives them a life of record, and the work is his reward; because going back to Rembrandt nothing is so beautiful. Yet they are no mere story-telling. The satire on prosperity of beggars and menials and drunkards, the daily satire which any man can see shifting about him through a thousand shapes wherever he moves, in Forain is mastered and distilled into a style caustic and reticent as his own (and their) habit of thought. I would suggest that in this style the manner of the people is transubstantiated; its noble irony is theirs as well as his.

"If the scene represent a crisis, such, for instance, as the sacraments of the dying, one is made to feel, with awe, the insignificance of that crisis. For what is it? Two haggard men stretched

has been worn smooth by ceaseless contact with the harshest forms of suffering; her calm seems detached and unfathomable, and is in so far religious; it must impress a sufferer; certainly it excites the curiosity of an observer. If the sister has any thought at all, it is evidently clear, trained, and practical; whereas the vigorous peasant appears to us helpless as a child, affectionate as a dog, bareheaded, bewildered, and doting, his heart beating with greedy hope. Then as you look at the old woman's shoulders hung above her silly head and at her rigid body, as searchingly as if the artist's scrutiny were turned on you, you feel his question: What kind of a life froze up these bones? and what in fact could life mean to her, brutal and exacting, year after year, without outlook, without ambition, driven only by goading physical necessity, by treacherous heroes, of reward, longer and drier and more ingeniously abusive than a beast's until finally here we have the end of all effort, the consummation of many stubborn impulses, the paralytic's chair, this plank for the living?"

Forain has evolved a technical method, ample as Rembrandt's, says Mr. Roeder, by way of critical appreciation. "He expresses his idea without a superfluous mark; a few sweeping outlines suggest all that he needs of the figure, the several essential spots complete the study." He began by being literal, we are told, and only gradually eliminated superficialities; but "this synthetic style is always exact." "In one broad sweep of a young soldier's arm at salute he can put all the dapper contentment of the boy; he can stretch a beggar's hand so that it will beg forever; he can draw a politician's eye, with the good man in bed

vast and flabby and meditative, so as to transform the bedroom into a senate-hall and the servant carrying the breakfast-tray into an adoring public devouring the crumbs." It is only technically, judges Mr. Roeder, that Forain and the American can be compared. Further:

"Between him and Robinson, for instance, there is barely an illusory likeness, that of their gallant style. There is, I suppose, an inherent restriction in all exaggeration (and in particular of the grotesque) which makes all cartoonists alike, because all are limited; certainly it is true that there is more resemblance between the drunk than the sober. But to make technical power the ground of comparison in this case is to compare two instruments about equally perfect; until the performers play upon them there is no great distinction to be made; when they do, unfortunately there is no further reconciliation possible. The high-strung, nervous chagrin of Forain's humor and the dry, facetious cast of Robinson's are, to say the least, heterogeneous. No doubt comparisons are doubly odious when two caricaturists are pitted and the inference drawn with blood; but none the less selection breeds.

"Forain is an excellent caricaturist, but he is so because he is so much more.

"The lowest form of caricature is that which resorts to allegory; the highest, that which seizes its victim without violating the shape of life; that is legitimate sorcery. Consider in this light the American cartoonists. How often allegory is all! Roosevelt at a soda-stand, the faucets ticketed with his party measures—suffragism, tariff reform, etc.—and the question What will you have? Or the Mexicans as dwarfs playing on a powder-barrel, the United States; or a negro prize-fighter crunching the bleached bones of the vanquished. The last is a subject treated by a cartoonist (Robinson, I think) in the better vein I have indicated. He produces Governor Foss in the ring with a fatuous gesture deprecating the struggle: 'No, no, gentlemen, we can not stop it.' This is nearer Forain's manner, when to have a fling at a kindred subject, idyllic love, he draws the 'Bower.' A man and woman have taken to love the country; they are sitting under a trellis by the waterside. He sprawls blissfully across the table, holding her limp hand; she leans back languidly on a stiff, unyielding chair; while over the yawn she can not suppress a decent fan is fluttering. To this scene an empty siphon and two glasses stand witness; over it her abandoned roses hang their heads.

"Plainly Forain is no reformer; he is imaginative and cynical. When he draws a criminal's head in the dock (one of the Anarchists of a recent trial) his motto runs: 'Please move, Inspector; the photographers can not see me.' When he draws Jaurès, the Socialist orator who has been opposing in the Chamber of Deputies the projects of military reform aimed against Germany,

he puts him to bed and introduces the maid with the breakfast-tray, saying devilishly; 'Monsieur dreamed all night in German,' to which Jaurès with a guilty sigh: 'Ah, yes! I dreamed that I was speaking in the Reichstag.'

EVEN THE PENNIES OF THE POOR.

(Cassre in the New York Sun.)

The allegorical method dominating one of the new men among American caricaturists.

"It is useless, and it would be unjust, to oppose the superior refinement of Forain's humor to that of the Americans; nor do I think that (tho the most evident) the important consideration. And a conscious effort for refinement always ends in affectation. No, not refinement, but observation. Does an American caricaturist draw and observe life like Hokusai, for instance, the 'old man mad for design' who died almost a centenarian and cried then that if the gods had but given him ten years more he might have known how to draw, or, like Forain to-day, whose eye upon you is a ruthless inquisition, withering and dissecting, in every sense discomposing you, or, like Rembrandt the day before yesterday, inflamed with vision? These men were forever studying, noting, inquiring, consuming the world about them; they absorbed it with such intensity that the heat of their perception refined it; and so if their kind will do, the American caricature will refine itself inevitably, as consciously it never will."

In France, so we are told, "Forain's wit is applauded (as if wit were genius!) and Forain's eye is feared, because the dummies are recognized true to type." For years he has been publicly known as a caricaturist and nothing else, but his recent exhibition reveals his beliefs and "the man himself."

DIFFICULTY IN THE WAY OF SCIENTIFIC SELECTION.

CHORUS OF EUGENISTS—"What's the matter?"

—Boardman Robinson in the N. Y. Tribune.

IMMODEST COLLEGE ADVERTISING

MODESTY in declaring its own virtues may be bad for the products of commerce, but it seems to be thought good for colleges. At least the officers of the Carnegie Foundation for the Advancement of Teaching think so. In their latest report they observe that "any college advertising which aims to attract students to an institution or to a department because that institution or department desires more students, is almost sure to be harmful." Such a statement seems to hit at the roots of one of the deep-seated activities of our college administrative system, but the Foundation is not without the evidence of the kind of thing it reprobates. A Western college is declared to include in the biographies of its professors such details as their editorships of college annuals, class notes on their relative popularity, degrees they are expected to receive, the scholastic attainments of their wives, the number of their children, and finally their portraits, which, to the cynical Foundation, "are ever unsatisfactory intellectual documents." The publicity bureau, as this critic sees it, tho it may be helpful, yet "can be made as sensational as the most advanced yellow journal could desire." The *New York Evening Post* appears to refuse to take the Foundation with all the seriousness it claims for itself, and facetiously remarks that this last characterization is "as high a tribute as could be paid to what some unenlightened persons still regard as a medieval institution." *The Evening Post* continues with citation and comment:

"Alumni associations also come in for a scoring on account of their efforts to recruit new students, and honorary degrees are not exempt from blame, especially when a small college confers more of them at a commencement than degrees in course. . . .

"There should be many scholarships," says Professor Stevenson, 'but they should be granted not as gifts, but only upon severe examination.' Even in the older institutions, which have been more careful than others in using scholarships as a bait for students, avers the Foundation, 'the distribution of fellowships in their graduate schools has generally gone on merrily. Without these bids, very many graduate schools would be entirely bereft of students.' The net result of all this advertising is to set forth every college as superior to every other. Each one has a location that is magnificent, glorious, unrivaled, or ideal; an equipment that is thoroughly or completely modern, remarkable, excellent, or superb; a faculty of experienced, cultured, superior, distinguished, leading, or inspiring teachers; the finest college spirit with the highest ideals."

What the Foundation wants to see are announcements and catalogs that are "sincere, honest, and modest," that present facts rather than claims. To which *The Evening Post* adds:

"Even this will seem a hard saying to many. To ask one to tell you his qualifications for a place, but to be modest in doing it, is much like urging him to win a race, but to be careful not to over-exert himself. Yet if an institution which professes the highest intellectual and moral ideals allows itself to forget all about them when it takes to blowing its own horn, it can hardly complain if, after a while, the rest of the world pays little attention to what it says about them at any time. A more specific remedy for whatever is wrong in the present situation is some sort of legal restriction upon the use of the term 'college' or 'university.' In his report for 1911, the United States Commissioner of Education transferred eighteen institutions calling themselves colleges to his list of secondary schools. His specialist in higher education estimated that only fifty-nine institutions were granting degrees that were wholly acceptable, and only 161 others degrees that were approximately so. These 220 institutions comprized less than one-fourth of the institutions in this country calling themselves colleges or universities. The first step, not only toward more appropriate college advertising, but toward elevating the general tone of our educational life, is the separation of the sheep from the goats."

Another sign that the college fetish is on the wane was shown by the *Popular Science Monthly*, where a writer recently held that "not every young man should be urged to go to college; entrance may be the first step on the road to hopeless failure."

THE LURE OF THE CRIMINAL

WE ARE FILLING our heads with a lot of sentimental nonsense when we take it without question that the criminal of stage and fiction and the criminal of real life are one and the same. Mr. Arthur Stringer, who knows something about both types, having dealt with them in real life for the sake of his fiction, declares they are about as wide apart as the poles. He finds it high time for some one to point out this fact and to stop the stultification of one's intelligence with such beliefs. The "crimewriters," he reminds us, have been "solemnly announcing themselves as realists." Even editors are beginning to affix foot-notes to say that their crime stories are transcripts of real life. A crime novel asserts that it is an actual portrayal of police conditions. A playwright gets an ex-convict to form a member of the cast. Some of the ways in which these so-called realists fool the gullible among us are set forth by Mr. Stringer in the *New York Times Review of Books*:

"I know of one novelist who describes a safe-breaking scene wherein the master-crook attaches a wire to a chandelier and an electrode to the end of this wire, and by the deliciously naive means of a mere lighting circuit burns his way through a ponderous steel door. It would be no more ridiculous to say that he pried that door off with his fountain pen. Another novelist with an international reputation has his villain sit on a steamer's deck and quietly read at the mast-head an incoming wireless message. It is of little consequence, of course, that the professional operator in the wireless room is compelled to have a microphone of the most delicate nature held close to his ear before he can even pick up that same incoming message. This same villain, I take it, could stand on the Singer Tower and hear a hairpin fall off a bureau up in Albany. An important feature in a reigning 'realistic' crook play is a Maxim silencer, which is used on a revolver, despite the fact that a silencer can not be and never has been attached to a revolver. In still another Broadway sleuth-play a woman under suspicion casually takes up a sheet of writing-paper from the desk of a man mysteriously murdered. The detective on the trail of the offender holds up this sheet to the audience, showing the finger-prints thereon imprinted as plainly marked as ink spots. Now, the murdered gentleman may or may not have had the hobby of inditing his correspondence on chemically sensitized note-paper. Or, on the other hand, the lady under suspicion may have been opening a tin of printer's ink in one of the rooms off-stage. But without one of these two extremely remote contingencies the overconvenient appearance of those nice black blots must be accepted as either absurd or miraculous."

These are perhaps only absurdities showing how shallow is the author's real knowledge of crime. His portrayal of the criminal himself, Mr. Stringer avers, is a more open and offensive sin:

"There is no such thing as a romantic criminal. By this I mean that there is no romance about professional crime. There is no Raffles in real life. As McClusky once said down at Police Headquarters: 'A crook is a crook at heart. Day or night, drunk or sober, he is swayed by his criminal instincts.'"

"The playwright who exploits crime loves to have his hero bad only nor'-nor'-east. When the wind is in the other quarter he is the gentlest of lovers and the most impeccable of characters. It is the same with the book criminal. Even his felonies are prompted by a supposedly ameliorating love of adventure. He follows the gentle art of burglary for the thrill that's in it. He likes the game for the game's sake. He makes house-breaking and highway robbery lose half their evil by losing all their grossness. He seduces you into the belief that it's quite fit and proper for him to take toll of the overjeweled ladies who are enjoying the same week-end with him in the same country house, or to exact midnight largesse from the altogether unsympathetic jeweler who has not appreciated his devil-may-care audacities, his good breeding, and his languidly enunciated epigrams. We remember that it's only human to sympathize with the bad and tolerate the good. We follow our fiction-made villain through his round of denatured adventures; we feel that he is being true to some wider scheme of things than the trivial laws that he is breaking; we like to witness his leap through the paper hoops of the temporal while swayed by those emotions which we regard as eternal. We watch him in a pink light, or we see him stalk through his

chapters like a Christy illustration, and we imagine that we have at last come face to face with the somber and true side of this seamy life of ours. But he's no more the real criminal of to-day than is Ali Baba or Robin Hood of yesterday. And his adventures are no more actual criminal life than were the adventures of the Forty Thieves. You are really eating pink gumdrops and, from their color, imagining them raw beef.

"The habitual criminal is always a defective. If he is not a weakling physically, he's a weakling mentally. His ranks are recruited from incompetents and degenerates. His mind may not differ much from the ordinary man's in many respects, but it is a mind that is either stupid and narrow on the one hand or passionate and uncontrolled on the other. He has a craving for alcohol, for drugs, or for artificial and unhealthy excitement. Only too often his spirit has been further brutalized by the cruelties of jail punishment. He is a man of no settled place of abode, no knowledge of trade, and no desire for honest work; no technical equipment for earning his living; no place in the industrial scheme of things. He is a graduate in idleness, who will live off a woman if he is able to, blackjack an invalid if need be, sleep in verminous lodging-houses, and poison his own enfeebled body with fusel-oil whisky. Inspector Schmittberger once told how even Monk Eastman begged to be put in a cell because he didn't have a gun and the Kellys were after him. 'When I'd thrown him out of the station-house,' Schmittberger said, 'he slunk into a hallway and went to his kennel by way of the roofs.' And, as this same Inspector has pointed out, the spirit of adventure no more enters into the make-up of the East Side criminal than does the respect for women or the will to work. As Schmittberger put it, he's usually a cadet out of work.

"The last time I was down at Police Headquarters I happened to see a burglar who had become famous, or rather infamous, in the evening papers. This devil-may-care robber, whose newspaper description had excited such sympathy among dove-eyed ladies, was being put through his Identification Bureau examination, mugged and measured. I watched him take off his poor old, run-over, gaping-toed shoes to get ready for the Bertillon measurements. There were no soles or feet left to his socks. He was not terrified, but just pathetically ill-nourished and ill-clothed and anemic and unclean and sunken-cheeked. His teeth were bad and his vapid blue eyes were foolish-looking. His whole life was foolish, just as his commitment for so many years up the river must have struck the presiding judge as foolish, if that judge was a man of thought."

This is one of the ways, as the late P. T. Barnum found out, that the public loves to be fooled. And we love it, adds Mr. Stringer, because "under the veneer of civilization exist our racial and elemental passions." Further:

"As Felix Adler has said, the criminal instinct is more deeply rooted than is generally imagined. In us survives an older and rebellious spirit of adventure. It crops out in childhood, when the healthy-bodied boy aches to be a pirate or a Deadwood Dick. Then, as life becomes more restricted, we have a greater weakness for the audacity of man rebelling against powers older and greater than himself. The more we are hemmed in by law, the more we like the man who can defy what we have to respect. The core of romance is peril. There is a zest in uncertainties. The romantic criminal unmasks our potentialities. . . . In fact, nearly all the literature of the world is about its wicked people, from Adam and Cain down to the 'Iliad' and Ali Baba and Shakespeare and Hugo and Stevenson. But there is much written about the wicked that will never be literature, and the first and greatest reason why it can't be literature is because it isn't true. It is neither true to humanity nor true to facts."

RECORDING THE INDIAN'S MUSIC

THE FAD OF "RAG-TIME" has set going all sorts of speculations and theories regarding its origin. Most people instinctively assign it to the negro; but the Indian also, according to Miss Natalie Curtis, is to be credited with a hand in it. The syncopation, which is a predominant feature of all rag-time, as she observes in *The Craftsman*, "is an absolutely essential element in the songs of our North American Indians of many tribes." Miss Curtis, who is an authority on the music of our aboriginal tribes, insinuates that here, indeed, may be the ultimate source of this peculiar rhythm, for "doubtless the negroes in the South heard the tom-tom and the sharply

Copyrighted by The Byrnes Company, New York.

INDIANS SINGING FOR UNCLE SAM.

The figures from the reader's left are the recording operator, Geoffrey O'Hara, the chiefs, Medicine Owl, Big Top, and Long Time Sleep, of Glacier National Park Reservation.

accentuated rhythms of Indian song from the surrounding tribes with whom they mixt to some extent prior to the removal of the Southern Indians to Indian Territory."

In connection with this insistent inquiry, if for no higher motive, it is interesting to record that Mr. Geoffrey O'Hara, recently appointed by the Interior Department at Washington to record the tribal songs and music of all American Indians, began his work in New York City by taking his first phonographic records of the songs of the Blackfeet Indians who were here on a visit from Glacier National Park, Montana. *Musical America* (New York) gives these statements:

"During the stay of the red men in New York, Mr. O'Hara is having them sing into phonographs, and the records will be sent on to Washington to be put in the Government archives, thereby preserving for all time the music of the original Americans, who are rapidly passing to the Happy Hunting Grounds.

"The accompanying picture shows the Indians singing to the phonographs under the direction of Mr. O'Hara. The Indians could hardly grasp the idea at first of how they could sing into a tin horn and thereby record their music. After the first song had been sung, however, the reproduction was given them in a few minutes and the magic of the operation was bewildering to them. They thought it was the most wonderful of all the wonders they have seen since their invasion of Greater New York. Mr. O'Hara will have them sing daily to his phonograph while the Indians are in New York."

RELIGION AND SOCIAL SERVICE

LIFTING THE BAN ON THE THEATER

THE TRADITIONAL HOSTILITY to the theater held so long by the Church has within the past few weeks been impugned in religious gatherings on both sides of the ocean. The Methodist denomination have formerly been particularly determined in their stand, and successive General Conferences have refused to rescind the disciplinary regulation frowning upon attendance at theatrical entertainments. Yet in a recent annual conference in New Haven, Conn., Prof. Henry Wade Rogers, a prominent Methodist layman, is reported to have "expressed in strong terms his disapproval of the rule in [the Book of Discipline, which puts under formal ban the practise of theater-going." *The Congregationalist* (Boston), which calls attention to this fact, thinks that "the raising anew of the question by Professor Rogers may indicate another attempt at the next General Conference to secure the removal of this objectionable clause." And it goes on to enumerate other efforts:

"This same general subject was agitated at the recent meeting of the Free Church Council of Great Britain in Newcastle, when a prominent delegate argued earnestly that no formal attitude of opposition should be taken by the churches to the theater, when such an attitude was contradicted so openly and constantly by many members of the churches. In Chicago the Methodist ministers have devoted a meeting to the discussion of the subject."

The Congregationalist also prints in the same issue an article by Prof. Henry H. Walker, of Chicago Theological Seminary, who points out the wholesome influence of certain plays which have been running successfully in recent years in a number of American cities. He mentions "The Servant in the House," "The Passing of the Third Floor Back," and "The Dawn of a To-morrow," and believes that this class of plays "should have the recognition of those who stand for the higher life of the community, and that the general position of Christians should be one, not of total abstinence, but of wise discrimination." He declares that the theater "is vindicating its right to be counted, not simply as an educational agency, but as an agency making for righteousness and social justice," adding:

"That the theater renders this ministry in its own way, different from the way of organized religion, is a distinct advantage, for it makes an appeal to multitudes whom the Church and kindred movements seldom if ever reach. There never was needed more than to-day the spirit of just discrimination in the judgment passed upon the theater by the Church. That which is corrupt in it should be unqualifiedly condemned. Plays that are a stench in the nostrils of decency should be driven to cover by an aroused public sentiment. But just as truly should the good and uplifting receive the support and encouragement of good men. It ought to become more and more profitable to serve the public with that which elevates taste and ministers to the creation of ideals. It ought to be made financially hazardous to attempt anything else. The theater is the public's servant, not its master. It caters to public demands. It thrives on the public's purse. We, the public, may have what we want, when we want it, and when we are ready to pay the price for it, not in coin, but in discrimination, in the condemnation of the evil, in sympathetic support of the good. The problem is by no means uniform. The size, character, ideals, and spirit of the local community are vital factors involved. Still, any community which has enough of religion and morality to support schools and churches can also unite in the creation and support of healthful amusement for all of its citizens."

The editor declares that he is in "heartly accord" with the principle of cooperation advocated by the theological professor, saying:

"The dramatic element is too deeply rooted in the human

instincts, is so capable when wisely guided, not only of furnishing the needed recreation for multitudes engaged in monotonous toil, but of being made subservient to moral ends, that to denounce and taboo all its manifestations is unreasonable and injudicious. Most churches of our own order have frankly admitted that the uncompromising attitude toward the theater, which circumstances might have justified in former times, cannot wisely be held to-day. Indeed, many modern parish houses are built with stages and footlights and other provision for an occasional entertainment of the dramatic order, and in chapels and Sunday-school rooms plays are frequently given and considered a legitimate part of the Church's ministry to the social life of the community.

"With such marked recognition within the Church of the dramatic instinct, and with so large a proportion of Church members attending the theater, at least occasionally, formal action discountenancing the theater seems perilously close to hypocrisy. Far better is it for the Church to bring its influence to bear in all legitimate ways, to banish demoralizing plays and to prevent the theater from becoming so purely commercialized that it will pander to the lowest instincts of humanity."

Certain cities are mentioned as doing useful pioneer work:

"The old city of Northampton in Massachusetts is this year trying out an interesting experiment in undertaking to control as a municipality the theatrical performances offered the public. The generosity of a prominent citizen, the cooperation of the city authorities, and the interest and assistance of Smith College professors have made it possible to organize a group of actors and actresses recruited from different parts of the country who are now known as the Northampton Players. They make their home in the city, are recognized socially, and are looked upon as contributors to the better life of the city in some such way as the public school teachers are serving it.

"Every week a new play is brought on, the character of which is satisfactory to discriminating supporters of the movement and which at the same time is attractive and popular enough to insure good audiences from night to night. These players themselves like this more permanent and normal relationship to the community better than they do the nomadic life of average stage folk. The rates are reasonable and the response from factory workers and other manual laborers, some of whom have hitherto squandered their earnings and time on cheap picture shows, is gratifying. This Northampton experiment has reached the point where its value both in furnishing legitimate entertainment and in bringing all classes of citizens together in profitable contact with one another is evident. In Pawtucket, R. I., largely through the initiative of a Congregational minister, Rev. J. D. Dingwell, a civic theater has just been opened.

"No earnest Christian will frequent or countenance the theater that impairs his spiritual life or chills his zeal in Christian service. Its value to him in the way of recreation and diversion is not unlike that of a good novel. But the earnest Christian will also recognize the fact that a multitude of young people may not have enough discrimination to use the theater without being harmed by it. To prevent such deterioration of character through establishing in young lives habits of self-restraint and a loyalty to the leadership of Jesus Christ in this and all other difficult matters is the duty of the Church. In addition to that, it should be ready to recognize and aid the members of the theatrical profession and the workers for social betterment who are striving to make the theater a blessing rather than a curse to America."

The Christian Work (New York), speaking of the farewell performances Mr. Forbes Robertson is now giving in London, observes:

"A glowing appreciation of Mr. Forbes Robertson appeared in *The Daily News* recently from the pen of 'A. G. G.' in which the great actor's peculiar quality is expressed in a single sentence: 'He is a moralist before he is an actor,' wrote Mr. Gardiner; 'a spiritual influence more than an artistic satisfaction.' An actor may not only be a Christian, but a teacher of Christian truth as well."

A SAINTHOOD OF SCIENCE

TO MAN has been given "a triple gospel—of his soul, of his goods, of his body." These words of Sir William Osler's naturally bring the query, what should be "the attitude of the Church toward the gospel of the body, toward the men who have given us this gospel?" Henry Fairfield Osborn, director of the American Museum of Natural History in New York, and a paleontologist of note, puts this question in *The Churchman* (New York, Prot. Epis.), and answers it by declaring that there should be a statue of Louis Pasteur in the Cathedral of Saint John the Divine, and that we should "institute a new order of sainthood" for men who, like him, "showed the way to the physical redemption of man." Some such tribute, thinks Dr. Osborn, would have been rendered to Pasteur if he had lived in "the early centuries of the Church before there had arisen any divorce between the study of nature and the matters of the spirit," and "had won the love of his generation and the reverence of succeeding generations by his mighty works." And the writer adds:

"Our belief to-day is that Pasteur should stand as a symbol of the profound and intimate relation which must develop between the study of nature and the religious life of man, between our present and future knowledge of nature and the development of our religious conceptions and beliefs."

Not that Professor Osborn is here propounding any new theory. He quotes St. Augustine and Dante to show their "theology was imbued with a deeply theistic view of nature." But since their days

"the Church has passed through a very critical period of skepticism as regards nature. This is perhaps an original view of skepticism, but there is no way of evading its application; if nature represents the wisdom and goodness of God, to be blind to its interpretation is a form of skepticism—devout and well intentioned tho it may be. . . . If the laws of nature are manifestations of the divine power and wisdom, as we proclaim in our services, the attitude of the Church toward these laws should not be hesitant, defensive, or apologetic, but active, receptive, and aggressive."

"Considered in this way, the great scientific inquiry of the latter half of the nineteenth century, so far from being regarded as destructive, is a constructive, purifying, and regenerating movement; it takes us back to the lost faith of our fathers, a faith which spiritualized the Old Testament, a faith which finds in nature a manifestation of the divine order of things. If Newton opened to us the new heavens, Darwin showed us the new earth, Pasteur showed the way to the physical redemption of man. If we were to rewrite the Litany in the twentieth century, for the passage 'From plague, pestilence, and famine, good Lord, deliver us,' we should read, 'From ignorance of thy laws and disobedience of thy commands, good Lord, deliver us.'"

From the standpoint of "this older teaching of Augustine and Dante," according to Dr. Osborn,

"The life work of Louis Pasteur was more than humanitarian, it was more than scientific, it was religious. He regarded nat-

ural processes which in their superficial view appear relentless, cruel, wholly inexplicable, as part of a possibly beneficent order of things; he again revealed through his profound insight, through his unparalleled toil, discouragement, and even scorn on the part of his contemporaries, deeper laws which are beneficent, protective, and restorative in action. He was the evangelist of Osler's 'third gospel':

"And the third gospel, the gospel of his body, which brings man into relation with nature—a true *evangelion*, the glad tidings of a conquest beside which all others sink into insignificance—is the final conquest of nature, out of which has come man's redemption of man."

And this brings the final question regarding the recognition of such service:

"Should we not institute a new order of sainthood for men like Pasteur? Could we find one more eminent for consecration, piety, and service in life and character than this devout investigator? Entrance to this order would be granted to those who through the study of nature have extended the bounds of human knowledge, have bestowed incomparable blessings on the human race, have relieved human suffering, have saved or prolonged human life. Would not a statue of Louis Pasteur in the Cathedral of St. John the Divine proclaim the faith of the modern Church that the two great historic movements of Love and of Knowledge, of the spiritual and intellectual, and the physical well-being of man, are harmonious parts of a single and eternal truth? On the base of such a statue might be inscribed the words written at the most perplexing period of Pasteur's life:

"God grant that by my persevering labors I may bring a little stone to the frail and ill-assured edifice of our knowledge of those deep mysteries of Life and Death where all our intellects have so lamentably failed."

CHANGING A CHURCH NAME—Many persons are not altogether pleased with the sound

of their own names, but, so it is pointed out, most of these dissatisfied ones "have the good sense and good taste not to make themselves ridiculous before their neighbors and friends by changing their names from Smith, Jones, and Robinson to something more high-sounding and aristocratic." A parallel to the disgruntled minority is found by G. Monroe Royce in the section of the Protestant Episcopal Church who wish to change their name to "The Holy Catholic Church of America." The diocese of California has indeed voted for this change. In *The Independent* Mr. Royce writes:

"The leader of this movement on the Pacific coast is a clergyman with English orders, who has not been a dozen years in this country, and who is still a 'British subject.' This gentleman is carrying on a most active, vigorous, and militant 'campaign for the change of name,' to use his own words, and is asking the public to subscribe to his war chest. He has circularized the whole clerical body of the Church, and has succeeded, so it seems, in capturing the diocese (California) in which he is at present residing, and he has accomplished this result in spite of the opposition of the bishop of that diocese. He must therefore be an opponent worthy of respect, whatever one may think of his propaganda. The leader of this agitation on the Atlantic coast was also a 'priest' with English orders and without American citizenship. But this distinguished doctor of

HENRY FAIRFIELD OSBORN.

Who suggests a new order of sainthood for men like Pasteur.

divinity is no longer in orders and has left the country. . . . "These men are not, of course, conscious of anything like disloyalty to this historic American Church; they are simply out of touch with the temper of the American people, which has little patience with such ecclesiastical tomfoolery."

"The American people have, once for all, accorded to a certain Christian Church organization the name *Catholic*, and they have at the same time accorded to all other Christian Churches the comprehensive appellation of *Protestant*, and all King George's horses and all King George's men can't pull these two names down from the places which have been assigned them by this common consent. This may be the result of ignorance, and these agitators may know much more than the rest of us about the proper meaning of *Catholic* and *Protestant*. But illiterate as this verdict of the American people may be, it is a final judgment, and I advise these very superior persons to accept it and cease making themselves a nuisance and the Episcopal Church ridiculous."

MR. MORGAN AS A CHURCHMAN

ALL THE CRITICISM of J. Pierpont Morgan is stilled when it comes to the discussion of his church activities. As a financier, of course, he represented all that to the trust-breaker is anathema. But his rector and his bishop have a personal story to tell that will not be uninteresting even to those who find a flaw in his other activities. From the Rev. Karl Reiland, rector of St. George's, New York, we learn that none of Mr. Morgan's manifold interests in the world of high finance ever minified his interest and attention to religious duty. He worshiped weekly in St. George's when in the city, passed the collection plate there, and, indeed, "he was the most approachable of men whenever anything pertaining to religion and the church required his attention." He was never a talker; nor was he very patient with those who liked long-drawn-out discussion of irrelevant matters. But "he was always generous to every project that required financial assistance, or the trained, far-seeing observation of a comprehensive mind." If, in the councils of the church, he seldom address the chair himself, observes Mr. Reiland, it was "because of humility rather than shyness," but "no one and nothing escaped his observation, or failed to receive his criticism or encouragement as the matter deserved." In *The Outlook* (April 12) Mr. Reiland writes further:

"Mr. Morgan's devotion to religion is perhaps best known in St. George's Church, New York, of which he was a lifelong member, and which, as an institutional church, represents his idea of applied Christianity. He became a vestryman in 1868, junior warden in 1885, and senior warden in 1890, which office he held at the time of his death. No one knows the extent of his generosity in and about St. George's. He was regularly at the Sunday morning service when in this country, and always took up the collection in the center aisle. On communion Sunday he remained to receive communion. He followed every word of the service and sermon with devout attention, and the present rector is thankful for his habit of giving wise and helpful criticisms of services, sermons, and general parochial policy."

"He came early to the church, eagerly mounting the steps, specially animated with a kind of youthful joy when surrounded by the members of his family. After putting aside hat and coat, he would walk up and down the broad aisle greeting every one who cared to speak to him, rich and poor alike, or take his stand with the parish clergy near the entrances to welcome the gathering worshippers. Mr. Morgan has frequently said that, next to his immediate family, nothing on earth was so dear to his heart as St. George's Church."

"His warm-hearted personality, his cordial hand-clasp, will be missed, as greatly as they were eagerly looked for, by hundreds to whom they meant no less than encouragement in a common faith and the blessing of a friend. He did not like to place a contribution in the collection plate 'to be seen of men,' but often sent his gifts privately. Tho he liked especially a certain pew, and sat in it when he found it vacant, he was glad to feel that the size of the congregation sometimes forced him to sit

elsewhere, and prided himself upon being the warden of a really free church."

Mr. Morgan's religious feeling found its outlet chiefly in music. The rector of St. George's has some interesting facts to narrate:

"He was enthusiastic for congregational singing, urging that all music, and especially the hymns, should be selected to that end. His knowledge of hymns was remarkable, even to the choice of tunes, and the custom of always using certain tunes with the hymns in the services at St. George's is to a great extent due to his interest. I never knew any one who felt so strongly about the choice of hymns. Altho I had known Mr. Morgan for several years, my first conference with him when I came here was largely about St. George's music. He said, 'Please do not change our hymn-singing till you know our method. When I don't like a hymn tune, I always sit down.' I never saw him sit down. Upon the completion of the new Centennial Chapel last fall, he came from his office Saturday afternoons and entered the chapel alone. As soon as I learned of this habit I used to go over regularly to meet him there. Sometimes I found him kneeling in prayer, or reading, or singing a hymn without organ, and alone. He seemed as happy as a child if I sent for one of our organists to play the hymns for us. He would stand in the chancel singing and beating the time, with book in hand, thoroughly enjoying every moment. The doors were always closed—no one but the aged sexton and myself knew that the great master of men and things was worshipping in the temple."

"His last words as the steamer left the pier on January 7 were:

"'Watch over dear old St. George's.'"

"Mr. Morgan has been called a 'broad churchman,' and so he was, very broad and deep. His was not the breadth of extended thinness, but breadth with depth. He disliked any but the plainest, heartiest service in which all could join. He used to say, 'St. George's way is what I like, and I hope it will never change.' Frequently he urged his acquaintances to attend services. Public worship with him was the outward visible sign of an inward religious conviction. His religion was no Sunday affair. He worshiped in spirit and in truth."

"No one who was present on his last Sunday here will ever forget how he stood out, almost in the aisle, beating time with his book, singing with strong voice and moist eyes his favorite hymn—'Blest be the tie that binds.'"

"We think of it now."

From these parochial views of the great financier we turn in *The Churchman* to the estimate of him presented by the Bishop of Albany, William Croswell Doane. Here we see him as participant in the larger affairs of the church:

"He was a statesman in the church and always had the time, or made the time, to discuss with the keenest and most intelligent interest every detail of its doings. During the last Lambeth Conference, day after day, great matters of international Christian relations were discussed in the library at 13 Princes Gate, by Mr. Morgan and his household of bishops, and in those talks his great brain and heart had much influence upon the results of the conference."

"It was due entirely to him that the Archbishop of Canterbury came to America to the General Convention in Boston. He had declined to come, but Mr. Morgan finally persuaded him, and he was Mr. Morgan's guest, from the time that he left England till he got back there, traveling always in his private car. The Archbishop, before leaving, said, 'I have seen everything in America except a railroad ticket.' Whereupon Mr. Morgan sent a man out at New London to buy a ticket, and crossing out the word 'New,' gave him the ticket, which read 'London to New York,' and that ticket is still preserved among the treasures at Lambeth Palace."

"He had a clear vision of the importance to the whole of Christendom of a close, personal understanding between the Church in England and the Church in America."

"There are few places and fewer people who will not miss him and mourn him, New York, London, Paris, Rome, Florence, Egypt, Aix-les-Bains, Mt. Desert Island, Highland Falls, and even the far parts of the East, where he was deeply interested in the unearthing and excavating. There hardly lives the man whose death would be so mourned in so many nations."

"He had a larger and a deeper power of loving and of being loved than any man I ever knew, and he has left sad and empty many places and many hearts that will miss him more and more. For him, he has passed out of this life peacefully and painlessly."

Victor-Victrola XVI, \$200
Mahogany or quartered oak

Other styles of the
Victor-Victrola, \$15 to \$150
Victors, \$10 to \$100

If the Victor-Victrola did nothing but bring to you the soul-stirring arias and concerted numbers of opera, beautifully rendered by the world's greatest artists, that alone would make it a treasured addition to your home.

But besides the compositions of the great masters, the Victor-Victrola brings into your home a wonderful variety of music and mirth, that satisfies alike the longing for musical harmonies and the taste for sheer entertainment.

And as you sit and enjoy all these musical riches, you will marvel at the varied accomplishments of the Victor-Victrola and thoroughly appreciate its value as a companion and entertainer—a treasured possession in your home.

Any Victor dealer in any city in the world will gladly demonstrate the Victor-Victrola to you and play any music you wish to hear.

MOTOR TRUCKS

ONE of the dire consequences of the flood in Ohio was the crippling, or entire suspension, of transportation facilities. Steam railroads and trolley lines were practically all put out of business. There remained in these circumstances as the only vehicle for transportation purposes the motor-car and truck. These were at once employed in conveying survivors away from the flood district and in carrying food and clothing to these and others who had survived the flood. A writer in *Motor World* presents impressive details of the good work done by the motor vehicles:

"From every available source of supply, pleasure cars and trucks were rushed to the scene of the disaster; from those factories that were not visited by the flood or that were but partly damaged, cars in nearly every state of construction were put on what had once been the roads in the hands of factory mechanics; speed laws were forgotten for the time being, and the erstwhile despised test car with its two little bucket seats soon became a tremendous factor in assisting the rescue work. Private owners, having rescued their families and those of their neighbors, turned back into the stricken district to carry others away from the reaching fingers of the flood.

"In Indianapolis, when the water started to creep over the banks of Fall Creek, practically all of the test cars were hurried to the spot and immediately took up the work of conveying the residents to higher ground. Later, when the levee gave away, nearly every self-propelled vehicle in the city was engaged in the rescue work, and when the waters receded it was no uncommon sight to see the tops of touring cars showing through the murky current where some family in its flight to safety had been forced to abandon the car and take to the water.

"Although the water rose to within 50 feet of the Henderson plant and did not touch it, it was closed temporarily, so that every available car could be pressed into service. The National factory was another that was just outside the flood zone, and tho the factory was not shut down, every available car was sent to the "firing line." Over almost impassable roads the first helpers were carried to Peru, Rushville, Connersville, and Broad Ripple, by the National's best car drivers.

"At the Pathfinder plant the force of the current was so great that it unearthed the great 5,000-gallon gasoline tank in the factory yard, and when the flood reached its greatest height the second floor of the plant was turned into a temporary medical establishment, in addition to housing the burden of the entire stock of cars and parts that had been moved up before the water covered the lower floor. Before the water became too deep for the Pathfinder trucks, a number of the families living near the factory moved their pianos and other household goods to higher ground, tho as yet they have been unable to replace them in their homes.

"When, on the first day of the flood, the Indianapolis trolley cars ceased running, the only public conveyances were the big 'buses running on Delaware Street. Later, big motor-trucks and 'buses helped out. Some of them were free 'buses and on some of them a fare of 25 cents was charged, tho on none of those supplied by manufacturers was any demand for payment made. The city pumping station was flooded early, and it was only because the automobile fire apparatus was able to get to the few fires

quickly that a great conflagration was averted. Dealers were unusually active in carrying on rescue work, and in one typical case a Studebaker '25' went into the flooded district carrying food and came out carrying no fewer than eighteen refugees.

"It was in Dayton, Ohio, that the blow fell most heavily, and it was there that the motor-truck performed its most effective work. Immediately danger threatened, the National Cash Register Co.'s fleet of twenty-five Packards was pressed into service conveying passengers and freight out of the clutches of the flood, and within three hours after they left Springfield, a fleet of Kelly-Springfield trucks loaded with supplies pulled into Dayton, having traversed roads that for the greatest part of the distance were no roads at all.

"The first vehicles to arrive at the stricken city from the outside were eight Packards. They were loaded into a special train at the Packard factory in Detroit, and within twenty-four hours were busily engaged in carrying on rescue work in the streets of Dayton. The first of them to be unloaded conveyed twenty Red Cross nurses out to the N. C. R. relief station, two miles away from the depot. A little later ten more Packards arrived by what remained of the railroad, and these, together with every other vehicle in the city, immediately were put to work carrying the lame and the halt and the blind and those who were otherwise sound but who could not stem the current, to places of safety.

"When the flood hit city and country, it is estimated that upward of 1,000 horses and cows were drowned, and outside of the necessity of replacing the horses as draft animals, it was absolutely essential that their carcasses be removed from the streets, for they represented a menace to health. It was not until after they had been floating around for several days that it was possible to remove them, and their removal then required the utmost dispatch.

"It was in carting them away to places where they were less likely to contaminate the atmosphere that the value of the motor-trucks for such work stood out most boldly. Even where it was possible to remove them with horse-drawn trucks, it was necessary to use a motor-truck to drag the carcasses onto the other vehicle. The horse-drawn vehicles could carry only two horses to the load, and the best record made was five trips in one day. Each motor-truck, on the other hand, carried from four to six horses a trip and made the round trip to the dumping ground, a couple of miles outside."

MOTOR-TRUCKS AS AN INFLUENCE ON TRAFFIC REFORM

R. M. Hutchinson, Jr., contributes to *Automobile Topics* a suggestive paper on the reform which motor-trucks promise to bring about in the traffic of congested centers in large cities. The width and arrangement of streets in many of these cities are such that traffic frequently suffers greatly under the new conditions which have grown up since these streets were laid out. While the delays that ensue may not seem important to casual observers, it could easily be demonstrated that the losses incident to these delays in large cities run up into millions every year. Several cities have effected something by way of a relief. For example, in New York City, certain gains have been made by taking down projecting steps and narrowing the sidewalks

Feel as Husky

in order to provide greater space for vehicles. But there is a limit beyond which work of this kind can not go. A change, however, in the motive power of vehicles—that is, the change brought about by the motor-car and truck—has already done much to give relief. Mr. Hutchinson says:

"As the length of the vehicle is a most important factor in preventing traffic congestion outside of its speed, naturally the relief must come through the general utilization of self-propelled vehicles. In using a horse-drawn business vehicle the 'wheel base' of the motive power—the horses—is nearly equal to that of the vehicle; in other words, space is becoming such a premium in large cities that, economically speaking, the use of horse-drawn vehicles is bringing about a collective and individual economical loss for which we all must pay a tax. This tax appears indirectly as one of the principal factors in the present high cost of living. Of all things transportation, efficient and economical, constitutes one of the biggest items in the expense of merchandise distribution.

A single-horse delivery wagon, for illustration, has an overall length of about 18 feet and occupies 90 square feet of area. To house this one-horse vehicle demands 114 square feet of ground space. The business motor vehicle, which on an average could do as much work as two of the one-horse delivery wagons, has an overall length of about 10½ feet or a total of 60 square feet of area whether on street or in a garage. Here is a saving of valuable street space of practically 33½ per cent. and approximately 60 per cent. for dead storage. For larger capacity vehicles, the comparison is more startling. A 5-ton horse truck needs 25 feet on the street, or 200 square feet of space; the stabling area of the same horse equipment represents 281 square feet. A 5-ton motor-truck of equal capacity and doing as much work in some cases as a half dozen two-horse teams takes up only 176 square feet on the street or in the garage.

"If the economy in street space was the only ground on which the business motor vehicle could base its claim for effecting traffic reforms, this alone would justify its more general use by the business public. Economy in valuable street space is, however, but one of the many ways in which motorized transportation can eliminate an enormous waste which we suffer from the delays in getting our merchandise carried over city streets to-day. It can be proved to the satisfaction of any skeptic that a good motor-truck can do on an average two and one-half times as much work in an equivalent time as the horse, which increased rate of speed of doing work economizes street space to an extent of approximately 75 per cent. in favor of motorized traffic as against horse-drawn vehicles. In other words, the same amount of work can be done with about one-fourth of the street congestion or quadruple the present volume of traffic can be accommodated through general motorized transportation before we will have outgrown in most of our cities the present street lay-outs and highway movement of merchandise.

"If, as has been estimated, every user of a double-horse team in New York suffers a direct loss averaging \$600 per year, due to delays incident to traffic congestion, which are unavoidable by the driver, the aggregate loss, figuring a total of 60,000 teams in New York City, runs into \$36,000,000 per year. This sum of money invested in motor-trucks figuring that the average business firm has principal need for a two-ton vehicle, would mean that these merchants could supply 12,000 trucks without making any outlay visible to them, or outlay which could be entered as a capital charge on their books.

International Motor Trucks

Proved by Years of Successful Service

Mack 12 years in use **Saurer** 18 years in use **Hewitt** 10 years in use

A mileage of 100,000 miles—and no signs of wearing out. This is the record made by the first truck bought of us five years ago by R. H. Macy & Co., the New York department store. That is why this company recently ordered four more of our 1-ton trucks.

Consider what this department-store truck had to do:

1. Each day it made hundreds of deliveries—quick starts, threaded through congested streets and speeded 15 miles an hour on clear running.
2. Made from 60 to 80 miles, day after day.
3. On Saturdays, during holiday time and on emergencies it ran for 20 to 24 hours per day.
4. It kept at work 300 days a year and each year rounded out from 16,000 to 24,000 miles.

Hundreds of our trucks have made records of over 100,000 miles without signs of wearing out.

And yet some people are still waiting for motor-trucks to prove efficient long-life service.

Our trucks have been proving this point for 10, 12 and 18 years.

Capacities: 1, 1½, 2, 3, 4, 5, 6½, 7½ and 10 tons

Bodies for every business use.

Let us show you what the right truck and body can do for your business.

MOTOR-TRUCKS

(Continued from page 957)

In five years the team owners of New York City could invest in 60,000 trucks, which would have displaced nearly all teams. Continuing the illustration still further, in eight years' time the entire business vehicle traffic in New York would be motorized without the owners' taking anything out of their business to accomplish this desideratum."

TRUCKS FOR DEPARTMENT STORES IN CHICAGO

Five of the largest department stores in Chicago and others less famous locally expect soon to do away entirely with horses for delivery purposes and to substitute for them motor-trucks. When the change has been completed, the number of horses replaced will, it is believed, reach a total of 1,600. The change will mean the operation of between 700 and 900 more motor vehicles in Chicago than are operated now. An estimate has been made of the saving in street space effected by this change, the saving being important as a relief to congestion. The estimate places this saving at about two miles. Chicago department stores have used motor-trucks for some time. Following is the account which *Motor Age* gives of some of the results:

"The first machines were of large tonnage, and were used for hauling the heavy transfer loads from the main stores to the delivery substations north, west, and south. The machines were put into use not with any thought of financial gain other than that resulting from better service. With the motor vehicle the load could leave the down-town store an hour later than was required of horsed wagons, and arrive at the shipping or distributing point in time to meet the small horse wagons, there, at the regular schedule hours for delivery. Thus each truck saved one hour for each of three or four deliveries a day. This paid in service. After a time it was seen that if certain things could be done with the trucks to keep them continually moving that they could be made to pay actual dividends over horsed service.

"Then it was that a few large gasoline cars were put in for furniture work, delivering bulk loads in house-to-house work. These trucks are now doing better in the matter of cost than any other machines in the department-store service, some of them running 60 to 100 miles a day.

"When it was found that these machines were a success smaller ones were tried out by a couple of the firms, for the longer hauls to the suburbs. In this work loads were smaller, so that smaller trucks were put to work. These running from six to nine miles from the store before commencing deliveries then engage in house-to-house delivery work and have proved a success both as to service and cost. From one to two hours is saved on each delivery and with more reliability than was possible with horses, especially in winter work.

"These machines did not prove a success in near-at-hand delivery, however. In fact, most of the down-town firms never even tried them out in this work, knowing from their own study and figuring that they could make better time with the horse equipments where so many stops and waits were involved. It was then that the electric vehicle began to be considered.

"At first with these vehicles there was the great disadvantage of limited mileage, but this has now in part been overcome. Chicago is an ideal city so far as topography goes for the operation of electric vehicles with their great weight, since there are no

hills and pavement stretches in all directions from the central district. True, some of this is poor paving, but every year sees some improvement. With no hills and many good road surfaces, with much of congestion as well to contend with, the electric has a good chance to make a showing over the gasoline car for the short hauls and many stops.

"The heavy hauling to the substations is all done by gasoline cars. These run for an average of six miles from the store to the substations north, south, and west, and there the load is taken off and distributed to the wagons for the different routes. Originally horse vehicles of small size were in use for this final distribution and package work. Now electrics are planned for all of this except suburban work, where fast gasoline cars of small tonnage will be used.

"The nineteen gasoline cars now used pretty well take care of the long-distance work of one firm, so that the bulk of the new machines will be for the house-to-house delivery. This will mean electric equipment for the most part.

"One firm is not yet convinced of the coming of the motored vehicle for house-to-house work, but is enthusiastic over the hauling of the big machines for transfer work and furniture hauling. The eventual motorization of this equipment would mean possibly 100 motor vehicles.

"We favor the gasoline truck," said the shipping clerk of this firm, "on account of its mileage capacity. It can do things impossible to the electric. For instance, we had a breakdown on the north side one afternoon. A big truck from Hammond got in about 4 p.m. and was sent north with a load at once. With an electric this would have been impossible."

THE GREAT INCREASE IN AUTO EXPORTS

From tables officially compiled and embodied in a recent report issued by the Department of Commerce at Washington, it appears that the exports of motor-cars from this country have caught up with, if they have not surpassed, those of Great Britain, and are close on the heels of those for France. These tables cover the industry from its beginning in 1897 and are tabulated for the three countries, and for each year down to 1912, as follows:

Year Ended December 31.			
Year.	Unit. K'gdom.	France.	U. S.*
1897.....		\$121,000
1898.....		340,000
1899.....		832,000
1900.....		1,834,000
1901.....		3,070,000
1902.....	\$837,000	5,883,000	\$950,000
1903.....	1,674,000	9,898,000	1,207,000
1904.....	1,747,000	13,825,000	1,895,000
1905.....	2,637,000	19,568,000	2,481,000
1906.....	4,228,000	26,833,000	3,497,000
1907.....	6,725,000	28,098,000	5,501,000
1908.....	6,423,000	24,779,000	5,278,000
1909.....	8,141,000	28,541,000	5,992,000
1910.....	13,460,000	31,510,000	11,190,000
1911.....	17,246,000	30,795,000	15,509,000
1912.....			25,657,000

*Year ended June 30.

The reader will note, as the most remarkable fact in this table, an increase in the exports from this country in 1912, as compared with 1911, of more than \$10,000,000. This gain is pointed out by a writer in the *New York Times* as "nearly double the total value of the export trade in any year since the advent of the business in 1902, with the exception of the two immediately preceding years." The writer of the report remarks that England "still imports a larger number of complete motor-cars than she exports, but the imports for 1912 were only about 1,000 instead of over 4,000 in 1904." The value of the complete cars exported, however, is "greater than the imports."

MRS. WOODROW WILSON AS A LANDSCAPE PAINTER

A comparative few only know to what extent the Lady of the White House is a landscape painter, or have seen the actual work of her brush. Her two most representative paintings, personally selected by Mrs. Wilson and presented with her special permission, are given *in their full and original colors*, for the first time in any magazine, in the May number of

THE LADIES' HOME JOURNAL

Aside from the surprise that awaits a first acquaintance with Mrs. Wilson's art, the pictures lend themselves beautifully to framing.

On Sale Everywhere—15 Cents

The Curtis Publishing Company
Independence Square, Philadelphia, Pennsylvania

The little brother of Packer's Tar Soap would like to pay you a visit.

The little brother is a sample half-cake which will give you a number of refreshing shampoos.

Those who have never used Packer's Tar Soap will find it of great benefit in bettering scalp conditions—conditions unpleasantly shown by dandruff and falling hair.

Systematic shampooing with this pure tar soap is a delightful habit. After a hard day's work it will give you comfort and rest.

In the bath its rich, creamy lather insures absolute cleanliness and a sensation of unusual refreshment.

To aid you in getting the greatest benefit in using Packer's Tar Soap we will gladly mail you free our manual "The Hair and Scalp, Their Modern Care and Treatment."

Packer's Tar Soap

(Pure as the Pines)

The sample half-cake sent on receipt of 10c.

CURRENT POETRY

AS an introduction to "The Muse in Exile" (John Lane Company), his latest volume of verse, Mr. William Watson prints his address on "The Poet's Place in the Scheme of Life," which he delivered in many parts of the United States during his recent visit. It is strange that so popular a poet should be so firm in his belief that poetry is to-day a branch of literature ignored by the public. He speaks of the "innumerable persons in whose scheme of life the poet can not properly be said to have a place at all." "The art of poetry," he says, "is, more than all others, the art which of late has appealed with constantly diminishing force to the audience which it addresses." And later he speaks of "the indifference of the reading public to contemporary poetry." In an age in which there are more poets than ever before, in which the magazines give space not only to numerous brief lyrics, but also to the long narratives of John Massfield and Wilfred Gibson and the epics of Alfred Noyes, in which five magazines devoted exclusively to verse find an appreciative public—in such an age, it is strange to find a poet with such beliefs. He expresses the same idea, with consummate skill, in the lines which we quote below. It is unfortunate that Mr. Watson has so uncomplimentary and so erroneous an opinion of the age in which he lives, but he utters his views with such grace and artistry that they deserve attention. The concluding prophecy is splendidly delivered.

The Muse in Exile

BY WILLIAM WATSON

Verse—a light handful—verse again I bring,
Verse that perhaps had glowed with lustier hues
Amid more fostering air; for it was born
In the penurious sunshine of an Age
That does not stone her prophets, but, alas,
Turns, to their next of kin, the singers, oft
An ear of stone; in bare, bleak truth an Age
That banishes the poets, as he of old,
The great child of the soul of Socrates,
Out of his visionary commonwealth
Banished them; for she drives them coldly forth
From where alone they yearn to live—her heart;
Scourges them with the scourge of apathy,
From out her bosom's rich metropolis,
To a distant, desert province of her thoughts,
A region gray and pale; or, crueler still,
Gives them, at times, gusts of applause, and then
Remands them to new fringes of unconcern;
Nay, to atone for some brief generous hour,
Holds back their dues, husbands the heartening
word,
Until they dwell where praise cheers not the
praised,
And scorn and honor are received in like
Silence, and laurel and poppy are as one.
Let me not slight her. Let me do no wrong
To her whose child I am, this giant Age,
Cumbered with her own hugeness as is the wont
Of giants. Yet too openly she herself
Hath slighted one of Time's great offspring; she
Hath slighted song; and song will be revenged.
Song will survive her; Song will follow her hearse,
And either weep or dance upon her grave.

30 Nights' FREETRIAL

A 30-night free trial awaits you—at our expense. A handsome full-size mattress, 4 feet 6 inches wide and 6 feet 3 inches long, full weight of 45 pounds, best blue and white ticking, will be sent to you express prepaid, same day we receive your check or money order for \$15.

OSTERMOOR MATTRESS \$15

Built—Not Stuffed

This amount will be placed to your credit for 30 days until you have had ample opportunity to prove the Ostermoor, and will be returned to you without question if you are dissatisfied. The mattresses come packed in leatherette paper and burlap, and reach you in perfect condition. You take no risk.

Send \$15 today or write for Price Book and Sample of ticking.

Box 103, Brown's Mills, N. J.

For in Life's midmost chamber there still burns
Upon the ancient hearth the ancient fire,
Whence are all flame-like things, the unquenchable
Muse
Among them, who, tho meanly lodged to-day,
In dreariest outlands of the world's regard,
Foresees the hour when Man shall once more feel
His need of her, and call the exile home.

The anniversary of Swinburne's death has called forth several poems in his memory. Of one of these, which appears in *The English Review*, we reprint a part; for it is distinguished by sincerity and force as well as by color and music comparable to that of the work of Swinburne himself.

To Algernon Charles Swinburne

(Died April 10th, 1909)

BY JOHN HELSTON

This April night that takes into its breath
The nightingale's first passion, faint and sparse,
Surely thy name it saith,
Like music in the heath,
A shining music shaken from the stars!
With Song's immortal crown,
Tho death thy life enthrone,
To-night my soul would humbly look to thine,
Here, where mine eyes looked last upon thine
own,
Here, where thy feet a thousand times have
trod,
Nor clearer should the starry-circled zone
Burn, than thy glory, if aught be divine
And Love and Truth and Beauty make for
God,
Shall I not find thee here,
Master? nor know thee near?
I feel the fires of heaven on mine eyes:
The dark to mortal sight,
The earth-line halves the night,
I share the endless glory of the skies.
And seems to me the winds have answer given,
Blown earthward from behind the stars in heaven.

The spirits of all winds and seas and suns,
The many-throated music made in spring,
Move in thine own; with that deep chord
that runs
Throughout Time's heart-beats, ever
echoing,
Yea, Master, is such music in thine own,
That in thy song Time's pulse awakes and falls,
Or with large sounds of wonder
Thy words are rolled in thunder
And boom of breakers on the landward walls,
Where clanging deep to deep reverberant calls
And all the mouths of ocean make their moan,
On seaweed pinions glides
Above the swirl of tides
Thy singing, as of sea-winds bred and blown.
Yea, Master, is such music in thine own!

Here where thou wendedst I have oft-times
wandered
When the larks hold their joyous evening choir
Until the shadow-lengthening day retire
From off the gorse and broom with gold-dust
squandered,
Nor grudge all hours of light their lift's refrain;
Leaving to dark, laments, for Itys slain,
Of that bright bird thou, living, lovedst so well,
Alas! now nightingale and lark no more
Can charm thy heedless ear; or Death restore
To thee, within thine island tomb, a subtler spell—
Sea voices on the shore.

Alas? Nay! Wherefore shall I weep for thee?
Who art not for man's tears but for Time's
praise:
Nor shall of man be counted all thy days,
"O sweet strange elder singer," bear with me!
I weary, and awhile am fain for rest;
Oh, lend me of such peace as fills thine own,
An hour!—then of thy strength to feed my breast
(That I may stand alone)

FEDERAL

The Truck Triumphant

BY a country-wide test of three years, by the verdict of a Thousand Owners, The Federal is the first Motor Truck to establish as a scientific principle of commerce—Economic Transportation.

For three years we have collected the data and proof of a Thousand Federals in Operation, the Advice and Evidence of a Thousand Federal Owners. For three years we have been satisfying ourselves that in the Federal we have a truck as nearly flawless, infallible and indestructible as brains, business conscience and manufacturing ideals can make it. Today we *Know*.

The Evidence

Detroit is the City Motor-wise. There are one hundred and thirty-two Federals in operation in Detroit—as many as any other two makes combined.

The Municipal Commission of Toronto operates eight Federals. Whole fleets of Federals are operated by the following firms of national prominence:

Marshall Field & Co.
Portland Railway, Light & Power Co.
Ward Bread Company
Breuner Furniture Co.
Wm. J. Lemp Brewing Co.
Swift & Company
Armour & Company
American Bank Note Co.

Write us for the names and evidence of Federal Owners. We can solve your problems as we have solved theirs.

The Federal is today recognized as the Standard of Truck-Efficiency, Truck-Reliability and Truck-Economy.

FEDERAL MOTOR TRUCK COMPANY

With fire of singing as with fire of flame—
(I ask but of thy strength, not any fame)
Some spark of that which dwells about thy name,
With such a light as burns along the west.
Once more I wait and watch: the day is gone:
Comes night, and a great silence o'er the land:
And down the dusk, like dead leaves blown upon,
Thy footsteps echo past me as I stand!

The following lines (from *Harper's Magazine*) are attractively simple, and
their symbolism is graceful and unaffected.

At Evening

BY B. MACARTHUR

I feel an envy very deep
For those frail little birds that fly
Across the tranquil evening sky
Before the world has gone to sleep.

Each evening e'er the light is done
There falls a hush, as tho the Lord
Were wont to speak a wondrous word—
The promise of another sun.

The traffic of the air is still,
The clouds are motionless and flushed,
The very wind is listening, hushed,
As tho to hear the Master's will.

And then the swallows' twittering flight!
Audaciously, yet half in fear,
As tho they knew he held them dear,
And so forgave them every night.

They hasten past; the sun is low,
The Master's word at close of day
Is spoken—yet the swallows stray
Enraptured in the afterglow.

Ah, for that confidence divine!
The knowledge that, however late,
I seemed to let the Master wait,
His pardon and his love were mine!

Here is a poem in Stephen Phillips's old
manner, full of delicate and shadowy
tragedy, suggesting rather than describing
terrors. We take it from *The Westminster Gazette*:

The Unheard Ghost

BY STEPHEN PHILLIPS

I dare not sleep, now thou art dead,
I toss until the morning red;
On what path wouldst thou have me go,
Spirit, whom I have injured so?

At times the lilac, or the rose,
At moonset through my window blows;
I breathe again the bank of grass,
Whereon that hour did sweetly pass.

Yet not from wind I gather fear,
But that thy words I may not hear;
I shrink not from the silvery beam,
At midnight on my bed astream.

A something muffled, yet alive,
Able to injure and deprive;
To stand between me and my God,
Lone-treading ways we two have trod.

Ah not the requiem o'er thy tomb,
Did not fulfil thy wandering doom;
Still comes a voice that is not voice,
Yet aye forbids me to rejoice.

My wrong to thee I know, how well!
And thou art quickened by my hell,
At thee, unheard, I tremble most,
The voiceless fury of thy ghost.

PERSONAL GLIMPSES

SLEUTHING FOR SHOPLIFTERS

ONE of the cleverest woman store detectives in New York is an Italian girl of twenty-one. She is not over five feet one, and is of proportionately slight build, but her size has nothing to do with her courage and tenacity whenever she grapples with a thief. Whether it be man or woman, she marches the light-fingered person to the office of the manager, where the culprit must either make a satisfactory explanation or be turned over to the police. The young lady is Miss Amelia de Santis, and she tells of some of her experiences in an interview with I. Stephen, a reporter for the New York Press:

I was sitting down one day watching the crowd, for it was a bargain day, and the place was pretty well filled with shoppers, when I saw a handsomely dressed woman edge up to a shopper who was complacently trying on various hats. She had noticed the well-filled bag slung on the shopper's arm, and, taking advantage of the crowd seething around the mirror, she opened it carefully and extracted a roll of money. I darted toward her and grabbed hold of her hand.

"Madam, your bag has been opened. Have you lost anything?" I asked the shopper, for you must catch the thief at the very instant she extracts her hand from the bag; otherwise it is impossible to identify money and the thief easily makes a getaway.

"Oh, goodness!" the woman wailed in a shriek that sounded all through the floor, "somebody's taken my money. What shall I do?"

I forced the other woman's hand open and saw the money. The shopper named the exact sum, and I asked the pickpocket to come to the office with me.

Of course, as soon as I caught hold of her hand she started to fight.

"This is an outrage. What do you mean by accusing me? I am Mrs. So-and-So, and you will pay for this. Let me go this instant."

Then the "stall" came forward. The pickpocket was a small woman, but her companion was large, and she came forward with a great show of indignation.

"What do you mean by accusing my friend? She is a wealthy society woman, and I will see you are properly punished."

All the time she was speaking she kept poking me with a heavy box she carried (for just that purpose probably), while the first woman beat and scratched me with might and main. I kept calling for help, and several floor-walkers ran up and released me. By that time three women had fainted, among them the woman whose money I had secured.

"Now, you will have to come to the office with me," I told them. "You may just as well go quietly, because I'll get you there anyhow."

When we reached the stone stairway which leads from the floor where the robbery was committed they started in once more. This is the most dangerous part of the arrest, for the stair is steep, and if we

No Need of Tire Trouble On Electric Cars

So far as electric pleasure cars are concerned, the problem of tires has been solved.

Punctures, blowouts, dangerous skidding and tire repair bills can be forgotten.

You can go any place with your electric and stay as long as you please without the slightest fear of tire trouble.

All due to Motz Cushion Tires, now adopted by every leading maker of electric cars.

Easy-Riding Tires

Unlike common, hard, solid rubber tires, Motz Cushion Tires are easy-riding. On electric cars, they give the utmost comfort to the occupants and also protect the delicate mechanical parts of the car from bumps and jars. The double, notched treads (A in picture) prevent skidding and distribute the weight to the sides. The sides are undercut (see B), which allows free action of slantwise bridges (see C). These bridges are elastic. They give and yield like the air in a pneumatic tire. Note D in the picture, showing shock-absorbing qualities when tire runs over a stone.

Cost More Than Some Tires

Motz Cushion Tires contain more costly rubber than the ordinary pneumatic tire and cost a little more. But they are far less expensive in the end.

(27)

Guaranteed 10,000 Miles

Each set is specifically guaranteed for 10,000 miles—two years. That's almost double the usual tire guarantee.

1,000% Increase in Two Years

The use of these tires has multiplied just ten-fold in two years. The great majority of electric car owners use them, and all leading makers of electrics include them as standard equipment.

Send for Book 98

Motz Cushion Tires can be easily applied to any standard clincher, universal quick-detachable or demountable rim.

You'll regret it later if you buy an electric, or buy tires for an electric, without first knowing these tires.

Send a postal today for our latest book. Then see if you know any other tire that's nearly so dependable, so durable, so economical and so easy-riding. Remember, the right choice of tires more than doubles the pleasure of motoring. Send specifications—name of car, model, size of rims, etc.

all fell downstairs we might get very severely hurt, if not killed. They picked me up and tried to throw me, but I elung on.

"I won't fall down alone," I reminded them. "If I go you come with me, and it's a broken neck for one of us." They saw the sense in this and went quietly down the stairs. (We never use the elevator because of the commotion it makes among our patrons.)

But when we arrived at the landing we had the fight all over again. These women knew what was before them. If you open a pocketbook and take even \$1 it is grand larceny and carries a year's sentence with it. However, I got them into the office at last with the woman whose purse had been picked. Judge Swan sentenced them to one year in the penitentiary. They were notorious pickpockets and had their pictures in the Rogues' Gallery.

There is one couple of shoplifters which I have had arrested twice. They are Fred Morris and Nellie Nap. The first time I managed to get the man only, and he was sent up for a year. He got off with eight months because of good behavior, and one day when I thought he was safely locked up he walked into the store where I was working. Nellie Nap was with him.

Their plan was to carry a big valise, and while the woman, who was fashionably dressed, was engaging the saleswoman's attention, the man placed the big valise under a number of imported gowns and, under cover of examining these, he was dropping several of the gowns off the hangers into the big bag. He played the part of the husband who was very interested in his wife's new gown, and by the time madam was satisfied he had made quite a collection.

I watched the whole game quietly, but of course I could not arrest them in the store, so I followed them to the street.

"You are carrying away some merchandise which you have not paid for," I said to the man when we got outside. "Now, please come back to the store quietly, for it is no use to make a fuss. I saw you take the things."

The man laughed and ran off. I followed, blowing my police whistle like mad. They ran up the stairs of the elevated and I dashed after them. I had on a hobble-skirt and had to tuck it "way up" so as to be able to sprint. But I didn't think of that—the only thing I thought of was getting that couple. The man turned every now and then and tried to beat me down. He was desperate, for he knew that getting in trouble immediately after his release from prison meant a long term.

I thought he was going to kill me before we reached the top of that stair, but I kept on blowing my whistle, and a policeman got there in time to arrest them. The man was sent up for a long term, and the woman, who was tubercular, was remanded.

A cook in a restaurant stole several pieces of jewelry and Miss de Santis followed him until he went outside. She asked him to return, and he came very quietly until they were alone at the foot of the stairway leading to the office. There he unwrapped a big apron he was carrying and Miss de Santis saw that it contained several knives. He took a big butcher knife and, seizing hold of her, said: "If

you don't let me go I'll dig this right into you." The girl gave a yell for help and grabbed hold of Muller's arm. Assistance came in time to save her. When the reporter asked her if she had many cases of kleptomania, she said:

Kleptomania? Fudge! That is only a term that is applied to a thief who happens to have social standing. We treat them all alike. Of course, we do not take all cases to court. Many of them are arraigned in the chief detective's office, and if all the goods are returned and the person who has stolen goods has some good excuse, such as poverty or ill-health, we let them go with warning to keep out of the store; but we treat them all alike.

One of the women who gave me the hardest tussle I ever had was the wife of a wealthy lawyer, who was living at the Hotel Aster. Her home was in Connecticut, and she had come to New York to do some shopping. Believe me, she was some athlete! She gave me a flat fight all over the place, and by the time I got her to the office I was pretty well beaten up.

I watched two women one morning stow away \$300 worth of imported waists. I followed them to the street and asked them to return with me. They were both heavy women and they looked at me and smiled.

"Why, the idea! Do you mean that you are going to take us back?"

"Yes, indeed, madam," I replied, "and you had best come nice and easy."

"Why, girlie," one of them said, "you couldn't take us back. You are not big enough."

I was standing between them. I put my police whistle in my mouth, and taking hold of their sleeves at the wrist in such a way that they could not run off, I blew the whistle once. Then they came.

These women were "Ruby" Harris and Ruth Wilson. They were released on \$1,000 bail, but before the case came to trial Ruth Wilson was caught again and sentenced to a year in the penitentiary. When she gets out she will be sent up again for the offense in our store. They were very slick workers.

Judge Malone asked me to demonstrate to him how it was possible to place \$300 worth of waists in concealment in a busy store. So I took a big muff, and with the table in front of the jury box as the counter, I soon showed him how I could pack away the waists in the muff and under my coat.

Magistrate Herbert complimented me on my work, said that I was a very bright detective, and that he would certainly recommend me for the first vacancy for a first-grade detective. I should like to be a first-grade detective, but one has first to be a matron, and as it is necessary to be thirty years old to get that position, I should have to wait nine years. However, I have been told that this might be arranged.

I did some work for Commissioner Dougherty on the Fowler bomb-throwing case lately, and he has promised to give me another chance soon.

Sometimes we have very funny cases in the store. One woman stole an alarm-clock, with other things. Just as she was leaving the clock went off. She was so excited when I spoke to her that she could not hear the clock, which was smuggled under her coat, and even when I tried to

One touch of Nature and the World's alive—
The dog, the motor, the crowded pit.

Your Week-end, Your Hupmobile And a Breath of Life in the Open

The fleeting Hupmobile—the car that "runs wherever a dog can"—turns at last into Farmer Hoskins' lane.

You remember that Day—that one Perfect Golden Day. It is given to each of us to Live and Treasure just one such day. Dawn was just breaking—a spring day, the Dawn of a New Summer—when you and Billy and Ned and Steve left the drowsy city street and streaked for that Lake.

But Hoskins Junior, has beaten you to it. He grins through his freckles, holds up his string and then leads you off through the hickory grove to the Enchanted Lake of your Dreams.

Then, when the shadows are slanting through the hickories and the fish stop biting, you pile into the Hupmobile, and wing through the falling evening back to the city—in actual miles very far from the Lake of your Dreams, but in the Hupmobile—very near.

You, who long for freedom now and again from the everyday grind—can have your perfect day, too, with a Hupmobile.

And at a cost ridiculously small, as automobile costs are measured.

The Hupmobile is distinctly a car of the American family. It is the only car that both millionaire and man of moderate means can approve; for there is no other car with style, stamina, comfort and power that so closely approaches its companions of costlier price.

Build your week-end plans around a Hupmobile; give your loved ones such a Summer as they have never known, with this sturdy Car of the American Family.

Write for catalog and the Hupmobile dealer's name.

Branch Office, Flatiron Building, New York City.

On Approval—Freight Paid

draw her attention, she declared she had
bought the clock and did not like to be
seen carrying bundles.

Another time an Italian opera-singer
lifted a great many small articles, which he
hid away in the large coat he was wearing.
When we brought him to the office he veho-
mently expostulated against his arrest.
He assured us he was a great man who had
sung before all the crowned heads of
Europe, and that nothing less than an
international disaster would follow the
insult.

He was the queerest bird I ever caught.
Under his coat he wore the spangled cos-
tume of Romeo, and he looked as if he had
escaped from a museum. He told us that
in his home city he was allowed to go
through the stores and pick out what he
wanted; then when he got home he took
his time in selecting the articles which he
approved and sent the rest back to the
store. His eloquence, however, was wasted,
for he was arrested, and after he had been
held for fifteen days for investigation he was
sent to the city prison for ten days to learn
more about the laws of the United States.

Altogether I enjoy my work immensely.
It is never dull, and I would rather do it
than anything else in the world. My ambi-
tion is to be a great detective some day, and
I won't mind the hard work in reaching it.

WHALEY OF THE NEW HAVEN

WHEN the New York, New Haven
& Hartford Railroad recently de-
cided to inaugurate a general policy of
bringing its service and equipment up to
the top notch, the board of directors cre-
ated the new office of vice-president in
charge of operation and elected Albert R.
Whaley to fill it. They wanted a man who
knew the business from all-round experi-
ence, and Whaley happened to be just the
kind they were looking for. He began as
a brakeman, and worked his way up until
now, it is said, he is paid a salary of \$25,000
a year. The story of his rise appears in the
New York Press:

Thirty-four years ago Mr. Whaley was
a freight brakeman drawing \$1.62 a day
from the old Providence & Worcester Rail-
road. He was sixteen years old then. His
progress since that time has been remark-
able.

It was not until he became manager of
the Grand Central Terminal in 1907, how-
ever, that his possibilities as one of the
highest executives of the road became ap-
parent. But he made a record that at-
tracted the attention of the railroad world.
This resulted in the action of the Board of
Directors at their meeting yesterday mak-
ing him a vice-president.

Under handicaps greater than any of his
predecessors had ever encountered, due to
the excavation and reconstruction work in
the Grand Central yards, Mr. Whaley de-
creased the delays in the movements of
trains in and out of the yard approxi-
mately one-third.

For six years he handled from 650 to 750
train movements a day with an average de-
lay of less than one minute a train. The
magnitude of this achievement may be ap-
preciated when it is understood that the

ordinary traffic movement over the terminal tracks is the heaviest in any terminal of the size in the world.

In addition to ordinary traffic, all the material excavated in connection with the reconstruction work and everything required for construction purposes had to be moved over the same tracks, which added greatly to the number of trains to be operated there. Yet Mr. Whaley was able to make a new record for the prompt arrival and dispatching of trains.

The man who has been called thus prominently to the attention of the railroad world was born in Rhode Island a little more than fifty years ago. He began his railroad service with the Providence & Worcester Railroad, remaining with that company until 1891.

Then, when the consolidation of the Providence & Worcester, Old Colony, and other local lines into the present New York, New Haven & Hartford System went into effect, he was placed in charge of all train crews which had headquarters in Providence.

In 1899 he became superintendent of the Worcester division of the Consolidated Railroad, in which capacity he played a prominent part in the electrification of the Providence, Warren & Bristol line of his division. His successful experience with electrical operation resulted on May 1, 1907, in his being transferred to the Grand Central terminal here.

WHEN ADRIANOPLE FELL

TO say that the Bulgarians were astonished when they entered Adrianople and found that the people had plenty to eat and were faring well generally, is to put it mildly. The besiegers, as well as nearly everybody in Europe and America, had been under the impression that the city's population was almost destitute of food and a prey to cholera, typhoid, and many other diseases. The correspondents behind the lines of the Balkan Allies were not mistaken when they said the Turkish defenses were weak, but they missed the mark when they told us that the populace were in dire straits—that is, if we are to believe Luigi Barzini, correspondent of the *London Daily Mail*, who was one of the two first newspaper men to enter the city with the Bulgarian troops. Barzini tells a graphic story of General Ivanoff's triumphant entry, and describes the living conditions of the civilian residents. He writes:

The long and careful preparations lasted about twenty days. Cases of shells were slowly transported by night to the appointed positions, which were well hidden behind the heights. Conveying the ammunition across pathless fields occupied an enormous time. No wagon could carry more than six rounds for the heavy guns, and a good 50,000 rounds were amassed in the casemates of the big batteries. The country was still covered with snow when, unseen by the enemy, the active preparations began.

These preparations were concealed by the reverse slopes of the distant heights, where

BUILDING

Guaranteed Limit of Cost

BUILDING procedure has been allowed to drift along with wasteful inefficiency for centuries; but why should waste continue simply because it is established practice?

The Hoggson Single Contract Building Method requires that every item which is to enter into a building operation shall be considered before work on any part of the building is begun; how else can the limit of cost be determined in advance?

If the limit of cost is not determined before foundations are started, how can it be guaranteed?

If you have no financially sound guarantee of the limit of cost, how can you know that the cost will be satisfactory?

A BUILDING operation requires the services of eight professions and forty-

six or more trades. How can the work of all these professions and trades be co-ordinated efficiently except by one organization which is constituted, part by part, to meet these various requirements?

IN many kinds of business, efficiency is rapidly eliminating waste and indirection is giving way to method—building must fall in line.

In what other business does an owner deliberately divide responsibility and then look for satisfactory results?

By concentrating responsibility in a single contract covering your entire building operation from plans to completion, you can obtain a financially sound guarantee of the cost and quality of the whole, as a whole.

Cost and convenience of arrangement must always be considered in deciding whether a building operation is successful or not. Banks, Hotels, Clubs, Libraries, Churches, Hospitals, Residences require expert services for arrangement, and a predetermined limit of cost is essential. The Hoggson Building Method is especially adapted to such operations.

A small book describing the method (but without pictures), mailed on request.

How Will Your Woodwork Look in a Few Months' Time?

When the children have scampered over the floors, guests have come and gone, all the hundred and one incidents of use have contributed their share of wear—will the finish of the woodwork stand the test?

There's just one way to be sure. Select your varnish carefully—select the varnish that has back of it 55 years of quality manufacturing—select **BERRY BROTHERS' VARNISHES**.

There's a Berry Brothers' product for every varnish need—each one tried, tested and as perfect as human ingenuity can make it.

Look for our name and trade-mark—and you need look no further. You can find them at first-class dealers everywhere.

Write and tell us what varnish problems you have before you—a room, a home, an office building, anything. We have special booklets, prepared by experts, which fit the case—and they're free.

BERRY BROTHERS

Established 1858
Detroit, Mich., and Walkerville, Ont.

Ask your dealer about the Berry Wagon, the delight of three generations of children. W. W. Denison, the artist who illustrated the "Wizard of Oz," has prepared a booklet, beautifully illustrated in color, describing the trip of a Berry Wagon around the world. Get a free copy for the children—from your dealer or from us.

hundreds of men prepared emplacements for mortars, shelters, and magazines. Immense convoys made a sweep of over seventy miles in transporting the material and projectiles. But meanwhile the siege continued day after day without any variation.

At three o'clock in the afternoon of March 24 the action began. It began with a general cannonade on all sectors, an intense bombardment from every side, but less intense on the point which had to be taken by assault, for it was necessary to conceal the plan and mislead the defense.

But at four o'clock in the morning black masses of Bulgarian infantry who had rested on the grassy slope began creeping slowly, in the profoundest silence, toward the Turkish advanced positions.

The Bulgarians arrived within 400 paces of the Turkish positions, and not a rifle-shot had been fired. One might have thought that the entrenchments had been abandoned if the small, black profiles of the motionless sentries had not been seen outlined on the moonlit sky.

It took the storming party more than an hour to traverse two kilometers. The first glimpse of dawn was beginning to clear the horizon. Suddenly, at the word of command, all the Bulgarians bounded to their feet, uttering their immense superhuman yell of assault, the terrible, prodigious roar of a people in fury. "To the bayonet! To the bayonet! Hurrah!" the soldiers shouted, hurling themselves forward. It is curious that they crossed three wire entanglements without raising any alarm. In a few seconds the Bulgarians found themselves at the last barrier, and the Turks, taken by surprise, abandoned their positions, practically without offering any resistance.

When Chukri Pasha caused a sheet to be hoisted as a white flag on the wireless mast of the Haderlik fort of the northwest sector, 20,000 men were prisoners, and another 30,000, having cast away their uniforms, were hiding in the city. Chukri was to be a prisoner without conditions. Colonel Markeloff approached to ask for his sword. He found him on foot, perfectly calm, together with Colonel Aziz Bey, governor of the city. Aziz Bey unsheathed his sword and silently handed it to the Bulgarian officer. Chukri replied, "You see, I am without arms," and clapt his hand to his thigh, where there was no sword. But it was only a question of etiquette.

At midday in the hall of the headquarters a profoundly moving and indescribably solemn scene was witnessed. Chukri Pasha, with dignified gesture, extending his gloved hand, offered his sword to General Ivanoff, who restored it, saying, "Vous êtes un brave. Tenez votre épée, général," and victor and vanquished gravely saluted each other.

Descending from the tragic corpse-strewn heights, the victorious troops met with their first surprise. In the meadows close to the town great herds of cattle and flocks of sheep were feeding tranquilly, and the fields were cultivated. A few steps more brought them to the suburbs, and in the suburbs, just as in any other Turkish town in the most prosperous period of its existence, were droves of chickens and turkeys, whose mortality did not seem to have been much above the normal.

Don't get caught with leaky roofs when the spring thaws come

Remember the roof on your house, garage or other buildings that leaked a few drops last fall—a little investigation now may mean a big saving when you put on a new roof or replace an old one.

Certain-teed

(Quality Cert-ified—Durability Guar-anteed)

Roofing in Rolls and Shingles

General Roofing
The World's largest
manufacturer of
Roofings and Build-
ing Papers

There is a **Certain-teed** Roofing and a simple method of applying it for every building on the farm. Look for the **Certain-teed** label of quality and 15-year guarantee on every roll and crate of shingles. Get prices from your local dealer—he will save you money.

Valuable Book Free You will find many valuable suggestions in our new book, "Modern Building Ideas and Plans"—it tells you what to do and what not to do—it suggests economies and conveniences that will save you money. A book of this kind would ordinarily sell for \$1—but as it shows the use of our **Certain-teed** Roofing on all kinds of model homes and farm buildings, we offer it to you at 25 cents. We prefer to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy FREE. If you write us, enclose 25c to cover cost, postage and mailing.

Recent Fires

in fire traps and in fire-proof buildings alike have demonstrated anew the fire-resisting value of

THE SAFE-CABINET

The flames that swept away the municipal building at Zanesville, Ohio, destroyed most of the city records. Those contained in THE SAFE-CABINET which stood in the hottest part of the fire were uninjured.

The configuration that attacked the eighteen-story skyscraper of the Union Trust Company in Cincinnati totally wiped out the records of many firms whose offices were gutted of everything burnable. Yet the contents of THE SAFE-CABINET in the very heart of the flames were undamaged.

Write for the story of these fires and for our catalog.

Dept. L-2 THE SAFE-CABINET CO. Marietta, O.
Agencies in most cities. If you don't find us in your telephone directory address the home office

Perhaps it was the population that suffered? Not at all. Among the first houses of the city poor children are serenely playing, perfectly indifferent to the war and the dramas of the peoples. The sight of these children is reassuring. Two Turkish women, and two peasants with long green tunics and ample trousers, pass down the street. Others seated on the threshold of a house sift barley, while chickens peck up the scattered grains. These are commonplace pictures, which are important only because they are seen in Adrianople at the end of a siege, and they give testimony to an incredible normality. The children, as is usual at their age when they are in perfect health, are more frank; they run to the threshold in order to get a better view of the new visitors.

A NEGRO MATHEMATICAL GENIUS

THE adding-machine manufacturers would take the shortest possible cut to the bankruptcy courts if everybody could add columns of figures as fast as Charles W. Cansler, the colored principal of a negro high school in Knoxville, Tenn. Cansler is a natural mathematician, and some of his quick handling of figures seems almost incredible, says the Knoxville *Sentinel*, from which we take this account of his work:

A very common feat for him is to permit any one to put down columns of figures with totals aggregating into the thousands, while he has his back turned to the black-board, or while he is securely blindfolded so that he can not see the figures being written on the board. At a given signal after the figures have been placed upon the board, and after the blindfold has been removed, he steps to the board and immediately writes the result, or the total of the several columns. This feat is done so quickly that one wonders how he has had time to see the figures separately, to say nothing of adding them and writing down the result as a whole from left hand to right hand as he does. He also multiplies large numbers of figures and writes a single product, carrying in his mind processes that involve millions. He gives instantly the squares of large numbers, and does other feats with figures which bewilder. He astonished those who witnessed him beat an adding-machine in giving the results of the combination of several columns of figures.

Unlike many prodigies, he has a well-balanced mind, and is a member of the Knoxville bar as well as principal of the Austin high school of this city. He has traveled considerably over a number of States and has given exhibitions of "lightning calculations" of figures. In speaking of some of his experiences as a traveling mathematician to a *Sentinel* reporter, Cansler said:

"I never tackled a crowd, whether on the street, in a public school, in a university, or in a business house, that I could not interest, at least for a little time, and tho, of course, I have been called upon times without number to explain just how I do these feats, I have been unable to do

White sheep give more wool than black sheep—there are more of them.

REMINGTON stenographers do more of the world's work than other stenographers—there are more of them.

Nature only knows why there are more white sheep than black.

All the world knows why there are more Remington operators than others.

REMINGTON is the machine in which the most operators have confidence—and the machine which gives them the confidence to make good.

REMINGTON is the machine in which the majority of good business schools have confidence—the confidence to turn out competent, efficient operators—the thing on which the very life of those schools depends.

REMINGTON is the machine in which business men and business houses have confidence—because the big majority of good stenographers are Remington trained and "go to work the first day without breaking in."

12,500,000 Remington Letters

mailed in the United States every business day in the year.

Isn't that the answer to the question, "which machine?" for your office?
Throughout the world Remington is a synonym for typewriter efficiency.
It is the voice of the business world.

BUFFALO LITHIA SPRINGS WATER

Challenges comparison with any other known mineral water in the world on its record of results.

Dr. Roberts Bartholow Professor Emeritus of Materia Medica, General Therapeutics, etc., Jefferson College, Philadelphia, said in "Practical Treatise on Materia Medica and Therapeutics," 1899, that Buffalo Lithia Water "contains well-defined traces of lithia and is alkaline. It has been used with great advantage in gouty, rheumatic and renal affections."

Dr. George Ben Johnston Richmond, Va., ex-President Southern Surgical and Gynecological Association, ex-President Medical Society of Virginia, and Professor of Gynecology and Abdominal Surgery, Medical College of Virginia, says: "When lithia is indicated, I prescribe Buffalo Lithia Water in preference to the salts of lithia, because it is therapeutically superior to laboratory preparations of lithia, lithia tablets, etc."

Edward M. Edberr, M.D., Ph.D., Ch.D., Ph.G. University of Vienna, Chicago, Ill., declares: "I have found Buffalo Lithia Water of undoubted service in the treatment of Uric Acid Gravel, Chronic Rheumatism and Gout."

Voluminous Medical Testimony on request. For sale by the general drug and mineral water trade.

**BUFFALO LITHIA SPRINGS
WATER CO. BUFFALO LITHIA
SPRINGS, VIRGINIA**

so, as I have possessed such a faculty from childhood. I know that these feats require great concentration of mind, for after every exhibition I feel fatigued and mentally exhausted. When I can not concentrate my mind upon my work, I find that I make mistakes. I had such an experience a number of years ago in a Michigan city where I had several nights' engagements, and where on the first night a state of nervousness made me unable to proceed with my entertainment, but after the first night I was able to work to the satisfaction of those who were present. One night in Lansing, Mich., I was exhibiting to a large crowd who seemed to be pleased with the character of my entertainment, when I announced that I would tell any one instantly the day of the week of any date, past or future, immediate or remote. A white gentleman who was present, accompanied by his wife, immediately arose and gave a date. I announced immediately the day of the week, whereupon he insisted that I was wrong and was corroborated in his statement by his wife. I again asked for the date, which being given as before, my mental calculation gave a result as before. He continued to insist that I was in error. I asked the pastor of the church where I was exhibiting to find a calendar or almanac of the year in question, which, being found, showed conclusively that I was correct."

THE NEW GENIUS OF THE MISSOURI PACIFIC

FOLLOWING the railroad warfare between the Gould lines and Harriman system, the Missouri Pacific, for many years the principal source of revenue for the Gould interests, fell upon evil times. Its ups and downs may be glimpsed from the fact that its stock sold at 125½ in 1902, hung around 100 during 1903-4-5 and '06, plunged down to 28 in February, 1908 (after the panic), struggled back to 65 or 70 in 1908 and '09, sagged down to 33¼ in the fall of 1911, and is now around 40. Some said it was a victim of Harriman's more or less evil genius, while others openly charged that George J. Gould neglected it for society life. It probably would be impossible to fix the blame accurately, but there is no question as to its history. Governor Stubbs, of Kansas, once asked the Legislature to order the company to suspend operations on one of its lines, because it had become a danger to life. There are 7,000 miles in the system, and to drag it to the washtub and clean it was a mighty big job, but, if we are to believe the Kansas City Star, Benjamin F. Bush, who became its president in April, 1911, has done that very thing. He has not only given it a good cleaning; he has practically rebuilt a good deal of it, and is busy making over the rest. The Star tells a lively story of his unusual performance:

Bush came to the presidency of the Missouri Pacific system from that of the

Choice Spring Neckwear

Whatever your taste in spring neckwear, whether beautiful flowing-end four-in-hands; tubular reversible cravats; knit or crocheted four-in-hands, you will find your favorite among

CHENEY SILK CRAVATS

An idea of the wealth of selection can be had from the illustration, which is only one of the many designs in foulards alone. At your dealer's.

Your identification of the genuine is the name "Cheney Silks" in every cravat.

MAKERS OF RICINOL GRAPE CASTOR OIL

Western Maryland, which he had just pulled through a receivership. His election followed a prolonged disagreement between the bankers interested in the road.

Bush at once started on an inspection tour of the system, which took all except 44 days of the first year. During that period he traveled 90,000 miles, or an average of almost 300 a day. He lived in his private car. He is as democratic as a book agent. It was his custom on reaching a station to walk into the depot and call for the agent. "I'm Bush," was his greeting. "What's your name?"

He's that sort of a man. There's no fuss and not a pinfeather about him. A cat could push open his office door. Any one who wants to see B. F. Bush on business can see him—and all the quicker if the business is a kick. He is a big, husky man, with a large, warm hand that grips hard, and is perfectly friendly and wholly businesslike. He regards a dress suit as an unmitigated nuisance, often misses lunch, and smokes black cigars of 100 per cent. efficiency.

The family Bible states that it is 53 years since he was born in Wellsboro, Pa.; but he doesn't look it. On that first inspection trip he rode over one of the principal divisions in company with the superintendent. For one whole day he sat on the observation platform silent. At night he said to the superintendent: "What does this road need?" "Everything," said the superintendent. "Rebuild it," said Bush. "We have the money. Get to work."

He put in 5,000,000 ties, rebalanced the roadbed, fenced it, put in cattle guards, and furnished new rolling-stock. On an Arkansas branch trains had been held down to four miles an hour for safety's sake. They are running now at 40 with comfort and at 60 miles an hour with safety.

Bush cleaned up 7,000 miles in four months. Time-expired officials could be seen leaving the Mop's general offices under the red lights marking the exits at any hour. He rebuilt the force as rapidly as he did the road. A day's work on the Mop ends now when the work is done—not at 4 o'clock.

Now let's eat the pudding. For the fiscal year of 1912—the first in which his work showed—he added \$1,726,657 to the operating revenues and decreased the operating expenses by \$2,049,344, an increase in the net operating revenues of \$3,776,001. For the five months ended November 30, 1912, the net railway operating revenues were increased by \$2,444,710. He obtained a surplus of \$732,566, as against a deficit of \$1,701,234 for the same period in 1912, a total increase in surplus of \$2,433,800. With an increase of \$3,391,235 in gross business, his transportation expenses only increased \$720,191.

He is president of the Missouri Pacific, with 7,000 miles; of the Denver and Rio Grande, with 3,000 miles; it is understood he is soon to be made president of the Western Pacific, with 1,000 miles, and entirely likely that he will be the head of the International Great Northern, with 1,142 miles. His digestion is perfect; he gets up at 5 o'clock in the morning, and goes to bed at 9 o'clock at night; his salary is \$100,000, and he never had a valet.

At nothing a ton
poor carbon paper
would be too costly

Your carbon paper bills for a whole year are a very small item—so small that it is absurd not to get the paper which best assures clean, permanent, reliable records.

TRADE MARK MultiKOPY CARBON PAPER

is made in the most scientific carbon paper factory in the United States. Back of it are twenty years of study and experiment in combining raw materials from every part of the globe. It costs you more per sheet than most brands for the same reason that gold costs more than copper.

While MultiKopy is really economical (since, for instance, a single sheet will copy 100 letters), yet economy is a less important consideration than efficiency and reliability. MultiKopy records in blue and black are absolutely permanent. MultiKopy gives the sharpest impressions (often indistinguishable from originals), does not rub nor smudge, is always uniform and is unaffected by weather conditions.

Send for a FREE SAMPLE

Test it in every way you can think of and be guided by the results. What's worth copying is worth copying well.

THE SPICE OF LIFE

Usually.—Tom—"What's the difference between betting and bluffing?"
JACK—"A good deal."—*Yale Record*.

Sollicitous.—He—"I wish I had money. I'd travel."
She—"How much do you need?"—*Judge*.

Awful Prospect.—"Pop, did you look like me when you were a boy?"
"Yes, Willie; why do you ask?"
"Oh, nothing."—*Puck*.

One Kind.—Willie—"Paw, what is light fiction?"
Paw—"Gas and electric light bills, my son."—*Cincinnati Enquirer*.

A Sidestep.—Knicker—"The income tax will be collected at its source."
MILLIONAIRE—"Well, I consider that heaven sends me mine."—*New York Sun*.

Federal Aid.—Mantell—"I had no idea that Banks was worth more than ten millions."

Dunlop—"He wasn't till the Government dissolved his trust."—*Brooklyn Life*.

Disappointed.—FOND MOTHER—"Don't forget to put your toothbrush in your suitcase, Bobby."

Bobby (going to the country for a week).—"Oh, shucks! I thought this was going to be a pleasure trip."—*Chicago News*.

Inside Information.—MOTHER—"If you could have eaten that entire jar of jam without a single twinge of conscience, you must be thoroughly bad."

Willie—"No, mother; I am confident there is something good in me."—*Yale Record*.

Rations Reduced.—Sir Leopold McClintock, the Arctic explorer, was once giving an account of his experiences amid the ice-fields of the north.

"We certainly would have traveled much farther," he explained, "had not our dogs given out at a critical time."

"But," exclaimed the lady, who had been listening very intently, "I thought the Eskimo dogs were perfectly tireless creatures."

Sir Leopold's face wore a whimsically gloomy expression as he replied:

"I—er—speak in a culinary sense, miss."
—*San Francisco Argonaut*.

Precocious George.—"What's the idea, George?" inquired Mr. Washington. "Why do you chop down this cherry-tree? Have you anything against cherry-trees?"

"No, sir."
"Maybe you are in favor of deforestation?"

"No, sir."
"Doing this for a moving-picture concept?"

"By no means."
"Then why chop down a tree?"
"I just thought of going on the stump," replied the future father of his country, and then Mr. Washington realized that George was a born statesman.—*Kansas City Journal*.

Schlichter
all pure linen
Underwear
The Original
Ramie Fibre
Reg. U. S. Pat. Off.

is guaranteed absolutely pure (100%) Ramie Linen, not adulterated with cotton, or other inferior materials.

The United States Government Report No. 7 of the Department of Agriculture, Fibre Investigation, pronounces Ramie the most wonderful and valuable of all fibres.

It is endorsed by the highest medical authorities of the world for its hygienic properties, and as a perfect material for Health Underwear.

The Schlichter Ramie summer-weight garments are a luxury for hot weather, the Ramie Linen being deliciously cool, having the highest absorbing and evaporating power of all known textile substances.

For sale by leading dealers everywhere.

If your dealer cannot supply you, we can direct you to one who can. Write us for booklet and samples.

SCHLICHTER-RAMIE COMPANY
357 Fourth Ave., N. Y.

His Chance.—GATEMAN—"Hold on there, young feller. A dollar for the car!"
STUDE—"Sold!"—*Cornell Widow.*

The New Standard.—KNICKER—"Is she interested in the Tariff Bill?"
BOCKER—"Yes; she says she won't marry a man who doesn't pay an income tax."—*New York Sun.*

Peevish.—"I had to kill my dog this morning."
"Was he mad?"
"Well, he didn't seem any too well pleased."—*Cincinnati Enquirer.*

Great Climax.—"Did the play have a happy ending?"
"You bet it did." Some one in the gallery hit the villain square in the face with a tomato."—*Houston Post.*

Carelessness.—OLD LADY (who has been lunching with her son)—"Here, William, you left this quarter on the table by mistake. It's lucky I saw it, because the waiter had his eye on it."—*Life.*

Easy Marks.—SCHOOLMISTRESS—"Master Isaac, what wrong did the brothers of Joseph commit when they sold their brother?"
ISAAC—"They sold him too cheap."—*Tit-Bits.*

Utilizing Gravity.—MAN (on dock)—"What are you rowing with that trunk in the bow of the boat for, Pat?"
PAT—"Shure, an' if it was in the stern, wouldn't I be rowin' uphill all the time? An' this way I'm rowin' downhill all the time!"—*Yale Record.*

Discretion.—"I say, Tom, lend me another ten, will you?"
"Heavens! Why don't you go to work and earn money?"
"Don't dare to, my boy. People would think the governor had disinherited me, and that would ruin my credit."—*Boston Transcript.*

The Better Part.—"Who's that impressive-looking woman over yonder?"
"That's Mrs. Peckum. She's a remarkably strong-minded woman, and they do say that she commands a very large salary."
"How does she earn it?"
"She doesn't earn it. Her husband earns it, and she commands it."—*Puck.*

Non-testable.—"Our product is thoroughly tested before leaving the factory. No man can sell stuff to-day that has not been tested."
"We manage to sell our product without testing it."
"That's odd. What do you sell?"
"Dynamite."—*Washington Herald.*

Crafty.—OLD GENT—"Well, sonny, did you take your dog to the 'vet' next door to your house, as I suggested?"
BOY—"Yes, sir."
OLD GENT—"And what did he say?"
BOY—"E said Towser was suffering from nerves, so Sis had better give up playin' the planner."—*Tit-Bits.*

Walk-Over

The Shoe for You

Shoes of character!

CHARACTER shows in shoes as in men. It speaks for itself!

By right of better materials, by reason of better styles, because of finer lines and easier fit—Walk-Overs show for what they are.

This general betterness is proven by thousands of the earth's wise folks who have been wearing Walk-Overs for years and years.

Every Walk-Over store deals in shoe comfort, shoe service and real shoe satisfaction.

Walk-Over stores, or agencies, are everywhere! Standard prices \$4.50 and \$5.00; other grades \$3.50 to \$7.00.

GEO. E. KEITH COMPANY

Manufacturers of Walk-Overs for Men and Women
Campello (Brockton) Mass.

The word "Walk-Over" appears on every genuine Walk-Over Shoe.

"Composite" Model 500

THE Indian Motorcycle

gives you the fullest pleasures of the open country road without any jolting, jarring or vibration. The new Comfort features of the 1913 Indian have completely revolutionized motorcycling. The **Cradle Spring Frame** has abolished discomfort. It's the correct principle. Instantly appreciated by anyone who has ever ridden a motorcycle.

Foot Boards now fitted in addition to pedals give choice of two comfortable riding positions with separate brake controls. New style luggage carrier fitted free. No increase in Prices. Power, Speed and Endurance unequalled by any other motorcycle. Costs next to nothing to maintain. Easy to ride as a bicycle. Needs no garage.

Prices | 4 H. P. Single, \$200 | f. o. b. Factory

Beautiful Lawns

What adds more to the home and its environment than a beautiful lawn—nature's carpet of rich emerald-green turf and velvety texture? It gives that much sought for touch of quiet, peacefulness and comfort.

Such lawns are not hard to grow, but discretion **MUST** be used as to the seeds sown. There are many classes of grass seed, yet there are few that really grow the kind of lawn you would like.

Thorburn's Lawn Grass Seeds

have produced the most beautiful lawns everywhere, for more than a century. Our mixture is the result of years of constant study and practical application to the adverse conditions existing in day country, the composition of the very best seeds in available nature. Thorburn's Lawn Grass Seeds are able to give excellent results under all conditions. Just give them a trial.

The Thorburn Lawn Grass Seed

A Wide Choice of Investments

**NETTING
5% to 6%**

We issue each month a small pamphlet containing short descriptions of various high grade investments. This list includes bonds secured by first mortgage upon railroads, steel steamships, hydro-electric properties, farm lands, timber lands, Chicago down-town real estate and the plants of well-known industrial corporations. The bonds are available in \$500 and \$1,000 denominations and maturities from one to twenty years. In each instance the issue has been investigated by us thoroughly and purchased outright. You will find this booklet of great assistance in selecting an investment for \$500 or larger amounts.

INVESTMENTS AND FINANCE

THE RISING INTEREST ON BONDS

THE financing undertaken this year by the Baltimore & Ohio, St. Paul, and Pennsylvania railroads, because of the price at which the bonds and stocks were issued, is believed to mark "a new epoch in borrowing rates for American railroads." That opinion is now held not only in this country, but in Europe. It is recognized that investors have come to require a higher yield, as a result of the operations of economic forces, such as the rise in the cost of living and excessive demands on capital. These are the same causes which in recent years induced many holders of high-grade, low-interest bonds to sell them and invest the money in other properties yielding larger returns, such as industrial preferred stocks and bonds.

The new St. Paul bonds, of which \$30,000,000 are issued, bear 4½ per cent. interest and were offered to the public at 99½. While they were subscribed for in excess of the amount, the interest rate and the price both indicate how radical is the change that has come over the investment market for high-grade railway issues. It is not so many years since 4 per cent. was a standard rate—in fact, not so many since bonds could be put out at 3½ per cent. Some experienced bond dealers believe the day has passed for a lower rate than 4½ per cent., while some place the coming rate as high as 5.

These conditions have brought to the front once more the question whether railway companies must not soon obtain advantages as compensation for their increased interest charges, and other new expenses which have been brought about by higher wages and the increased cost of materials. Such compensation could come about only through permission from the Interstate Commerce Commission to raise railway rates. There are those who hold that the commission, as now constituted, is more favorably disposed toward the roads than it was formerly. Prevailing conditions in the markets, for labor, material, and money, however have forced upon the roads many economies in administration to which they have not been accustomed in former years, and this in itself will no doubt be found a distinct gain for the stockholders.

Should any of the seasoned dividend-payers, in consequence of these conditions, be forced to reduce their dividend rates, it seems not at all unlikely that the commission would ultimately yield. Among stocks already threatened with reductions are the New Haven and Illinois Central. Low rate conditions with these roads are not, it is true, responsible wholly for situations which endanger the dividends of those roads, but they are in part, and with the New Haven a considerable part, that road having been more seriously affected by inability to raise rates than almost any other prominent system in the country. As for roads which do not pay dividends, and which, if they ever paid them, paid intermittently, the situation is still more serious, inasmuch as they could not save themselves by a reduction in dividends, but

would have staring them in the face a threat of insolvency and all the evils of receiverships.

There are experts in investment conditions who hold that these dear rates for capital will ultimately have a good influence on the market for bonds. One expert is quoted as saying bonds are now "on a sounder basis than they have occupied for months," while another, who is foremost among bankers in New York, declares that the higher rate of interest "portends a distinctively favorable change in the investment situation." He believes that, in a not remote future, prices in the bond market will recover "a substantial part of the ground lost in the past year."

MILLIONAIRES WHO MADE BAD INVESTMENTS

The filing this month of the appraisal of the estate of John Jacob Astor, showing a total valuation of somewhat more than \$85,000,000, brings to light the fact that Mr. Astor had large sums of money invested in properties that are now worthless. While their face value was only a small percentage of the value of his good securities, they were sufficiently large to illustrate the point often made that no man, not even the most experienced, ever has a uniform success in his business ventures.

This was notably true of Jay Gould, Russell Sage, and E. H. Harriman, all of whom left estates nearly as large as Mr. Astor's. Among Mr. Gould's securities were 97,513 shares of a railroad company, the value of which at his death was marked down to \$487,565, whereas the value at par would have been \$9,751,300. In the list of Mr. Gould's properties, were nine other items, nominally of large amount, but actually of no value, and they were so marked by the appraisers. In Mr. Sage's estate were many properties without value. In some of them he had as many as 3,000 shares. Mr. Harriman had an equally large number of worthless properties. They comprized railroad stocks and bonds chiefly, but there were also stocks in real estate improvement companies, construction companies, typewriter companies, coal companies, and mining stocks. These worthless securities altogether had a par value of \$4,041,876. Mr. Harriman had eighteen other investments, the face value of which was over \$20,000,000, but the appraisers were not able to mark them as worth more than \$6,070,828.

It is to be borne in mind that these worthless stocks, and these other stocks, appraised at much less than their par value, did not necessarily represent heavy losses to Messrs. Gould, Sage, and Harriman. To determine what their losses were, the important point would be to know how much they paid for the stocks. The likelihood, however, is that many of them represent losses, and very considerable ones. A writer in the *New York Evening Post*, discussing the problem of how these experienced men came to make such poor investments, inclines to the belief that

"many of the securities came to them on defaulted loans," while others "unquestionably represent investments made practically out of charity to friends." The Harriman list at least shows "a considerable amount of money devoted to propositions in which he was personally interested and from which he obviously did not look for any return." With all allowances made, the writer believes the lists show "a large number of investments deliberately made as speculations in which they were led astray just like the man in the street."

Further light on the losses which rich investors often meet with was recently shown in an auction sale in New York of securities that originally were sold to investors through misleading prospectuses and the honeyed eloquence of clever promoters. In the auction market securities of this kind are certain to reach their proper level. Those who come to buy are wise men in their generation. The certificates have already been subjected to careful tests as to their present or prospective value. On a single day in April there were sold, as one lot, stocks in a coal company of a par value of \$300,000, bonds of a mortgage company of a par value of \$220,000, stock in a railroad company with a par value of \$300,000, bonds of the same railroad company of a par value of \$300,000 and stock in another railroad company of a par value of \$150,000. The entire collection brought \$125. Another offering consisting of oil and refining bonds of \$60,000 par value brought \$60. Another varied collection comprising 200 shares of a silver mining company, 200 shares of an exploration company, 20 shares of a mining company, and 25 shares of a steamship line, went as one lot for \$5.

THE PENNSYLVANIA STOCK ISSUE

The fall in April in the price of Pennsylvania railroad stock to 114 (the price a year ago having reached 126) followed an issue of \$45,000,000 new stock, which brings the total amount outstanding up to \$499,265,635. Altho foreshadowed in the company's annual report, the announcement, says a writer in the *New York Times Annalist*, "came sooner than expected and was accompanied by heavy short selling." The price at once declined sharply, and this, of course, led to decline in the rights which have been worth only about 1 1/4 or 1 1/2. Pennsylvania stock, for a considerable time, has been selling below the level at which, for some years, it had been regarded as a good purchase for investments. At prevailing prices, it yielded about 5 per cent, altho Pennsylvania was looked upon as a stock very close in safety to a bond. When offered, it had been well absorbed by investors. Its stockholders now number 77,000, many of them women. The *Annalist* writer represents that in Philadelphia stockholders "are naturally looking with alarm at the enormous increase in the company's capital,"—especially as this increase has brought no increase in the net income for the stock. He says on this point:

"In 1904, when the total outstanding stock was \$301,285,650, the net income applicable to dividends equaled 9.29 per cent., which is precisely the return for the year 1912, when the outstanding stock was \$453,880,560. For a time expansion of capital was accompanied by expansion

The Investment With Multiple Safeguards

No. 3—Ample Earning Power of the Underlying Security

THE experienced investor does not stop with determining the reliability of his investment banker and the large margin of safety in the particular investments offered him. These factors being established, he carefully examines the earnings of the property or corporation behind the bonds he considers purchasing, since these earnings must pay the principal and interest of his investment.

Obviously, property which has no earning power is not the best security for a loan. Unimproved real estate, for example, earns nothing. One who borrows money on unimproved real estate must pay the principal and interest from other resources or permit the security he has pledged to be sold to pay off the loan. It is evident that an investment based on such security is not the best investment. Bonds, to be sound, must be backed not only by ample security but by ample earning power.

The First Mortgage Bonds owned and offered by us are thoroughly safeguarded in this respect. They are directly secured by absolute first liens on newly improved, centrally located Chicago property of the highest class, which must produce net earnings much more than ample to insure the safety of the bonds.

First Mortgage Bonds — 5 1/2 to 6%

In no case is the total bond issue greater than one-half of the conservatively estimated value of the security. The bonds are issued in denominations of \$100, \$500, \$1,000 and \$5,000, and mature serially in from two to fifteen years without any release of the original security.

We give reasonable assurance of convertibility through our custom of repur-

chasing securities from our clients, when requested, at par and accrued interest, less a net handling charge of 1%.

We call your especial attention to the fact that no investor has ever lost a dollar of either principal or interest on any security purchased from us in the 31 years in which we have been engaged in handling this class of investments exclusively.

"The Investors Magazine," a semi-monthly publication, together with literature of value to every careful investor, will be mailed on request.

A list of carefully selected issues has been prepared. Write for circular No. 2473

Income on Investments

A wise investor, in considering investment securities, will first satisfy himself as to their soundness. Unless he is buying for long time investment he will next make sure of their marketability. The third consideration, and one which, while of importance, should be secondary to the others, is the income.

We have prepared a circular which describes several corporation, short term, and railroad securities that possess the first two qualifications and that yield incomes of from 4.65% to 6%. We will be glad to supply this circular to you if you are interested.

Ask for Circular E-444

Conservative Investors

are more concerned with stability in price, safety of principal and prompt payment of income of investments than the chance of speculative profit with its consequent greater chance of loss.

Municipal Bonds

are now, always have been and always will be the ideal securities for conservative investors. Business conditions, political attacks and foreign complications do not affect their intrinsic value.

If YOU want investments of this character, please consider the following:

Bonds of Larger Cities

Yielding 4% to 4.55%

New York City	3½%	due 1954
Grand Rapids, Michigan	4%	due 1931
Minneapolis, Minnesota	4%	due 1942
Baltimore, Maryland	4%	due 1961
Houston, Texas	4¼%	due 1920-52

Bonds of Smaller Communities

Yielding 4.25% to 5%

Mount Vernon, New York	4½%	due 1952
Barry County, Missouri	5%	due 1922
Webster Groves, Missouri	4½%	due 1932
St. Clair Co., Ill. Sch. Dist.	5%	due 1918-23
Bellingham, Washington	5%	due 1926
Austin, Texas	5%	due 1930-52
Fairmont, West Virginia	5%	due 1942
Fort Smith, Arkansas	5%	due 1923

Bonds of Drainage and Road Districts

Yielding 5% to 5½%

Calhoun Co., Texas, Road	5%	due 1952

White, Weld & Co.

The Bankery 14 Wall St. 111 Devonshire St.
Chicago New York Boston

of income and larger dividends. In 1907, when the capital was \$314,604,200, 10.67 per cent. was earned and 7 per cent. dividends disbursed. In the following year, with capital unchanged, 8.96 per cent. was earned, and the dividend reduced to 6 per cent. A further increase in the stock to \$404,506,752 in 1909 returned 11 per cent., as compared with 11.66 per cent. in 1906, when the capital was \$305,951,350. There was a shrinkage in profits in 1910 to 9.28 on a capitalization of \$412,613,725; and in 1911 the surplus available for dividends fell to 8.63 on a capitalization of \$453,880,500. Meanwhile the price of the stock naturally followed the business of the road. It now stands at 115 a share, as compared with 140 in 1904. Before that year, in 1903 and 1901, two stock allotments of 33½ per cent. were issued at a premium of 20 per cent. They were the last of the premium issues. Since then the new stock allotments have been made at par."

This issue of new stock by the Pennsylvania gives special interest to a recent article in the *London Statist*, calling the attention of English readers to the magnitude of the Pennsylvania system. That magnitude is declared by the writer to be one that it is difficult for an Englishman to grasp. The writer undertakes a comparison of the mileage of the Pennsylvania road and the work it does with the mileage and work of the railways of the British Isles.

The length of the Pennsylvania, east and west of Pittsburg, is now 11,557 miles, while the length of all the railways in the British Isles is a little short of 23,500 miles; so that the Pennsylvania's mileage is one-half as much as the whole mileage of all the railways in Great Britain and Ireland. If the Pennsylvania system's sidings be included, we should have a total length of track of about 26,000 miles, as against 55,000 miles in the United Kingdom.

As to work performed, that being "a much more weighty matter," the amount done by the Pennsylvania system is declared to be "truly enormous." It is unfortunate that on this point English data do not exist for a proper comparison; at best the amount can only be guessed at. By a good process of guessing, it is concluded that the freight traffic in the United Kingdom reaches 13,000 million ton miles, whereas the freight traffic of the Pennsylvania exceeds 41,000 million ton miles, that is, the Pennsylvania conveys more than three times the amount of freight that the British and Irish roads convey. Stated in other terms, it appears that, whereas the railways of the United Kingdom now convey about 530,000,000 tons of freight an average distance of about 25 miles, the Pennsylvania system conveys 473,000,000 tons of freight an average of 87 miles. From this it appears that the freight tonnage of the Pennsylvania is nearly as great as the whole tonnage of the railways of the United Kingdom, while the average distance carried was between three and four times greater.

When it comes to passenger traffic, the greater density of the population in the United Kingdom gives the railways over there a much larger passenger traffic than the Pennsylvania enjoys. While the passengers conveyed by the Pennsylvania one mile last year reached 4,440 millions, the passenger mileage of the United Kingdom reached upwards of 14,000 millions. When the passenger mileage of the British railways is added to the ton mileage, the total

Before You Re-Invest Your April Dividends

Take your pencil and mark on the

Babson Composite Plot

the dates of your investments during the past ten years. Frankly, have you always chosen the most favorable time to buy, the time when fundamental conditions were just right to give you the lowest price and the highest yield? Now instead of looking backward and seeing what you ought to have done, why not look ahead and actually do it? The Babson Composite Plot indicates when fundamental conditions are ripe for buying stocks and bonds. Before you make your next investment, write for a copy of a valuable booklet explaining when to buy, which will be sent gratis to any person interested in the work of the Babson Organization.

units of traffic conveyed one mile became however, only 27,000,000, whereas with the Pennsylvania they reached nearly 46,000,000.

SOME OF THE PAYERS OF LARGE INCOME TAXES

Financial newspapers here and there are printing articles in which attempts are made to estimate the amount of tax which the richest men in the country will pay when the proposed income tax shall have become a law. The bill provides for a 4 per cent. tax on all incomes in excess of \$100,000 a year. *The Financial World* applies this tax to incomes, based on "the most trustworthy estimates of the riches of some of the best-known men of wealth." Following are the results:

	ESTIMATED WEALTH	ESTIMATED INCOME	TOTAL TAX
J. D. Rockefeller.....	\$650,000,000	\$22,500,000	\$1,350,000
Andrew Carnegie.....	500,000,000	25,000,000	1,250,000
Edw. J. P. Morgan.....	250,000,000	12,500,000	600,000
Henry C. Frick.....	200,000,000	10,000,000	400,000
Edw. Russell Sage.....	100,000,000	4,500,000	180,000
Edw. Marshall Field.....	250,000,000	12,500,000	600,000
Robert L. Datt.....	200,000,000	10,000,000	400,000
James Stillman.....	200,000,000	10,000,000	400,000
Huntington Estate.....	100,000,000	5,000,000	200,000
W. Rockefeller.....	50,000,000	2,500,000	100,000
H. H. Flagler.....	50,000,000	2,500,000	100,000
Edw. H. R. Rogers.....	50,000,000	2,500,000	100,000
Mr. Jay Gould.....	75,000,000	3,750,000	150,000
Edw. G. M. Pullman.....	75,000,000	3,750,000	150,000
Mr. Leland Stanford.....	75,000,000	3,750,000	150,000
Edw. R. H. Harriman.....	70,000,000	3,500,000	140,000

In arriving at the income received by each of these men from investments, the writer assumed that it would average five per cent. on the capital. No account was taken, however, of certain special exemptions which many incomes will profit from when reckoning up the amount of the tax. The writer notes further that estates will be obliged to pay this tax as an additional tax to the one imposed under the inheritance-tax law. For example, the estate of E. H. Harriman has already paid to the State of New York in death taxes something more than \$700,000. It has also paid in Utah a few hundred thousand dollars, as a tax on securities owned by Mr. Harriman which were chartered in that State.

LOWER COMMODITY PRICES

"Easier general tendencies in various quarters," were found by *Bradstreet's* on April 1st in its study of commodity prices. While live stock, mutton and pork products had become more expensive, leading to continued complaint as to the high cost of meat, there were so many articles that had receded from the former level as to supply a lower index number. This number was \$9.2976, which reflected a decline of 1.1 per cent. since March 1st, and "the lowest price level since September of last year." Since December, the decline had been 2.5 per cent.; for four months the movement had been steadily downward. Of thirteen groups only four made advances. The index number, however, remains still high. It is 2.3 per cent. higher than it was one year ago. As compared with April, 1907, it is 3.7 per cent. higher. In detail the writer in *Bradstreet's* says:

"The advance in live stock was brought about by higher prices for beeves and hogs, altho sheep worked lower. Provisions rose because of increased quotations for hogs, mutton, pork, bacon, hams, lard, and codfish; but, on the other hand, dairy products

Who Recommends The Bonds You Buy?

There is one dominant requirement to successful investing in bonds and that is the advice of someone who knows thoroughly the actual character of the bonds you are going to buy. You naturally must depend upon someone else for this information because you could not possibly make the extensive and exhaustive investigations required to establish fully the true worth of the property. The extent of these preliminary investigations necessitates the services of independent experts, engineers, attorneys and certified accountants.

We would like to place at your disposal our experience and knowledge of bonds.

Our recommendation of a bond may be regarded as dependable evidence of its reliability. A bond which meets the rigid requirements we demand is well adapted to the needs of the investor.

We offer a diversified list of sound securities in our General Circular. Bonds yielding from 3 1/2 to 6% interest and particularly attractive at present prices.

This Circular sent postage prepaid on request for list—D-2.

The Realty Guarantee & Trust Company
Capital and Surplus \$400,000.00 Youngstown, Ohio

fell off, with eggs reflecting the most substantial decline. Metals turned higher, owing chiefly to a rise in copper. Building materials went higher because of dearer glass and spruce timber. Breadstuffs receded; fruits also went off, while hides and leather declined, thanks to cheaper hides and union leather. Textiles fell on rather general decreases, more especially in domestic wool, but the force of the recession was offset by a rise in gingham. Coal and coke dropped as the result of seasonal changes in the price of anthracite coal, while at the same time Connellsville coke slumped. Oils receded because of lower castor oil. Naval stores dropped on account of a decline in turpentine, and chemicals and drugs fell with a loss in carboric acid. Rather marked decreases in hops and tobacco caused lower prices for the miscellaneous group."

INVESTMENT BANKERS AND THE STOCK EXCHANGE

One of the reasons cited for the decline in late years in transactions on the Stock Exchange has been the growth of investment banking. Just how large a share this growing business may have had in the decline could not be determined with much precision, but that it has been considerable seems to be generally conceded. Statistics of transactions on the exchange to some degree make its extent clear. Following is a table printed by Montgomery Rollins in his *Magazine*, showing the total number of shares traded in on the Exchange during the twenty-three years from 1889 to 1912:

Year	Sales in Shares	Year	Sales in Shares
1889....	72,014,600	1901....	265,944,659
1890....	71,282,885	1902....	188,503,403
1891....	69,031,689	1903....	161,102,101
1892....	85,875,092	1904....	187,312,065
1893....	80,977,839	1905....	263,081,156
1894....	49,075,032	1906....	284,298,010
1895....	66,583,232	1907....	196,438,824
1896....	54,654,096	1908....	197,206,346
1897....	77,324,172	1909....	214,632,194
1898....	112,699,957	1910....	164,051,001
1899....	176,421,135	1911....	127,208,258
1900....	138,380,184	1912....	131,128,425

A glance at this table will show that the low records reached in 1911 and 1912 were not reached in any other of these years since 1898. This is the more remarkable when it is remembered that the increase in general business in those years was probably unsurpassed by other any like period in the history of the country.

There was in that time, as Mr. Rollins says, a "tremendously increased output of securities" and the investment banker in all those years developed his business greatly. One of the notable means by which he did this was through the employment of young men, largely recent graduates from colleges, to solicit purchases of stocks and bonds recommended by their respective houses. These young men have become as familiar visitors in many businesses and professional offices as was the book agent or the life-insurance agent in earlier times. Not only have they solicited business in New York City, but in many others. Indeed, some houses employ them to travel, so that they have become parts of the great army of commercial traveling salesmen. It has been pointed out,—and this is really an important matter in the warfare going on against fraudulent oil, mining, and other enterprises,—that as these stocks and bonds put out by reputable investment houses have had solid values

The United States Government Accepts

for Postal Savings Deposits such securities as we offer you.

In addition to Government and State Bonds, they are the only form of securities accepted by the Government as surety for Postal Savings Bank deposits placed with banks. No securities could be given a better endorsement. And our choice selected of **MUNICIPAL, COUNTY AND SCHOOL BONDS** secured by taxing power

are worthy of this endorsement, combining, as they do, utmost security with good interest return and minimum risk. All the taxing power of the community issuing them stands behind these securities.

Our present offerings include bonds from various states, yielding from 4½% to 5½%. These bonds embody the judgment and experience of our organization of 27 years' training in the selection of this particular class of conservative investment.

Banks and Insurance Companies last year purchased 60% of our securities. Offerings mailed on request for circular No. 526 L.

behind them, an educational work in wise investments has been accomplished.

While quoted prices for these stocks and bonds may decline with certain market movements, yet in the main they are safe as to interest, dividends, and principal. These houses, therefore, have shared with some of the magazines and newspapers the credit which belongs to the work already done through warfare made on fraudulent schemes for investments. Mr. Rollins comments as follows:

"In no way has the American public been so rapidly educated in the last decade as in the subject of money and its investment. The ordinary, every-day investor has absorbed an immense amount of ordinary, every-day finance. The one who does not pillory himself with pertinent questions is, indeed, uncommon! Be it man or woman, each not only desires to know the kind of bond, its rate, how long it may run, whether subject to earlier redemption than its maturity date, and so on, but inquires with very keen insight into such erstwhile, complicated details as net yield, amount of interest accrued, and what not.

"It is but fair to inquire into the reasons of this great enlightenment. It has been very largely accomplished through the medium of the magazines and certain of the more progressive daily newspapers. A fair treatment of the subject demands, however, that the well-intentioned dealers in investments should be given their full share of the credit for the good results accomplished. The periodicals have had the encouraging practical support in this aggressive work of the investment bankers, who realized that they had nothing to lose, but everything to gain from a broad educational campaign in the matter of investments. They have also cordially put their own shoulders to the wheel by treating their issues in such detailed and simple language as to be understood by the least experienced. They have sent out tons of literature of an instructive nature, with every endeavor to enlighten rather than to confuse, and it has proved to have been broad well cast upon the waters."

MONEY IN GREAT DEMAND

"Money," says *The Wall Street Journal*, "was never before so internationally nor so universally in demand on this planet for constructive purposes." As a sign of the international character of the demand, mention is made of a small railroad in the southwest which "searched the world for funds," and found them in Belgium, while Switzerland, for the first time in her history, has sold bonds in New York. Heretofore Switzerland has been ranked as a leader of money—never as an outside borrower. A German bank is mentioned as having recently borrowed in New York \$1,000,000 at 6 per cent. for one year, and would have been willing to take \$5,000,000 if it could have had that much. A large life-insurance company in New York recently lent in Montreal \$1,000,000 on real estate at 7 per cent., and several millions more could have been lent at 6 per cent.

The war in Europe, in considerable part, explains these unusual occurrences. It came at a time of universal business expansion, when the commercial needs of people were already great. Hence the strain on capital and the high rates; hence also these unusual incidents. The public has in small part only realized how great was the

Income Paying Bitter Root Orchard For Sale

For personal reasons, I must sell my 80 acre orchard, located near Darby, within a mile of the railroad, gets its water supply from the well known Como Ditch. 64 acres are planted with McIntosh, Jonathan and Rome Beauties. 20 acres are 7 years old and in bearing, paid about \$2000 net in 1912. 7 additional acres can be planted. One acre would make an ideal building site and the balance of the land is good for cherries. The trees on 20 acres are 4 years old. The youngest trees in the orchard are three years old. Must be sold in one lot, but can be cut into two or three satisfactory orchards which my price would permit re-selling at a very satisfactory profit. About one third in cash and the balance on almost any reasonable terms. For references and further particulars, address

JOS. DIXON CRUCIBLE CO.
Established in 1877
Jersey City New Jersey

"Of the better known dividend-paying railway issues, we append the following:

	Low price of last week (omitting fractions)	Div. rate	Approx. yield on low price of last week
Atchafalpa.....	100	6%	6%
Atlantic Coast Line....	123	7	5.7
Baltimore & Ohio.....	99	6	6
St. Paul.....	108	5	4.5
Great Northern.....	126	7	5.5
Illinois Central.....	121	7	5.9
Lehigh Valley.....	133	10	6.5
New Haven.....	115	8	6.9
Pennsylvania.....	119	6	5
Southern Pacific.....	98	6	6.1
Union Pacific.....	147	10	6.8
Norfolk & Western.....	104	6	5.8
Northern Pacific.....	114	7	6.2

"The foregoing list comprises the large well-established railway dividend-payers. It is possible, of course, that dividends in the case of New Haven and Illinois Central and possibly one or two other roads in the above list may be reduced. In the case of New Haven it looks as if the dividend must necessarily come down. Of the list as a whole, however, it may easily be said that their dividends are on a very firm foundation, and that in the current fiscal year, notwithstanding the rather backward condition of business generally, the railroads have not only kept up to the earning levels of the preceding year, but in most instances have done considerably better. Certainly when the standard railway dividend-payers begin to yield over 6 per cent., it is time to consider scale-down purchases even if not broad investment commitments."

In the Investment Department of *Moody's Magazine* is printed an article in which conditions as to some of these standard rails are pointed out in further detail as follows:

"Suppose we take an old-fashioned dividend-paying railroad issue like Chicago & Northwestern common. As this comment is being written, it is quoted at about \$135 per share. It pays dividends at the rate of 7 per cent. per annum, and has for more than a decade. The yield at going prices, therefore, is 5.15 per cent. Is it a time to buy? Comparison gives an affirmative answer to this question, if the stock is looked at from an investment rather than a speculative point of view. The extremes of the fluctuations in this issue during the last five years are found to be 198½ and 134½, representing yields of 3.50 per cent. and 5.18 per cent., respectively. The mean investment yield for that period is 4.34 per cent. The advantage to the investor at current prices, then, is more than three-quarters of one per cent."

"Atchafalpa common shows an investment yield of close to 6 per cent. Its price range during the five-year period has been 127½-90½. It sold at its highest price just before being put on a 6 per cent. dividend basis in 1909, and at that quotation showed a yield of but 4.80 per cent. At the other extreme, its yield was 6.65 per cent., giving a mean of about 5.70 per cent., against which the present shows an advantage for the investor of one-quarter of one per cent."

"The record of Baltimore & Ohio is similar. It has been on a 6 per cent. dividend basis since 1907. During the last five years it has sold as high as 122½, to net about 4.90 per cent.; and as low as 93½, to net more than 6½ per cent. The present yield of about six compares with a mean of slightly over 5½ for the period under review."

"Coast Line shows an investment return at current prices of approximately 5.65 per cent. It has been on a 7 per cent."

THOMAS' ANTI-RIM-RUST COATING

Should Be In Every Auto Kit

A new, scientific compound of pure paraffin and graphite for use on rims and rim bolts as a rust preventive and on spring leaves as a perfect lubricant and squeak eliminator.

Makes tires change faster and holds them longer. Applied to a rim and spring in 10 sec. \$1.00 buys 2 lbs. from your dealer or direct from us. By Parcel Post—enclosed the cost only 30c. — You don't have to send money.

PREVENT THE RUST PRESERVE THE RUBBER

The Anti-Rust Paint Company
163 South Main St., Akron, Ohio

dividend basis but a comparatively short time. At its high price for the five-year period, it showed a yield of 4.70 per cent. as a 6 per cent. stock; and at its low, a yield of 5.85 per cent., with a mean of 5.26 per cent., nearly one-half per cent. below the present.

"Great Northern is now selling on an income basis of about one-quarter per cent. above the mean since 1909. At current quotation its yield is 5.45 per cent., compared with 4.50 per cent. at the high price recorded in 1909, and with 5.95 per cent. at the low of 1910. It has paid annual dividends at the rate of 7 per cent. regularly since 1899.

"Illinois Central returns about 5.70 per cent. at the current market. As a 7 per cent. stock, on which basis it has been regularly since 1905, it sold as high as 162½ in 1909, showing a yield of but 4.30 per cent.; and as low as 124 in 1910, showing a yield of 5.75 per cent. The difference between the mean investment yield for the five-year period and the yield at present prices is, therefore, only a little less than three-quarters per cent.

"New York Central at its extremes during the last five years gave net returns of 3.40 per cent. and 4.90 per cent., respectively showing mean of about 4.15 per cent. At its present price, the yield is 4.75 per cent., an advantage of more than one-half per cent. net.

"Norfolk & Western, a 6 per cent. stock since December, 1911, yields at going quotations about 5.71 per cent. on the investment. This compares with extremes of 4.20 per cent. and 4.70 per cent. at the various rates of dividends paid during the five-year period, and with a mean of 4.45 per cent., showing a greater relative advantage in this respect than any of the other high-grade stocks.

"Northern Pacific is still another which shows a difference of approximately three-quarters of one per cent. between the investment return at current prices and the mean return for the last five years. The two figures are 6 per cent. and 5.32 per cent., respectively.

"The difference shown by Pennsylvania in this respect is about one-half per cent. At current prices its investment yield is close to 5 per cent. It sold as high as 151½, or on a 3.95 per cent. basis, in 1909, and in 1911 as low as 118½, or on a basis about the same as the present, with a mean of 4.47 per cent.

"Union and Southern Pacific are somewhat more interesting to analyze in this fashion than any of the other standard stocks, in view of the problems with which the two companies have been unexpectedly confronted in their endeavors to work out a plan for complying with the Supreme Court's dissolution decree. Union common, as a 10 per cent. stock, yields about 6.60 per cent. at the current market, compared with a mean yield of only about 3.60 per cent. for the five-year period. Southern's present yield of approximately six, compares with a mean of five.

"Such a rule as the one whose application has thus been shown could not, of course, be set down as infallible. The investor's emotion, obviously, is to be sure that he is applying it to stocks whose dividend positions are capable of at least reasonably accurate determination. It may be said, with reference to the index that are summarized in this connection, that, with the exception of Illinois Central, their current rates of dividend were earned during the last five fiscal years by more or less assuring margins. Aulas for the outlook for the current year to end on June 30 next the following summary of results of operation during the period July 1, 1912, to February 1, 1913, is enlightening. It shows the increases in net earnings reported by

Filing Illustrations from Trade and Technical Papers

Many of the illustrations appearing in trade and technical papers are of undoubted value. They should be properly classified according to subject heads in the same manner as libraries use Globe-Wernicke Filing Cabinets for photographs, clippings, etc.

Globe-Wernicke Envelope Containers

Universal filing cabinets offer a safe method of filing these illustrations in upright position so that they can be referred to at a moment's notice.

Photographs can be mounted and filed on cards in the same fashion, thereby eliminating the risk of their being damaged or misplaced.

Such a system can be installed at very little initial expense, additional sections added only when required. These cabinets are furnished either in wood or steel.

For sale by authorized agents in 1500 towns and cities. Write for information, we ship on approval, freight paid. Catalogue on request. Address Dept. V-812.

SAVINGS-BANK GROWTH SINCE 1864

Imposing is the word for statistics of savings-banks in the United States as given in the annual report for 1912 of the Controller of the Currency. These banks now number altogether 1,922. They are divided into two classes—the mutual banks, which number 630, and the stock banks, which number 1,292. Depositors in all these banks numbered, in 1912, 10,010,304 persons. The average deposit was \$442.72, the total of deposits the colossal sum of \$4,451,818,522.88. Figures are given for savings-banks in this country for a period beginning in 1863, in a table showing the number of banks in existence each year, the number of depositors, the amount of the deposits, and the average amount due each depositor, as follows:

Year	Number of banks	Number of depositors	Deposits	Average due each depositor
1863...	293	887,096	\$206,235,202	\$232.48
1864...	305	976,025	236,280,401	242.08

Grateful.—"Do you know that that bulldog of yours killed my wife's little harmless, affectionate poodle?"

"Well, what are you going to do about it?"

"Would you be offended if I was to present him with a nice brass collar?"—*Houston Post.*

A Four-Day Tour In Glacier National Park For \$22.00

By Automobile, 4-Horse Stage, Launch and Horseback

Break your journey to or from the Pacific Coast by a stop-over at Glacier National Park. It will be a new and wonderful experience. A few days in this scenic wonderland will provide material for a lifetime of vivid, pleasant recollections—and at a comparatively trifling cost.

For instance, \$22 covers the total expense of a four-day tour to exquisite Lake Mary in the very heart of the scenic region of the Park, by automobile, launch and stage, including a visit to the unique and cozy Chalets at Many-Glacier and Going-to-the-Sun Camp—the paradise of the mountain trout fisherman. An almost unlimited number of other tours, covering one to twelve days or an entire season, may be arranged at a correspondingly low cost.

Low Fares Every Day

In Glacier National Park and Pacific Coast. The accommodations throughout the Park exceed the usual. In addition to the famous chain of Swiss Chalet Camps, a magnificent new hotel has just been completed, offering every modern luxury and convenience. It is built of huge logs in perfect harmony with the natural setting. Every room is electrically lighted and heated, swimming pool and shower bath in basement. Numerous open fireplaces typify and crystallize the spirit of hospitality and generous welcome that is evident from the moment of your arrival.

An excellent opportunity is afforded to observe the tribal dances and ceremonies of the Blackfoot Indians—some of the most interesting and picturesque of all the surviving tribes. Stop off at Glacier Park Station.

Write for Aeroplane Map and Special Booklets

Very complete descriptive literature explaining every feature and including a large aeroplane map of the entire park, in colors, will be mailed on request. An interesting and useful pamphlet, "Glacier Park and Its Scenic Features," will be mailed on request. Write for full information today.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"G. T." Sand Lake, N. Y.—(1) "In speaking of the man let down through a roof, one said, 'See! There he comes. Four friends are carrying the box on which the poor man lies.' Should it not be *lies*?" (2) "There are base, subtle passions and prejudices which you often see *exemplified* in really good people." Is this good use of so good a word as *exemplified*? Should it not be preserved for good things—not base?"

(1) The word to use is *lies*; one should say *lay* only when one means "to cause to lie." (2) To *exemplify* is "to show by example; to illustrate." What the writer means is not "to show by example" but "to show as matter of fact," and the word *manifest* would express that meaning.

"C. B. D." Walton, N. Y.—"Who is Herbert Kaufman? The following are said to be from his pen. Where can they be found? 'The best way to get a chance is to take one.' 'Conservatism ceases to be a virtue when it stifles enthusiasm.' 'You can't acquire common sense by proxy.' 'Previous success is by no means the sole evidence of superiority.'"

An American Journalist connected with several London, New York, and Chicago periodicals and newspapers, and also the author of several books. No doubt in his writings. Better apply to him direct. Address him, care of *The Woman's World*, Chicago.

"H. R. F." Brooklyn, N. Y.—"What is the proper pronunciation of the word 'amateur'?"

One will approximate the pronunciation of the word *amateur* if one pronounces all but the last syllable of the following English words as if they were part of ordinary conversation: "am a turtle." One will come nearer the French sound in the third syllable if one, while saying *tur*, also rounds the lips as one does in whistling. The true French sound is hard for an English-speaking person to make.

"A. W. R." Paris, France.—(1) Kindly let me know whether or not the sentence, 'I contend that the German language is more nearly universal than French,' is correct with regard to the words, in italics and why? (2) Also as to the correctness of the following two: 'This glass is more nearly perfect than that one,' and 'This apple is more nearly round than that one.'"

The sentences, as you quote them, are all correct in form and exact in statement. The word *nearly* is an adverb modifying the adjective *universal* (*perfect*, *round*), and is put in the comparative degree by prefixing the adverb *more*. One would ordinarily make the statement in a lower way: "more universal—more perfect—more round," altho the adjectives (from the point of view of their narrower or specific meaning) can not be compared.

"M. L. H." Brooklyn Manor, L. I.—"Which of the following sentences is correct and why? 'It proved to be he.' 'It proved to be him.'"

One should say "he," because the pronoun is in a virtual nominative-predicate construction, as it would actually be in the sentence, "It is he."

"F. C." Edmonton, Alberta.—"In which of the following sentences is the word 'not' used properly? 'It is the practise to not appoint these persons.' 'It is the practise not to appoint these persons.'"

One should say "not to appoint." Even if one is tolerant of the "split infinitive," one should use it only when it makes a better construction than could otherwise be had.

"C. L. U." Chicago, Ill.—"Kindly state which is the correct preposition and reason for its use: 'He planted the field in corn,' or 'He planted the field to corn.'"

The Oxford Dictionary, under the term *plant* defined as "to furnish or stock (a piece of land) with growing plants," cites five passages ranging from 1585 to the present day, and in all of them the expression is "to plant (a field) with (so-and-so)." The Lexicographer knows of no authority (in literature) for the phrasing, "to plant a field in corn" or "to plant a field to corn." The last expression, "to plant a field to corn," if admitted to use, would have the special force of "to devote a field to corn."

Big Fishing

If you need a REAL change, if you want a few days outing that will be more fun and do you more good than anything you ever did, and that won't cost much—DO THIS—

Write to us TODAY for exactly where to go in the

Maine Lakes

to find big, hungry, fighting trout, salmon and bass WAITING FOR YOU.

For the best fishing camp, or if you're fussy and want to eat with a fork, the best hotel.

What to take, how to go, what the trip will cost.

And the name of the registered guide who will meet you with everything ready.

5 Hours From Boston
10 Hours From New York

N. B. Your family will enjoy it as much as you. Hundreds of women and children go.

V. STEFANSSON

V. Stefansson, the famous explorer, who has recently discovered a tribe of blonde Eskimoes in the arctic regions of Northwestern Canada, says:
"Tuxedo is mild, cool and soothing—just the sort of tobacco I need. Tuxedo goes with me wherever I go."

V. Stefansson.

WM. STUART KEYBURN

Wm. Stuart Keyburn, Congressman from Pennsylvania, says:
"I take pleasure in recommending Tuxedo tobacco to all smokers. It is a most refreshing smoke."

W. S. Keyburn

GARRETT P. SERVIS

Garrett P. Servis, prominent scientist and writer, author of "The Second Deluge," etc., etc., says:
"I have tried many brands of tobacco, cool, bad and indifferent, before alighting upon Tuxedo, the ideal smoke."

Garrett Servis

Tuxedo—the Most Enjoyable, Most Healthful Smoke, and the Most Economical

THE most enjoyable smoke is a pipe. But many men refuse this method because they have had unhappy experiences with pipe tobaccos.

Likely you have paid 35c to 50c for a tin of fancy "mixture," and it burned your mouth or throat, or was unpleasantly strong.

Too bad—but you got the wrong tobacco. The hundreds of thousands of men who have tried

Tuxedo

The Perfect Pipe Tobacco

have found the answer to their smoke problems. Tuxedo is the *mildest* tobacco made. It cannot bite the tongue or dry the throat.

And it's economical. There are 40 pipefuls in a ten-cent tin. You can't get any better tobacco because nothing better grows than the mellow, perfectly aged Burley leaf used in Tuxedo.

If you try Tuxedo for a month and cut out other smokes, you will not only have had the best month of smoking you ever had in your life, but you will have made a mighty big saving in your pocket-money!

YOU CAN BUY TUXEDO EVERYWHERE

Famous green tin, with gold lettering, curved to fit pocket **10c** Convenient pouch, inner-lined with moisture-proof paper **5c**

SAMPLE TUXEDO FREE
Send us 2c in stamps for postage and we will mail you prepaid a souvenir tin of TUXEDO tobacco. Address TUXEDO DEPARTMENT, Drawer 5, Jersey City, N. J.

Illustrations are given on half size of real package.

Lieut. WILLIAM H. SANTELMANN, Lieutenant William H. Santelmann, leader of the U. S. Marine Band, says:
"I have used Tuxedo tobacco and found it to be a great luxury. It is a cool, sweet, fragrant smoke and I take pleasure in recommending it to all smokers."

W. H. Santelmann

WILLIAM P. SHERIDAN
William P. Sheridan, one of the most famous detectives in the country, says:
"Tuxedo is so mighty fine, so superior in its quality, its mildness and combined richness, that it seems the ultimate and only tobacco for the connoisseur. I can recommend it unqualifiedly."

William P. Sheridan

SAM BERNARD
Sam Bernard, well-known star in many musical comedy successes, says:
"A tin of Tuxedo is my constant companion. I like it especially because it has never given me a bit of throat trouble. The smoothest smoke ever."

Sam Bernard

Serve Two With Cream and Sugar

The grains are filled with a myriad cells, surrounded by thin, toasted walls. They melt away at a touch of the teeth into almond-flavored granules. For breakfast, this is a royal dish.

Serve Two With Fruit

Puffed Grains taste much like toasted nuts, and they form, with fruit, a delightful blend.

Serve Two in Milk

These grains are eight times normal size—four times as porous as bread. They float like bubbles in a bowl of milk. And they form delightful morsels, crisp and airy, easy to digest.

10-Cent Package Free

Take this coupon to your grocer. He will give you for it a full-size package of Puffed Wheat. This is entirely free.

If you prefer the Puffed Rice, which costs 15 cents, this coupon is good for 10 cents toward it. Pay the grocer 5 cents in addition.

Accept this offer in fairness to yourself. It means a 10-meal treat. You will never forget the delight of them. Cut out the coupon, lay it aside, and present it when you go to your store.

Let Us Buy 10 Dishes

This coupon, at your grocery store, pays for a 10-cent package of Puffed Wheat—enough for ten big servings.

Please cut it out—present it. Pay no money, for your grocer will collect from us.

Then serve the grains in the way we show. Let your folks enjoy, at our expense, the finest cereal foods created.

We make this offer every spring. This spring we print our coupon in 22,000,000 magazines.

As a result, countless homes now know one of the greatest food delights of the century.

A Hundred Million Explosions

Within every kernel there have occurred at least a hundred million explosions. Every food granule has been blasted to pieces by exploding steam.

This is Prof. Anderson's process. Whole grains in this way are made wholly digestible. This never was done before.

One result is the best-cooked food in existence.

Another is these crisp, airy wafers—thin, toasted, almond-flavored—foods so fascinating that a quarter-billion dishes were consumed last year.

Now please let your folks try them—try them at our expense. They will add a joy to countless meals when you find them out.

Puffed Wheat, 10c *Except in Extreme West*
Puffed Rice, 15c

SIGN AND PRESENT TO YOUR GROCER **I**
Good in United States or Canada Only

This Certifies that my grocer this day accepted this coupon as payment in full for a 10-cent package of Puffed Wheat.

The Master of the House

From the successful play of EDGAR JAMES
Novelized by EDWARD MARSHALL

Embodying a wonderful message to both husbands and wives, it tells how a determined man of dominating personality and iron will leaves a faithful wife for another woman, gifted with all the artful wiles that tempt men's souls. 12mo. Cloth. Illustrated from scenes in the play. \$1.25 net; postage, 12 cents.

Faro Nell and Her Friends

By ALFRED HENRY LEWIS

A new "Wolfville" story, the best of all. It pictures the fine comradeship, broad understanding and simple loyalty of Faro Nell to her friends. Here we meet again Old Monte, Dave Tutt, Doc Peets, Texas and Black Jack, all the rough-actioned, good-hearted men who helped to make this author famous as a teller of tales of Western frontier life. 12mo. Cloth. Illustrated. \$1.25 net; postage, 12 cents.

The Voice of the Heart

By MARGARET BLAKE, Author of "The Greater Joy."

A romance of a woman's heart. It tells of a girl so pure that she was determined to marry no man who would ask of his wife anything but affection, companionship and respect. She bars as illicit the call of the flesh, until her lover finds the key to her humanity. 12mo. Cloth. Illustrated. \$1.25 net; postage, 12 cents.

Crooked Trails and Straight

By WILLIAM MacLEOD RAINE

Author of "Brand Blotters," "Mavericks," "Buckey O'Connor," "Ridgway of Montana," "A Texas Ranger," etc.

A story of Arizona; of swift-riding men and daring outlaws; of a bitter feud between cattle-men and the sheep-herders; of Curly Flandrau's "mix-up" with a notorious gang and his subsequent vindication. The heroine is a most unusual woman and her love-story reaches a culmination that is fittingly characteristic of the great, free West. 12mo. Cloth. Illustrated. \$1.25 net; postage, 12 cents.

TWO POPULAR NEW NOVELS

The Great New Story by the Author of

"The Way of an Eagle"

The Knave of Diamonds

By ETHEL M. DELL

Frontispiece in Color and Decorated Wrapper. \$1.35 net; by mail, \$1.50

With masterly skill Miss Dell has depicted the domination of love and its effacing strength when called upon to blot out from the memory an offense which only love could forgive. The struggle of the hero, a savage by heart, to emancipate himself from the sinister tendencies of his nature and to rise to the standard which the woman he loves is entitled to claim, is told in a story full of romance and adventure.

"I should not be surprised if it became a second *Rosary* in popularity"

"One of the most human and lovable of story-book characters"

Little Thank You

By Mrs. T. P. O'CONNOR

Author of "My Beloved South," etc.

With frontispiece, \$1.25 net; by mail, \$1.35

From the Author of "The Rosary"

FLORENCE L. BARCLAY

"I have just to-day had time to sit down quietly and read *Little Thank You*. Not an hour can I wait to say 'Thank you indeed for *Little Thank You*.' It is a gem: full of fascinating charm, which seems to me unique. There have been charming love stories and charming child stories, but in your book we have the two combined into a perfect whole. Do accept my warmest congratulations and good wishes for its success."

Charles Scribner's Sons

Fifth Ave., New York

Years of study by Electrical engineers to save Hours of labor in "Woman's Work"

Saving millions of footsteps, making home tasks easier, multiplying the moments of leisure—this is what cheaper electricity and successful invention have done to banish the saying that "Woman's work is never done."

In hundreds of thousands of homes one great labor-saver, the G-E ELECTRIC IRON, has turned a long drudgery into a short, easier task. A special feature of this particular iron, its "even heat," means quick ironing, and quicker ironing means less labor and less electricity. An added convenience, quick heating, is assured by a special arrangement of air spaces that send the heat directly down into the ironing.

The G-E Iron also holds this heat so well, and distributes it so evenly on the ironing surface, that a good bit of the ironing can be done with the current turned off. No separate stand—merely tip the iron back on its own heel stand.

What Edison Mazda Lamps Save
Another economy product of the same G-E

laboratories is the EDISON MAZDA LAMP, which gives its cheerful light with but one-third of the electricity needed for the old style carbon lamp. This leaves you a big, actual *saving of current* for use in heating your iron, running your vacuum cleaner, sewing machine or washing machine—or for operating your G-E Toaster, G-E Hotplate, G-E Ozonator, or any of the other delightful home conveniences bearing the G-E trade mark.

"G-E" tells the whole story. Look always for that trade mark.

Electric Wiring Costs Less, Too

You will be surprised to find how little it now costs to equip your home for all these electrical comforts. The walls will not be marred. Your nearest electrical dealer or your lighting company will direct you to a good electrical contractor. Ask them also to show you the G-E Flatiron, the various sizes of Edison Mazda Lamps and the many other G-E electrical conveniences for the home.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 44-60 E. 23d St., New York

VOL. XLVI., No. 18

NEW YORK, MAY 3, 1913

WHOLE NUMBER 1202

TOPICS OF THE DAY

THE ISSUE BETWEEN JAPAN AND CALIFORNIA

WHY SHOULD the ownership of a few farms in California cause grave concern to the governments at Tokyo and Washington, and awaken rumors of war in the press of two friendly nations? While mass-meetings in Japan shout for war with the United States, the venerable Count Okuma declares that "only the influence of Christianity" remains to prevent such an outcome, and President Wilson resorts to the unprecedented course of sending his Secretary of State to Sacramento to "counsel and cooperate" with the members of the California Legislature, many are wondering why there is so much international excitement over a matter affecting directly only a few farmers. California explains that "white supremacy and the American standard of living are at stake," and the Japanese reply that "the issue is one of discrimination, and reflects upon our national honor, and its importance is, therefore, not to be measured by the number of our countrymen materially affected." Speaking as a dispassionate observer, the *London Times* dissects the "inflammatory susceptibilities" in evidence on both sides by saying that "the Japanese consider the immediate dispute to be merely symbolical of the whole question of their future status in the world," while "the action of the California Legislature only represents one phase of the rising alarm in the United States at the growth of large populations not akin in spirit and tradition to the original founders of the American nation." Further:

GOVERNOR JOHNSON, OF CALIFORNIA.

"We would not willingly affront the dignity of Japan, nor offend its pride," he says, "but what of the dignity of California?"

"On a solid mass of ten million negroes there has been superimposed a dense layer of backward peoples from Southern and Eastern Europe, and the white races in the Western States have an additional dread of competition from Asia by folk who can underlive the white man."

"Japan, on the other hand, tho cherishing no impossible dreams, is gaining a foothold on the American Continent, and is keenly resentful of implications of racial inferiority. It is the humiliation which wounds her, and the proud and sensitive nation which has newly won a place in the world feels acutely that her sacrifices and struggles have not yet achieved for her all the recognition which she deems to be her due."

Sending Mr. Bryan to Sacramento, in the opinion of many editors, is practically a confession that the proposed legislation threatens to embroil us with Japan. The President's position is regarded as peculiarly embarrassing, because on the one hand, as head of the Federal Government, he is responsible for the treaty rights of Japanese subjects in this country, while, on the other hand, he has no constitutional right to prevent the California Legislature from acting as it pleases in the matter. In a telegram address to Governor Johnson, he appeals "with the utmost confidence" to "the people, the Governor, and the Legislature of California" to avoid "invidious discrimination" which "will inevitably draw in question the treaty obligations

of the United States." The assertion that popular feeling in California is strongly in favor of excluding the Japanese from land ownership seems to get some color from the fact that

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. Instructions for **RENEWAL**, **DISCONTINUANCE**, or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed

that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 44-60 East Twenty-third Street, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

on April 15 the Assembly passed a drastic Antialien Land Ownership Bill by a vote of 60 to 15. Some of the lawmakers are quoted as saying that if no such law is finally passed by this legislature the people themselves will resort to the initiative to bring about the result they desire. "The people of California have become impatient of diplomacy and world politics, and are no longer to be denied in their imperative demand," says State Senator E. S. Birdsall, author of one of the measures in question, who thinks that "if the Antialien Land Law went to the people it would pass by a vote of 3 to 1." The two big propositions involved, says Senator Birdsall, are these:

"First—Have we the right to enact such legislation? If we have not, then the act would be automatically offset by the Constitution and existing treaty rights.

"Second—Is this a demand by the whole people of California? The latest and most conclusive answer to that is the overwhelming vote by which the Alien Land Law passed the Assembly."

The proposed legislation, according to the same authority, represents "the cool determination of American citizens of the West Coast to prevent the encroachment of a race problem and to maintain their own economic standards." And in a public statement Governor Johnson points out that other States—Arizona, Washington, Illinois, Minnesota, Missouri, Kentucky, Oklahoma, Texas, and even the District of Columbia—have enacted laws prohibiting the ownership of land by persons ineligible for citizenship, without any international disturbance ensuing. He says:

"Californians are unable to understand why an act admittedly within the jurisdiction of the California Legislature, like the passage of an alien land bill, creates tumult, confusion, and criticism, and why this local act of undoubted right becomes an international question. Of course, the California Legislature would not attempt to contravene any treaty of the nation, nor to do more than has been done by the Federal Government itself and many other States. To say that California must do less, or be subjected to harsh criticism and the charge of disrupting friendly relations with foreign Powers, is to deny to California what has been freely accorded to every other State in the Union and what has never been questioned with any other State.

"Our legislature is now considering an alien land bill in

to citizenship. The power to pass such laws is conceded, but immediately upon the exercise of this power by a great sovereign State, a remarkable and inexplicable outcry is heard all over the land and in other lands as well. . . .

"We of California ask therefore: Should California be singled

ELDER STATESMAN.—"S-s-s-s-s. Here's where I go through his clothes for some more taxes."

—Patrick in the New Orleans Times-Democrat.

out for attack when it is exercising the same right that has been exercised by so many States and by the United States itself?

"Japan, until 1910, had an absolute law against alien ownership, and in effect has it yet. What the United States Government has done, what has been done by many States of the Union, what has been done by Japan, all of which admittedly has been done in pursuance of unquestioned power and undoubted right—is now attempted to be done by the State of California, and no reason can logically exist for hysteria, for sundering friendly relations with any Power, or for offense and threats by any nation."

The treaty rights which are supposed to be threatened by California's attitude are thus set forth in Article I of the treaty of 1911 between the United States and Japan:

"The citizens or subjects of each of the high contracting parties shall have liberty to enter, travel, and reside in the territories of the other to carry on trade, wholesale and retail, to own or lease and occupy houses, manufactories, warehouses, and shops, to employ agents of their choice, to lease land for residential and commercial purposes, and generally to do anything incident to or necessary for trade upon the same terms as native citizens or subjects, submitting themselves to the laws and regulations there established."

Since Article VI of the Constitution of the United States declares that "treaties made . . . under the authority of the United States shall be the supreme law of the land . . . anything in the Constitution or laws of any State to the contrary notwithstanding," the question here seems to be one of interpretation. Nothing in the Japanese treaty of 1911, says a writer in the *New York Evening Post*, seems directly to forbid the enactment by any State of laws prohibiting alien ownership of farms, or limiting the expressly permitted leases of land to the purposes of residence and commerce, excluding those of agriculture; or curtailing the duration of the leases declared to be permissible. "Whether the terms 'commerce,' 'manufactories,' and 'shops,' will be held by the courts to include any of the activities of agriculture is a question for the future," he adds.

The census of 1910 showed that there were then 41,356 Japanese in California, in a total population of 2,377,549. Washington and Oregon brought the number in the Pacific Coast States up to 57,703. According to many authorities the number has not appreciably increased since that time, because Japan has put a check on her coolie emigration to this country. Accord-

DISTURBING THE EQUILIBRIUM.

general language and not discriminatory. If terms are used which are claimed to be discriminatory, those very terms long since were made so by many enactments and by the laws of the nation itself. Broadly speaking, many States have endeavored to prevent the ownership of land by those ineligible

ing to Mr. Kiyoshi Kawakami, a Japanese writer living in this country, the facts and figures in the case by no means justify the alarmist note sounded by certain Californians. In a letter to the *New York Times* he says:

"It is more than twenty years since Japanese began to be interested in agriculture in California, and yet farm lands now owned by them total but 17,000 acres. In a State with 12,000,000 acres of agricultural lands 17,000 acres owned by Japanese are but a negligible quantity.

"Those sections of California in which Japanese have been chiefly active in farming are the San Joaquin and the Sacramento Valleys. The northern half of the San Joaquin Valley, unlike the coast regions of the State, is noted for its rigorous winters and scorching summers. Because of this inclement climate the development of the country was long delayed. The Sacramento Valley and the southern part of the San Joaquin Valley consist mostly of lowlands, always damp and often inundated. This section was therefore long regarded as unhealthful, and was shunned by most immigrants. It was the Japanese who opened these regions at the invitation of California. He braved the heat and cold of the Northern San Joaquin Valley, and has converted it into a thriving fruit country, famous for its raisins and wines. He worked upon the unsanitary farms on the lower reaches of the Sacramento and the San Joaquin Rivers, and has made the country rich with onions, potatoes, beans, and fruits. Yet for this great contribution what has the Japanese received? Only 17,000 acres of land—8,000 acres in the Northern San Joaquin Valley, 7,000 in the Southern San Joaquin Valley, and 2,000 in the Sacramento Valley. The two great valleys are in themselves an empire, containing some 37,456 square miles of arable lands. If we may judge the future of the Japanese farmers in California from what they have achieved in the past twenty years, it seems not even the remotest possibility that they should become a 'menace' to the agricultural interest of the State.

"Besides the land owned by the Japanese, there are some 170,000 acres rented by them. Because of the increasing difficulty experienced in securing labor, landowners in California find it more convenient to rent their farms to Japanese, whom they regard as the most desirable tenants on account of their industry, reliability, and steadiness. As tenant farmers the Japanese have become an important factor in the agriculture of California, but it is highly improbable that they will attain as important a position as landowners. The price of land is high and is growing higher, and the American or white landowners are not willing to sell their holdings."

UP TO HIS OLD TRICKS.

—Macaulay in the *New York World*.

Another Japanese, himself a landowner in California, also testifies that most of the little land owned by Japanese there was originally so poor that the native farmers did not attempt to cultivate it. To a representative of the *New York World* he says:

"Florence, Cal., is a very good example. Nobody tried farming in Florence before the Japanese went there. And it is a sandy land. The Japanese made it one of the best strawberry-producing lands in the whole State. And by the effort of

Copyrighted by the Philadelphia Inquirer Co.

ALL READY IN THE EVENT OF POSSIBLE HOSTILITIES.

—Morgan in the *Philadelphia Inquirer*.

the Japanese farmers the land value advanced as much as ten times."

The other side of the picture, however, is thus portrayed by V. S. McClatchy, proprietor of the *Sacramento Bee*, who describes the Japanese in California as land-grabbers, who have a systematic and effective method of driving the native farmers off the land:

"They take charge of entire communities by methods of gradually displacing native-born Americans. Take, for instance, the case of an orchard. Japanese labor drives out all other labor, as the Japs will work for less money. Then, when there is no other labor, they will refuse to work unless given a lease of the orchard. Later they may force a sale of the orchard to them in the same manner. As soon as the Japanese become owners the surrounding property is no longer desirable.

"The entire strawberry district of Florin, Sacramento County, is now in the hands of the Japanese, and it was acquired in just this way. They have actually forced out the whites.

"We understand the danger, and you Eastern people do not. You would do what California is doing if you were placed in the same position.

"It isn't only in strawberries. It's in potatoes, and in prunes, and in oranges. All the way from Oroville to San Diego the Japanese are forcing the issue. They have seized the Vaca Valley, which is the richest valley in the State and the earliest to reach the market with spring vegetables. Once they get a hold in a neighborhood, they make it as obnoxious as possible for white owners who cling to their land. Land values all around them fall rapidly, and no laborers are to be had for white men's farms."

"California is not rabid against Japan, but it has learned that Japanese and white men can not live successfully side by side," says another journalist, with first-hand knowledge of the situation. California is right, insists Mr. Hearst's *New York American*, because "the Japanese would not make good citizens and do not make good residents." So, too, thinks the *Baltimore American*. The Tokyo Government, thinks the *Detroit Free Press*, "lacks ground for even a formal protest," and *The News* of the same Michigan city advises us to ignore Japan's "bluff." Another outside paper that believes the Nipponese land invasion to be a serious menace to the white man's

agricultural future on the Pacific Coast is the New Orleans *Picayune*, in which we read:

"The unwillingness of the States west of the Rocky Mountains to permit unrestricted immigration of Japanese or other Asiatics is too deep-seated to be overcome by any pressure that the eastern half of the country may be able to bring, and the sooner the Japanese realize this fact the better. Greatly elated by the easy victory won over Russia, in a war which the latter Power had to wage 8,000 miles away from its home base, the Japanese are deluding themselves with the notion that they can as easily defeat any other country. Knowing the practically defenseless state of the Philippines, they imagine that this country can be frightened into according them the same rights of residence and property ownerships as are freely accorded to Europeans, hence they are disposed to be bumptious and threatening.

"Our Government would make a serious blunder did it permit itself to be swerved a single hair's breadth from its traditional policy toward all Orientals by any amount of bluster that the Japanese may indulge in. The American people do not desire Oriental immigration or citizens of Asiatic birth, and no government would dare to disregard this popular mandate."

Native Californian farmers have assured their Assemblymen that "the Japs will do more harm if left alone to the property owners of California than all the scale, white-fly, or blight combined." Yet the Pacific Coast papers, curiously enough, are for the most part ignoring this burning topic in their editorial columns. The San Diego *Union*, it is true, remarks quietly that the Legislature must not be influenced by outside pressure or hysteria, but must "determine what is right and expedient and act accordingly." Even such commercial arguments as that the pending legislation would hurt the San Francisco Exposition and cripple the Pacific Coast's Oriental trade, it adds, are relatively unimportant and beside the mark. To the San Francisco *Past and Chronicle*, however, these arguments seem more substantial. If the California Legislature embroils the whole nation with Japan, warns *The Post*, the other States may refuse to participate in the fair. It admits, however, that while antialien legislation should be avoided at this session, "it may be ultimately advisable." And *The Chronicle* remarks:

"The fact is that this boycotting business can work both ways. And if California insists on boycotting aliens, its people may expect with perfect confidence a return boycott which will make us squirm."

The same paper declares that "the Japanese population among us is not increasing or likely to increase, and the number now here is not large enough seriously to affect any interest." Even more outspoken in its condemnation of the alien land laws is the Los Angeles *Times*, which urges the legislature to "go home at once" before it "bankrupts the State, destroys its credit, closes its factories, ruins its farmers, deprives its workers of their jobs, pensions mothers-in-law, involves the nation in a war with Japan, and makes California an object of derision from Bangor to New Orleans." "If California insists on her right to legislate against the Japanese," remarks the Portland *Oregonian*, "then if any fighting shall result, let California do it, while the other States look on." "It is time for California to realize that it is part of the United States—a fact involving responsibilities as well as privileges," admonishes the Chicago *Tribune*. "We believe out our way that California's proposed anti-Japanese legislation is unnecessary and unfair," says Mr. Hilton W. Brown, general manager of the Indianapolis *News*. "There might be some consolation in a war with Japan; California would probably get what is coming to it," remarks the Cleveland *Leader* sardonically. And the Florida *Times-Union* remarks gloomily: "It seems not at all improbable that California will force the United States into a war with Japan for a cause for which not 10 per cent. of the people of this country feel any sympathy."

Altogether, thinks the St. Louis *Globe-Democrat*, the Japanese issue confronts the Wilson Administration with a more formid-

able aspect than it wore when encountered by either President Roosevelt or President Taft; and in the Philadelphia *Inquirer* we read:

"It must be hoped, and it may fairly be supposed, that some way will be found of 'saving the face' of the Japanese and of allaying their irritation, but no student of the situation can doubt that it contains the seeds of an irrepressible conflict which is certain sooner or later to occur and which may be precipitated when it is least looked for."

THE CAPTURE OF SCUTARI

WHATEVER PERIL to the peace of Europe may come from Montenegro's capture of Scutari in defiance of the Powers, the American press, at least, feel no hesitation in expressing their frank admiration for the doughty mountaineers and their king. America was represented in the trenches before Scutari by "whole battalions of American riflemen"—Montenegrins living here who went home for the war—says one well-informed writer, and all the Allies, in fact, were heavily reenforced from this country. With our recruits went our sympathies, it would seem. King Nicholas comes in for many warm tributes. "We have merely retaken our own," he said after the recapture of the town the Turks took before Columbus discovered America, "and we will hold Scutari against the Powers as courageously as we fought against the Turks." In February he said to a New York *World* correspondent:

"I and my subjects are determined to take Scutari and to keep it. I am an old man and this has been my life's object. Scutari was ours before the Turks took it from us by force of numbers 300 years ago. Scutari will be my capital in the future.

"If the great Powers try to prevent us from taking Scutari—and keeping it—we shall resist so long as one Montenegrin remains to fight. So if they do try, a European war is unavoidable."

Austria may compel Nicholas to give up his prize, but the feeling of his people may be judged from these words of ex-Premier Miyuskovitch, printed in the Paris *Matin*:

"We are now told that Austria intends to take it from us. If Europe permits her to do this she will have to take it over the dead bodies of all our male population. It would not be possible for King Nicholas, even if he were willing, to bow before the decision of the Powers; the Montenegrin people and army would oppose such a course as one man.

"Let the public opinion of Europe judge between the attitude of our poor little country and that of the six great European Powers."

The defiance of all Europe by this handful of Balkan highlanders brings the following praise from the New York *Tribune*:

"It has been a spectacle for gods and men to see the embattled fleets of the great Powers alined in the Adriatic blockading the Montenegrin coast, dictating the raising of the siege of Scutari and threatening dire penalties if the mandate were not obeyed; while Nicholas and his troops on the rocky heights above have ignored them and only persisted the more resolutely in siege and storm. Why not, indeed? Why had not the Montenegrins the same right to take Scutari, if they could, that the Germans had to take Metz, or the Japanese Port Arthur? Their right was the more confirmed because it was known that the only reason for disputing it was Austria's sordid desire to keep Montenegro and Serbia crippled and hampered by maintaining an Austro-Albanian fortress on the very frontier of the mountain state.

"Now, having achieved his splendid undertaking, suppose that Nicholas says with MacMahon, 'here I am; here I stay'? What will the Powers do about it? Will the Concert of Europe go to war against a state with only two-thirds the area of Connecticut, and with less than a fourth of the latter's population, to coerce it into the relinquishment of one of the most primary and fundamental rights of states, its title to which it has established with a sacrifice and a heroism seldom paralleled in history? We should greatly doubt if all or a majority of the great Powers would thus play the subservient monkey for the raking out of Hapsburg chestnuts."

THE VICE-PRESIDENT'S "NEW FREEDOM"

AMID THE CRASH of precedents that are being broken these days, observes the *New York Tribune*, "the ancient rule that 'little Vice-Presidents should be seen and not heard' very properly goes down with the rest." And as Mr. Marshall releases himself from his self-imposed sentence to "four years of silence" he perhaps considers himself as much of an authority on "The New Freedom" as another. But, to use the *Louisville Courier-Journal's* phrase, the leading Eastern newspapers have "come down like a thousand o' brick" upon the Vice-President's recent observations on wealth. Mr. Marshall, at the New York Jefferson Day dinner and on several occasions later, warned rich men that the growing discontent among the poor might have serious consequences, that "hunger and a longing for happiness are abroad in the land," and that property rights are growing less sacred in the opinion of the multitude. This "going about the country outdoing Cassandra, Jeremiah, and Theodore in foretelling evil," occasioned much grave shaking of heads in metropolitan sanctums, and the *New York Times* and *Journal of Commerce* have been telling their readers what a dreadful calamity it would be "if there should be a vacancy in the Presidential office before the present term is over." The *Progressive Evening Mail* calls him a demagog and a "defamer of the American people." And an organ of Mr. Marshall's own party, *The World*, declares that for him "to give free rein to his tongue to no purpose but to stir up unnecessary class hatred is to render a great disservice to his party and the Administration."

But down in Louisville, Kentucky, such remarks from the New York papers are read with a smile by Colonel Watterson, and in a *Courier-Journal* editorial he ventures to surmise—

"that the Vice-President had no more thought of stirring up class hatred than the senior Senator from New York had last December when, addressing the members of the Chamber of Commerce, he told them that half the world believes them a lot of thieves."

So, too, we find Mr. Marshall protesting that he has said nothing new or revolutionary, that men like E. H. Gary and Wayne MacVeagh have said the same things, in stronger language. In his Jefferson Day address the Vice-President asked "thoughtless rich men" to consider what would happen should the "have-nots" decide to make common cause against the "haves." He continued:

"Suppose a Governor and a General Assembly in the State of New York should repeal the statute of descents for real and personal property and the statute with reference to the making of wills, on their death how much vested interest would any relative have in the property which fell from their nerveless hands at the hour of dissolution? The right to inherit and the right to devise are neither inherent nor constitutional, but on the contrary they are simply privileges given by the State to its citizens."

"Let backward-looking and inward-looking men read the returns of the last election. Let them put on masks, go down into the East Side and hear what people are saying about them. Let them not close their eyes and dream that what has been forever will be. . . ."

"The belief that there is an unequal distribution of wealth in this country has been supplemented by the belief that much of it has been obtained through special privilege, that it did not come by labor, skill, industry, barter, or trade, but through watered stocks and bonds, through corners on commodities, through corruption of legislatures, through the sale of impure foodstuffs, through wrecking railroads, through all the devices known to man whereby the law is not abrogated but chloroformed. . . ."

"The backward-looking and inward-looking men may be able to temporarily check the onward movement of the forward-looking men, but if they do it will be an unwise interference and may result either in a paternalistic system of government which can only endure upon the basis of ignorance and serfdom or in a socialistic system which will destroy both the opportunity and

desire of man to exercise in the fullest capacity his natural and acquired endowments."

Most of the explanations which Vice-President Marshall has made in reply to his critics are reassertions of these statements, with constant emphasis on their being not personal opinions, but a "fair presentation" of the trend of public thought. Mr. Marshall does not believe in socialism. He merely suggests "the folly of educating people, enlarging their views of life and teaching them to enjoy good things and then foreclosing the door of opportunity upon them so that they cannot enjoy life

INSOMNIA.

—Harding in the Brooklyn Eagle.

and obtain those good things." Two further declarations of the Vice-President may be noted, the truth of the first being generally denied by conservative dailies, the second being chosen by a Socialist editor as containing the essence of the Marshall speeches:

"Men of judgment have expressed to me the opinion that were a vote to be taken on the proposition that all estates over \$100,000 revert to the State upon the death of the owner—the \$100,000 being exempt—it would be carried two to one."

"One man in my State told me that he had \$100,000 and was about to set up in a business that was controlled largely by a trust and that he was warned not to proceed. He had figured out the amount that would be needed for his plant, how much his raw material would cost and what labor could be had. One of his own friends told him he had better not go on; the trust would drive him out of business."

Mr. Marshall's ideas on inheritance are seriously disquieted by a number of editors. Some agree that the right to devise and inherit is a mere privilege, which can be taken away by the State at will; others, with the *New York World*, say that it is "as much a right and no more a privilege than the right to hold property while living." The *New York Sun* and the *Houston Post* argue that such reversion to the State as Mr. Marshall speaks of would destroy all incentive to accumulation and "annihilate human enterprise." Tho it agrees with Vice-President Marshall as to the increase in socialistic and ultra-radical sentiment, the *Atlanta Constitution* does not share his fear of the coming dominance of socialism. It reasons "that 'big business' is already awaking and carrying out the theory of Vice-President Marshall by acquiring a very healthy conscience" and that "the needed reforms and readjustments in this country will come, not by socialism or even an approach of it, but through rich and poor, high and low, working together through the established political forms already at their disposal."

But Socialist papers like the *New York Call* and *St. Louis Labor* reply that the reform will come through the triumph of socialism, for tho the Vice-President is opposed to socialism, a

THE ANXIOUS BEAT.

"PRISONER, HAVE YOU ANYTHING TO SAY BEFORE SENTENCE IS PASSED?"

—Donahay in the Cleveland Plain Dealer.

SAD FATE OF OUR "BEST TARIFF."

million voters "are sternly set for it." And the St. Louis paper rather pities Mr. Marshall and sees only futility in his "cry of despair"—

"In going to New York and making his sensational speech there, Vice-President Marshall thought he could whip the lions of capitalism into line and permit the Wilson Administration to carry out some of its campaign promises. However, the lions of capitalism will not even get up in their den and take notice of Mr. Marshall. They will have a smile of pity for him."

THE TARIFF AND THE COST OF LIVING

THE CHIEF CONCERN of the Democratic tariff revisers, according to Mr. Underwood, is to lighten the burden of the consumer, and it seems to the New York *World* (Dem.) that "a tariff debate which promises to end in real benefits to the consumer is a novelty to the present generation." Whether the new schedules will actually bring any relief, however, the future alone will tell. Protectionists have their doubts about it. The feeling of the New York *Press* (Prog.), for instance, is that "we should rather have all the American people employed and able, out of their wages, to buy their bread and butter, high cost or low cost, than for a part of them to be at work and getting their bread and butter for less than before, with another part out of work and getting no bread and butter at all." But the Washington correspondent of another Progressive daily, the *Chicago Tribune*, looking over the result of Democratic labors, asserts, without reservation, that the "free market basket" is provided beyond question by the Wilson-Underwood Tariff Bill. President Wilson's insistence upon future free sugar and present free wool is considered due to his concern over the cost of living. He is said to believe that the consumer will feel the sugar tariff reduction at once, and free wool is thought by many friends of the bill to mean cheaper clothes and cheaper blankets in a few months, altho these statements are not accepted by many authorities connected with the production of the articles concerned. Sugar is not alone among the foods which are to be made cheaper. There have been "free breakfast tables" in previous tariff bills, but Mr. John Callan O'Laughlin, who represents the *Chicago Tribune* in the capital, finds after an examination of the agricultural

schedules "that the American citizen hereafter can eat for breakfast, lunch, and dinner food which will not bear a cent of duty." Just as an indication of what he means he mentions several articles taxed under the existing Payne Tariff, but now to go on the free list. There is oatmeal, which, he says,

"under the existing law pays a duty of 1 cent a pound; bacon and hams, 4 cents a pound; fresh meats, 25 per cent. ad valorem; milk, 2 cents a gallon; cream, 5 cents a gallon; condensed milk, 2 cents a pound; potatoes, 25 cents a bushel of 60 pounds; lard, 1½ cents a pound; corn, 15 cents a bushel of 56 pounds; cornmeal, 40 cents a hundred pounds."

Then there is the list of grains upon which the duties are cut down, and the fruits and nuts which are likewise affected. The lemon duty, for instance, is reduced from 69 to 24 per cent. Other important food articles to which Mr. O'Laughlin calls Chicago consumers' attention are the following, which will now pay only about half the present duties: Macaroni, butter and cheese, beans, beets, pickles, eggs, honey, peas, poultry, and vinegar.

Now, among the Democrats who will support the bill are many members who must face disappointed constituents interested in industries likely to be unfavorably affected. But their point of view, says Chairman Underwood, in his speech introducing the measure bearing his name, has hitherto been national. To quote certain notable paragraphs from the New York *Journal of Commerce's* report of this authoritative utterance, which the New York *World* calls by far the ablest ever delivered by Mr. Underwood:

"The real question we have to contend with is the rights and interests of the consumer, the mass of the people. The rights of the manufacturers are secondary to the rights of the great American consuming public.

"Now the main reason why a revision of these customs duties was demanded was because of the increased cost of living since the passage of the Dingley Law. All commodities have increased an average of 46 per cent. since the passage of the Dingley Law. It would be unfair to say that the whole increase is due to the tariff, but it is fair to say that the greater proportion of increase has grown out of abnormal protection.

"I want to say that tho we have reduced the tariff in favor of the consumer, it would be unfair to say that it will immediately reduce the cost to the consumer. But there is one law we can point to—the law of supply and demand. Retailers

"TOSS IT ABOARD, HAVEN'T TIME TO STOP."

BLIND MAN'S BUFF.

—Richards in the Philadelphia North American.

OPPOSITE VIEWS OF THE NEW TARIFF.

have goods on their shelves bought under protection duties. The merchant will not buy more goods until he has sold these. But I do believe that when the present stocks of goods are sold and this bill becomes effective, the American people will receive a real reduction in the necessities of life.

"The cry has always been made when an attempt is made to reduce duties that it will impair industries. The greatest impairments of industries have been the shackles of protection, fastened like barnacles to the ship of industry. This has prevented our merchants from going abroad with their wares. It has stifled energy; it has put a premium on incompetency. We find that industries highly protected are running with equipment sixty years old. These enterprises are running uneconomically, and are asking the American people to pay them tribute on their ancient factories."

In the report of the Ways and Means Committee, presented with the Underwood Bill, the old tariff system is characterized, according to the New York *World's* summary, as "the basis upon which many economically impossible combinations have been constructed" and these combinations along with many collateral causes have brought about an artificial inflation of prices, while the consumer has been paying "an unjust and improper tax." The passage of the Democratic measure means not only a new basis of taxation, "an altogether new fiscal system," but likewise "a reduction in the cost of living that will come gradually, but surely, as the new economic era asserts itself." With this report are published certain figures upon which some of the foregoing statements from Mr. Underwood are apparently based. As *The World* summarizes them:

"There has been an increase of 93.2 in the wholesale price of farm products between 1897 [the year of the Dingley Tariff] and 1913; food has increased 46 per cent., clothing 35, metals and implements 48, drugs and chemicals 23, house-furnishing goods 24, miscellaneous 44 per cent. The average increase in all commodities has been 46.7 per cent.

"Then follows a list of 226 trusts which were formed in these years, with a list of the number of plants controlled and their capitalization."

The debate over sugar and wool hinges on the question whether the gain to the consumer is sufficient to outweigh the loss to the producer. Upholders of each end of the argument were quoted in these columns last week. In both cases it is generally acknowledged that the price of the raw material will drop. But will the difference simply swell the pockets of the

manufacturer and the dealer, or will it, at least in part, be reflected in our grocery and clothing bills? This must be left to the further discussion which is bound to come in Congress and in the press before the Underwood Bill reaches President Wilson. But just to show how far apart the debaters are, we first quote a Southern Democratic editor, then a sugar trade authority.

Taking as correct the New York *Globe's* (Ind.) estimate that free sugar and free wool together "theoretically mean a reduction of \$2.20 per capita in the annual cost of living," the Macon *Telegraph* remarks that

"a poor struggling family of five would save \$8 on sugar and \$3 on wool, or \$11 annually, and would welcome the opportunity. And a saving of \$198,000,000 annually by the American people as a whole is not a trifling matter."

But Mr. Truman G. Palmer, who is secretary of the United States Sugar Beet Industry, says in concluding a statement printed in the New York *Herald*:

"Those who figure that the refiners advocate free sugar for the purpose of giving the people cheaper sugar are counting without their host. While free sugar would give the refiners the power to reduce prices to a lower figure than could be met by the domestic producers, this power need be exercised only long enough to drive the home producers out of business, when the refiners, having gained their coveted monopoly, could sell sugar at the old price and pocket the extra \$52,000,000 a year, which now helps to run the Federal Government."

There are certain other "vulnerable spots" in the Underwood Bill which seem "quite indefensible" to the New York *Journal of Commerce*. This paper objects to "the discrimination against foreign shipping or the disguised subsidy to American shipping, concealed in the proposed 'discount' of 5 per cent. on all duties upon goods imported in vessels built in the United States and owned wholly by its citizens." But the average reader, perhaps, will have more interest in *The Journal of Commerce's* protest against "retaining duties on certain grains, including wheat, oats, and buckwheat, and removing them entirely from the cereal food products derived from these grains." This, it argues, will hurt our millers, "will be of no benefit to American farmers, and the duty on wheat and oats will add to the cost of cereal foods as surely as if it were levied directly upon them."

WHAT THE RAILWAY FIREMEN WIN

HIGHER WAGES and better working conditions are assured by the award of the board of arbitration in the dispute between the fifty-four Eastern railroads and their 31,000 firemen. "It is the most important labor dispute ever arbitrated under the Erdman Act," says the *Evening Sun*, which has nothing but admiration for the settlement of labor disputes in this orderly process. The fact that the board's decision, favorable as it is to the firemen, is also unanimous, incites this newspaper to point out the lesson of the folly and waste of strikes as against the fair and intelligent conduct of matters debatable before the arbitration board as a court of last resort. The public has been saved the privation and loss that must have resulted from a strike on all the railway lines of the East. The roads and their employees have just so much more to their credit in wages and dividends; and the good example of such a termination to a most serious dispute has "a value hardly to be exaggerated."

The three members of the board, Judge W. L. Chambers, Vice-President W. W. Atterbury, of the Pennsylvania Railroad, and Vice-President Albert Phillips, of the Brotherhood of Locomotive Firemen and Enginemen, are unanimous in a decision that affects more than one-fourth of the total railroad mileage of the United States. Besides an increase in the daily wage of firemen, the award establishes a uniform scale of wage for the same class of workmen on all the roads involved in the case. The award takes effect from May 4, 1913, altho the firemen's demand was that it should be made retroactive, as of date July 1, 1912.

Estimates of the actual increase in the wage scale of the firemen vary. The *New York World* quotes ex-Judge Chambers, Chairman of the Arbitration Board, as placing it at "an average estimated at 6 to 12 per cent," and the same newspaper relates that "a prominent Pennsylvania Railroad official, after going over the award, said he did not believe the net flat rate wage advance would exceed an average of 8 per cent., and might not exceed 6 per cent."

The *New York Evening Post* cites an estimate of \$4,000,000 increase in annual expenses to the roads, about the same amount as was entailed by the engineers' strike, and it hints that the public will be asked to foot the bill:

"Whether these incidents are to be followed by similar movements affecting other departments of the railway service is a question for the future; but in any case the idea of a revision of railway rates to correspond to increased expenses, prominently put forward a couple of years ago and checked by the vigorous interposition of Attorney-General Wickersham, can hardly fail to be suggested afresh by these developments."

A similar idea is put forward by the *New York Sun*, which brings up and dismisses other sources of revenue as impracticable and concludes that:

"Increased rates, putting on the public the new burden, are the sole refuge of the railroads, and the necessity for these will soon be apparent even to the shipping community itself."

Yet public sympathy, notes the *New York Times*, seems to be with the men who have acquired a "habit of victory," while the railroads have acquired a "habit of defeat." So that—

"It would seem that the increase of wages must go on until public opinion changes through an alteration of the point of view developed by the demonstration of the effect upon users of railways. In that case the railway outlook is disturbing, unless perhaps these awards by public bodies may supply a basis for advancing rates."

Some new method of settling these disputes is needed, thinks the *New York Journal of Commerce*, which criticizes the arbitration system sharply:

"The awards are determined by expediency rather than justice or equity, and are the fruit of coercion rather than a sense of right. There is agreement to abide by the decision for a fixt period, but nothing is finally settled. Trouble is not permanently averted. There is need of a system of proceeding more judicial in character and more authoritative in effect, where the parties will have an equal chance for justice and the rights and interests of the public will be duly regarded."

"Amend the Erdman Act," says the *New York World*, and gives its reason:

"It is absurd that arbitrators should be named in any such case because of their personal bias. Yet that is exactly the situation which the Erdman Act creates by giving to each side the selection of one member of the arbitration commission. It is not reasonable that the balance of power should lie in the hands of a single individual who must resist the pressure borne upon him by the opposing interests of his associates."

Emendation is suggested, too, by the *New York Tribune*:

"Arbitration is a long and costly process. It should not be necessary to repeat it in a year. Nor should the public be subjected to the uncertainties arising from disputes between the public carriers and their employees every twelve months, as is now possible. An award should be made binding for at least three years."

The statement of President Carter, of the Brotherhood of Locomotive Firemen and Enginemen, by telegraph to the *New York Tribune*, may be cited as the judgment of that organization on the award:

"The decision is a fair one, and perhaps the increase in wages is as great as could be expected under arbitration."

FOREIGN COMMENT

ENGLAND ON OUR NEW TARIFF BILL

NO SUCH JOY is apparent in the English press as critics of the new Tariff Bill have led us to look for. Predictions that our factories will emigrate to England would make a strong article, but the English papers are not making any such forecasts. Instead, we find the expectation voiced by some that lower tariffs will turn America into a great exporting country, threatening Britain's place in the world's trade. One of the most eminent economists in England is Mr. L. G. Chiozza Money, M.P., who has had much influence in reforming the Board of Trade Returns and is a prolific writer on economics. He contributes an article to the *London Daily News* in which he bids the free-traders to moderate their transports over the Underwood Bill. Thus we read:

"I am sorry to see so many people hastily jumping to the conclusion that America's move toward free trade is a magnificent thing for British exporters. It is a conclusion of a very crude character, and those who have arrived at it show that they do not understand the respective parts which British free trade and American high protection have played in building up British exports. The truth of the matter is well understood and expressed by Mr. Underwood, Chairman of the Ways and Means Committee of Congress, in his statement which accompanied the new Democratic tariff. 'The future growth of our (American) great industries lies beyond the seas,' said Mr. Underwood, and he argues that the reformed tariff will fit the American manufacturer to capture the world's markets."

England has hitherto exported twice as much as America, and why, he asks. Protection has created "artificially high prices" in raw materials and manufactured articles, so that "America is handicapped in competing with European manufacturers." The consequences of the Underwood Bill are thus outlined in their effect on English industries:

"If the new Democratic tariff becomes law, the handicap of the American exporter will be partly removed. Many important materials will be put on the free list, and the duty on others will be greatly reduced. That will make a world of difference to American competition, and it will not make it easier, but in some cases more difficult, for the British manufacturer to enter the American market. It is perfectly true that in certain cases our exporters will find an immediate advantage, but let no one imagine that in the long run the breaking-down of the American tariff barrier, if it eventually proves to be that, will help to expand British trade. On the contrary, regarding the markets of the world as a whole, the American exporter will be assisted to a larger share of it, and we will lose part of what we should have had if American high protection had remained."

This opinion is shared by the *London Saturday Review*, which gives a long account of the provisions and tendency of the bill, and proceeds:

"How about foreign competition? What will be the effect of the lower tariffs on European trade, and on Canada, the West Indies, and Australia? So far as this country is concerned we are not sanguine that any material advantage will accrue to our trade. Formerly the tariff was excessive; the reductions will still leave it effective to bar any considerable increase in our exports of manufactures. The drastic cuts in the wool schedule may stimulate some new trade from the Bradford area; but when we note that the largest reductions are to be made in the yarns, and progressively smaller reductions in the more fully finished categories of manufactured cloths, there is some reason to fear that, as with Germany, an increased importation of yarns may be accompanied by a serious reduction in the quantity of cloths. The reductions are not designed to aid Bradford, but New England."

Some advantage will, however, accrue to Canada, continues this paper:

"Canada, on the other hand, is likely to derive much benefit from the proposed free importation of corn and meat, and the large reductions in the principal farm and forest products. The introduction of the new tariff is the fullest justification of Canada's determined refusal two years ago to indorse the reciprocity policy favored by the Laurier Government. Practically all that was then offered by the United States in return for material concessions and political sacrifices by Canada is now offered free. Mr. Borden should find his position in Western Canada considerably strengthened by the turn events have taken; and in advocating his great imperial policy in that part of the Dominion he ought no longer to find himself addressing a community torn between conflicting emotions of sentiment and interest. The gradual reduction of the sugar duties may also confer great advantage on the West Indies, tho it remains to be seen whether they can recover any of the foothold which they had before 1900."

Americans who expect the new tariff to lower the cost of our daily bread will be interested in this paragraph from the *London Pall Mall Gazette*:

"Those who have not read the draft tariff carefully appear to have jumped to the conclusion that it provides for the 'abolition of food taxes.' If they look again,

they will find that a duty is retained upon flour against all countries which do not themselves give free entrance to that commodity. In these circumstances it will take some research to discover where a single barrel of flour is to come from that can enter America free of duty even if President Wilson's tariff were to pass without modification. In any circumstances the

conditions of the United States and of Great Britain are so vitally different that the question of taxing foodstuffs involves no common issues."

On President Wilson's remark in his message about "the boasted genius of America" becoming "afraid to go out into the open and compete with the world," the *London Daily News* observes:

"The American business men have now to face that ordeal. They will not surrender to the necessity without a great fight, but they will, we believe, be beaten, for in President Wilson America has discovered a man who means everything he says and who has won the confidence of the country. And we do not doubt that in the end the result will be as beneficial to industry as

SETTLED.

DAME EUROPA—"You've always been the most troublesome boy in the school. Now go and consolidate yourself."

TURKEY—"Please ma'am, what does that mean?"

DAME EUROPA—"It means going into that corner—and stopping there!"

[Sir Edward Grey, in the House of Commons, has expressed the hope that Turkey will now confine its energies to consolidating itself in Asia Minor.]

—Punch (London).

it will be to the American consumer. Its effect on this country remains to be seen. Many years ago Gladstone predicted that our supremacy would remain unchallenged until the United States adopted free trade, and that then it would be seriously threatened. We do not fear the competition so long as we retain the system that has brought us such abundant prosperity. Free trade is a blessing not to one country at the expense of others, but to all countries that share its fertilizing influence."

The *London Chronicle* sees benefits for every one in the provisions of the new bill, both in America and abroad:

"The main feature is the enormous market which they will open in the United States for imports both of raw materials and of manufactured articles, and the great lowering which they must effect in the American cost of living. Wool and meat from Australasia, lumber from Canada, potatoes from Ireland, manufactures from England—what a destroying avalanche it must appear to Protectionist minds. How they must tremble for the future of American industries! Even so when railways were invented, men trembled for the future of carts and wagons, little foreseeing that where the new system displaced one, it created a demand for a dozen. To-day with more experience behind us we ought to see more clearly, and realize that the freeing of American trade can not be at America's expense, but that the stimulus given by it to world-production must be greatest of all in the United States themselves."

TURKEY'S HOPE IN THE SLAVS

HOPE is seen by Turkey in the direction of Russia, a strange quarter, in view of Russia's supposed designs upon Constantinople and Asia Minor. But Turkey now perceives that the Slavs, long oppressed in Poland, in the Balkans, and in Russia itself, are rising to be the most formidable race in Europe. The Slavs form a large fraction of Austria's population, and thus the double monarchy may be said to nurse a serpent in her bosom. For if the Slavs outside Austria begin to move, the Austrian Slavs will become a domestic danger. Such facts are what Turkey is advised by the *Ikdam* (Constantinople) to reckon upon, and to govern herself accordingly. This is the tenor of an article entitled "Our Duty After Peace." The fall of Adrianople has roused the fears and anxieties of the Ottoman Empire, and the only hope the country has is to save the pieces of its broken splendor and greatness. Hence we read in the *Ikdam*:

"The most important work before us is to consider the future of what is left to us. How shall we defend this little piece of Rumelia and our capital city? Facts, not fancies, are what we have to consider. The French, to counteract the power and influence of Germany, have adopted the policy of putting the Balkan peninsula under the control of the Slavie nations. There is no influence which can oppose the onward march of the Slavs. Greece is going to be Slavie, and the Albanians will then become Slavs too. There is now no Power for Albania to lean upon. Her hopes were centered on Austria. But if Austria is weak even before Montenegro, what is to be the future of Albania?"

"But Slav domination is not confined to the Balkan peninsula. Besides the Hungarians and eight or ten millions of Germans, the Austrian empire is Slav. The fact that Austria uses only remonstrances against Servia and Montenegro is due to Slavie influence, as I understand the case, that is, Austria is Slav. The policy of the Austrian Government is one thing; that of her Slav population is another. When her Slavs join with the Balkan Slavs, Austria can have no distinctive policy, and will grow weaker as time passes."

The great Slavie inundation, declares this writer, is to overspread the Balkans and Greece. It will reach even to Constantinople. To quote his words:

"The people of the portions of Albania that fall to Montenegro, Servia, and Greece will, in five or ten years, forget their native tongue and their nationality. No one of those States will allow the Albanians to use their own language, and they will not recognize their Albanian nationality. And so much of their country as remains as an Albanian principality will be engulfed by the waves of Slavism. The same will ultimately be the case with Greece, when all the rest of the Balkan peninsula is Slav."

No power of Turkey can cast up a dam or a levee that will withstand this deluge, he adds, and looks round with half despair, as he asks:

"In what way and how long can we defend the little portion of Rumelia left in our hands? It is natural that the Greeks have their eyes on Constantinople. But their road to it is longer and less safe than that of the Slavs, who can reach Stamboul quickly from the Rumelian side. How many soldiers, how many forts must we provide on our Bulgarian frontier, and at what expense! We must strengthen our forts at the Dardanelles and on our Asiatic coast. The cost will run into millions and billions. Where is the money coming from?"

The solution is thus detailed:

"Our most important problem is that of our relation to Russia. By land and sea we border on Russia for a distance of hundreds of miles. It is proposed that we come to a friendly understanding with Greece. It is far more important that we cultivate friendly relations with Russia."

The Turkish boys must be sent to Russian schools, this writer says; must study the Russian language and literature, and the Turks must banish the French language and French

novels, from their homes, and turn to Russian ideals. They must trade with Russia too:

"It is both more practicable and more profitable for us to establish commercial relations with Russia than with any other states. I would go further, and send some of our young men to St. Petersburg, Kief, and Moscow to study in Russian schools, to acquire Russian, for the Slavs have a brilliant future, and we may thus make progress at the pace they set us. Such a plan is doubtless new to us. We have been looking westward, with what result? We have learned French, have read French novels. What good has it done us?"—*Translation made for THE LITERARY DIGEST.*

THE NEW AMBASSADOR TO ST. JAMES'S

ENGLISH OPINION, as represented by the London press, seems to be pleased to welcome Walter Hines Page as successor to Whitelaw Reid in representing the United States in England. It is recognized that he continues to stand for the literary as well as the political bond that unites the two countries. Altho he is not rich, yet London, it is implied, will be better satisfied with brains than dollars, and if a stupid millionaire and a brilliant scholar or editor were set in opposite scales the British Government would prefer to throw a weight on the scales of the clever man in declaring a proposed ambassador *persona grata*. On the reception to be accorded to Mr. Page, who has already been declared *persona grata*, the London *Standard* discourses as follows:

"The roll of American Ambassadors to the Court of St. James's includes the names of Washington Irving, Motley, Lowell, and others whose books have been read with equal profit and pleasure on both sides of the Atlantic. Mr. Page, even if he must be looked upon more as the cause of authorship in others than an author himself, has much the same claim on the British nation. It need not be suggested, however, that his appointment would be in the least degree less acceptable had he happened to choose some other vocation. No nation in the world can reckon more confidently than the United States may on its representative commanding in this country not only the esteem due to his personal character, but also the warm sympathy that springs from the bond of mutual amity uniting us in common aims as it has in speech and origin. The invariable popularity of an American Ambassador in Great Britain—and we have no doubt that Mr. Page will carry on the tradition—may be enhanced by his personal gifts; but it is rooted in sentiments which are never likely to become either obliterated by time or weakened by occasional friction.

"We have no doubt his qualifications are such as to justify the selection the President has made, for President Wilson has kept to the tradition which utilizes the bond of literary interest to unite the sympathies of the Anglo-Saxon peoples, and Dr. Page can rely upon a reception in this country which will embody every element of popular good will."

"He has been occupied with one department of the world's work," happily observes the London *Evening Standard*; "now he enters another and a less onerous one, for never have our relations with Cousin Jonathan been on a more satisfactory footing." America sends us the flower of her thinkers and writers, declares the London *Times*, in which we read:

"Mr. Page's appointment will come as a surprise to most people, both in America and in England; all the more, perhaps, because there has been a wide-spread expectation that the next Ambassador would be a namesake, Mr. Thomas Nelson Page, also a Southerner, and the well-known author of many delightful Southern stories. The unexpected, however, the appointment will be generally regarded as a happy solution of what appeared to be in danger of becoming a rather harassing problem.

"Mr. Page's distinguished predecessor also was an editor. In the world of American letters Mr. Page is known as a vigorous and graceful writer and a scholarly speaker. His selection once more emphasizes the fact that the United States does us the compliment to wish to be represented in London only by men of what she considers her very best type."

The *Standard*, in a second article, takes occasion to criticize the scales of remuneration on which American Foreign Ministers are engaged. The position requires profuse hospitality. This paper reminds us that the United States does from sentiment what Frederick the Great did from sheer meanness. "The Ambassadors of Prussia were then paid such meager salaries that they could not keep up even a decent appearance, and their squalid poverty was the derision of foreign courts. American diplomacy has never, of course, been so discredited." "Yet the official allowances would have proved altogether inadequate had there not been an ample supply of rich men of great capacity willing to serve for honor's sake." But "the supply seems to be exhausted." The article concludes:

"The Republic has so far been singularly fortunate in regard to appointments to capitals like London, Paris, and Berlin. Her Ambassadors have generally been men of real distinction

From the New York "Sun."

DISTRIBUTION OF SLAVS AND GERMANS IN EUROPE.

Showing why Turkey regards the Slavs as the race of the future.

in law or letters, and whatever they may have lacked in the way of a professional diplomatic training they have supplied by natural tact and mother-wit. But tho the practical results of the system have been happier than could be expected, there is little to be said for the system itself. It limits the supply of available talent; it gives too much importance to mere wealth, and quite unnecessarily slights the pretensions of those abilities which are not expressed in terms of money. A poor man succeeding a multimillionaire in London, for example, would find his position intolerable on the scanty allowance at present made to the Ambassador—an allowance which would scarcely have paid more than half the rent of Dorchester House. Hospitality is a great and onerous and a very expensive duty to an American Ambassador in London, where every year the crowd of transatlantic visitors grows greater. It is only right that the state should bear at least all the reasonable expenses to which its representative is put, and the present occasion seems appropriate for placing the London Embassy on a proper footing, with suitable emoluments and a permanent establishment for the Ambassador."

The *Daily News* (London) remarks of the new Ambassador:

"His policy in the magazine whose editorship he now relinquishes has been to keep in touch with contemporary thinkers and doers, and induce them publicly to explain their gospel of work.

"No American understands better the new spirit which is transforming American life, and no man will be better able to inform British statesmen precisely what the United States is thinking about.

"Mr. Page is not rich, except in brains and common sense."

JAPANESE PRESS ON CALIFORNIA

CALIFORNIA'S legislative movement against aliens has aroused a storm in Tokyo. The Japanese proudly refuse to be classed with red Indians and Chinese, declare the native press. At a mass meeting held at the capital, the rage of the people was given full vent. The old war-songs of the Samurai were sung amid frantic acclamation. In the newspapers plans for the seizing of the Philippines and the islands of Hawaii are being broached, and editor Miyaki, of the *Japan Times* (Tokyo), in addressing a mass meeting of 20,000 people declared that America should leave off sending peace apostles to Japan when she is in dire need at home of all such teachers as she can get. Meanwhile the Foreign Office at Tokyo maintains an imperturbable silence and the press is thundering at its doors and demanding prompt and vigorous action. Seldom before have the Japanese people been so deeply stirred as at this present moment. Their protest against the segregation of the Japanese school children at San Francisco was vigorous enough, but compared with the indignation which they are evincing at the anti-Japanese land bills in the California legislature that protest of 1906 was a tame affair. Their protest against Secretary Knox's proposal for the neutralization of the Manchurian railways was not without a tone of humor, for they felt confident that the proposal would be ignored by European Powers. In the present case they speak in a voice of despair, and their resentment is coupled with intense bitterness. There is indeed something ominous in their demonstration against these anti-Japanese bills. What most impresses one is the perfect harmony in which all politicians, publicists, financial leaders, merchants, and newspapers are cooperating with one another in the present protest against California. For once party lines are entirely ignored and rivalry among the newspapers is forgotten.

This unrestrained outburst of feeling on the part of the Japanese is not difficult to account for, when we remember that only half a year ago the delegates of the Panama Pacific Exposition went over to the other side of the water and assured the Japanese that the people of California entertained sincere regard and friendly feeling towards them, and that Japan's cooperation in the proposed exposition would greatly strengthen the bond between her and California. Japan readily responded to the appeal and took immediate steps for the appropriation of a large sum for the exposition. Now comes the legislature of California introducing a flood of bills, which are at bottom aimed at curbing the rights of Japanese in that State. This bewildered the Japanese, and the bewilderment soon changed into indignation. "True," says the San Francisco Japanese daily, the

Shinsekai, "these bills employ the phrase 'aliens not eligible to citizenship' instead of the direct term 'Japanese,' but such indirect acts are even more humiliating to the Japanese than a direct discriminative act, for they presuppose that the Japanese are so mentally deficient that they can not see the real motive of such legislation." Turning to the other side of the Pacific, we find even the ever diplomatic *Kokumin* (Tokyo), an official organ, casting aside all restraint and denouncing the act of California as barbarous and inhumane. To quote this journal:

"When Russia maltreated the Jews within her own dominions the United States saw fit to censure her in an official manner. What has this humanitarian nation to say about the persecution to which the Japanese in one of its States are constantly subjected?"

Other Tokyo journals, including the *Jiji*, the *Asahi*, and the *Nichi-nichi*, voice the same opinion, while the Osaka *Mainichi* takes occasion to attack what it considers the inefficient, timorous diplomacy of the Japanese Foreign Office, saying:

"If the American nation does not ponder over the situation more seriously no one can tell what will be its outcome. Wise visitors from America tell us that this anti-Japanese agitation was started and is kept alive only by those politicians who would rather curry favor with the ignorant masses than consider the true welfare of the nation. Be it so. But how long are we to bear the disgrace and humiliation which seem to grow worse year after year?"

"That our people are treated on the same plane as the Chinese, the Indians, and other races which are not yet admitted into the family of civilized peoples, is mainly due to the inefficiency of our diplomacy. Our Foreign Department is too meek in dealing with the aggressive, egoistic nations of the West, and permits the lowering of our prestige in Europe and America. How can we expect our countrymen to be respected in America when our Foreign Office does not even strive to uphold our national dignity?"

While the press are thus launching vigorous protests, some of the political and financial leaders are equally active. Mr. Nakano, President of the Tokyo Chamber of Commerce, publishes an open letter in the leading newspapers, urging that in the event of the enactment of the anti-Japanese bills the Japanese chambers of commerce should see to it that no exhibition is sent to the Panama Pacific Exposition. He asserts that while the Japanese Government can not reasonably cancel the promise it has given the exposition, the people are under no obligation to send an exhibit to San Francisco, should California persist in persecuting the Japanese. The Tokyo *Asahi* goes a step farther and declares that even the Government need not be bound by its promise when the State which is undertaking the exposition acts in bad faith. Count Okuma, the "Grand Old Man of Waseda," states that even a Democratic Cabinet, which

stands for State's rights, can not permit a State legislature to act in disregard of the treaty obligations which Washington is bound to respect. The *Kokumin-to* (Nationalist Party) has passed a resolution urging the cancellation of the pledge which the Government has given the exposition. The *Sei-yukai* (Constitutionalist Party), the party in alliance with the present ministry, has also adopted a similar resolution. Baron Shibusawa, perhaps the most public-spirited man of wealth in Japan, has organized a society called *Nichi-bei Doshi-kai* (Japanese-American Association), whose object is to solve the Japanese question in California peaceably and without impairing the dignity of either Japan or America. The Society consists of well-known business men, financiers, publicists, and journalists. Amid this storm of protest and clamor the Government at Tokyo maintains an ominous silence, but cautiously intimates that the problem will be dealt with in a manner which will not be disappointing to the people.—*Translations made for THE LITERARY DIGEST.*

FRENCH AND GERMAN BACKBITING

THE SQUABBLE over the German *Zeppelin's* invasion of France has started some lively writing in the French and German newspapers. It is only fair to say that the Paris press exhibit a creditable calmness which is not so apparent in Berlin utterances. Germany seems to think that the scoffs of the crowd at Lunéville and the grins of the cavalymen were matters of international importance, and called for diplomatic intervention. At the worst, replies Paris, the matter is to be decided, not by the diplomats, but the courts of law. The *Zeppelin* affair became aggravated by another incident at Nancy, where the Lunéville adventure had caused much talk and roused much anti-German feeling. The press report that at Nancy a band of students publicly hooted and otherwise insulted a party of German ladies and gentlemen at the Casino. The Germans at once left the building, breathing threats, we are told, against France and Frenchmen. This little *contretemps* seems to have roused much indignation in the German press, which regard it as a sequel to the French greeting of the *Zeppelin*. Thus the *Kreuzzeitung* (Berlin) remarks:

"The conduct of the crowd at Nancy merits our serious denunciation. We insist that the German Government take swift and energetic measures to protect Germans against the risk of becoming the victims of such outrages."

The affair was actually brought up in the Reichstag, whereupon Mr. Jagow, the Minister of Foreign Affairs, calmly observed:

"If the news of the Nancy affair is confirmed and matters have occurred as non-official reports relate, I shall describe this affair as highly regrettable. It is the more so because it indicates the direful misunderstandings to which the machinations of French chauvinists may give rise."

Much less guarded, we may say much more threatening, is the utterance of the semi-official *Lokal Anzeiger* (Berlin), which derides the claim of France to be "a chivalrous nation." This paper lifts up its voice to say:

"It seems to be considered a national virtue in France to abuse and ill-treat foreigners suspected of being Germans. How Frenchmen reconcile this with their honor and their renown is their own business, but it is possible that they will some day discover that German patience and tolerance have their limits. If the sense of decency and courtesy toward Germans continues to die away in France our Government will be compelled to take such measures as will ensure to Germans that respect on the other side of the Vosges to which they are justly entitled. The French Government would do well to take notice of the Nancy incident and to watch for similar demonstrations elsewhere."

The *Post* (Berlin), which is notorious for its attacks upon the Kaiser and his policy, declares:

"The Nancy affair is a sign of the times. It is quite possible that the newspapers make so much of the affair in order to stir up enthusiasm for a vote in the Reichstag in favor of the military budget and increased taxation."

And, indeed, the war party exploits the incident with gusto. Witness the following utterance of the *Berliner Neueste Nachrichten* (Berlin), organ of the Naval League:

"Frenchmen have now attacked the honor of Germany, and the Imperial Government can not do otherwise than demand a just reparation."

Turning to the French press, we find a different tone. "The German press has lost its head and its sense of justice," is the opinion of the *Eclair* (Paris). The judgment of the *Paris Temps* is that "the Germans are quite mad with rage, and actually are distorting the facts. But

Frenchmen must keep cool, be careful, and prudent. Moderation and strict correctness of behavior are better than this rush into polemics." This influential organ, which easily takes the first place in Paris as a dispassionate mouthpiece of public opinion, resumes:

"Only a few days ago the Government and people of France exhibited their courtesy and their sympathy with regard to the affair of the *Zeppelin*, which had crossed the frontier. Nevertheless it appears that the German jingo press, irritated by this mishap, decided to efface the good impression created by France, and have eagerly seized the opportunity, from the tattle roused in the Casino at Nancy, to accuse the French of acting like blackguards, thus showing themselves to be brutal cowards. Our

accusers at the same time demand profuse apologies.

"Now we have done nothing to deserve such a tempest of reprobation. While the people of France decline to make recriminations or reply, they draw their own conclusions and take note of the warning."

The *Autorité* (Paris) agrees with the *Berlin Post* that the affair has been exaggerated by politicians, who are working on public opinion in the interest of the Government's military plans. Even Mr. Jaurès shows some alarm at the pitch to which German Francophobia has been excited. He declares that "the Nationalist press have provoked this incident, which may cause the outburst of serious danger." According to the *Action* (Paris), the Nancy incident was merely "a schoolboy lark." "Certain botheaded youths may, perhaps, have shown themselves lacking in courtesy, but the German press in exaggerating the incident simply make an exhibition of bad faith and insincerity."—*Translations made for THE LITERARY DIGEST.*

MICHEL'S NIGHTMARE.
He sees the collection box growing bigger and bigger.
—Wahre Jacob (Berlin).

SCIENCE AND INVENTION

NEGLECTED EDUCATIONAL MATERIAL

WHY SHOULD we pay high prices for school atlases when the best maps in the world may be purchased from the Government for ten cents apiece, with reduction for quantity? So far as they go—for they include, of course, only regions in our own country—there is nothing better than these topographical maps, and they show features that are never given in the ordinary school atlas. If your neighborhood has been covered by the United States surveyors, you can not only pick out your own house on the map (if you live in the country), but the brook back of it, the swamp in the rear, and all the country roads about it. That year-old quarrel about whether it is quicker to go to Deacon Jones's by way of Smith's or around by the pond may be settled in three seconds with an ordinary tape-measure, as well as that regarding the difference in height between your neighbor's pasture and the big rock in the grove. That most citizens do not know these things is the complaint voiced in a recent *Press Bulletin* of the United States Geological Survey (Washington, April). We read here that a strong effort is being made by the Survey to foster the use of government topographic maps in schools and colleges. Says the *Bulletin*:

"These maps contain so many details of local interest, showing even the schoolhouses and farmhouses as well as every wagon road, with which of course the school children are familiar, that it is said to be an easy matter for teachers to enlist the interest of the pupils in this new type of school map. From an understanding of the particular maps representing their own localities it is but a succession of short steps to lead the pupils to an appreciation of the different types of country portrayed on maps of other sections of the United States. Most of the standard atlas sheets of the Geological Survey of recent issue are printed on the scale of 1 mile to 1 inch, a scale which shows the physical features of the country in very interesting detail.

"With these maps the pupils can determine the altitude of their homes and the steepness of hills and mountains, estimate the grade of wagon roads, work out simple engineering problems such as the drainage of swamps, select dam sites for the construction of reservoirs to supply water to imaginary towns or for irrigation, lay out imaginary trolley or railroad lines or canals along the most feasible routes, establish lookout and signal stations on high points for the control of forest fires, and plan many other similar activities.

"The Geological Survey has published 2,200 topographic atlas sheets, covering about 40 per cent. of the United States, and on receipt of \$3 from any teacher it will supply 50 different maps selected with special reference to the particular requirements of the class it is proposed to instruct in this new kind of geographic study. This selection will include, besides the map covering the area where the school is situated (provided such a map is published), other maps showing all the physiographic

forms to be found in the United States—seacoast areas, hilly country, high and precipitous mountain country, swampy areas, regions of innumerable lakes, areas showing dense forests, areas with woodlands interspersed with many streams, lakes, and other natural features.

"If less than 50 maps are desired, a special selection of a less number will be made on request and furnished at the retail rate of 10 cents a copy. Most of these maps, each of which on the 1-mile scale covers about 225 square miles, or 150,000 acres, have been made at a cost for surveying and engraving of \$3,500 to \$6,000 each, and the wholesale price of 6 cents apiece covers only about the cost of paper and printing. If the areas were surveyed and the maps published by a commercial concern, these maps would need to be sold for not less than \$2 to \$3 each. The Survey also sells an excellent wall map about 4 by 6 feet, unmounted (in three sections), for 60 cents. This may be included in any wholesale order as part of the \$3. Applications and remittances should be made to the Director of the United States Geological Survey, Washington, D. C., who will promptly fill all orders."

A BIT OF RURAL MAINE.

As it looks on a government map, showing every village, farmhouse, railroad, wagon-road, watercourse, and rise of land.

SHALL WE ABOLISH PATENT MEDICINES?—It would be a good thing for druggists, so Dr. Harvey W. Wiley is reported to have said in Idaho some weeks ago, if nostrums were taken off the market. Says an Idaho newspaper, quoted, but not

named, in *The Druggists' Circular* (New York, April):

"Dr. Wiley scored the patent-medicine drug stores, declaring that he was not against the drug business, but was making an attempt to put the patent medicines off the market, not to hurt the druggists, but because they were a detriment to the public health, and if removed from the market would prove a benefit to the drug stores."

The Circular goes on to say:

"The newspaper did not agree with the doctor. It gave this advice to those who were poor and unable to pay physicians' fees: 'Go to an honest drug store and buy the patent medicine known to cure such cases as yours.' The most important thing for these poor people to know, however, the Idaho paper failed to tell them—that is, how they are to know which 'patent' medicine is known to cure such cases as theirs. Presumably the poor people are to ascertain that by consulting the advertising columns of the paper. It does not seem to occur to the editor of that paper that the poor people about whom he is so much concerned may be misled by reading the advertisements of 'patent' medicines. Presumably in his beautiful unsophistication he does not know that these advertisements are written for the purpose of getting the money from these very people who are least able to lose it, the poor and sick.

"We are glad that such editors are growing scarcer. Dr. Wiley is right: the removal of nostrums from the market would be a blessing to the drug business."

AMERICAN RAILWAY METHODS IN ENGLAND

THAT the introduction of so-called "American methods" on a great English railway, especially the large train load for freight, has resulted in great economy and efficiency, is reported in an article in *The Railway Age Gazette* (New York, March 28). The writer gets his information from the annual report, for 1912, of the North-Eastern Railway of England, which is the road in question. This railway has strengthened its financial position, kept up its property well, and declared twice the average dividend of other English roads—all, we are assured, because it has adopted American policy in the matter of train loading. To quote and condense the article:

"Some years ago George Paish, editor of *The Statist*, of London, published a series of articles criticizing the operation of English railways as unnecessarily costly. The main ground of Mr. Paish's criticism was that the English roads handled their traffic in too small train loads. He sharply contrasted the fact that the train mileage of English railways increased practically as fast in proportion as the amount of traffic they handled with the fact that the railways of the United States, by working steadily to increase their freight train loads, handled a rapidly growing business without a proportionate increase in the number of train miles. Mr. Paish urged the railway managers of England to follow the example of their American brethren.

"Mr. (now Sir) George Gibb, then general manager of the North-Eastern, soon afterward introduced 'American' methods so far as he thought they were applicable to British conditions. The North-Eastern ever since has compiled and used statistics similar to those of the railways of the United States. The increase in its average freight train load in ten years was 66 per cent.

"The average freight train load of the North-Eastern (143 tons) does not seem large when compared with that of the railways in this country, which, in 1910, was 380 tons. But the average train load [in Great Britain] is only 85 to 90 tons. The main reasons for the small train loads in England are that the average haul per ton is very short—it was only twenty-four miles on the London & North-Eastern in 1912—that freight is shipped in small consignments, and that the railways handle it in small cars and in trains that are run on regular schedules and at high speeds. The experience of the North-Eastern shows, however, that the British roads by the use of American methods can increase their train loading.

"Not many students of railway economics seem to appreciate that the system of economizing by handling freight traffic in large train loads originated in the United States, or how largely it is still confined to this country. For the development of this system the greatest credit to any individual is due to James J. Hill. The only country whose railways handle their freight in anywhere near as large train loads as those of this country is Canada; and there our methods have been applied by railway managers such as Sir William Van Horne, Sir Thomas Shaughnessy, and Charles M. Hays, who were born in the United States and received their early railway training here."

The author contrasts sharply the Australian roads, where the English system is used, with the Canadian. In New South Wales, for instance, roads are congested "not with traffic, but with trains." Some roads are going to the expense of double-tracking, when all they need is to run heavier trains, and fewer of them.

AN OVEN TO BAKE STEEL CARS

STEEL CARS for the Pennsylvania road are now baked several times in a huge oven before they may be said to be "done." The baking has to do only indirectly with the fact that the cars are of steel. It is to harden the paint on the car, both outside and inside, and probably wooden cars would not stand such heroic treatment. Cars treated thus last longer, look better, cost less, take less time to paint, and are more sanitary. The illustration, taken from an article written for *The Railway Age Gazette* (New York, April 11), by C. D. Young, Engineer of Tests on the Pennsylvania Railroad, shows a car in the oven just about to be baked. To quote Mr. Young in substance:

"This oven, as designed and built by the Pennsylvania Railroad at its Altoona shops, is 90 feet 3 inches long, 13 feet wide, and 15 feet high. Each end has two large doors which may be readily opened and closed. The oven is lined on the inside with steel plate, and on the outside with galvanized iron. The 3-inch space is filled with magnesia lagging, thus effecting the needed insulation. The doors are insulated in a similar manner. Along the walls of the interior of the oven are placed 16 rows of 1½-inch steam pipes, and along the floor, close to the walls, are arranged manifold castings with small lengths of pipe tapped into them at right angles. By this means over 2,000 square feet of heating surface is provided. A steam pressure of approximately 100 pounds to the square inch is used, thus making it possible to get an oven temperature of over 250 degrees Fahr. Ventilation supplies fresh air, which is required for the proper drying of paint, and provides for the egress of the volatile matter present. A track is placed on the floor of the oven and connected at each end of the oven with other tracks leading into the regular paint shop where the different coats of paint are applied to the car before each baking operation."

A STEEL CAR IN THE OVEN.

The painting and baking of a car proceed as follows, Mr. Young tells us: First, the car is primed all over, out and in, and baked for three hours. After partial cooling, the surfaces are glazed, and uneven spots are puttied. The car receives a coat of "surfacee," is baked again for three hours, and then removed for additional coats of paint. Finally, after the necessary decoration, three coats of varnish are applied, each being baked three hours. The car thus enters the oven and is withdrawn several times in the course of the process:

"All of the work done by the baking process of painting may be accomplished in six to eight days, thus effecting a saving in time of about ten days as compared with the standard or present air-drying system. Further, the paints and varnishes have been worked up so that they are especially adapted for this baking process, having greater elasticity. Exact formulas for the various mixtures are well defined, so that uniformity in material is expected, thus giving greater durability, better appearance, and longer life for the paint work.

"The checks and cracking previously found will be considerably lessened, if not almost removed. By oven painting the work is done under more uniform conditions, which at the present time are so hard to control. It enables the surfaces of the car to be heated uniformly and dried thoroughly, thus removing any objectionable moisture before the first priming coat is applied, which is a very desirable feature of the new method.

"A considerable saving will be effected by the shorter time

that cars will be held out of service when undergoing repairs and repainting in the shops. It is expected that dirt, soot, etc., will not adhere or imbed themselves so readily and that the general appearance of the car will be improved.

"This oven was placed in service the early part of this year and the results of the complete car at this time seem to . . . indicate that . . . this method of painting can be used to advantage not only for the painting of steel passenger equipment cars, but for the painting of any other full-size steel structure of a similar character where protection and finish are desired.

"Results and indications at this time seem to justify our expectations that the new process of baking will give, over the present air-drying system: (a) Longer life of material applied. (b) A general appearance as good or better. (c) Less cost of material at no increase in the labor charge. (d) A considerable saving of time for shopping cars, which results in a saving of shop space. (e) Complete sanitation for old cars. These advantages are offset by the initial cost of installation and operating cost of the oven."

SAWDUST TO PUT OUT FIRES

TO UTILIZE ordinary sawdust as a fire extinguisher would hardly occur to most of us—but that only shows how stupid we are. In a report made to the Associated Factory Mutual Fire Insurance Companies, Mr. E. A. Barrier, a Boston engineer, shows that it may be used effectively for this purpose in dealing with small outbreaks of liquid combustibles, such as lacquer and gasoline, which are usually difficult to extinguish by ordinary means. Sand is generally considered the best thing to use in such cases when it can be applied promptly, but the tests showed sawdust to be greatly superior, says *Industrial Engineering* (New York, April), abstracting an account in *The Mechanical Engineer*:

"The tests were made with flat, rectangular tanks in which a quantity of combustible was poured and ignited, and allowed to burn for about a minute before efforts were made to extinguish the flames by spreading a few shovelfuls of sawdust on the surface of the liquid. It made little difference to the effectiveness of the sawdust as an extinguisher whether it was damp or dry, and whether it was the product of hard or soft woods. A number of commercial lacquers, as well as samples of gasoline, were tested in this way, and in all cases the flames were extinguished in from 25 to 50 seconds, and with a very thin sprinkling of sawdust. When efforts were made to use sand a much larger quantity was required, and the process of extinction was much slower.

"The efficiency of the sawdust seems to be due to its blanketing action in floating for a time on the surface of the liquid and excluding air, and naturally its efficiency is greater on viscous liquids than on thin ones, since it floats more readily on the former than the latter. The amount of moisture contained in the sawdust was apparently not a factor, since sawdust which was dried was just as efficient. Sand appears to be less satisfactory, because it sinks through the liquid and has not the same blanketing action. It was found, further, that the efficiency of sawdust as an extinguisher was greatly increased by mixing it with sodium bicarbonate—ten pounds to a bushel of sawdust—since this material when heated liberates carbonic acid. Sawdust itself, however, is not easily ignited, and burns without flame, while it would be difficult, if not impossible, to ignite sawdust mixt with bicarbonate with a carelessly thrown match.

"Of course, it is not suggested that sawdust is a material to use when once a conflagration has got hold, but the tests clearly show that in many works where lacquer and similar inflammable substances are liable from some accidental circumstances to ignition, either in tanks or from leakage on to a floor, a supply of sawdust, especially if it is bicarbonated, is most convenient for stamping out the initial fires from which big ones spring."

VISION BY STARLIGHT

THAT VISION by very dim light, such as alone is available by night from natural sources, is essentially a different thing from daylight vision, is asserted by a writer in the *Revue Scientifique* (Paris, March 29) in an account of the recent experiments and theories of Lummer. According to these we see in dim light by means of the retinal "rods," while

the "cones" are used in full light. By daylight we see directly, that is, by looking full at the object and "fixing" it, while by night we see indirectly, using not the optical center with its cones, but these parts of the retina that are remote from it, where the retinal rods abound. Daylight vision, too, appreciates colors; starlight vision is colorless. Says the writer:

"The human eye possesses, as is well known, two sorts of optical receivers—cones and rods. The cones, which alone are present in the central region of the retina, are the organs of color-vision. The normal eye utilizes only these by day, when it sees by 'fixing' objects; that is to say, by bringing their images upon this central spot. The rods are spread over all the rest of the retina. They give the sensation of light without that of color and are the only active organs of sight in animals that live in darkness, as also in men who are totally color-blind.

"This simple theory, which is due in great part to O. Lummer, has been applied by him to the case of vision on starry nights, and has led him to establish a large number of facts that deserve attention, the more that they can easily be observed by any one.

"It should be noted first that it has been definitely proved by photometric measurements that the curve of sensibility to light is very different for the cones and the rods. . . . The curve without color (that of the rods) . . . is identical with that of the normal eye observing indirectly; that is to say, without fixing the objects, so as to utilize the outer parts of the retina, where there

are only rods. Measurements show, in the first place, that the region of maximum sensibility is clearly different for the cones and rods. . . . A reddish image will seem gray or black when perceived by the aid of the rods.

"Starting from these physical data, Mr. Lummer conceived the idea of studying night vision, or, more exactly, vision during the period of transition, when the cones cease to function little by little and give place to the rods. . . .

"A first experiment was made in a balloon ascension by night, with a fine full moon. The basket of the balloon was decorated with many-colored pennants. As the eye became adapted to the darkness, the colors of these flags weakened, and finally they appeared quite gray or whitish—a proof that the rods had completely awakened from their diurnal sleep and had assumed the character of organs of vision.

"Another experiment was made on a starlit night in the mountains. So long as the eye was annoyed by the neighborhood of electric lights the cones stayed awake and color-vision remained. On the contrary, as soon as the observer got into the shade, the rods began to work. The sky, which had hitherto appeared dotted with only a few stars, was lit up with myriads of them, all whitish in tint—the white of the rods. When effort was made to 'fix' them, their number and brightness were much diminished, but they all returned and shone as before when regarded indirectly. . . . Mr. Lummer succeeded in performing the following astonishing experiment—to look for an instant at the silver crescent moon, then try to fix the gaze on a star near by, and perceive that for several seconds the moon had disappeared from the sky. It is sufficient to have recourse anew to indirect vision by means of the retinal rods, to cause the fugitive celestial body to reappear, with the thousands of stars that the cones alone are powerless to bring to our knowledge."—*Translation made for THE LITERARY DIGEST.*

From "Diseases of the Eye," by permission of Lea & Febiger.

CROSS-SECTION OF THE RETINA.

It shows the rods and cones, the former being long and the latter short like bowling-pins. In daylight we see with the cones and by night with the rods.

METAL ROOTS FOR TEETH

AN OPERATION said by the author to be "as audacious and revolutionizing in dentistry as were the discovery and use of wireless telegraphy, radium, and x-rays in their particular fields of science," is described by Dr. E. J. Greenfield, of Wichita, Kan., in *The Dental Cosmos* (Philadelphia, April). Dr. Greenfield implants teeth upon artificial roots of iridio-platinum, which, he asserts, are practically permanent. The bony tissue of the jaw unites in and around the structure of the metal root, so that his artificial teeth rest on what is virtually a foundation of reinforced bone, the reinforcement consisting, just as in the case of concrete, of a metal skeleton imbedded in the bony mass of the jaw. The invention was due to the unsatisfactory results of the implantation of natural teeth, the implanted natural root usually absorbing in a few years. The metallic substitute was suggested by the use of silver-wire sutures by surgeons to reduce fractures. We read:

"This new process of implantation is no less than the making of a few circular incisions in the jaw-bone, . . . inserting properly prepared artificial roots of iridio-platinum, and mounting on each a base or anchorage, to which can be attached a full set of permanent, natural-appearing teeth, capable of rendering as good and efficient service as those endowed by nature at her best.

"Perhaps the greatest convenience to dentists in this new process is the fact that the splint is unnecessary. For filling the vacancy caused by the loss of a single tooth, what better method could be employed? No splint will be needed, and the adjacent teeth will not have to be mutilated in order to serve as anchorages or abutments; the artificial root eliminates all that. Besides, the mechanical phase of this wonderful process is so utterly simple that it will be readily understood, and proficiency in its use will be quickly acquired by all who desire to use it. . . .

"The artificial root used for this process is a hollow, latticed cylinder of iridio-platinum, No. 24 gage, soldered with 24-carat gold. It is impervious to acids, and does not injure the tissue which grows about it. The disk-shaped cast base with groove or slot, in which the crown attachment is inserted, is made of 22-carat gold, and is soldered to the metal frame of the root.

"Special machinery is necessary for cutting and shaping these roots. Absolute accuracy is essential, for the artificial root must fit exactly the circular incision or socket made for it in the jaw-bone of the patient. . . .

"In the course of a week or ten days after operating, sensitiveness has largely abated, and in six weeks' time—rarely longer—the bony tissues of the jaw have united through the latticed root-structure, and a positive anchorage is provided for the attachment of the artificial denture.

"By means of the bony core which the trephine produces in making the incision or root-socket, the artificial root, after being placed in position, will be held firmly until a sufficient deposit of bone cells has filled the spaces in the root-frame. Thus the artificial root becomes solidly embedded in the jaw.

"This bony center of the root-socket is one of the chief factors in the success of this process of implantation. It assures the fit of the artificial root in the socket trephined for it, and an absolutely accurate and certain fit is decidedly essential to permanence and endurance.

"Without this core or center, splints would be necessary, . . . but with it, there are practically no limits to the prosthetic appliances available. It is this feature of the process which makes it so inviting and interesting to all members of the profession, especially when the results accomplished are compared with the

results of the implantation of natural teeth. The implanted natural tooth fails because of the rarefying inflammation which occurs at the seat of implantation."

The conditions limiting the use of these metal roots, the inventor tells us, are few. If the patient's health is bad or if the bony structure of his jaw is diseased, the method is sometimes inadvisable. The author concludes:

"This operation must not be placed in the same class as all other implantations, nor should it be anticipated that this process comes to the same end as do all other implantations. No fear is to be entertained that infection will occur. If a solid body is inserted in the maxilla there would be room for infection to set in around it, but in this operation a cage-like, hollow cylinder is inserted in a circular socket in the maxilla. This root is open all the way up, clear to the gum, and the circulation carries away any bacteria which might otherwise be destructive. This is one of the main features in the success of this process of artificial-root implantation. If the root were a solid body or even simply perforated, it would be thrown off, as nature would not tolerate it, and there would be room for infection.

"Another factor which limits the conditions of failure is the simplicity of the operation, which is neither difficult nor complicated, and can be performed in a few minutes.

"Another advantage is the immovability of the root. When once implanted, this artificial root is solid and stationary, the bony core in the center of the socket assuring solidity.

"I have implanted both natural teeth and these artificial ones, so I speak from experience when I say that the absorption which takes place after a few years and absolutely destroys implanted natural teeth is entirely avoided by this process, which provides for the anchoring in the jaw of good, solid, imperishable artificial roots."

X-RAY PHOTOGRAPH OF METAL ROOTS IN PLACE.

ANOTHER X-RAY VIEW.

WHY WAS DAYTON ISOLATED?—Why

should communication with a large American city have been practically cut off for days from the rest of the country, when we can talk to a vessel in mid-ocean without trouble? We Americans pride ourselves that we are quick to utilize new inventions, but we appear to have forgotten that the waves used in wireless telegraphy can travel over land as well as over sea. *The Electrical World* (New York, April 5) waxes sarcastic, and also somewhat indignant, over this matter. It asks:

"Why in these days of the wireless telegraph should Dayton be even more isolated than was the *Titanic*? Anybody would think that the wireless telegraph had never been heard of in Dayton or Ohio. Why, when they know that their wires are breaking all the time, do telegraph and telephone companies so persistently neglect adding the wireless to their standby emergency forces? If we were finding fault, we should say that such neglect of an obvious and cheap remedy is scandalous and reprehensible. We simply ask, why? We shall be glad to hear from some of our readers on the subject, and particularly from the companies. And, then, again, why should Dayton, birthplace of the modern aeroplane and a leading home of its manufacture, go without any resort to that useful device at such a juncture? It should have been the easiest thing in the world to fly into Dayton or out of it at any time, . . . even when the floods were at their worst, either by aeroplane or hydroplane, or flying boat. Why did not somebody do it? Again, we say, this is all by way of inquiry; but when modern civilization has such resources at its instant command it does seem most mysterious that they should not be ready and waiting to be availed of at the very instant such emergencies arise."

LETTERS AND ART

AN ITALIAN VICTORY OVER GERMAN OPERA TRADITION

THE LAST NAIL in the coffin of the Teutonic tradition in music in America has been driven home by Mr. Toscanini, according to Mr. H. T. Parker. Once it was thought that "the best music was made only in German-speaking lands and that the best interpreters of it came, also, from them." But the Russians came to smite the tradition "with the hard blows of their symphonies"; the new Frenchmen "pricked it with the sharp thrusts of their impressions and images"; the Italians "seared it with the hot fires of their newer operas." Singers and virtuosi came also from countries other than Germany and were received; but the belief has longest stood its ground that only Germany could produce an adequate leader. "An Italian might do very well with the operas of his own country; a French conductor might at least have his routine uses; but for real conducting in the 'high sense' of the word there could only be a German." But for five years the Metropolitan has had an Italian, Mr. Toscanini, who has done much of the "serious work" of the opera-house; "for five years he has led impressively in one and another of Wagner's music-dramas—a grievous blow to the tradition," and finally, "he has proved little less impressive in symphonic music." He came, as Mr. Parker shows, with an eccentric reputation, and experience has justified report:

"When Mr. Toscanini came first to the Metropolitan, the wisacres who fancied that they handed down the tables of operative law from the mountains of reviewing, like musical Moses in the wilderness of Manhattan, wagged their heads ominously, and those who were prone to mistake Teutonic prejudices for lofty principles made the same ominous motions. Who was this Toscanini, with a great reputation behind him in South America and Italy—lands in which such a reputation could not—or at any rate ought not to—be made? First of all, he conducted absolutely from memory, and he had always done so. Report ran that he carried the scores of countless operas, and to the last minutiae of detail, in an abnormally susceptible and retentive memory. Gossip told how, within a week, he could so absorb the music and the text of a most intricate modern music-drama, poring over it at the piano, reading and rereading it for hours and for whole nights at a time, until it was photographed upon his memory—yet not merely photographed, but vitalized there as a living and communicable thing. He had so carried twenty-two operas in his head in one season; he could recall as many more with a little study. Singers and players who had worked with him bore unanimous testimony to the completeness and the accuracy of Mr. Toscanini's memorizing. He knew the minutest details of the music or the composer's glosses upon it. He knew every line of the text and the stage directions. He had corrected out of easy recollection errors in parts that had escaped his most meticulous predecessors.

"And lo! it was all true. He did so conduct when he appeared first at the Metropolitan. He has so conducted ever since. He conducted so again when he passed for the first time in America to symphonic music last Sunday evening. The singers and the orchestra of the Metropolitan laid their hands on their hearts and swore that his instant recollection of the smallest details of the music was not one whit exaggerated. Admittedly, then, he did so; but why did he do so? Of course, not to be free

from any dependence on the score at rehearsal and performance that he might concentrate all his powers upon the results that he would accomplish. That was far too obvious and simple a reason. He memorized his scores to be 'different,' to make an effect. And so the high priests were solemnly silent, and left an observant and intelligent public to discover the advantages of Mr. Toscanini's memorizing. Yet they were not so silent about it as was he. Strange man! Striving to be singular, he quite refused to flaunt or even discuss his singularities.

"This Italian undertook arduous operas—or exacting operas newly produced or reproduced at the Metropolitan. He may

have disliked the routine of 'repertory,' but when it fell to him, as with 'La Gioconda,' for example, he did not slight it. When he took in hand a new production, a fresh revival, or even the preparation of a repertory piece for which he was to be responsible for the first time, never in the whole history of the opera-house had rehearsals been so thorough. Mr. Toscanini came to them with not only the whole opera—music and drama alike—in his head, but with as clear an image of what in every direction he would achieve with it. He schooled his orchestra not only as a body, but choir by choir, sometimes almost instrument by instrument. He counseled the singers in their parts not only at rehearsals, but for hours in private study in their rooms. He received the chorus from the thorough preliminary preparation of one of his lieutenants and then worked with it as with his orchestra. He had a keen eye, a fertile imagination, a quickness and sureness of expedient with settings and lighting, with the whole ordering of the stage. Separately he worked at each element in the production of an opera until every one concerned in it was thoroughly prepared in his individual share and in his cooperation with others. Then, in the final rehearsals, he

coordinated all these elements—orchestra, chorus, singing-players, the ordering of the stage, the whole music, the whole drama—into the unit of the image he had reasoned, imagined, and kept in his mind from the start.

"If Mr. Toscanini was unsparing to all his forces, he spared himself even less. If he would not rest until the last detail of preparation had been assured, the result—in such unified, complete, and polished performances as the Metropolitan had not hitherto known—justified him. Since Seidl's time no conductor there had so stamped himself upon the operas that he undertook."

The eccentricity of memorizing an opera and conducting it without a score is far from producing anything spectacular in manner. Mr. Toscanini is rather a disappointment in this respect:

"There he stands before his empty music-stand, slight, alert, elegant, seemingly heedless of his audience. He does not fling his body about gracelessly and superhumanly after the manner of certain conductors; nor does he stand in rigid and detached pose, nonchalantly moving a stick, as is the way of certain others. His beat is clear, firm, exact, insistent and almost never, even in routine transitional passages, does he leave the orchestra to itself. His right hand is always busy with his beat; with his left he suggests his shadings and modulations; adjusts his balances, summons his forces; gives his commands; indicates his significant strokes. Mr. Toscanini's conducting is energetic and exact; sometimes even, with both arms extended, he seems to outpour himself upon all his forces of stage and orchestra that he may flood them as it were with his will. Yet even then his con-

CARUSO'S SKETCH OF TOSCANINI.

He possesses, says H. T. Parker, "the divining and individualizing imagination that is the highest attribute of a great conductor."

ducting is not graceless or contortionate. It still keeps, as in its quieter moments, its air of perfect, almost elegant sureness. Mr. Toscanini has no score in which to bury his head. His eyes are always upon his forces. Yet, curiously, there are no legends of the stimulating power of his glance as there used to be of Mahler's. Out of Mr. Toscanini's hands, and above all, out of his fingers—his men say—come his will and his personal force.

"First of all, as every great conductor must, Mr. Toscanini conducts with the clearly apprehending, the firmly designing, and the finely discriminating mind. He does not merely memorize his music. He grasps its substance until he has made it a part, a living part, of himself. Through and through he knows it largely and knows it minutely. Comprehending it so, he can preserve its unity. His ordering of every opera, of every act in each opera, of each scene within each act, is usually a clear and logical piece of musical design. He preserves the long lines of the music and the drama—recall his 'Tristan'!—he keeps them advancing, broadening, cumulating, endlessly flexible and endlessly shaded, but always clear. Within those lines each detail and each accenting of a detail falls into its due place, sometimes insignificant, sometimes salient. For Mr. Toscanini discriminates as he conducts. He does not magnify the unimportant or make the important monotonous. There are middle voices and middle shadings in his conducting. It does not alternate heights and depths in fletitious contrasts. In every opera he practises the science of musical architecture, and then by imagination and feeling warms it into an art. To 'sit under him' is to hear the art of musical design practised as no other conductor in America except Dr. Muck practises it. Incredible as it may seem, an Italian conductor may have intellect.

"To intellect, Mr. Toscanini adds imagination, the finely subjective imagination that no other conductor in America, except again Dr. Muck, possesses in such degree as he. It is the divining and individualizing imagination that is the highest attribute of a great conductor. By virtue of it he conceives each opera in its own peculiar quality, in its own particular individuality, enters into the composer's purposes, divines what swam before his eyes and welled within his spirit as he wrote. By this virtue Mr. Toscanini makes 'Armide' or 'Falstaff' or 'Tosca' or 'Le Donne Curiose' sound each with its true voice, in its true style, to true impression upon those that hear. To ply such an imagination to such ends, to make it the animating force of the preceding knowledge, is to accomplish the fullest and the finest work that a conductor may do, since he reproduces the opera or the symphony or the tone-poem not merely as the composer wrote it, but as he imagined it."

His Wagner performances have been the greatest of his sensations, because the least expected of his achievements:

"He began with 'Götterdämmerung,' and then, for some inscrutable reason, abandoned it to Mr. Hertz. He continued with 'Tristan' and he has kept it to himself in all his five years at the Metropolitan. Often, tho not in all performances, he has also conducted in 'Die Meistersinger.' Anticipating those things, finding them drawing near and not to be withstood, the upholders of the Teutonic tradition raised their hands in pious horror. What! An Italian conduct in a music-drama of Wagner, in this America where Wagner signifies German singers, a Ger-

man conductor, German opera, in short. It was as tho some rank blasphemy or monstrous curiosity impended. Mr. Toscanini conducted none the less, and the tradition tottered while its adherents quibbled about its trembling base. In their eyes and ears, Mr. Toscanini may have done this, that, or the other in a Latin and not a Teutonic way. In the eyes and ears of hiscomprehending, stirred, and transported hearers, it mattered little whether his ways were Italian or Prussian, or whether he was overthrowing a worm-eaten tradition and at last making what passed for artistic principles the personal prejudices they really were.

"It sufficed for Mr. Toscanini's audience that his 'Tristan' had the voice of passion, of song, of romance, and of fate in degree that scarcely a conductor had given it before; that the music expanded in beauty and glowed with power until those that heard were transported out of themselves into the very ardor of Wagner's creating spirit. Fortunate the German conductor who could so feel and so make others feel 'Tristan.' Fortunate, too, the German conductor who could so suffuse the music of 'Die Meistersinger' with sensuous and romantic beauty, and keep its endless strands weaving themselves into luminous song."

ENGLAND'S "DOORMAT" HEROINES

INSTEAD of militancy and various other brands of suffragettism now rampant in England having their effect on contemporary fiction, they seem to produce just the opposite. At least we must conclude from an article in the *London Daily News* that all the feminine intellectual energy goes elsewhere than into the creation of new types of fiction. A survey of the output of such writers as Mrs. Ward, May Sinclair, Elinor Glyn, and Katherine Tynan, causes the critic

we quote to see only "what Nietzsche calls 'the eternal tediousness of women' amply demonstrated" in all their heroines, gentle and simple. Not one new heroine, he declares, arouses interest. "They are merely commonplace 'womanly women,' according to the Early Victorian interpretation of the term, born to mental slavery." What a shock this must be to those who are offering themselves as martyrs for the cause. We read:

"As if to compensate for the lack of psychological interest, we are told with wearisome reiteration of the physical beauty of these heroines. The woman novelist of to-day appears to be more susceptible to feminine beauty than her male contemporaries. She revels in lovely complexions, beautiful eyes, red lips, white teeth, and straight little noses.

"Undoubtedly the most admirable of the five heroines is *Lydia Penfold*, Mrs. Humphry Ward's latest creation. She is the only one who is not a 'doormat,' made for man to wipe his boots on. She is 'your modern girl of the intellectual sort, quite unmoved by gawgaws.' She has also beauty, grace, and personality. *Lydia* has pride and independence and ideals, for which one is devoutly thankful, but she is nevertheless a bore, and she has no sense of humor

From "The Making of Lydia" by Mrs. Humphry Ward. © H. S. G. Co.

MRS. WARD'S LATEST HEROINE.

Lydia Penfold was more of an "Early Victorian" than a "doormat," but her story, told in "The Making of Lydia," shows that even she "tries to hide any gleams of intelligence in case man might not approve."

whatever. Her endeavor to maintain a friendship with her rejected lover, *Lord Tatham*, fails, and she writes in ponderous style to his mother, 'How good and dear he always was to me, and how much I have learned from him. And yet I am afraid it was all very blind and ill-considered and very selfish.' So heavy is *Lydia* that, in spite of her beauty, one doubts at times of her all-conquering attractiveness. There is also more than a touch of the Early Victorian about her, with all her modernity. 'She was a deal too clever to talk philosophy' brings one back to the days when women were supposed to hide hypocritically any gleams of intelligence they might possess, in case (awful thought!) man might not approve of so much erudition.

'Of a different type is *Winnie Dymond*, Miss May Sinclair's heroine in 'The Combined Maze.' She is a clerk, with a passion for gymnastics. At first one has hopes of *Winnie*. She seems

AMERICA'S GREATEST WOMAN PORTRAITIST.
Cecilia Beaux as she sees herself.

to be a proud, self-respecting, independent character, but long before the book ends she has definitely degenerated into a 'doormat.' The hero, *Randall Ransome*, with whom *Winnie* has had 'an understanding,' suddenly marries *Violet*, *Winnie's* chum, who possesses 'the biggest and darkest blue eyes he had ever seen.' Later on we find *Winnie* giving up a good situation for an inferior one, in order to be near the *Ransomes*. Every day (altho she has to work hard in an office all day) she goes to the *Ransomes'* house, scrubs and cleans it, washes the baby, cooks the dinner, and acts as general servant and factotum, while *Violet*, who is 'as strong as a horse,' lies, 'like a suburban odalisk,' on a sofa, watching with a contemptuous smile the labors of the infatuated *Winnie*.

'But *Winnie*, the weak one, does not mind. She 'paid herself,' Miss Sinclair tells us, 'in a thousand inimitable sensations every time she touched the things he had touched or that belonged to him.' Could fatuousness go further? One wants to hear no more of *Winnie*, but the sequel of her servility is interesting. *Violet*, her own rightful duties being usurped by an outsider, finds time hang so heavy on her hands that she elopes. Yet Miss Sinclair obviously holds up *Winnie*—who is an interfering little fool—for our admiration."

Having polished off the efforts at picturing an acceptable modern woman by two of England's leading fiction writers, our critic turns to two more. He couldn't even find "comfort and consolation" in Mrs. Elinor Glyn:

"Strindberg says somewhere that life 'consists in doing the same things over and over again.' Reading modern novels consists largely in reading the same things over and over again. Listen to a description of one of Elinor Glyn's latest heroines: 'She moved with the undulating grace of a panther or a wild animal' (surely one has read something like that many, many times before), 'and yet when you looked at her face her eyes were splendidly and broadly lidded, as are Etruscan eyes sculptured in the cinerary urns.' This heroine ceased to interest me at this point, so I skipped some pages and alighted on another: 'A pale, slender woman, who was watching him with large, dark blue eyes from the sofa where she sat.' 'The gentle creature stroked his crisp, dark, wavy hair, and the tenderness of an angel came into her sad eyes.' Heroines like this may have 'magnetic eyes,' but they have no power of holding one's interest.

"As a drowning man clutches at a straw, I turned to Katherine Tynan. She is an Irishwoman. Surely she will provide a heroine with 'a sparkle' in her. Vain hope! Mrs. Pratt, of *Paradise Farm*, 'had a great natural placidity. Her brooding, ruminant air, when her mind was at rest, was not unlike that of the cows in the pasture.' Mrs. Pratt is also a doormat of the most virulent type. Her attitude toward her beautiful young lodger, Mrs. Greville, is Uriah Heepish in the extreme. Mrs. Pratt belongs to the days when people 'knew their proper stations.' 'My dear soul,' says Mrs. Greville, looking at her with half-frightened compassion, 'you must not care for me like that.' 'You should have thought of that, my lady,' says the humble one, 'before you won my poor heart.'"

ART SCHOOLS FOR GIRLS

NO LARGE CITY of our land is without its art institute, yet "the more art schools there are, and the better equipped, the smaller will be the average of really distinguished talent turned out from them." This sounds at first like the cry of a cynic or a pessimist. Instead it is the word of America's most distinguished woman portrait-painter—Cecilia Beaux—and she is writing in *Harper's Bazar* more particularly of women and their chances of success in art. "The rough material that goes to make up the character of the artist who is to succeed—that is, ingenuity, perseverance, and power of concentration—is not much called upon or developed in the early stages of study in these schools." The only chance for "invention" a girl finds is in the composition class; in all matters pertaining to the posing of the model the work is done for the pupil. When she takes a studio on her own hook "she has not learned to invent ways and means nor to rely on her own resources for the material construction and development of an idea." Such objections sound as tho Miss Beaux has a poor idea of art schools; it is only that she is impressed with the fact that under the necessary restrictions in them "nothing but a high degree of natural gift will in the end prevail." The small average of high talent and the bad side of school training account for the failure of so many girls. In her very suggestive article Miss Beaux lays down sane rules for success that will sound like hardship to any but the most determined girls. Thus:

"Not only sacrifice of the time and strength must be given to the work itself, but a sacrifice even of pleasures that will deplete the working powers of the next day.

"This is especially the case with women and girls who, with rare exceptions, have a less abundant physical energy than young men of a corresponding temperament. In our sex the will to preserve, even when we are tottering with fatigue, is most praiseworthy, and we often wonder why 'keeping at it' has such meager and disappointing results. A girl, from the beginning of her life as an artist, should know that her physical energy must be conserved like precious oil, like water in a desert, like ammunition in a besieged camp, like food and fuel in a dash to the pole.

"Art has no dealings with the dregs of life. The foam on the brimming cup is the only acceptable offering. A young artist should ask herself, 'If I do this to-night shall I be fresh—not tired—at the end of the first two hours of work to-morrow, so that if I wish to I can elineh it in the third?'

"Often a piece of work depends for its force on the ability of the artist to go on with it at the moment. Two hours of intense

application have been given; the work is now ready to be pulled together, without a break in its purpose, or, more important still, without a change in the condition of the materials in use. If energy, *natural energy*, not will power, is relaxed at this moment, and the artist keeps on by force of will alone, I can almost hear her lamentation, 'It looked well for a while, and then I went on with it and spoiled it!' It may be that she could never have sustained it, but the chances are that if her strength and enthusiasm had been as high continuously as when she began, her work would have been increased, not diminished, in power at the end of the morning. An obvious case of cause and effect constantly ignored by students and young artists generally. Witness the tepid and weary results so often seen."

The all-important question is whether a girl is qualified, whether she is endowed by nature for the life she wishes to lead, says the writer. She may, suggests Miss Beaux, even mistake her motive in starting out upon an art career:

"It is more necessary than ever before that our young woman should closely examine herself as to her real motives. With many the desire to get out and away is too strong to be resisted, and to these the life of an artist is most attractive. True, some one must pay for the tuition of the student, but the fees are small, and at most of the art schools the drawings accepted for admission might be produced without the smallest degree of natural gift. Anybody can produce the work of the average beginner, so admission to the school is no real proof of ability. Even the desire to 'try' may mean nothing; yet who goes to school except to learn, and who can tell, especially without inspecting the would-be student in person, whether great things may not some day develop?"

"It is right that admission should be liberal, and after passing this barrier and paying the cost of tuition everything is open to the student, and everything is provided except the materials with which to work.

"When I went abroad to study I found in Paris numbers of girls and women who, encouraged by the ignorant flatteries of their friends, had staked all on foreign study. Years had passed; the one hope—to get something admitted to the Salon—was still out of sight. This admission would mean a creditable degree of promise, if not of achievement; it would mean, too, that the successful student would be strongly abetted by M. Julien, who counted on their performances to help advertise his school. But year by year the chance grew less and less. Ill health, resulting from life in rooms overlooking filthy courts, poor food, and privations of all kinds were endured. And how often I heard the sad plaint, 'They have made such sacrifices for me I can not go home until I have something to show for these years of work.' There were several whose fate I never knew, for my stay was short. Of course such martyrdom as this is unknown nowadays either in Paris or here."

For a girl who has a clear idea of what she wishes to do, declares Miss Beaux, "it is far better to start alone, working alone, even at a great disadvantage." Further:

"She may not go far before she seeks at the art school either to certify or to correct what she is guessing at. She will find her progress rapid and vital when she does enter. By this it seems that we have come, at the present day, to something absolutely opposite to the practise of the period when the apprentices in the masters' studios were irresponsible. In the old way the impressionable student came under the influence of a master's works and preparatory studies, and under this influence alone. He was irresponsible, but he had before him nothing less than the example of the master. To-day, in a school, he is surrounded by scores of fellow-students who are cheerfully producing the crass work of the average beginner. No one is distressed by it. It is accepted, in its various grades, as being as good as might reasonably be expected.

"Schools of art must exist, tho their very essence prevents their

being ideal places for the nurture of the delicate flower of art. In them may be found everything or nothing for the student. Never was opportunity greater. No sign-posts are needed; no private knowledge will prevail. The force and innate gifts of the individual are the only passports that will carry him through."

OUR SERIOUS READERS—The public hungers for serious books, and repudiates the dominance of fiction, a fact which makes the *Spokesman-Review* (Spokane) see "evidence of the

A PORTRAIT STUDY.

By Cecilia Beaux.

Exhibited in the Spring Academy is this study of "a very long young woman," as a critic puts it. "Her feet are stretched out far in front of her, charming little feet, exquisitely painted, and the observer was grateful for their delicacy after traversing the length of the yellow robe, with its big pattern of purple flowers."

intellectual growth of the American people." For proof it adduces this:

"The growth of the civic conscience leads the people to spend their money on literature that claims and is supposed to ground this conscience in facts.

"The demand is for books about the development of the city, the emancipation of woman, eugenics, industrialism, the social evil, and socialism.

"Even much of the season's fiction and practically all of its drama reflect an American craving for information that makes for the health and happiness of society.

"Intellectual interests are broadening and literary taste becoming discriminative. 'Philosophy is picking up and theology doing well.' There even is a renewal of enjoyment of poetry. The people insist that their fiction be better written.

"Most of the 1913 novels, through their heroines, voice the demand of woman for broader freedom."

RELIGION AND SOCIAL SERVICE

HOW ATLANTA CLEANED UP

IN ATLANTA all the houses of professional vice have been advertised out of existence by the churches. The crusade that effected this constitutes, in the opinion of Mr. William T. Ellis, the most remarkable story in the present religious life of North America. The Christian sentiment of this Southern city has been solidified, a ruler of the underworld has become a matron of a new home for rescued girls, and "a tense political battle wherein Christian men showed that strategy and the ability to win are the possession of the righteous"—such are some of the outstanding features of the campaign. The "unforgettable address of Jane Addams" at the Men and Religion Congress in New York last spring sent the Atlanta delegates home with a new vision of their city's local conditions. "They discovered what may be found in almost every other large city in the country—a 'red light' district wherein the social evil was protected, or at least winked at, by city officials." *The Continent* (Chicago) gives Mr. Ellis's account of how these men went to work:

"Without taking the world into their confidence or boasting of what they meant to do, or calling in the counsel of any experts, these men blended the publicity message and the social-service message into one agency and began to advertise in all the city papers the facts of the social evil in Atlanta. They contracted for a large amount of advertising space in the daily papers to be paid for at regular rates. They entitled their advertisements, 'The Houses in Our Midst,' and called them 'Men and Religion Bulletins.' They were numbered in consecutive order. No. 1, of course, implied that No. 2 was to follow, and No. 10 called up in the minds of the friends of vice the dread possibility of a No. 20 or a No. 30. In truth, the bulletins have now numbered fifty, and there have been frequent extras, sometimes a whole page in extent. Ordinarily the advertisements are two, three, and four columns wide, extending the full length of a page.

"Of course the advertisements created a sensation. They were conspicuous, and yet they did not rely for their effect upon display type. The method plainly was to be the use of the artillery of facts and principles. Bald, hideous facts about the social evil in Atlanta were cited without qualification or circumlocution. Then to these conditions was applied the clear word of Scripture. . . .

"The advertisements were marvels of effectiveness. Their logic was as straight as a running noose. The style was brilliant, epigrammatic, puncturing. At times it rose to the loftiest heights. These messages were literature. Hysteria and fanaticism never crept into the presentations. There were no muddled generalities. The writer clearly had a knowledge of the world. He not only knew Atlanta, but he gathered his ammunition from the capitals of Europe—Berlin, Madrid, London—and from the other great cities in America. He was quick to seize the news of the day and feather his barbs with it. With rare adroitness he took advantage of Jewish and Roman Catholic pronouncements and actions upon the subject, to show the solidarity of moral attack upon this evil.

"Most remarkable of all, in this long succession of advertising, was the pertinent application of the words of Jesus. In the serene assurance that this was the court of last appeal, the gospel of Christ was quoted where it fitted. A better blending of the law and the gospel could not be imagined. The tone of the

advertisements revealed something of the serene assurance of Scripture itself; they were unhurried and unannoyed. The calm confidence in which they were written was more terrifying than bluster. Evidently the Christian forces of Atlanta, under the direction of the Men and Religion Movement, had laid siege to the citadel of vice, and they possess the needed guns and ammunition. Even the casual reader could see that there were behind the written statements a legal mind and a soldier heart. Here was the Christian crusader down to date. Each of the advertisements, until victory was assured, ended with the confident words, 'Atlanta should and will close the houses in our midst.'

"The men who used these advertisements were speaking to the people of Georgia with a power that no other series of messages had ever possessed, and they were plainly fearless. They went wherever the trail led them. It became necessary to point out the new and unstudied implications in the problem of the social evil. The wages of women workers were set forth in the advertising and a new duty laid upon the city's Christian men. It is true that the world has been blundering along in chaotic fashion amid the new economic and social conditions. Now our prophets are facing the facts—all facts. The really startling appropriateness of the Scripture quotations used by the Atlanta men have stimulated many minds. Thus one advertisement bears the words of Nehemiah, 'Some of our daughters are brought into bondage already.'"

Investigation showed that 50 per cent. of the properties used for evil purposes in the city were owned by Christian men, says Mr. Ellis. "The newspapers of no city could be counted upon to follow editorially and disinterestedly such a path as the Men and Religion committee pursued." But where the facts were presented as paid advertisements, "there was no newspaper owner with possible property interests to edit it and no big advertiser to influence it." So—

"There was no way of answering, avoiding, or diverting the tremendous truth told week by week in these display advertisements, which naturally came to be the first

part of the paper to which thousands of readers turned every day."

The outcome was dramatic. The chief of police of Atlanta "does not have to confer with any authorities higher up":

"Chief of Police Beavers of Atlanta was at heart a better man than the world with which he had dealings ever suspected. He had fallen into a vicious custom. These advertisements 'got him'; they found the real man Beavers. He resolved to stand by his parents, by his own early training and by the best life of Atlanta. He publicly pledged the Men and Religion committee that he would close the houses. . . .

"At once many persons who had shown no spark of solicitude for the fallen girls in their virtual slavery began to shed maudlin tears in public over their fate at being turned adrift without shelter. This ostentatious sympathy was short-lived, for the advertising campaign was part of a Christian movement. It was bigger and better than politics. Behind it burned the yearning, loving heart of Christ's compassionate servants. The ensuing advertisements were directed to the women in the evil resorts. The word of the committee was pledged that every one of them would be offered shelter and help in a new life. All the arguments that the vested interests of evil might offer to their victims were counteracted by this clear, unequivocal statement.

CHIEF OF POLICE BEAVERS.

Who after his pledge to the Men and Religion committee of Atlanta actually closed the resorts of vice there.

which could not be kept from the eyes of anybody who read the daily papers, that there was a door of opportunity open to all who sought a better life. Ministers and their members went two by two through the 'red light' district. Every fallen woman in Atlanta was personally offered a chance for a better life. With this message of practical service went the gospel of Christ. The women were told that if ill they would be provided with medical care; if they needed training for a career of honest service, it would be supplied; if there were dependent relatives, they would be cared for; if shelter alone were wanted, that would be provided. Whatever was necessary to help the victims of vice back to respectable life was freely pledged to them.

"Here comes the most shining chapter in the long and beautiful story. More than 200 of the women accepted the committee's offer and forsook the old life of shame."

Only the "worldly wisdom, driven by a deep Christian passion" of Marion Jackson and John J. Eagan, says Mr. Ellis, could have achieved such results as Atlanta shows. The story of these two men is romantic:

"They are David and Jonathan in their friendship. Young men of the same age, born and bred in Atlanta, they once were peculiarly antipathetic; but when Jackson became a Christian in the Torrey meetings the two found themselves drawn together by the great tie of Christian fellowship. It does not take a psychologist to explain this. The men held the great essentials in common. They were in unity in life's deepest purpose. Marion Jackson is a study in the unexpected consequences of vital religion. He was a born aristocrat, an aristocrat to his finger-tips, by birth, tradition, and aptitude; but when, in Dr. Torrey's preaching, the gospel gripped him, he became a democrat. He now has a New Testament passion for people. The simplicities of the Christian brotherhood shine out in his life and actions.

"Marion Jackson is a lawyer, and a good one. That explains why the method of the Men and Religion committee has been bomb-proof and water-tight. The advertisements were all written by him. Of course there was not money enough in Atlanta to hire professional brains that could write such advertisements as these. They had to be born of a trained mind and a flaming heart. Nobody ever thought of Marion Jackson as a man to write advertisements. Yet to-day if he cared to abandon his legal practise he could take those advertisements in his hand and secure employment with any advertising agency in the land.

"Hand in hand with Marion Jackson has gone John J. Eagan, whom the books write down as a capitalist. A quiet young man who inherited a fortune from his uncle, he had gone on his simple way as in the day when he did not possess wealth. The money that came to him he invested in securities that were in consonance with his Christian beliefs, for he is an earnest Presbyterian. This Atlanta campaign has thus far cost over \$12,000, \$6,500 of which was for advertising bills. One does not have to be much of a guesser to surmise where the money came from. We may be sure, tho, that the giver has had a 'run for his money,' in the phrase of the street. Judged by any standards, the Atlanta campaign has been more fun than can be got out of a fleet of aeroplanes or a garage full of racing automobiles. One would hunt far to find a happier man than John J. Eagan.

"In this Men and Religion Movement he has come to be dominated by a great idea, of which he is the apostle among his fellow business men. That is that business is a ministry, that a man should serve the world by his business. The rights and welfare of his employees and of the larger world which they represent should be the first consideration of business, taking precedence even of dividends. . . .

"What these two laymen have done, with the full and efficient cooperation of the churchmen of their city, is a revelation and a foregleam of the new era of efficient Christian patriotism which will utilize the most modern methods and the ripest worldly wisdom to bring to pass the reign of the kingdom in this present world."

JOHN J. EAGAN.

A capitalist of Atlanta, who is credited with financing the movement to clean the city of its vice resorts.

THE NEW KOREAN VERDICT

A VICTORY, even if incomplete, may be "tremendously significant and most gratifying." In this light *The Continent* (Chicago) views the verdict of the Appellate Court in Seoul, Korea, which reversed the earlier verdict of "the police-manufactured case charging a large company of Koreans, mainly Christians, with conspiracy to assassinate Count Terauchi, the Japanese governor-general of the province."

One hundred and twenty-three defendants were prosecuted for complicity in this alleged sedition and 106 were convicted, but the second decision, rendered March 20, convicted six and released as innocent the remaining hundred. *The Continent* reviews the later verdict:

"Of the six still held for the supposed crime, all have been granted a material reduction of sentence. Six men by the original verdict were sentenced to penal servitude of ten years each. Of these, one now goes free and the others are committed for six years only. Of nineteen previously receiving sentences of seven years each, all but one now escapes. The term for that one is commuted to five years.

"The six still in prison are the most prominent of the defendants, including the one man among the group who has an international reputation, Baron Yun Chi Ho, president of the Methodist College in Songdo. He and four others—Yang Ki Tak, Im Chi Chung, Yi Seung Hun, and An Tai Kak—stand sentenced for six-year terms, while Ok Kwan Pin, the sixth convict, is given five years. All of these men are alleged to have been leaders in the Sin Min Hoi, or New People's Society, which the Japanese insist was an association for revolution and assassination. The Koreans admit the existence of the society, but claim that its object was the peaceable education and uplift of the Korean masses. Baron Yun allowed his name to be used as one of the officials of this society, but apparently took no active part in directing it. The real leader of the movement was Yang, who served for several years as the editor of a patriotic daily published in Seoul. Im is a resident of Seoul, at whose house the Government affirmed that Yun met Yang to perfect the conspiracy, altho Baron Yun was able to show by unmistakable records that he was not in Seoul at all on the day alleged for this meeting. Yi and An were prominent citizens of Pyeng Yang, alleged to have been summoned to Seoul when Yun and Yang had elaborated their plot. Ok is a young man of twenty-two who is alleged to have been of particular use to the conspirators on account of his eloquence as a public speaker.

"Lyu, who originally received as heavy a sentence as Yun, but was acquitted on this trial, is a graduate of Japan's national military academy in Tokyo, and served with the Japanese Army in the Russian War. It would seem that his influential Japanese connections have worked in his favor."

The Continent feels that the verdict thus rendered ratifies its contention all along that "there never was the slightest real evidence to justify the allegation of Japanese police that Count Terauchi was the object of a plot of assassination." It goes on:

"Stared in the face by a judicial decision releasing a hundred men whom police charges had specifically marked as the instruments of a seditious plot, even the most biased must admit that the plot is totally disproved, even tho the alleged ringleaders are still held for punishment. And this means that torture alone could have produced the purported confessions of a conspiracy.

"Of course the great flaw in the finding lies in the court's failure to discharge all the defendants. But it must not be too harshly condemned for this. Altho the presiding judge throughout the trial showed the most unmistakable disposition to deal fairly with all the defendants, the missionaries could see that he still labored under tremendous pressure from the military

administration of the province. They had therefore but little faith in his ability to withstand the truculent demands of officials around him. That he and his colleagues under such circumstances have had the strength to go as far toward justice as they have is a monumental credit to the Japanese judiciary.

"Nevertheless, this satisfaction must not be allowed to obscure sympathy and concern for Baron Yun and his six compatriots who now, standing alone, become more obviously than ever a sacrifice to the 'face' of the Japanese police. It remains yet for the international protest which has liberated 117 of the unjustly accused Koreans to be exercised in behalf of the last six. For them undoubtedly an appeal will be made to the supreme court of Korea, in which the fully trusted Christian judge, Watanabe, has the deciding voice. But under the judicial practise of Japan, this court can only review points of procedure, and cannot investigate the case on its merits. So if the procedure below is technically regular, it may be impossible for Judge Watanabe to vacate these last sentences. In that case intercession for their pardon must be made to the Japanese Emperor."

Baron Yun Chi-ho is said to be suffering from incipient tuberculosis, and in the opinion of many of his friends, if he is incarcerated he will not live to serve the full term of his sentence.

INDIA'S SYMPATHY WITH TURKEY

OBSERVERS ON THE GROUND report that the Turk has not regarded his present conflict with the Balkan states as a holy war. Otherwise there would be no possible explanation of his failure at arms and his apparent failure in courage and warlike zeal. But his coreligionists of India view it differently. The belief is current among them, says W. E. Nicoll, a missionary in the Punjab, writing in the *United Presbyterian* (Pittsburg), that "the so-called Christian nations" are bent on Turkey's annihilation, "primarily in order to bring Islam into disgrace." The Powers, so it is held in India, have connived at, if not secretly abetted, this harassment of the enfeebled Turk. From the very beginning, therefore, of the present war, the interest even in the remote villages has been intense. Branches of the Red Crescent Society have been formed in all the large centers, and well-known members of the Moslem community have given the effort their hearty encouragement. "There seems to have been no doubt in the minds of the Indian Moslems but that their coreligionists were entirely in the right and were really very much maligned in their well-meant efforts to effect reforms in the Balkan mountains." The practical way in which sympathy is shown rather carries out this view:

"Some weeks ago a fully equipped Red Crescent corps of physicians and assistants sailed for Constantinople from Bombay. These men were recruited from various parts of India and great enthusiasm was manifested in getting them ready and sending them away. From reports that have been appearing in the papers since of their haranguing crowds in Constantinople and urging them to continue the struggle, assuring them of the united support of their Indian brethren, it would appear that the deputation was probably engaged in anything but humanitarian and neutral work, such as attending to the wounded and relieving the sick.

"While funds were being gathered some weeks ago the suggestion was seriously made from several quarters that it would be quite right to send the money that was being collected and promised for the establishment of a great sectarian Mohammedan university at Aligarh to help the poor, struggling Turks. Inasmuch, however, as the proposition to establish such a university had already received the sanction of the Government, the wiser heads saw that such a thing was manifestly improper and impolitic. The fact remains, however, that the rank and file were quite prepared for such a move and it reveals very clearly their attitude.

"Great Britain is often spoken of as the special guardian of Mohammedan interests in the Parliament of the World, since the King of England is the acknowledged sovereign of more Moslems than any other single potentate. The thinking men among the Mohammedan community have, of course, realized from the very beginning that the British Government and her

subjects must observe strict neutrality, but here again the Moslem 'man of the street' has not been slow to believe and suggest that Great Britain should take sides with the Turk and render him material assistance. No doubt the fact that the sympathies of the English people themselves were largely with the Balkan states has accentuated the feeling that the Government as such should do something tangible for the Turk to offset the prevailing sentiment of the people, such people forgetting for the moment that Great Britain is a constitutional monarchy and that the people would not tolerate for a moment such an attitude on the part of the Government, even were it disposed to show any favor, which people generally know it is not.

"This feeling that the British Government was not living up to its opportunities as the protector of holy Islam has been wonderfully accentuated during the progress of the negotiations for peace, especially when it became evident that the Powers were advising Turkey to accede, in large part, to the Allies' terms. Indian Mohammedans considered that the Powers in general, and Great Britain in particular, were proving traitors to Turkey and that their treachery was based largely upon the fact that they and the Allies were coreligionists.

"Another fact that has exaggerated this opinion is the alleged massacre of Mohammedans in the war area. Questions have been asked regarding these in Parliament and the ministers responding for the Government have been openly charged with evasion and duplicity when they replied that reliable information was difficult to secure and that reports of such massacres had been brought to the attention of the governments concerned. This has failed to satisfy Mohammedans' aspirations, which seemingly demand that Great Britain actively intervene to stop such atrocities."

To read the Indian Mohammedan press, says this writer, one would be led to believe that "the Turk was the most inoffensive and mild-mannered individual possible." Further:

"The Aga Khan of Bombay, probably the best known, at least abroad, of Mohammedan leaders in India, and withal a keen thinking statesman, and knowing doubtless on which side, politically speaking, his bread is buttered, has recently expressed himself quite fully regarding the sentiment of Indian Moslems toward the Turkish War. His highness says the present attitude of Indian Moslems on the subject often leads them to a position of useless negation. He himself has studied the Turkish position very carefully for some years, and particularly in this present crisis. The immediate question for Indian Mohammedans is relief of suffering in Turkey, to which they should concentrate their whole efforts. It would be a terrible thing for the Mohammedans of India if, through neglect on their part, thousands of their brethren in Turkey died. They must send money for the relief of the suffering and wounded, and for the help of the thousands of refugees who are now flocking from European Turkey into Asia Minor. These people want not only food but money to buy seed for the coming season and to reestablish themselves. It is equally incumbent to eschew any policy which may increase and prolong the sufferings of their coreligionists in Turkey. 'It does seem to me,' continues his highness, 'a cruel addition to the burdens which Turkish statesmen have to bear at this crisis to be harassed by irresponsible advice from Indian Mussulmans who know nothing of the grim realities of the position, and upon whom none of the grievous burdens of the war fall. How easy it is to bid others to fight for the honor of Islam when here we enjoy the serene comforts of peace and prosperity. It would be a good thing,' says his highness, 'if all these hundreds of thousands who are from here giving their advice were forced to make all the sacrifices that the war entails on the people of Turkey themselves.'

"In the course of the concluding portion of the article his highness says: 'Turkey must in the future be an Asiatic power. She must concentrate on Asia. Turkey as an Asiatic power can live and thrive only if she has the good-will, friendship, and support of England. England is the only country which has everything to gain and nothing to lose by a strong Turkey in Asia. Apart from any question of sentiment, it is to the interest of England that Turkey in Asia should become strong and prosperous. Here is a great opening for the Mussulmans of India, alike of serving England and Islam. Let them use all their influence through their loyal efforts, through their good-will, to bring England and Turkey together, and, in fact, to carry out in Asiatic Turkey the spirit of the Cyprus convention and the policy of Lord Beaconsfield. At last there is a possibility that the dream of many Mussulmans may come true, and that England and Turkey may become fast and firm friends.'"

REVIEWS OF NEW BOOKS

QUEEN VICTORIA'S DIARY OF HER GIRLHOOD*

Reviewed for THE LITERARY DIGEST by

E. S. NADAL

THIS diary of Queen Victoria's girlhood will make a great many friends for the Queen. Youth is always almost, if not quite, the most attractive thing in the world. But when the subject is the sovereign of one of the earth's great empires and is, besides, a clever and interesting young lady, the person combining these characteristics becomes very interesting indeed. Other interesting figures, besides the young lady, appear upon the scene, of which the chief are Lord Melbourne and Prince Albert. The diary covers the period of the courtship of Prince Albert and concludes with his marriage to the Queen. The story of the Prince's courtship is fairly interesting, but nothing like so interesting as the account of the Queen's friendship with Melbourne. The diary is almost all about Lord Melbourne, the Queen appearing as a little feminine Boswell, recounting the conversation of this attractive man. What a wonderful tutor he was! The mind of the young girl grows under the fostering influence of Melbourne's conversation as corn grows in the night after a rain. The antecedents of Lord Melbourne would not appear at first sight to qualify him to be a young lady's guardian and tutor. Two years before the Queen's accession he had appeared in court as the corespondent in a celebrated suit for divorce, in which, however, the verdict was a vindication of himself and Mrs. Norton. It was, indeed, charged by his friends that the suit was brought with the intention of preventing his remaining as Prime Minister after the Queen's accession. This was, however, the second occasion on which he had been obliged to appear in court as a corespondent. Furthermore, he did not come from forbears who were at all strait-laced, nor were his connections and associations of that character. His mother, altho a good mother to him, had not escaped the breath of scandal. He had had for a wife the clever and erratic Lady Caroline Lamb, the friend or enemy of Byron—the words in the case of such a lady are synonyms—whose escapades had been the talk of London. Such had been his antecedents. But it is the verdict of history that no man ever fulfilled more worthily the duties of such a position than he did. The situation was evidently not without its temptation, for he was very fond of his young charge. She on her part had an admiration for, and an interest in him, which might well in the case of a susceptible young lady, such as the Queen evidently was, have changed to a warmer sentiment. But he was a too loyal and honorable man to encourage the growth of any such feeling.

It is true that he was at that time fifty-eight years of age. But he was a very handsome man, and was the possessor of

many personal attractions, one of them being a delightful voice in speaking. He had abundant gifts of wit and entertaining talk, evidences of which appear on almost every page of this diary. His youth and middle age had been passed in one of the most interesting periods of the world's history. He could remember the great events of the French Revolution, and was a grown man during the Napoleonic period. In the events that followed he had a considerable share, and he was one of the Whig leaders at the time of the passage of the Reform Bill. With the great literature and the art, the pleasure and sport, and the society of that age he was familiar. He had known everybody. To the observation of all this brilliant life he had brought a fine intellect and humorous and whimsical fancy.

One wonders whether he always succeeded in making his talk suitable to the ears of the young lady. He had the old-fashioned habit of mixing up his language with a constant stream of profanity, a habit which he shared with many of the men of that day. Every substantive was qualified with the adjective or participle "damned" in such a manner as to be almost an impediment to the progress of conversation. It is said that he was once discoursing in this style to Sydney Smith, when Smith, thinking such language a rudeness to him in his character as clergyman, begged that his Lordship would assume everybody and everything to be damned and would proceed with the subject. Hayward, however, who tells the story, doubts whether Sydney Smith ever took such liberty with Melbourne. The diary contains no evidence that Melbourne did not succeed in repressing this characteristic in the presence of the Queen. This incident is an indication that he was usually successful in this endeavor. He was telling the Queen of the violent behavior of the women at the time of the Reform Bill agitation. These ladies seem to have been true grandmothers of the suffragettes of the present day. He heard one of them say "Hiss that black-guard Melbourne!" At hearing this word, at that time scarcely permissible before ladies in polite company, the Queen says that she felt her cheeks to redden.

The diary closes with the marriage. The indications are that the Queen passed at once from under the influence of Melbourne into the control of her young husband. Melbourne had assisted in bringing about the marriage, but the change could not have been altogether agreeable to him. Is there not some suggestion of this in the following well-authenticated incidents? The Queen's mind was greatly occupied with the question of the precedence at court to be allowed Prince Albert, and she was continually talking to Melbourne about it. He said finally—"For goodness' sake, ma'am, let's say no more about it. If the English people once take to making kings,

they soon begin un-making them." At another time the Queen said to Melbourne that she thought herself fortunate in the fact that the Prince took so little notice of the beautiful ladies there were about the court. Melbourne said: "It's full soon to begin to boast," at which the Queen was much put out. But the Prince remained to the end the most faithful and conscientious of men. He avoided society and devoted himself to public objects and to assisting the Queen in the duties of her office.

Prince Albert had the views and feelings of a German prince. He thought it the part of wisdom that the Queen and himself should live in great measure apart from society. It may have been that the life she led under the guidance of the Prince was happier than that of the young girl described in this diary, as the Queen said it was. But it was certainly not so brilliant nor so varied, and the record of it, as given in the Queen's "Journal in the Highlands," with its humdrum and rather vapid details, is infinitely less interesting. It hardly seems possible that the two accounts could have been written by the same person.

The character of Queen Victoria, during the latter part of her life, had not the winning qualities of the young girl of the diary. With a strong nature and a strong will, she had the defects that go with these qualities. She felt it to be her duty to uphold the dignity and power of the crown. This was probably due in part to the teachings of the Prince Consort. It is reported that she once said that she was a Stuart rather than a Hanoverian in her feelings. She once asked Lord John Russell if he did not think that rebellion was always wrong. He replied: "As a loyal subject of the House of Hanover, I can not say that it is." She had, besides, a strong sense of what was due to herself. A woman will fight for something she believes to be her due with a passion and courage which will not often be found in a man, and the Queen gave the impression of being capable of this. The author of a very interesting eulogy of her in the *Quarterly Review*, printed not long after her death, confesses that what she really believed in was the Divine Right. She looked as if she believed that. This faith gave her dignity and gave her strength. She was very dignified in appearance; it was surprising that any one under five feet should have so much presence. But it can not be said, at any rate when she appeared in public, that she looked amiable. She was a good deal feared, and perhaps she rather liked to be feared. We are told that her children were in awe of her. The editor of the diary says:

"To those accustomed to the easier manners of more recent times it is difficult to convey a sense of the atmosphere of Windsor during the reign of the Queen. Her extraordinary aloofness was its

* *The Girlhood of Queen Victoria.* A Selection from Her Majesty's Diaries between the years 1832 and 1840. Published by authority of His Majesty the King. Edited by Viscount Esher. In two volumes. New York: Longmans, Green & Co.

determining cause, but the effect was that of a shrine. Grave men walked softly through the rooms of the castle, and no voice was ever raised. The presence of the Sovereign brooded, so to speak, over the Palace and its environment. The desire to be negligently at ease never entered the mind. The air was rarefied by a feeling that somewhere, in a region unvisited by any but the most highly privileged, was seated, not in an ordinary armchair, but on a throne, the awe-inspiring and ever-dignified figure of the Sovereign.

There is perhaps some exaggeration in this, but it is near the truth. That she got a certain strength from this attitude can not be denied, combined, as it was, with a rectitude of character which commanded universal respect. Thus she was able to do things which English constitutional practice hardly allows to the Sovereign, and which a modern King of England could scarcely do. She could keep men out of office whom she did not like. Of course, she could not do this with the great men, such as Palmerston and Gladstone, whom, no doubt, she would have been glad to exclude. Their strength with the country was too great to admit of her doing this in their case. But she could and did do it in other cases. It is said that she kept from being Prime Minister Sir William Harcourt, whom she did not like and who had no such strength with the country as Palmerston and Gladstone had. Not only did she succeed in having her way about individuals, but, by the weight of her personal character, she was able to affect matters of public policy. She did this in part through that community of feeling which she had with the great English middle class whom she so well understood, and whose sympathy and respect she possessed so entirely. Lord Salisbury spoke of this characteristic of the Queen in a speech he made about her in the House of Lords just after her death. The late Confederate General Payne, of Virginia, commander of the Black Horse Cavalry, told me that he was in England for a short time during our Civil War, and had, while there, several interviews with Lord Palmerston. He said to Palmerston that he could not understand how the English, devoted as they were to monarchical and aristocratic government, should wish to see a great democratic power on the American continent, which would in time be certain to take the leadership of the Anglo-Saxon world. "I recognize the truth of that," said Palmerston. "This country is not strongly against the South, nor is the Government. But the Queen is, mainly on account of her feeling about slavery, and the Queen's feeling as to slavery is no doubt that of the country." Palmerston evidently thought the Queen's influence in this matter very important.

The Queen also felt an obligation to uphold the cause of good morals in a luxurious and frivolous society. She succeeded in keeping away from her court persons who had been proved to have transgressed the laws of morality. She had very serious views regarding her duty in this respect, of which this anecdote is an indication. A lady, it is said, was once talking to her about death and the future state, a subject which I have heard the Queen was fond of discussing. The lady said that one of the advantages of the future existence would be that not only should we meet the interesting people of

our own time, but we should meet those of other times as well, for instance, King David. But David would not quite do. "No," said the Queen, "I will not meet David." What a very limited acquaintance among royal personages in the next world could she have expected to have if she were so particular!

If the Queen had permitted herself to mix more in society than she did, would there have been any diminution of the public respect for the throne? I do not believe it. Of course, she could not have mixed in society, as was done by her sociable and good-humored son. But still she might have enjoyed the brilliant social resources and opportunities of London, with advantage to herself and to the world. Edward VII. in all probability could not compare in power of mind or force of character to his mother, but he was very popular. The Prince, as he was called in those days, was about everywhere and knew everybody. I remember one incident which gave me a notion of the extent to which he availed himself of the amusing features of London life. I went one evening to hear Toole in "Sergeant Buzfuz." Between the acts I was sitting in Toole's dressing-room while he was making up his face before a looking-glass, and I asked him whether he had not taken his idea of the part from some particular model. He replied that he had had such a model, and that it was Sergeant Ballantine. He said that the night before the Prince had been sitting in the chair which I occupied, while he was making up, and that when it was time to go on, the Prince had said: "Come, Toole, let's go in and have some more Ballantine." It is a question whether this sensible, tactful, and kind-hearted young man, assisted as he was by his beautiful and amiable wife, was not of as much use to the British monarchy as the serious-minded and able Queen Victoria.

NOVELS OF THE FIRST HALF OF THE YEAR

In the following lists of novels published in this country since January 1 this year, or which will be published before July 1, an effort has been made to secure, as far as possible, complete lists from all the well-known publishing houses that issue fiction regularly. As will be seen from a count, the total number of these books is 328.

The lists have been arranged according to publishing houses. It is believed that this system will make them more generally interesting than would be a compilation made alphabetically by authors' names. For one thing, it shows clearly how well distributed among the large houses devoted to fiction the output for this half year is.

Readers will perhaps recall two diagrams printed in THE LITERARY DIGEST of March 1, showing the number of all classes of books published in 1890 and the number published in 1912, and indicating a total increase of all classes from 4,559 books in 1890 to 10,903 books in 1912. Fred E. Woodward, of Washington, who compiled these diagrams, made the interesting point that, contrary to an almost general opinion among booksellers and readers, the percentage of fiction during these twenty-two years had not increased. In fact, the total of fiction in 1890 was 1,118, while the total in 1912 was 1,010—that is, a slight decline took place. When the relation of fiction

to all books published in these twenty-two years is sought, it is found that fiction has not kept pace with the general increase. Mr. Woodward showed that in 1912 only 9.3 per cent. of the whole number of books published belonged to the fiction class, whereas in 1890 the percentage of fiction to the whole was 24.5 and in 1900 it was 20.1 per cent. The lists that follow have been arranged alphabetically as to publishers' surnames:

Why You Get Greatest Satisfaction from a Baker

—Because the Baker is a practical, efficient, powerful automobile, possessing the luxury, dignity and appointment that can be found only in a car of the electric type.

—Because the Baker meets all the average operating requirements that could be expected from any car—ample speed, more mileage than ordinarily needed, and ability to take any hill where wheels will turn.

—Because the Baker is the most *broadly useful* car money can buy. It is at the disposal of a fifteen-year-old child—easy to operate, simple to handle. For social uses it is a car of unquestioned elegance and style—clean, quiet, convenient. The business or professional man finds it superior to the gasoline for city calls—no chauffeur needed, no engine difficulties, no carburetor, no ignition, no cranking. For city use it has every desirability of a gas car, with troubles banished and true dependability added.

—And we challenge any other maker to produce a car that will travel farther on a single charge, or involve lower upkeep cost, or give better service, year in and year out, than the Baker.

THE BAKER MOTOR VEHICLE COMPANY, CLEVELAND, OHIO

Builders also of Baker Electric Trucks. CANADA: The Baker Motor Vehicle Company of Canada, Ltd., Walkerville, Ont.
BRANCHES OR DEALERS IN PRINCIPAL CITIES

The Baker Victoria (ground model)

A favorite among those who prefer an open-body car. When necessary, ample protection from weather is secured by raising top and using rain curtains.

The Baker Coupe and The Baker Brougham

are closed models of unsurpassed beauty in lines and finish—low-flying body, long wheel base, handsome side lamps and two powerful search lights, wheel of lever steer, revolving front seat, "easy vision," low front windows.

Style— and Service

Not only have Ide Silver Collars a smart look—but they stand laundering best, and hold their shape because of the LINOCORD BUTTON-HOLES (found in no other collar) that don't "tear out."

Ide Silver Collars

2 for 25c— $\frac{1}{4}$ Sizes—In Canada, 3 for 50c

because correctly shaped, give you a well-groomed look, even though your clothes be most modest in cost.

The new Sussex is an absolutely exclusive shape—exhaling the atmosphere of the Strand and Piccadilly. More distinctive, more comfortable than any collar you have seen—durable and style-retaining because of its LINOCORD UNBREAKABLE BUTTONHOLES, front and back.

Buy the Sussex at your dealer's today. Other new and attractive Ide Shapes are the Cabaret, the Sanford, the Pembroke.

Spencer Turbine Vacuum Cleaners are being installed in the most important buildings of the day. Their efficiency, simplicity and durability have been proven in homes and skyscrapers.

SPENCER TURBINE VACUUM CLEANER

It stands to reason the Spencer will best solve your cleaning problem. It will accomplish the most difficult cleaning tasks more thoroughly and in only a fraction of the time usually expended.

Machines are for basement installation: made in 12 sizes, from ½ H.P., 4-sweeper to 40 H.P., 16-sweeper capacity. Send for catalog and list of 1,000 installations furnished as references. Very probably some of your acquaintances have already installed Spencer machines.

A Tarvia Town

THERE are many towns in this country which began with Tarvia years ago and finding it successful have extended its use on their roadways year by year as a matter of fixed policy. Such a town is Westfield, N. J., which now has 19 miles of tarviated streets.

Mr. A. W. Vars, the town engineer, reports that the "Tarvia B" treatment on all these streets averaged 1 1/2¢ per square yard for the season of 1912; compared with the cost of keeping down the dust and maintaining the road surface by any other method, this is a very low figure.

The roads have been free from dust and have not been seriously impaired by automobile traffic.

Tarvia acts as a binder and cements the road surface firmly together in a plastic matrix. Automobiles do not hurt such a surface but roll it down smoother.

The amount of new stone screenings needed for surface maintenance is greatly reduced by the Tarvia treatment and the road keeps in better condition. The longer the Tarvia treatment is maintained, the less the annual cost.

Booklets on request.

As Permanent as a Roof cut out of Solid Rock

Can you imagine anything more durable than a roof cut out of solid rock! Such a roof would be practically indestructible. Fire couldn't burn it. Acid fumes, gases, rain, snow, sun and extreme temperatures couldn't injure it.

A roof of this description—a roof that is cut from solid rock to all intents and purposes—is

J-M ASBESTOS ROOFING

This roofing is made by crushing solid Asbestos Rock and compressing the long fibres into a dense, homogeneous felt. Several layers of this rock felt are then permanently cemented together with nature's greatest water-proofer, Trinidad Lake Asphalt, making a light-weight roofing that is virtually a solid sheet of pliable stone.

J-M Asbestos Roofing forever rids you from the expense of repairs. No coating. No graveling. Everlasting. After more than a quarter century of service J-M Asbestos Roofing shows no signs of deterioration. It is the cheapest of all roofings from the cost-per-year standpoint.

Adapted to any building and any climate. Easily and quickly applied. If your dealer can't supply you, we will ship direct.

Write our nearest branch for sample of the Asbestos Rock from which this roofing is made and Illustrated Book No. 2386.

The Closet that Does Not Embarrass by Noisy Flushing

The installation of a Siwelclo Closet means freedom from the noisy flushing of the old-style closet, which reaches every part of your home and always seems loudest when guests are present. A Siwelclo is valued in every home of refinement, not only because of its noiselessness but for its thorough cleanliness.

A properly installed Siwelclo Closet is noiseless because we planned it to be noiseless, but it also fulfills every sanitary requirement—perfect flushing, security against sewer gas, etc.

Siwelclo Closets are made of Vitreous China, glazed at a temperature 1000 degrees higher than is possible with any other material. This makes a surface that actually repels dirt, like a china plate. Demonstrate this dirt-resisting quality by first trying to mark on a china plate, then on a kitchen utensil of white enameled iron.

Trenton Potteries Co. Solid Porcelain and Vitreous China fixtures are unequalled for service or beauty. If you are building or remodeling you will do well to consult with your architect about their installation. Your plumber will install them for you if you are making your own plans.

OHIO ART STEEL

1-PEWSTER TABLE AND CABINET

WARNING!

After perfecting the "OHIO" cabinet by years of effort, it is being imitated by others made to look like it, but with great inferior results. Beware of cheap imitations. Buy the original "OHIO" cabinet. Best by looking for the name.

SAVES

Time—Space—Rent—
and Stationery

Every square foot of space in your office counts money. Save money by installing the Ohio stand and cabinet. Occupies only 4 sq. ft. as compared with the 10 sq. ft. taken up by the old-style desk. It is

100% PRACTICAL

DESCRIPTION: Solid steel frame, absolutely indestructible, supports up to 100 lbs. weight of stationery. No drawers, no compartments, no doors, no locks. Always clean and sanitary. Wood platform—no need for under-operations. Easily moved to follow the light when on wheels. Half inch of steel makes it light and movable. Write full name and street to Ohio Art Steel Co., Toledo, Ohio, for your nearest dealer. The Ohio Art Steel Co. will send you a booklet on the subject of office furniture. It is a booklet of 100 pages, 15 days' free trial, and a booklet of 100 pages.

15 DAYS' FREE TRIAL

Write for a booklet on the subject of office furniture. It is a booklet of 100 pages, 15 days' free trial, and a booklet of 100 pages. The Toledo Metal Furniture Co., 2243 Dorr St., Toledo, Ohio

The Fountain Beverage

Welch's is not a manufactured drink.

It is not a make-believe, but is Nature's own combination of healthful and delicious fruit acids and sweetness, just as they have been brought to perfection in the skin of the grape.

Welch's

"The National Drink"

Thirst-quenching, cooling, satisfying—beneficial to old or young. Order a Welch Rickey (with lime juice), Welch Phosphate—or just plain Welch's at the fountain. Be sure you get Welch's. Then you are certain of the purity and high quality.

Get the Welch habit—
It's one that won't get you

If you cannot obtain Welch's of your dealer we will ship a trial dozen pints, express prepaid east of Omaha, for \$3.00. Sample four-ounce bottle mailed, 10c.

The Food That Builds Rugged Children

Thousands of youngsters ask for Heinz Peanut Butter every meal. Just because of its delicious flavor. Parents have a deeper reason for wanting them to have it. Children's food must go into *growth*, as well as satisfy appetite. They need *protein*. And

Heinz Peanut Butter

is rich in this valuable element. Little folks revel in it while it builds them up. The choicest peanuts, picked over and over to exclude all but the perfect kernels—roasted till the delicate flavor is fully brought out—then salted and ground. Made into creamy butter. One of the best of the

57 Varieties

And grown folks rival children in demanding Heinz Peanut Butter. Many housewives use it for cooking and for the table. Fine for louchéon sandwiches. Get a jar today.

Others of the famous "57": Euchred Pickle, Chili Sauce, Vinegars, Tomato Ketchup, Baked Beans, India Relish, etc.

Is Your Refrigerator Poisoning Your Family?

YOUR doctor will tell you that a refrigerator which cannot be kept clean and wholesome, as you can easily keep the Monroe, is always dangerous to your family.

The Monroe is the only Refrigerator with Genuine Solid Porcelain Food Compartment.

The "Monroe"

which can be kept free of breeding places for disease germs that poison food which in turn poisons people. Just clean porcelain—easy, but not possible of white, unbreakable porcelain, wave over an inch thick—nothing to crack, chip, or absorb moisture—as easily cleaned as a china bowl—except corner rounded—not a single crack, joint or any other lodging place for dirt and the germs of disease and decay. See it once for

Free Book About Refrigerators which explains all this and tells you how to materially reduce the health cost of living—how to have clean, more nourishing food—how to keep food longer without spoiling—how to pick down ice bills—how to guard against sickness—doctor's bills.

A NEW BOOK ON THE ARCTIC

Mikkelsen, Ejnar. *Lost in the Arctic.* 8vo. Pp. 395. New York: George H. Doran Company. \$5 net.

Arctic expeditions may be divided into two classes, those undertaken to make surveys—geographical and meteorological—and those dispatched to rescue from possible death those who have started out but not returned, or, at least, to recover their notes and diaries for the benefit of the scientific world. The writer and explorer whose book is before us made his voyage for the purpose of recovering and bringing back the relics of a predecessor. This pre-

decease was Mr. L. Mylius Erichsen, who started in 1906 to survey the as yet unexplored coast of northeast Greenland, covering over six degrees of latitude from Cape Bismarck to Cape Bridgmann. Altho he succeeded in accomplishing his survey and making valuable scientific discoveries, he and his companions perished. The voyage of Einar Mikkelsen was entered upon partly to look out for the ill-fated men and partly in an attempt to recover their journals. They found several reports of the lost explorer, one dated September 12, 1907, at Danmark Fjord; a second, dated August 8, 1907. These were both hopeful, and showed that an abundant supply of food had been available. Nothing more was to be recovered, and a return was made amid many adventures.

The public has been almost surfeited recently with the tales of Arctic and Antarctic expeditions. But Mr. Einar Mikkelsen's book contains what we may almost call new material. It reveals to us new facts with regard to the coast of Greenland and over which the hardships of the journey are relieved by days of plenty and sunshine. Added to this there is a personal element in the descriptions and adventures which make the book readable and interesting even to the reader who cares little for meteorology, scientific navigation, or cartography. We become acquainted with the personnel of the expedition, and there is a cheerfulness and almost gaiety in the tone of the narrative that we feel it has been a pleasure to travel with Captain Mikkelsen through the various scenes of his adventurous route. This route is set forth in a capital map, and the text illustrated with half-tones, and as far as we have tested it the index is full and accurate.

MISS COMAN'S WORK ON THE WEST

Coman, Katharine. *Economic Beginnings of the Far West*. Vol. I. Explorers and Colonizers. Vol. II. American Settlers. Illustrated. Cloth, 412, 450 pp. New York: The Macmillan Co. \$4 net.

It is fortunate for the reading and studying public that one who is an expert economic historian and who has already made a reputation with her "Industrial History of the United States," should have gone further and successfully completed a special study of a period and a subject that will be seen to be increasingly important as the days unfold. We hear much now of "problems of the Pacific." Had it not been for the advance of American settlers and their American hardihood into the Far West, American diplomatists might have striven in vain to gain a Pacific outlook, and Russia, Spain, France, England,—who knows?—might have been playing America's part in the Far East.

As may be expected from Wellesley's emeritus professor of economics, the work is a serious illuminating study. Miss Coman does well in letting some of the adventure and romanticism slip in, for that is true to the sources. After a section on the Spanish occupation and the earliest colonizing of New Mexico, Louisiana, Texas, and California, the writer turns northward and reviews the beginnings of the Northwest and the fur trade. In the first volume there naturally figure large the famous expeditions of Pike, La Salle, Ledyard, and Lewis and Clark, and the competing fur companies. The second treats of the rise and flood of transcontinental migration

"Standard" GUARANTEED PLUMBING FIXTURES

THE bathroom made sanitary and beautiful with "Standard" fixtures—is an investment in cleanliness and comfort from which the whole family draw daily dividends in pleasure and in health. The Guarantee Label each piece bears, is our specific assurance to you of highest sanitary quality and a long life of splendid service.

Genuine "Standard" fixtures for the Home and for Schools, Office Buildings, Public Institutions, etc., are identified by the Green and Gold Label, with the exception of one brand of baths bearing the Red and Black Label, which, while of the first quality of manufacture, have a slightly thinner enameling, and thus meet the requirements of those

who demand "Standard" quality at less expense. All "Standard" fixtures, with care, will last a lifetime. And no fixture is genuine unless it bears the guarantee label. In order to avoid substitution of inferior fixtures, specify "Standard" goods in writing (not verbally) and make sure that you get them.

HEALTH-STRENGTH-ENERGY Without Exercise, Drugs or Appliances.

I have discovered a fundamental principle for the development of energy, health and strength. A scientific foundation for the most important discovery in the field of physical development of the past hundred years. With this system you can produce the maximum degree of strength of which your body is capable of developing. You can have health, let me say again, as this system produces, strong, all-round energy and a quality of vitality that will not only aid you in overcoming any existing weakness but will produce health and strength.

You can develop a degree of energy such as is possessed by the powerful, dominant men of the world—the men that will lead health and success for you.

Read My Book.

What this system is, how it works and what it can do for you, are all told in my book "Building Energy."

A postage stamp will bring it. Send now.

Robert Duncan, Suite 302A, 1 Madison Ave., New York City

LOOK—A WATERPROOF SILK SUMMER HAT

"The new Harvard"—something distinctly new—also you can find from the conventional straw. Light, stylish, serviceable. Of waterproof silk, in four colors: shepherd plaid; dark gray; light or striped brown. You can buy "the Harvard" only of us. We offer it PREPAID THIS SUMMER at \$2. Money back if you don't like it. Order now—simple state and color and size. Write for 1913 Spring and Summer Style Book of Hats and Caps FREE. FRENCH CO., 253 Arch St., Philadelphia, Pa.

Wilson Bros

Athletic Union Suit

Licensed under
Klosed-Krotch Patents

Here is the summer undergarment of absolute comfort. Light, cool, easy fitting and possessing an exclusive advantage over all underwear of this style

—the most important improvement since the introduction of athletic underwear. The crotch is closed as in a pair of drawers. Front and rear openings are separate. No edges or buttons between the legs to bind or cut. Seat flap is buttoned so it can't gap or roll up in folds.

This is the only garment of this style licensed under the Klosed-Krotch patents. Identify it by the label. At your dealer's, or he can secure from us. \$1 and up.

Other furnishings bearing the
Wilson Bros
mark of quality include Shirts,
Gloves, Hosiery, Suspenders,
Neckwear, Handkerchiefs, etc.

528-536 So. 5th Ave.

label

with special emphasis on Missouri territory, Oregon, the Mormon movement, and the fascinating record of California's rise into prominence. The final section briefly considers the slavery question, the Pacific railroad, and the inducements to settlement offered by the Homestead Act. With this the "beginnings" end.

In all of the record Miss Coman has carefully avoided the Scylla and Charybdis of being too detailed on the one hand and too general on the other. She has avoided also the complications of diplomatic affairs, and yet has included enough to show how the economic progress of the territory molded the turn of events more inexorably than any other factor. The inclusion of extracts from many authors not generally accessible will make the book a source for illustrations as well as of sound opinions. A complete bibliography and full index round out an important historical and economic survey.

THE BROAD FEATURES OF ROMAN HISTORY

Stobart, J. C. (M.A.). *The Grandeur That Was Rome. A Survey of Roman Culture and Civilization.* Large 8vo, xxvii+352 pp. London: Sidgwick & Jackson. 30s. net.

This companion volume to "The Glory That Was Greece" (published in 1911 by the same author), does for Rome what was already so well done for Greece. The note that is struck and maintained is found in the remark in the Introduction that Rome "had to do for the West what Alexander had attempted for the East." The difference in the tasks is, however, taken into account, viz., that while Greece dealt with rival ancient but decadent civilizations, the Roman for the most part faced warlike but unsophisticated barbarians. The former lecturer on history in Trinity College, Cambridge, has gathered his narrative around six nuclei—The Beginnings of Rome; Conquest; The Last Century of the Republic; Augustus; Augustan Rome; and The Growth of the Empire. To these are added an epilog, which sketches rapidly the decline of Rome, including the brilliant periods of Aurelian with his patronage of Mithraism, and of Constantine with his patronage of Christianity; a chronological summary and bibliography (the latter the only really inadequate piece of work in the volume); and an Index. We must note also the presence of a series of illustrations on heavy paper (some of them in color and all of exceptionally fine quality) the enumeration and description of which fill over fifteen pages.

As a review of the broad features of Roman history—taking that in its broad sense as including government, statecraft, social and political development, law, art, literature, philosophy, religion, and morals—the work is satisfying. Here are sketched rather than portrayed the virtues and defects of Roman character, the successes and failures of public administration, and the flood and ebb of vigor in the body politic and social. The objects under review change in the discussion so rapidly, yet easily, that the fatigue which sometimes attends the reading of history is unfelt. The illustrations relieve the eye and satisfy the artistic instinct, while they make real to the mind the substance of the letterpress.

The publishers' part is nobly done. For

2c a Week Pays Wash Bill!

Electricity or Water-Power Does the Work

Just a "Twist of the Wrist" Starts or Stops the Machine!

The 1900 Motor Washers are now at work in thousands of homes. They are doing the work formerly done by women, at a cost of 2 cents a week for power. Saving thousands upon thousands of dollars in wash bills. Saving weeks of wash-day troubles. Leaving the women free to do other work while the machines are doing the washing.

The 1900 Motor Washer

Washes a Tubful in Six Minutes!

Handles Heavy Blankets or Dainty Laces.

The outfit consists of the famous room Washer with either Electric Motor or Water Motor. You turn on the power as easily as you turn on the light, and back and forth goes the tub, washing the clothes for dear life. And it's all so simple and easy that over-seeing its work is quite child's play.

**A Self-Working Wringer
Sent With Every Washer**

The motor room Washer and Wringer. We guarantee the perfect working of both. No extra charge for Wringer, which is one of the best made. **WRITE FOR FREE BOOK and 25 CENTS' FREE TRIAL OFFER!** Don't doubt! Don't say it can't be done. The free book proves that it can! And we do not ask you to take our word for it. We offer to send a 1900 Motor Washer on absolute **Free Trial** for an entire month to any responsible person. Not a cent of security—nor a promise to buy. Just your word that you will give it a test. We even agree to pay the freight, and will take it back if it fails to do all we claim for it. A postal card with your name and address sent to us today will bring you the book free by return mail.

2900-2901-2902-2903-2904-2905-2906-2907-2908-2909-2910-2911-2912-2913-2914-2915-2916-2917-2918-2919-2920-2921-2922-2923-2924-2925-2926-2927-2928-2929-2930-2931-2932-2933-2934-2935-2936-2937-2938-2939-2940-2941-2942-2943-2944-2945-2946-2947-2948-2949-2950-2951-2952-2953-2954-2955-2956-2957-2958-2959-2960-2961-2962-2963-2964-2965-2966-2967-2968-2969-2970-2971-2972-2973-2974-2975-2976-2977-2978-2979-2980-2981-2982-2983-2984-2985-2986-2987-2988-2989-2990-2991-2992-2993-2994-2995-2996-2997-2998-2999-3000-3001-3002-3003-3004-3005-3006-3007-3008-3009-3010-3011-3012-3013-3014-3015-3016-3017-3018-3019-3020-3021-3022-3023-3024-3025-3026-3027-3028-3029-3030-3031-3032-3033-3034-3035-3036-3037-3038-3039-3040-3041-3042-3043-3044-3045-3046-3047-3048-3049-3050-3051-3052-3053-3054-3055-3056-3057-3058-3059-3060-3061-3062-3063-3064-3065-3066-3067-3068-3069-3070-3071-3072-3073-3074-3075-3076-3077-3078-3079-3080-3081-3082-3083-3084-3085-3086-3087-3088-3089-3090-3091-3092-3093-3094-3095-3096-3097-3098-3099-3100-3101-3102-3103-3104-3105-3106-3107-3108-3109-3110-3111-3112-3113-3114-3115-3116-3117-3118-3119-3120-3121-3122-3123-3124-3125-3126-3127-3128-3129-3130-3131-3132-3133-3134-3135-3136-3137-3138-3139-3140-3141-3142-3143-3144-3145-3146-3147-3148-3149-3150-3151-3152-3153-3154-3155-3156-3157-3158-3159-3160-3161-3162-3163-3164-3165-3166-3167-3168-3169-3170-3171-3172-3173-3174-3175-3176-3177-3178-3179-3180-3181-3182-3183-3184-3185-3186-3187-3188-3189-3190-3191-3192-3193-3194-3195-3196-3197-3198-3199-3200-3201-3202-3203-3204-3205-3206-3207-3208-3209-3210-3211-3212-3213-3214-3215-3216-3217-3218-3219-3220-3221-3222-3223-3224-3225-3226-3227-3228-3229-3230-3231-3232-3233-3234-3235-3236-3237-3238-3239-3240-3241-3242-3243-3244-3245-3246-3247-3248-3249-3250-3251-3252-3253-3254-3255-3256-3257-3258-3259-3260-3261-3262-3263-3264-3265-3266-3267-3268-3269-3270-3271-3272-3273-3274-3275-3276-3277-3278-3279-3280-3281-3282-3283-3284-3285-3286-3287-3288-3289-3290-3291-3292-3293-3294-3295-3296-3297-3298-3299-3300-3301-3302-3303-3304-3305-3306-3307-3308-3309-3310-3311-3312-3313-3314-3315-3316-3317-3318-3319-3320-3321-3322-3323-3324-3325-3326-3327-3328-3329-3330-3331-3332-3333-3334-3335-3336-3337-3338-3339-3340-3341-3342-3343-3344-3345-3346-3347-3348-3349-3350-3351-3352-3353-3354-3355-3356-3357-3358-3359-3360-3361-3362-3363-3364-3365-3366-3367-3368-3369-3370-3371-3372-3373-3374-3375-3376-3377-3378-3379-3380-3381-3382-3383-3384-3385-3386-3387-3388-3389-3390-3391-3392-3393-3394-3395-3396-3397-3398-3399-3400-3401-3402-3403-3404-3405-3406-3407-3408-3409-3410-3411-3412-3413-3414-3415-3416-3417-3418-3419-3420-3421-3422-3423-3424-3425-3426-3427-3428-3429-3430-3431-3432-3433-3434-3435-3436-3437-3438-3439-3440-3441-3442-3443-3444-3445-3446-3447-3448-3449-3450-3451-3452-3453-3454-3455-3456-3457-3458-3459-3460-3461-3462-3463-3464-3465-3466-3467-3468-3469-3470-3471-3472-3473-3474-3475-3476-3477-3478-3479-3480-3481-3482-3483-3484-3485-3486-3487-3488-3489-3490-3491-3492-3493-3494-3495-3496-3497-3498-3499-3500-3501-3502-3503-3504-3505-3506-3507-3508-3509-3510-3511-3512-3513-3514-3515-3516-3517-3518-3519-3520-3521-3522-3523-3524-3525-3526-3527-3528-3529-3530-3531-3532-3533-3534-3535-3536-3537-3538-3539-3540-3541-3542-3543-3544-3545-3546-3547-3548-3549-3550-3551-3552-3553-3554-3555-3556-3557-3558-3559-3560-3561-3562-3563-3564-3565-3566-3567-3568-3569-3570-3571-3572-3573-3574-3575-3576-3577-3578-3579-3580-3581-3582-3583-3584-3585-3586-3587-3588-3589-3590-3591-3592-3593-3594-3595-3596-3597-3598-3599-3600-3601-3602-3603-3604-3605-3606-3607-3608-3609-3610-3611-3612-3613-3614-3615-3616-3617-3618-3619-3620-3621-3622-3623-3624-3625-3626-3627-3628-3629-3630-3631-3632-3633-3634-3635-3636-3637-3638-3639-3640-3641-3642-3643-3644-3645-3646-3647-3648-3649-3650-3651-3652-3653-3654-3655-3656-3657-3658-3659-3660-3661-3662-3663-3664-3665-3666-3667-3668-3669-3670-3671-3672-3673-3674-3675-3676-3677-3678-3679-3680-3681-3682-3683-3684-3685-3686-3687-3688-3689-3690-3691-3692-3693-3694-3695-3696-3697-3698-3699-3700-3701-3702-3703-3704-3705-3706-3707-3708-3709-3710-3711-3712-3713-3714-3715-3716-3717-3718-3719-3720-3721-3722-3723-3724-3725-3726-3727-3728-3729-3730-3731-3732-3733-3734-3735-3736-3737-3738-3739-3740-3741-3742-3743-3744-3745-3746-3747-3748-3749-3750-3751-3752-3753-3754-3755-3756-3757-3758-3759-3760-3761-3762-3763-3764-3765-3766-3767-3768-3769-3770-3771-3772-3773-3774-3775-3776-3777-3778-3779-3780-3781-3782-3783-3784-3785-3786-3787-3788-3789-3790-3791-3792-3793-3794-3795-3796-3797-3798-3799-3800-3801-3802-3803-3804-3805-3806-3807-3808-3809-3810-3811-3812-3813-3814-3815-3816-3817-3818-3819-3820-3821-3822-3823-3824-3825-3826-3827-3828-3829-3830-3831-3832-3833-3834-3835-3836-3837-3838-3839-3840-3841-3842-3843-3844-3845-3846-3847-3848-3849-3850-3851-3852-3853-3854-3855-3856-3857-3858-3859-3860-3861-3862-3863-3864-3865-3866-3867-3868-3869-3870-3871-3872-3873-3874-3875-3876-3877-3878-3879-3880-3881-3882-3883-3884-3885-3886-3887-3888-3889-3890-3891-3892-3893-3894-3895-

adornment or for use this and the companion volume are well suited.

PACIFIC PROBLEMS

Fox, Frank. *Problems of the Pacific.* Cloth, pp. 294. Boston: Small, Maynard & Co. \$2 net.

English writers seem bound to try to awaken America to the importance of the problems of the Pacific and to the necessity of standing by Great Britain whatever happens. Mr. Lawton's able book had much to say of that, and now Mr. Fox comes pleading the same cause. The thesis of the latter's book is that the next great struggle of civilization will come in the Pacific basin and the prize will be the supremacy of the world. "Shall it go to the white race or the yellow race? If to the white race, will it be under the British flag, or the flag of the United States, or of some other nation?" This is a bold stating of the problem, but it begs the question as to whether one nation alone can or will desire so to dominate before there occurs a coalition of two powers or more. Is the history of European jealousy to repeat itself in the East?

Fortunately Mr. Fox in the main deals with more immediate issues, and he does it in a lively journalistic fashion—so much so, in fact, that one sometimes hesitates to trust the "head-liner" style. He takes up in succession the political and strategic situations of each of the important powers concerned, with especial reference to the position of Great Britain and her colonies. Population, industry, naval and military strength, natural resources, all come in for their share of consideration.

Of particular interest to Americans are his chapters on the United States and the Panama Canal as giving an Englishman's view of us. Being positively certain of American ambitions for the Pacific, he says:

"Supposing, then, the United States to continue her present commercial and industrial progress; supposing her to gradually tighten her hold on the rest of the American continent; supposing her to overcome certain centrifugal forces now at work, the problem of the Pacific, should the United States decide to play a 'lone hand,' will be solved. It will become an American lake, probably after a terrible struggle in which the pretensions of the yellow race will be shattered, possibly after another fratricidal struggle, in which British possessions in the Pacific, Australia, and New Zealand, equally with Canada, will be forced to obedience."

One wonders whether the wildest American imperialist dreams ever equaled those of Mr. Fox in trying to think American thoughts before Americans think them! Again:

"If the American citizen to-day is considered as tho he were a British citizen of some generations back, with a healthy young appetite for conquest still uncloyed, some idea near the truth will be reached. But since the deference exacted by public opinion nowadays compels some degree of pretense and does not permit us to parade our souls naked, it is improbable that the United States citizen will adopt the frank and freebooting attitude of the Elizabethan Englishman when he was laying the foundations of his empire by methods inspired somewhat by piracy as well as patriotism. . . . It was sufficient for Francis Drake to know that a settlement was Spanish and rich. The attack followed. The United

Palmolive Beauty

DO you want your skin to be soft, clear and beautiful? Then use *Palmolive*—the soap that cleanses, soothes and refreshes the tenderest skin because it contains *palm* and *olive* oils perfectly blended by our scientific method.

Long before the days of Cleopatra, palm and olive oils were the chief requisites of the toilet.

Today they are made

more efficient by their combination in the beautiful green cake, called *Palmolive*, which you can buy wherever soaps are sold.

Nothing in *Palmolive* will irritate even a baby's skin. It has a delicately faint Oriental odor. Try it for toilet and bath—15c the cake. It outsells all other high-grade toilet soaps. You will find the reason in the use of *Palmolive*. Send two 2c stamps for sample and free booklet, "The Easy Way to Beauty."

Made by B. J. Johnson Soap Co., Milwaukee, Wis.

PALMOLIVE SHAMPOO makes the hair lustrous and healthy and is excellent for the scalp. It rinses out easily and leaves the hair soft and tractable. Price, 50 cents.

PALMOLIVE CREAM cleanses the pores of the skin and adds a delightful touch after the use of *Palmolive* Soap. Price, 50 cents.

N. B.—If you cannot get *Palmolive* Cream or Shampoo at your local dealer, a folded package of either will be mailed prepaid on receipt of price.

**A Low Cost
Permanent Roof
for Finest Homes**

**Guaranteed
for 10 Years**

Red, Garnet or Gray-Green. Natural-Color Shingles of Finely Crushed Slate or Granite, which add distinction and character to modern dwellings.

Fire-resisting, frost-defying, rain-proof, wind-tight. Cost no more than wood shingles, yet last longer. Lie perfectly smooth and flat—cannot warp, crack, split, curl, or blow off. Never need painting. Always hold their color. Light, strong and durable—easily and quickly laid—no reinforcing of roof necessary. Adaptable to every style of pitched roof. Non-conductors of heat and cold. Save part of insurance cost.

**REYNOLDS
Asphalt Shingles**

These are not an untried experiment. We are the ORIGINAL MAKERS of Flexible Asphalt Slate Shingles, and tested our product for ten years before putting it on the general market. Right here in Grand Rapids, where climatic changes are extreme, our shingles, after 10 years exposure to every kind of weather, look as good as the day they were nailed on. Why waste your money in buying quick-rotting wood shingles, which catch fire from the first spark? Uniform in size—8 in. x 14 in.—hold up to the weather. Made of pure asphalt, covered with finely crushed slate or granite pressed in under tremendous pressure.

your shutters

The Mallory Shutter Worker

keeps out the flies and mosquitos that come in swarms with the Spring time. You needn't raise the screens an inch to open, close or lock the shutters. If your hardware dealer hasn't the Mallory, send us his name. We will see that he can supply you.

**Mallory Mfg. Co., 522 Broad Street
FLEMINGTON, N. J.**

States needs to know that a possession is foreign, is desirable, and is grossly ill-governed before she will move a remonstrance in the sacred name of Liberty. Since good government is an ideal which seldom comes at all close to realization, and the reputation of no form of administration can survive the ordeal of resolute foreign criticism, the practical difference is slight. The American Empire will grow with the benediction always of a high moral purpose; but it will grow."

The book will provoke much thought, and with Americans occasional smiles. In its references to current events the book is at points a year behind.

OTHER BOOKS WORTH WHILE

Blythe, Samuel G. The Making of a Newspaper Man. 12mo, pp. 239. Philadelphia: Henry Altman Company.

Mr. Blythe must have suffered all his life from the pun so easily perpetrated on his surname; but that word is the only one which adequately describes the spirit in which he has pursued his toilsome way from the most humble to one of the best positions in contemporary journalism. His volume is not an account of the making of a newspaper man in the abstract—that is, it is not a work of the text-book sort, but rather a bit of autobiography, illustrative of ways and means by which men rise in this adventurous and strenuous field of labor. He has unconsciously disclosed to his readers some of the secrets of his advancement. Mr. Blythe was made for success in journalism and deserves all he has got from it.

Roberts, Charles G. D. The Feet of The Furtive. Pp. 264. New York: The Macmillan Company. \$1.35.

This is a collection of stories, some of them previously published, by one of our most popular animal writers, popular because he writes from actual knowledge and experience, inspired by real affection for the denizens of the woods. And his tales are full of interest for both young and old. The author's descriptions are poetic and graphic. He relates dramatic and pathetic episodes in the lives of the lynx, rabbit, moose, bat, or deer with a sympathetic touch which makes the lives of the animals vivid and enthralling. Best of all, however, Mr. Roberts does not distort the truth in order to make his stories more thrilling, but tells an unvarnished tale of animal life and its natural tragedies. The stories are fascinating and the form of narrative most entertaining.

Campbell, Cyril. The Balkan War Drama. 8vo. Pp. 206. New York: McBride, Nast & Company. \$1.40.

Mr. Campbell was a special correspondent of the London Times who was wise enough to follow the intimation that gentlemen of the press would have better opportunities for acquiring information if they remained in the capitals than if they left for the front. He, therefore, obtained the best information available, and gives us a very clear idea of the Balkan situation before the war, the circumstances that compelled the breaking out of hostilities, and the character of each nation engaged in the struggle. It is convenient thus early to see the character of the Balkan War and the battles, including Rumanovo, so well described. The photographs add to the value of this timely work, which does credit to the daring and judgment of its clever author.

**WICKES
Oak Refrigerator**

Opal Glass
Lined

\$31.75

Direct from factory to user

Here's lifetime refrigerator service and satisfaction for only \$31.75! A genuine "WICKES," made of Solid Oak and lined throughout with beautiful sanitary OPAL GLASS, 7-15 in. thick. "Better than marble."

Measurements: Height 45 in.
Width 36 in. Depth 21 in.
Ice Capacity 100 pounds

A splendid example of the fine cabinet work for which The Brunswick-Balke-Collender Company has been famous for over half a century. At the factory price, this model costs you no more than an ordinary "enameled" refrigerator.

Tile Exterior, German-Silver Trimmed, **\$45**
same size Refrigerator, specially priced.
We also make Refrigerators from \$16 upwards.

**Investigate the Wonders of
Double Refrigeration**

The Wickes Model 230, at the factory price of \$31.75, is not only a great bargain, but the Wickes principle, which gives double refrigeration from every pound of ice, means amazing economy in ice bills. Investigation will prove it. Money refunded if the WICKES is not exactly as represented.

Richly Illustrated Catalog Free

Shows all sizes and styles of Wickes Refrigerators, explains Wickes principle of double refrigeration, quotes low factory-to-user prices. Write now to Dept. 2-M

CURRENT POETRY

IN his scholarly and interesting book, "The English Lyric" (Houghton Mifflin Co.), Prof. Felix E. Schelling comments upon the large number of poems now written and printed, and, while he admits that the diffusion of an interest in poetry has bettered the technic of our versifiers, he is inclined to believe that it has kept poetry on a dead level of mediocre excellence, and has somewhat lowered our literary standard. Too many people, he thinks, are attempting this difficult art. He lists some of the easily recognizable types of verse which particularly annoy him. "The lyrical address to flower, beast, sunset, or season, each of these things vocal and solicitous to teach unhappy man some fine lesson or other, the sentimental or humorous poem of childhood, the tender lyric of regret for a fair maid who died young or married the market-gardener—who does not know these things? . . . These things nearly any one can turn out now . . . in facile rime and with a requisite precision as to the number of syllables: and in some places our taste has not sufficiently progressed for the majority to prefer silence."

Professor Schelling's criticism may fairly be applied to much of the verse appearing in American and English periodicals. But there is room for the poem that has no new thought, that expresses beautifully some idea dearer because of its familiarity. Poems of this sort are certainly to be preferred to those having no charm but novelty, to those written deliberately to startle the reader. And we have, fortunately, several poets with messages not at all commonplace, poets who write because of their necessity of uttering truths that dominate their lives. Such a poet is Evelyn Underhill, whose studies of mysticism are already counted standard works. "Immanence" is the name of a book of her poetry recently published by E. P. Dutton & Company. These poems, some of which have already been quoted in these columns on their appearance in English periodicals, are decidedly out of the ordinary. Miss Underhill is thoroughly a mystic, thoroughly aware of the presence of the supernatural in the natural. She has not the splendid rhetoric of Francis Thompson nor the passionate devotion of Coventry Patmore, but she is spiritually akin to them both. The poem which we quote illustrates her courageous faith as well as her artistry.

The Liberated Hosts

BY EVELYN UNDERHILL

*As clouds sweep over the moon,
The hosts of the dead pass by:
They veil the terrible face,
The ineluctable face of the sky.
They fill the winds of the world
With the sound of their gentle breath;
They temper the glitter of life
By the merciful shadow of death.*

How should we bear our life
Without the friendship of the happy dead?
The many-meshed deceit
Of sense, heart's cold and heat,
The feverish strife,
By which encompassed
We grope our way
Toward the peopled splendors of their day?
They see
The steadfast purpose of eternity.

Make new walls and ceilings
of **BEAVER BOARD**—and
they will never crack.

THAT'S one great Beaver Board advantage over lath and plaster—and there are forty others.

Beaver Board is a pure-wood-fibre product—light, strong, clean and wholesome, firm and permanent.

It isn't a mere covering for walls—it's the whole wall, except the timbers to which it is nailed.

The panels are nailed in position, then painted, and the decorative panel-strips put in position. That's all.

With plaster you build several walls, one over the other: First lath; then a coat of plaster; then another; probably a third; then wall-paper. It means delay, litter, confusion at every step—and a less artistic, less durable and less sanitary wall in the end.

Cover old walls and ceilings
with **BEAVER BOARD**—and
they'll be better than new.

BETTER, because they won't crack and deteriorate with age, are warmer, and resist the passage of sound.

Better looking, because the pebbled surface of Beaver Board is a perfect surface for painting in the soft, restful color-effects so suggestive of good taste.

More sanitary—because the pure-wood-fibre contains no poisonous or unwholesome ingredients.

The remodeling uses of Beaver Board are as important as its use in new buildings.

Helpful suggestions to meet your individual wall and ceiling problems will be gladly given by our Designing Department with no obligation on your part.

Write for painted sample and "Beaver Board and Its Uses," a book that shows by photographs of real rooms, the wide field of Beaver Board use.

Sold by builders' supply, lumber, hardware and paint dealers and decorators, in sizes to meet all average requirements.

GENUINE BEAVER BOARD is patented and has our registered trade-mark on the back of each panel and sample. It has also a light cream color all the way through, that comes only by the use of sanitary, durable **PURE-WOOD-FIBRE**. Insist on seeing this trade-mark and color before buying.

The Beaver Companies

United States: 113 Beaver Road, Buffalo, N. Y.
Canada: 315 Wall Street, Beaverville, Ottawa.
Great Britain: 4 Southampton Row, London, W. C.

Nailing Beaver Board in the walls of a new room. Construction is rapid, easy and permanent.

Nailing Beaver Board over an old plastered and papered wall. No more cracks and repapering. In these pictures panel strips are shown, to give the effect, but in actual construction are not put on till after the board is all up and painted.

BEAVER BOARD

The FAMILY Shoe Stretcher
For Men and Women

Don't let Your Feet Suffer from tight or ill fitting shoes. Corns, bunions, calluses stop hurting and disappear if you restore the pressure which is the cause of all foot trouble. The Improved Family Shoe Stretcher is a scientific device (look at the picture) which by simple adjustment distends the shoe wherever necessary—produces perfect fit, ease and comfort and makes your shoes wear longer. Lasts a lifetime. Endorsed by doctors and chiropodists. Write TODAY for FREE BOOKLET giving full information with list of best things for foot comfort. THE PEDICURE CO., Dept. 4, Buffalo, N. Y.

Tell Me Your Foot Troubles

It will ease your Mind;
I will ease your Feet.
Enlarged Joints Reduced and

103 Fourth St., Bauman, Pa.

A Graduation Gift

—the graduate himself would choose. Young men, especially, are proud to own a Gruen Verithin Watch—proud of the admiration its distinctive beauty always wins—proud of the reputation it gives them for promptness and accuracy in the affairs of men.

GRU-EN VERITHIN WATCH

Only half as thick as the ordinary watch, it alone possesses that "style" which the young man of today so greatly values. How we secured this beautiful thinness, yet retained full size and strength of parts is shown in the illustration below.

With this new, mechanically correct wheel arrangement as the foundation, skilled Swiss watchmakers finish and adjust every part by hand after the machines have done their work, thus building up each Gruen Verithin as a genuine thin, modern watch, combining with its beauty, an accuracy which meets the most exacting time-keeping requirements.

Write today for the "Story of the Gruen Verithin." With it you will send you the names of those jewelers—real watchmakers—who are the Gruen agents in your locality.

Men's and Ladies' Sizes

YEARLY SALE 100 MILLION
THE O. K. MFG. CO., Syracuse, N. Y.

Their care is all for us; they whisper low
Of the great heritage
To which we go.
As one may tell a child of tender age
Of manhood and its joys,
They from our toys
Call us to contemplation of the light.
We, all unknowing, wage
Our endless fight
By ghostly tanners led,
By arms invisible helped in the strife.
Without the friendship of the happy dead
How should we bear our life?

Few of Theodosia Garrison's poems appear in the magazines nowadays. Those that we find show that she has retained her power over rime and rhythm and has gained in vigor and concentration. We take the following poem from *Harper's Magazine*.

The Dreamers

BY THEODOSIA GARRISON

The gipsies passed her little gate—
She stooped her wheel to see
A brown-faced pair who walked the road,
Free as the wind is free;
And suddenly her tidy room
A prison seemed to be.

Her shining plates against the walls,
Her sunlit, sanded floor,
The brass-bound wedding-chest that held
Her linen's snowy store,
The very wheel whose humming died—
Seemed only chains she bore.

She watched the foot-free gipsies pass;
She never knew or guessed
The wistful dream that drew them close—
The longing in each breast
To some day know a home like hers,
Wherein their hearts might rest.

The *London Saturday Review* prints these seasonable verses. They are old-fashioned, but exquisitely made. "Slanting evening showers" is excellently descriptive.

To a Linnet in a Cage

BY F. E. LEDWIDGE

When spring is in the fields that stained your wing,
And the blue distance is alive with song,
And busy quiet of the gabbling spring
Rock lilacs red and long,
At dewy daybreak I will set you free,
In ferny turnings of the woodbine lane,
Where faint-voiced echoes leave and cross in glee
The hilly-swollen plain.

In drafty houses you forget your tune,
The modulator of the changing hours
You want the wide air of the moody noon,
And the slanting evening showers—
So I will loose you, and your song shall fall,
When noon is white upon my dewy pane,
Upon my eyelids, and my soul recall
From worlds of sleeping pain.

Seldom has a London fog been described with more convincing realism than in the verses below. They are taken from "A Strange City," a long and powerful poem in *The English Review*.

The Fog

BY W. H. DAVIES

I saw the fog grow thick,
Which soon made blind my ken;
It made tall men of boys
And giants of tall men.

You could
dip this
house in
water

Unprotected walls of stucco, concrete or brick absorb much water, becoming damp, unsanitary and disfigured. But they can be waterproofed and beautified by an application of

TRUS-CON STONETEX

APPLIED WITH A BRUSH

A liquid cement coating which becomes an inseparable part of the wall, sealing all pores and filling hair-cracks. Hard as flint. Dampproof, weather-resisting. Gives uniform, artistic color. Furnished in a variety of tints.

Trus-Con Waterproofing Paste

Trus-Con Waterproofing Paste, added to the water used in mixing cement, makes concrete and stucco walls waterproof and dampproof. Use it when you build. Don't have a "waterlogged" house.

Is your cellar damp? Write us for free advice. It will pay you to learn about Trus-Con Waterproofing Products. Write for full information, telling us your needs.

The Trus-Con Laboratories
1236 Trus-Con Bldg. Detroit, Mich.
Waterproofing—Dampproofing—Technical Points

Cornell Sectional Cottages, Garages, Churches, School-Houses, etc. Built in sections, and are quickly erected by joining sections together. Skilled labor is not necessary. All sections are numbered. Built of first-class material. Buildings are as durable as if built on the ground. We build houses to meet every need. We pay freight. Ask catalog for 4c stamp.
WYCKOFF LUMBER & MFG. CO., 408 Wyckoff St., Ithaca, N. Y.

"RANGER" BICYCLES

Are equipped with puncture-proof tires, imported roller chains, imported English flanged sprockets, English featherweight steel mud guards, imported Brampton pedals, motor style saddles, bars and grips, and other distinctive features possessed by no other bicycle. No effort or expense has been spared to make the "Ranger" the World's Best Bicycle. Improved factory methods and greatly increased output for 1913 enable us to make a marvelous new price offer. Something very special to the first purchasers of 1913 models in each town. Write us today.

WE SHIP ON APPROVAL

without a cent in advance, to any person, anywhere in the United States, and prepare the freight. We only ask you to examine and try the "Ranger" without a cent expense to yourself before you think of buying any other bicycle.

10 DAYS' FREE TRIAL

is allowed on every "Ranger" bicycle. Not a cent cost to you if you do not wish to keep it after riding it for 10 days and putting it in every use. Our "Ranger" bicycles are of such high quality, handsome appearance and low price that we are willing to ship to you, prepaid, for your examination and trial, and leave it entirely to you whether you wish to keep it or not.

LOW FACTORY PRICES Our great output, perfected methods and machinery enable us to offer you direct from the factory the best bicycle ever produced at a price that will be a revelation to you. Do not buy a bicycle or a pair of tires until you receive our large, complete catalog and learn our direct factory price and remarkable special offer.

SECOND-HAND BICYCLES—a limited number taken in trade by our Chicago retail store will be closed out at once, at \$3 to \$8 each. Descriptive bargain list free.

RIDER AGENTS WANTED in every town and locality to ride and exhibit a sample long "Ranger" bicycle furnished by us. In your spare time you can take many orders for our bicycles, tires and sundries. Write at once for our large Catalog and a remarkable special proposition we will make you on the first 1913 models going to-poor town.

TIRES, lamps, cyanothers, parts, repairs and everything in the bicycle line at half usual prices. Do not wait—write today for large catalog containing a great fund of interesting, useful bicycle information. It only costs a postal to get everything. Write it now.

MEAD CYCLE CO., Dept. S-172, CHICAGO

It clutched my throat, I coughed;
Nothing was in my head
Except two heavy eyes
Like balls of burning lead.

And when it grew so black
That I could know no place,
I lost all judgment then
Of distance and of space.

The street lamps, and the lights
Upon the halted cars,
Could either be on earth
Or be the heavenly stars.

A man passed by me close,
I asked my way, he said,
"Come, follow me, my friend"—
I followed where he led.

He rapt the stones in front,
"Trust me," he said, "and come";
I followed like a child—
A blind man led me home.

From Margaret Root Garvin comes "A Walled Garden" (The Mosher Press). Miss Garvin's verse is simple and graceful. She sings charmingly of small things and occasionally reaches the heights. The poem we quote is a sympathetic appreciation of an intimate aspect of nature.

A Pathway Overgrown

BY MARGARET ROOT GARVIN

Lost thy leading,
Little Path,
In the weeds' wild aftermath!
Passed by wayfarers unheeding,
Where the scythe has left no swath.

Path, long-pining!
Once her free
Footprints paved thee goldenly;
Then thy way was straight and shining
As the moon-path on the sea!

All thy roaming—
'Neath the fir,
Or where meadow blossoms were,
Or by brookside—was a homing
To her doorway, unto her!

Some hope-taken
Thou dost yearn,
Yet this curtaining of fern,
Where no frailest frond is broken,
Hints her footsteps' unreturn.

Haste thy passing!
Since thy soul,
Seeking her, must find but dole;
Wealth of joy no more amazing—
She is gone who was thy goal!

Lippincott's Magazine prints this new song of the seasons—colorful, musical, and thoughtful.

The Seasons of the Heart

BY EDWARD WILBUR MASON

When meads are fair with green of spring,
When April's moon is bright,
Then hope is like a bluebird's wing—
It wakes the heart's delight!

When hills are crowned with rosy bloom,
When fragrant odors cloy,
Then love, like angel from the tomb,
Awakes the heart to joy!

When fields are ripe with tawny grain,
When songs of summer cease,
Then gratitude like golden gain
Awakes the heart to peace!

When winter silvers every pond,
When frost is on the streams,
'Tis then that memory's magic wand
Awakes the heart to dreams!

'HOW I LOVE TO 'EVINRUDE''

THE BEST OF SUMMER'S PLEASURES

I LOVE to skim up the river in my motor driven rowboat;
I glide along in and out of the little nooks and baylets
with their over-hanging trees and feel that the best hours of

PERSONAL GLIMPSES

THE OLLIE TAYLOR HOAX

IT is not unusual for bad boys to have friends and sympathizers, because it is frequently the case that a bad boy is a little smarter and a little more human than the youngster next door who never causes any anxiety about his conduct, but perhaps no unruly American boy ever had as many sympathizers as Ollie Taylor, who was sentenced by an Atlanta judge to eleven years in the Fulton County Industrial Farm, a reformatory for incorrigibles. And what is more, Ollie got all the sympathy without any effort on his part. The credit is due to some newspaper correspondent who probably will miss his calling if he does not turn to fiction-writing for a living. The Owensboro (Ky.) reporter who, during one of the annual floods in the Ohio River valley, sent out a dispatch that a distillery warehouse had been undermined and several hundred barrels of whisky were floating down stream and could be had for the picking up, has nothing on the Georgia scribe in the way of creating excitement. The story was that Ollie had been sentenced to eleven years in jail for purloining a bottle of soda-water, and that the Georgia Supreme Court had refused on technical grounds to correct the awful mistake of the lower court officials in throwing him into a loathsome prison. Ollie was doomed to languish with hopeless criminals of all sorts and learn all the tricks of the lawless instead of spending these best years of his life in the open and enjoying all the privileges that are the heritage of the average boy. The account of the supposed miscarriage of justice was printed in many newspapers throughout the country, and here and there it was commented on very vigorously. This dispatch from Chicago to the Atlanta *Journal* gives a pretty good idea of how some people felt about the so-called outrage against childhood:

A campaign has been started in Chicago to make Georgia ashamed of itself. The campaign hinges around the sentence of Ollie Taylor of Atlanta, who, when he was ten years old, was sentenced to imprisonment in reform school for the rest of his minority because he pleaded guilty to stealing a 5-cent bottle of Coca-Cola.

Scores of letters are reaching Willie Sutton, attorney, who brought the case to the attention of the public through *The Tribune*. He told correspondents to express their resentment in letters to the Governor of Georgia, to congressmen, to members of the State legislature, and any one else of political influence in the State.

Now for the true story of Ollie's experiences, as told in the Atlanta *Georgian*, from which we quote in part:

Writing generally in an angry strain, lawyers and laymen want to know all about

WHITE MOUNTAINS of New Hampshire

The most superb mountain scenery east of the Rockies; fragrant, wonderful woods, forest-hidden streams and lakes—four hundred square miles.

Gay Summer Colonies

Linked together by perfect roads for motoring, riding and driving.

Cincinnati, O.
Look for the Yellow Label

the case, all about the Supreme Court decision, and if Ollie Taylor, ten years old, really was sentenced to an absolute term of eleven years because he looked too longingly with childish eyes on a tempting brown bottle. He was not. A long list of complaints regarding the boy preceded the charge that he stole the bottle of soda. His associations were bad. At ten years old he was not innocent of many things that a child should not know. His father, before Judge Calhoun, signed a statement that the boy was incorrigible. He was sent to the Industrial Farm. Here is his sentence, the sentence of wayward boys under the Georgia law:

"For the term of his minority, unless sooner discharged."

It was an indeterminate sentence, its length contingent on the boy's readiness to forget the old association and to learn good, new, clean things. He was sent not for punishment, nor even for reformation, but to be surrounded by influences that discountenance idleness and its consequent vice. He was sent to be taught things, and to be released when he learned his lesson.

That was three years ago. Two years later, Ollie Taylor, offering signs that he had learned his lesson, was released on his father's assurance that the boy would be watched, educated, and cared for.

Back home, Ollie Taylor did not attend school. His father, according to officials of the Children's Court and of the Reformatory, seemed careless of him. He was too small to obtain work, and was drifting back to the questionable associations of the street and of the surreptitious craps game. They took him back.

His father, angered, sought his release, and lost the habeas corpus suit in the State courts. The Supreme Court, in its opinion, considered the case from the strict legal aspect, and said that the sentence must hold because the law which sanctioned it was not invalid.

So Ollie Taylor is on the Fulton County Industrial Farm. If he is a good boy—and Superintendent Means says he is good and is learning his lesson of right and wrong—he will be released this year. Boys never are kept in the reform school during "all the years of their minority." They learn their lesson and are sent out at once.

The farm is not a bad place at all, if we are to believe *The Georgian*, which describes it thus:

Fulton County went into a business eleven years ago that to-day is netting bigger returns to the public, perhaps, than any other investment the county ever made.

The business the county engaged in was the making over of bad boys into good men.

The profits have been enormous, and the income is compounding with every new month—not in dollars and cents, perhaps, but measured according to the worth of good citizenry to the community.

The character factory and repair shop for youths with lop-sides and neglected morals is the Fulton County Industrial Farm, located at Hapeville, about eight miles south of the heart of Atlanta.

Here delinquent but not hopeless lads, who, if left to pursue the paths of their inclination, would grow up into lives of crime and dissipation, public liabilities

"Where do you expect to finish, George?" I asked Stallings the other night when I met him in a hotel in Boston.

"It isn't where I finish but where I start that's worrying me now," he replied. "I've got to keep that club on the move, and if the regulars cannot maintain the pace which suits me then they'll find nice warm places on the bench reserved for them."

Stallings looks over every player carefully on whom waivers are asked in the National League. He does not want to pass up any likely talent and knows that many a good ball-player has been caught after some other more prosperous club has let him out because the manager did not get a chance to take a good look at him. I know it has been hard to plant some of my recruits in the minor leagues this year, men whom I want to get a season's experience before they have another chance with the big show. Stallings looks them all over with a microscope.

The Pittsburgh club, which I consider the Giants' most dangerous rival, has been handicapped by the partial loss of Wagner. With him out of the game for any length of time the pennant chances of Clarke would promptly evaporate. The Dutchman holds the Pirates' infield together, and is the greatest ball-player I ever saw. With him gone the magnificent pitching staff could not bring home the championship.

Eyes of all ball-players in both leagues, as well as those of the fans, have been fastened on Frank Chance, who is undertaking to heave the Highlanders out of last place. The great difficulty which Chance will face in the American League this season is the public expectation of too many results. When the New York club defeated the Boston Red Sox the other day, they were talking about the Yankees being in the fight for the championship.

Of course, it is just possible, but not likely, that Chance can shoot the Yankees up into the contention. He is up against too many problems. He has taken in charge a team which finished last in the race of 1912, and he is new to the league and the weaknesses of the teams and players who compose it and who are his opponents.

Certainly, it is easy to reason that Chance has plenty of men on his club who have previously played against every team in the American League and who can tip him off on the styles of the players, but any manager will tell you that this second-hand information is bad. I don't depend on it much, myself, and I have had some mighty smart ball-players hand me tips on opposing clubs, particularly in preparation for a world's series, and they have seldom worked out to my advantage. Chance must find out for himself.

McGraw believes the Athletics, the Red Sox, and Washington will be the big competitors for the American League pennant. His prediction is based upon his familiarity with the three teams, having faced two of them in world series and met the other during two spring training trips. As he puts it:

Of this trio the Athletics have the greatest natural strength and they have been showing it this year from the very start. Over-confidence kept the team out of the final weeks of the race last year. Injuries helped to reduce the efficiency of

CHEVY CHASE COUNTRY CLUB

THE FACT that Firestone tires are seen wherever discriminating car owners gather is significant.

Mileage unequalled, traction that reduces gasoline expense, resiliency that affords comfort and car protection, and road-grip that prevents skid, are the compelling reasons for this choice.

The book "What's What in Tires," by H. S. Firestone gives the building details. Write for it.

Stain Your Bungalows

Don't paint them. Stain them all over, roofs, siding and trimmings, with

Cabot's Creosote Stains

The glossy "painty" effect does not harmonize with the bungalow idea, but the soft, deep colors of our stains suit perfectly. They are rich and transparent, bringing out the grain of the wood and increasing its natural beauty.

They cost only half as much as paint and only half as much for labor to apply. If your bungalow is in the woods, where skilled labor can't be had, you can do your own staining with perfect results. Our stains are made of the strongest and finest colors, ground in linseed oil, and specially refined Creosote, "the best wood preservative known."

Cabot's Stains are sold all over the country. Send for wood samples and name of nearest agent.

The Largest Refrigerator Plant in the World.

the club, it is true, but it was mostly the over-confidence which ate into its heart.

That was my own experience, back in 1906. But "Connie" Mack and his men realize that they must hustle this year, and they have started out with that end in view. The Philadelphia club looks to me to be stronger than it was last season. The infield is unimpaired, with McInnis, Collins, Barry, and Baker. This is a great collection of players and absorbs the attention of the keen observer for a few minutes. They are all hard hitters and very fast.

The outfield and pitching staff cost "Connie" Mack the pennant last year. The twirlers crashed in, "Eddie" Plank, the veteran southpaw, who is as old, baseballly speaking, as Mathewson, being the only support which stood. Bender, the Indian, failed to keep in condition, according to Mack himself, and Coombs was handicapped all season by a strain which he received in the world's series of 1911 while playing against the Giants.

LITERARY FAME THAT HURTS

WRITERS of short stories, novels, plays, and scenarios for motion pictures often misrepresent, innocently, but none the less harmfully, parts of the country varying in size from hamlets to whole States or Territories. By inventing or exaggerating unpopular types they give millions of people false impressions which it requires decades to correct. Perhaps the public is to blame for being interested mainly in characters that make high lights in the picture, so that only the undesirables in a community or a State are "written up," and it never occurs to a great many people that these characters are exceptional and do not represent one per cent. of the citizens of the locality. In some notable instances whole States have suffered because of reasonably accurate descriptions of a few interesting characters in small or remote communities, as in the case of the feudists of Kentucky. So much has been written about the mountain feudists that a great many people living in other States have got the impression that clansmen who regard a Winchester rifle as the supreme law of the land are as plentiful all over the State as fishermen are in Gloucester, Mass. Only the other day the editor of a small daily newspaper in California, commenting on a new agricultural movement started in Henderson County, Kentucky, said the improvement of farming methods would "allay the feuds." As a matter of fact, it takes as long to travel by train from Henderson County to the mountain districts where the feudists live as it does to go from New York to Pittsburg or from Chicago to Cleveland. And another case is that of Alaska. During the early gold-mining days there were a few women of unwholesome morals who followed the miners and frequented the dance-halls and saloons, and Alaska is having a

Let a DAVEY Tree Expert examine Your Trees Now

Weak crotches in trees are the ones that split apart in the storms. Dead limbs are the ones that fall—a menace to life and property. Trees with cavities are the ones that the winds blow over. A fallen tree cannot be replaced in your lifetime.

The loss of trees is the price of neglect

You may think that your trees are sound—but do not trust to guesswork—learn the truth through a Davey Tree Expert without cost or obligation. If your trees need no treatment you want to know it—if they do need treatment you ought to know it. Let a Davey Tree Expert examine your trees now. Write for Booklet "T."

for 1913, describing nearly a thousand varieties of daffodils, tulips, hyacinths, crocuses, and other hardy spring-flowering bulbs for fall planting is ready for distribution. It is a hand-book—not a mere catalogue—valuable alike to connoisseur and amateur.

Free to Flower Lovers

The Blue Book offers only Cream Quality Bulbs, as imported from Holland the individual prices received before July 1. The edition limited to 5000 numbered copies—one for you if you want to plant superior bulbs.

CHESTER JAY HUNT, Dept. C, Montclair, New Jersey

hard time living down the reputation given it by writers who "played up" the dance-hall women because they were strong characters for novels. The editor of *The Western Woman's Outlook*, published at Seattle, who says she is personally familiar with conditions in Alaska, tells us that women toughs, such as those described in some of the writings of Jack London, Rex Beach, and Robert W. Service, are probably rarer there than in most any other part of the United States. The women of our great northern Territory, she assures us, are generally up to the mark morally, socially, intellectually, and politically. But, of course, the Western editor does not blame the fiction writers for the false impression that their books have made, because the harm they have done has probably all been unintentional. We read:

The part women have played in Alaska will some day be fully told. It is true that pioneering has largely entered into the general plan, but since the day of a daily steamship or through trains many of the towns have ceased to be in the pioneer class. The church and the home can be found throughout all parts of the Territory, and even in those sections that are remote and where the winter is severest the bishops and the traveling minister have beaten down the trail. Women's clubs are to be found everywhere, and the women of Alaska have progressed along with their sisters in the States. All of the leading places, except Nome, St. Michael, far interior, or Aleutian island points are within four days' steaming from Seattle. Seven of the leading places are within two to three days from Seattle, so the current literature and the fashions are not badly delayed. The steamship service on half a dozen routes keeps up throughout the entire winter.

And go through the length and breadth of the land, from the Arctic to Prince William Sound, and the dance-hall will be found conspicuous by its absence. No Alaska town of to-day is nearly so loose as Goldfield or Reno or Bisbee or Leadville or any of the other famed mining camps. The usually heavy charge for a liquor license keeps the number of saloons down to the minimum. "Dawson Sal" or "Yukon Jane" appear, in the frozen drama and play their little part, but they can not be found in Alaska of to-day. Quite to the contrary, the women of Alaska are making homes and in many parts of the country are planting flowers about their cottages, and the children are going to well-conducted day-schools or largely attended Sunday-schools. The women are going to vote, and their first ballot, we can all be assured, will be cast for home development and righteousness, the suppression of vice in all its forms, and the elimination of the official whose laxity or overzealousness in the past has helped to hold Alaska back.

Legal Talent Here.—MOTHER—"I gave each of you boys an orange. Charles, you said you wouldn't eat yours till after dinner. And you, Jack, said the same. Have you deceived me?"

CHARLIE—"No, mother, we didn't eat our oranges. I ate Jack's an' he ate mine."—*Life*.

TWO WEEKS OF JOY-O'-LIVING

(Forest Lakes of MAINE)

It's the vacation you're ACHING FOR. You go 'way down in Maine woods. You leave civilization far behind. By canoe and carry you come to one of those great

Beautiful, Lonely Lakes

that are scarcely known to the outside world.

You put up at one of the log-built permanent camps whose comfort and good fare are one of the wonders of this country.

Or you set up your own camp with an Indian or white guide, sleep in a tent on hemlock boughs, eat campfire cooking with an appetite that's a joy, breathe air that makes your pulses tingle.

You will catch big fish, canoe, explore, watch the moose and deer, get back to Mother Nature.

In two weeks you come out brown, hard, clear-eyed, steady-nerved — and with memories you wouldn't sell.

The expenses of the trip are small.

Send for FREE Booklet.

THE SPICE OF LIFE

Revised.—"Mah breddren," cried a Boston colored preacher, "ye must be like great Caesar's ghost—above susspishun."
—*Life*.

Bliss.—LOUISE—"Has Pauline's husband a horror of debt?"

JULIA—"No; she is most happily married."—*Judge*.

Similar.—BACON—"Huxley said that an oyster is as complicated as a watch."

EGBERT—"Well, I know both of them run down easily."—*Yonkers Statesman*.

Differentiation.—"What is the principal difference between modern and ancient times?"

"One of the main points was that the modern earn their living, while the ancient urned their dead."—*Baltimore American*.

The Perplexing Question.—"I see," said the idler, "that Mr. Wilson has dropt the name Thomas."

"I'm not bothered about that," said the worried officeholder. "What other names is he going to drop?"—*Pittsburg Post*.

They Should Worry.—MRS. GRAMERCY—"Whatever will you do if business ceases to be profitable in a year or so?"

GRAMERCY—"Don't be alarmed, my dear. By that time we'll have sold all the stock in the company to the public."—*Puck*.

Out of Date.—MAJOR BANKSTICK (of the Indian army)—"Tell your scout-master that, now I'm home, I shall be pleased to help him, if he'd like it, with field-work and so on."

HORACE (of the Boy Scouts)—"Thanks, awfully, dad, but—er—are you quite up-to-date?—drill's altered a lot since you were home last."—*Punch*.

Tantalizing.—"There's a foreign couple living in the flat next to us, and they are simply a torment to my wife."

"Why so?"

"They quarrel incessantly, and she can't understand a word of it."—*Louisville Courier-Journal*.

Try It.—BEE MASTER (to pupil who has just brushed off bee which stung him)—"Ah! You shouldn't do that; the bee will die now. You should have helped her to extract her sting, which is spirally barbed, by gently turning her round and round."

PUPIL—"All very well for you, but how do I know which way she unscrews?"—*Punch*.

In Bad.—Young Jack was talking to the new visitor soon after her arrival. He eyed her critically for a few moments, then looked up and said:

"So you're my grandmother, are you?"

"Yes, dear. On your father's side," remarked the old lady, smiling.

"Well, you're on the wrong side; you'll find that out," replied Jack, without removing his gaze.—*Harper's Bazar*.

and contains of pure-bred poultry for 1918, many many pages of poultry facts, different breeds, their habits, etc. in various illustrated and described. Includes also and brood, low price of stock and eggs for breeding. A perfect guide to all poultry raising. Send 10c for this book today.
D. H. GREIDER, Box 15 Rhine, Pa.

Prevented—Stopped

MOTHERSILL'S, after thorough tests, is now officially adopted by practically all the Great Lakes and New York Steamship Companies running south, and many Transatlantic lines.

Four years ago Mr. Mothersill gave a personal demonstration of his remedy on the English Channel, Irish Sea, and the Baltic, and received unqualified endorsement from leading papers and such people as Bishop Taylor Smith, Lord Northcliffe, and hosts of doctors, bankers and professional men. Letters from personages of international renown—people we all know—together with much valuable information are contained in an attractive booklet, which will be sent free upon receipt of your name and address.

Mothersill's is guaranteed not to contain cocaine, morphine, opium, chloral, or any coal-tar products. 50 cent box is sufficient for twenty-four hours. \$1.00 box for a Transatlantic voyage. Your druggist keeps Mothersill's or will obtain it for you from his wholesaler. If you have any trouble getting the genuine, send direct to the Mothersill Remedy Co., 407 Scherer Bldg., Detroit, Mich. Also at 19 St. Bride St., London; Montreal, New York, Paris, Milan, Hamburg.

A Surrender.—On his eighty-fourth birthday, Paul Smith, the veteran Adirondack hotel-keeper, who started life as a guide and died owning a million dollars' worth of forest land, was talking about boundary disputes with an old friend.

"Didn't you hear of the lawsuit over a title that I had with Jones down in Malone last summer?" asked Paul. The friend had not heard.

"Well," said Paul, "it was this way. I sat in the court-room before the case opened with my witnesses around me. Jones hustled in, stooped, looked my witnesses over carefully, and said: 'Paul, are those your witnesses?' 'They are,' said I. 'Then you win,' said he. 'I've had them witnesses twice myself.'"—*San Francisco Argonaut.*

CURRENT EVENTS

Foreign

April 18.—Socialist Leader Liebknecht in the Reichstag charges that German manufacturers of war materials have paid French newspapers to carry on an anti-German agitation.

April 21.—A Berlin dispatch says the Reichstag has decided to reduce the proposed army appropriation as a result of Dr. Liebknecht's disclosures.

April 21.—The Belgian general strike for manhood suffrage, which tied up the country's industry for a week, is compromised when the Government agrees to take up for consideration the franchise reforms demanded by the Socialist trade-unionists and their followers.

April 23.—The Montenegrin army captures Scutari.

Austria asks the Powers to compel Montenegro to evacuate Scutari and give up all Albanian territory, and the Montenegrin authorities say they will not yield what they have won in the war.

Domestic

WASHINGTON.

April 17.—Approving the dismissal of a midshipman from the Naval Academy, Secretary of the Navy Daniels denounces hazing as "a senseless and dangerous practice," and says it will not be tolerated in the institution.

The Senate Department makes a rule forbidding representatives of the Government in foreign countries from becoming peculiarly interested in business enterprises in those countries.

April 19.—The President, through Secretary of State Bryan, urges the California Legislature to make its proposed antilien land ownership law less objectionable to the Japanese.

The Democratic House caucus approves the Underwood Tariff Bill.

April 20.—Secretary Daniels announces that the Navy Department will send a big fleet on a three-month cruise of the Mediterranean.

April 21.—The nominations of A. E. Strong for Governor of Alaska and Charles E. Davidson for Surveyor-General of Alaska are sent to the Senate by the President.

Senator Chamberlain introduces a resolution for the abrogation of the Hay-Pauncefote and Clayton-Bulwer treaties with Great Britain.

April 23.—It is announced that Secretary of State Bryan will go to Sacramento to confer with the California Legislature concerning the proposed antilien land measure.

GENERAL.

April 18.—Mrs. William C. Story is elected President-General of the D. A. R. at Washington.

April 19.—The late J. P. Morgan's will, which makes the financier's only son, J. P. Morgan, Jr., the principal beneficiary of the estate, is published.

April 22.—John Mitchell, formerly president of the United Mine Workers of America, is appointed Labor Commissioner of the State of New York by Governor Sulzer.

April 23.—The board of arbitration selected under the Erdman Act to settle the controversy between the Firemen's Union and fifty-four Eastern railroads awards a wage increase of from 10 to 12 per cent., to take effect May 5. The firemen contend that the raise should date from July 1, 1912.

A coal mine explosion at Pittsburg kills a hundred or more persons.

Picking Up the Pilot

Five days of rest and recreation. Five days of strengthened nerves and sharpened appetite. Five days of healthful change.

FUNK & WAGNALLS COMPANY, 40-60 East 23d Street, New York

This picture shows a portion of the big battery of Packard trucks which plunged into the relief work of flood swept Dayton.

THESE PACKARD TRUCKS HELPED TO PUT DAYTON BACK ON THE MAP

FOLLOWING the Dayton flood thirty-eight Packard trucks were used twenty-four hours a day to carry supplies and clean up the town.

The Citizens Relief Committee issued the call for help at noon, March 29. Two hours later, eight Packard trucks were loaded onto a special relief train at the Packard factory. Within twenty-four hours these trucks were at work in Dayton. Ten other Packard trucks were sent by special train from Cincinnati. These vehicles, with the large battery of Packards owned by the National Cash Register Company, formed the backbone of the transportation outfit used in relief service.

Dayton streets were choked with wreckage and debris. With all other methods of transportation rendered useless, necessity demanded motor trucks and they made a magnificent response.

The Packard trucks worked in water so deep that it was necessary to cover the radiators to avoid flooding the engines. In the stress of continuous emergency work, the trucks received no mechanical attention. It was a situation that called for 100 per cent efficiency and the Packards met this demand.

Sixteen hundred dead horses and many carcasses of other animals were removed by the Packard trucks within a period of three days. United States army officers say this prompt work averted an epidemic. Members of Dayton's Relief Committee state that the Packard trucks were a big factor in making the city fit for habitation.

The people of Dayton know that when necessity calls the Packard delivers. What will you do when your test comes?

THE NATIONAL CASH REGISTER COMPANY

DAYTON, OHIO

DAYTON, OHIO

Dayton, Ohio, April 9, 1913.

Mr. Alvin Mackley,

General Manager, Packard Motor Car Co.,
Detroit, Mich.

Dear Mr. Mackley:

Your letter of April 8th is received, and I take the earliest opportunity of writing to thank you on behalf of the Dayton Citizens' Relief Committee, for the excellent assistance rendered by the Packard Motor Car Co., in our time of stress.

At the time we appealed to you, motor trucks were our most pressing need, as we had the greatest difficulty in getting provisions for hungry people to the different points in the city for distribution. Your promptness helped to save the situation.

Sincerely yours,

John H. Patterson

HEADQUARTERS DAYTON MILITARY DISTRICT DAYTON, OHIO

Dayton, Ohio, April 17, 1913.

Packard Motor Car Co.,
Detroit, Mich.

Gentlemen:

We are both pleased and grateful to report that during the past three weeks of most extraordinary service, Packard trucks have rendered invaluable and continuous service. The work has been continuous day and night over almost impassable streets.

Without motor trucks it would have been impossible to have distributed relief supplies.

Very truly yours,

W. H. Wood
Adjutant General.

No-Rim-Cut Tires **10% Oversize**

How Do We Afford Them?

You ask, perhaps, how tires like these can be sold at Goodyear prices.

The utmost in tires—the final result of 14 years of betterments.

Tires that can't rim-cut—tires 10 per cent oversize.

One process alone costs us a million dollars yearly more than processes generally used.

How are such tires—tires that give such mileage—sold as low as Goodyears? Let us tell you.

Our Cost

We are the world's largest tire builders. We build almost as many tires as any other two plants combined.

Our factories are new. Our equipment is modern. We have invented a wealth of labor-saving machinery. We employ efficiency experts.

Our capital cost is exceedingly low, due to small capitalization.

Grade for grade, our cost of making must be far below the rest.

cent, out of which must come the interest on millions of capital invested. This year, with our reduced prices, we do not expect to exceed that.

Those are the reasons why tires like these can be sold at the Goodyear prices.

Lower Prices

Of course tires can be made to cost less. Tires can be sold at half our prices, yet pay a larger profit.

But tire cost means the cost per mile. Goodyears cost far less per mile than any other tire that's built.

The Evidence

This is shown by the fact that Goodyears far outsell the rest, after 2,000,000 have been used.

Our sales last year were larger than the previous 12 years put together.

That's the result of testing these tires on hundreds of thousands of cars. Men have proved enormous savings.

The No-Rim-Cut feature ends rim-cutting completely. The 10 per cent oversize, with the average car, adds 25 per cent to the tire mileage.

You will see these savings clearly when you test these tires.

Write for the Goodyear Tire Book—14th year edition. It tells all known ways to economize on tires.

Our Profit

Then our profit is kept at the minimum. To assure you of this, every year we advertise our profits. In times past this profit has averaged around 8½ per

THE BUTLER BIBLE WORK

EMINENT CONFIRMING TESTIMONY

"The most eminent ministers in America, and Bible students whose names carry greatest weight and authority, unite in their judgments upon this work. It is the best of expositions of the best of all books."
—THEODORE L. CUYLER, D.D., LL.D.

"I recommend this remarkable work to everybody with whom my words can have the least weight—clergy or laity, man or woman, persons of much reading or little."
—Bp. F. D. HUNTINGTON, D.D.

"While representing the thought of the centuries, this work is in every sense fresh and up to date. The most recent periodical literature and the latest books have been carefully sifted."
—GEORGE FREDERICK WRIGHT, D.D., in *Bibliotheca Sacra*.

"The work is specially adapted to all purposes of careful study, as it gives the opinions of the best scholars of Bible study in our times."
—Bishop JOHN F. HURST, D.D.

"It shows us what points in the Bible have attracted the attention of preachers, historians, literary men, men of affairs. It shows what trains of thought the Bible has awakened in their minds."
—W. J. BEECHER, D.D.

"It gives in the smallest space the best results of inquiry into the text, topography, customs and history. It approaches the Word not to support a theory, but to develop the mind of the Spirit."
—Bishop D. E. GOODSELL, D.D.

"The author has stood in the current of the Biblical literature of the world and gathered the choicest thought of it all. It brings light to bear upon every truth from every side and from a great variety of minds."
—W. C. GRAY, in *The Interior*.

"For all who desire a living and practical setting forth of Divine truth it is simply invaluable."
—A. F. SCHAUFFLER, D.D.

"Adapted to the humblest mind, yet fitted to feed and stimulate the most scholarly. Is the cream of Christian comment on the Scriptures, presented with rare skill of arrangement and adaptation. It can not fail to quicken the spiritual pulse and deepen the spiritual life."
—HERRICK JOHNSON, D.D., LL.D., McCormick Theological Seminary.

MATERIAL AND MAKE-UP OF THE WORK

With thought and fact gathered from the critically studied product of 1100 trained scholars, it covers with ample fulness and careful discrimination every Department of Bible knowledge and investigation. It gives the best obtainable answer to every reasonable question by presenting, in concise readable paragraphs, reliable results of Biblical scholarship and research.

Characteristic Features: 1. An incomparably full and inspiring comment, explanatory of the sense or meaning of the text and suggestive of its underlying spirit. 2. Details touching the origin, structure, contents and connections of the Bible and its several books—questions of Science and facts of archeology and chronology treated by expert investigators. Geographical and topographical matter and maps taken from eminent geographers and explorers. 3. Fulness of study is also largely insured by the Introductions, and by numerous special treatises set in place throughout the volumes. In these are condensed the substance of many small books in current use. 4. For the first time is presented a carefully studied and largely interpreted *Codification* of the Laws given to Moses at Sinai. 5. The *Four Gospels* are condensed into a continuous *Life History of the Christ*, in the order of its events and, in the words of the writers, to "get a clear and accurate idea of the Master's Life."

SPECIAL REQUEST EXAMINATION FORM. SIGN BELOW

FUNK & WAGNALLS COMPANY, 42-60 East 23d St., New York.

The Psychological Origin of MENTAL DISORDERS

By DOCTOR PAUL DUBOIS

In this book Dr. Dubois shows how mental derangement may be caused by the exaggeration of ideas and emotions, impressionability in the face of the vicissitudes of existence, disappointed ambition, worrying temperament, tendencies to fear or indolence, unrestrained anger, vengeance, amorosity, etc. He contends that insanity is more a Psychological unbalance than a Physical disease. He would prevent or cure the great bulk of mental disorders by developing the patient's reason, and inducing him to control his feelings and correct his follies.

How to Develop Self-Confidence in Speech and Manner

By Grenville Kleiser, author of "How to Speak in Public," etc.

Are You one of the thousands of persons who, for want of self-confidence, are "held in physical and mental bondage?"—Do you shrink from asserting yourself?—Do you feel nervous quailings and cold chills when it is time to "say your say"?—at the social affair—in the lodge—on the platform—or when you talk with your superiors or seniors in business life? Many persons realize only a small part of their abilities because they so distrust themselves. Chapters in this book deal with methods for correcting self-consciousness—with manners as a power in the making of men—with the value of a cultivated and agreeable voice—with confidence in society and business—with finding oneself—with the physical man, with will-power, self-culture, etc. Mr. Kleiser here prescribes a definite plan for systematically developing a high type of manly self-confidence.

Guizot's HISTORY OF FRANCE

From the earliest times
to the outbreak
of the Revolution

Abridged by Gustave Masson from the Translation of Robert Black

With Chronological Index, Historical and Genealogical Tables, Portraits, etc.

"Mr. Masson has scored in his competent abridgement of Guizot's famous 'History of France' up to the Revolution. Even abridged the volume is large, but not unpleasantly so. To compensate for the necessary elision of the quotations from original commentators, the appendix contains a full list of contemporary sources. Much tabulated information, and a topical index, make the book thoroughly workable."—The Chautauquan, New York.

Study Music with Masters At Your Home

No matter how little or much you know of music, this is your great opportunity to learn to play, sing or teach, or to revive your interest in music and complete your musical education—to achieve professional success, or to become an accomplished musician for your own pleasure, culture and social prestige. You will find the *Spirit of the Master* in every lesson, also the principles and methods that have made them masters. Circumstances or location need no longer stand between you and the best teachers.

We give weekly lessons in all branches of music, by artist teachers of international fame, and can give you in your own home, at small cost, the world's best musical instruction to fit your individual needs and guarantee satisfactory progress and results. Our courses provide for beginners, advanced students, professionals and teachers. We grant diplomas, issue teacher's certificates and confer degrees. Our Catalog sent free gives full particulars.

Greatest Musicians Endorse

Our various courses of lessons have been critically examined and highly endorsed by the world's greatest musicians—Paderewski, the great concert artist, Leschetizky, his famous teacher, Morawski, Gullmunt, Emil Sauer, Walter Damrosch, Sousa, also Masses, Lyon & Healy, Rev. Dr. Frank W. Gunsulphus, etc. Get our catalog and see what they say.

The best instruction means easiest, quickest and surest progress. Our Faculty includes some of the most distinguished names in modern music. We teach—

PIANO (Studies of Paderewski, Chopin, by Wm. H. Burghess, a master musician, whom Paderewski called a real artist, an accomplished pianist and an experienced teacher.

VOICE (with the aid of the Edison Phonograph) by Geo. Crumrine, graduate of the Royal Academy of Music, London, England.

Harmony, Counterpoint and Composition, by Adolph Hummel, late and Daniel Frauberger, both eminent directors and composers.

PIPE ORGAN, by Clarence Eddy, world's famous Pipe Organ virtuoso.

VIOLIN, CORNET, History of Music, Reed Organ, Mandolin, Guitar, Banjo, Choral Conducting, etc. by equally eminent teachers.

Over 100,000 music lovers of all ages, throughout the world have taken these wonderful lessons. Thousands of them have enthusiastically written:

"Am surprised and delighted with my rapid and thorough progress."

FREE Art Music Book

Thousands of **Ideas for Sermons**

PAGE upon page of vital facts drawn from the oldest and the latest of Christian records and researches. Every conceivable subject within the scope of Christianity is carefully and thoroughly covered in the New Schaaf-Herzog Encyclopedia of Religious Knowledge. It bristles with suggestion and inspiration for the live preacher, Bible student, religious worker, or scholar. Whatever the argument, you will find the FACTS concerning it in this stupendous new work, prepared by the religious world's greatest scholars. Send the blank herewith for information concerning this exhaustless mine of religious knowledge. Let us explain the easy terms of payment upon which you can secure it.

New Books
for Physicians**Diseases of Women**

An extensive, all-inclusive, and thoroughly reliable clinical guide to the diagnosis and treatment of the diseases of women. By George Ernest Herman, M.D., late President of the Obstetrical Society of London. Revised and enlarged by the author and R. Drummond Maxwell, M.D., Assistant Obstetric Physician, London Hospital. 300 illustrations. Large octavo, cloth. \$7.50 net.

Choyce's Surgery

Pathological, Symptomological and Diagnostic data, relating to surgical conditions and diseases of the various organs and regions and their treatment, with description of the lines of operative procedure. By C. C. Choyce, Dean of, and Teacher of Operative Surgery in the London School of Clinical Medicine (Post Graduate), and J. Martin Beattie, Prof. of Pathology and Bacteriology, and Dean of the Faculty of Medicine in the University of Sheffield. 3 large octavo volumes, cloth. Extensively illustrated with half-tones, diagrams, and colored plates. Per set \$21.00.

A Text Book of Gynecological Surgery

Operations, the preoperative preparation, the operative technique, the postoperative treatment, and the dangers to be avoided with the possible complications and their appropriate treatment. By Comyns Berkeley, M.D., Gynecologist and Obstetrician to the Middlesex Hospital, and Victor Bonney, M.D., Assistant Gynecologist and Assistant Obstetrician to the Middlesex Hospital. Large octavo, cloth. Over 400 illustrations. \$6.00 net.

IN PRESS—SOON TO BE ISSUED

Fourth Revised Edition—HEART DISEASE, BLOOD PRESSURE and the NAUHEIM-SCHOTT TREATMENT. By Louis F. Bishop, A.M., M.D. Price \$3.00.

THE FIRST SIGNS OF INSANITY. By Bernard Hollander, M.D. \$3.25 net.

Now Ready—THE PSYCHOLOGICAL ORIGIN OF MENTAL DISORDERS. By Dr. Paul Dubois, famous mental scientist. 50c. net.

Among the books described in our free medical catalog are:—"The Diagnosis of Smallpox," by Ricketts and Byles; "Syphilis," by Sir Jonathan Hutchinson; "Diseases of the Nervous System," by Thomson; "Tumors," by Bland-Sutton; "Serums, Vaccines and Toxines, in Treatment and Diagnosis," by Rosanquet and Eyre; "Therapeutics of Mineral Springs and Climates," by Yeo; "Clinical Methods," by Hutchinson and Rainy; "Surgical Diagnosis," by Gould; "Light and X-Ray Treatment of Skin Diseases," by Morris and Dore; "Psychic Treatment of Nervous Diseases," by Dubois; "The Semi-Insane and the Semi-Responsible," by Grassett; "Electro-Diagnosis and Electro-Therapeutics," by Cohn; "Radium-therapy," by Wickham and Degrais; etc., etc.

Besides these, the catalog describes many other works on various phases of medicine.

This Medical Catalog is absolutely FREE to Physicians. Send for your copy to-day. We send it by mail.

"A Common-Sense View of the Mind Cure"

At last. The author, Laura M. Westall, assumes that all diseases have a mental element, and are therefore amenable to some extent to MIND CURE.

This book may be read without any thought of its being a plea for any "cult" or "ism" other than that of plain Common Sense. In the simplest of language the writer describes the functions of the mind, the workings of the brain, the nervous system, the imagination, and the nature of pain—illustrating these topics with concrete examples to prove her premises.

Since we come to look and be as we think and do, it is evident that the workings of the brain (which is the seat of the mind) are impressed upon the physical body. BY A GRADUAL PROCESS THE IMPRESSION BECOMES FIXT PERMANENTLY AS HABIT.

In an additional chapter she gives a few practical suggestions for the cure of common functional disorders that may be tested easily by the reader with excellent results.

The new book is a daintily-made volume of 124 pages, 5x7 1/4 inches in size, printed on very heavy paper with extra wide margins suitable for notes and comments. It is bound in light-green cloth with titles in white intaglios.

At all bookstores, 75 cents; or, mailed postpaid for 80 cents by the publishers, Funk & Wagnalls Company, 44-60 East 23d Street, New York.

Get the Macfadden Course in Physical Culture FREE

If you will send us 25c. for a 3 months' subscription to the **Physical Culture Magazine**

We will send you, besides Macfadden's Complete Course in Body-building absolutely free. This course consists of six lessons, each lesson accompanied by a clear explanation, especially good for Mr. Macfadden. No apparatus of any kind is required. Every exercise is simple to perform, and wonderfully effective. In preparing this course, Mr. Macfadden, who has won the world over in the greatest physical culture instructor of all time, has utilized the results of his experience in body-building, covering a period of twenty years. You need not duplicate this course elsewhere at any price.

Why We Make This Unusual Offer?

We want to get you acquainted with the *Physical Culture Magazine*. We believe if we can get a copy of this wonderfully interesting and instructive magazine in your hands you will become regular subscribers. We don't know how long we will continue this offer, so get your personal note delivered to us here. Just enclose 25c. coin or stamp, and say, "Send me your free course and Physical Culture Magazine for 3 months."

The Final Choice of the Discriminating Purchaser

After trying out several different types of motor trucks for the past two years, The Atlantic Ice and Coal Corporation, of Atlanta, Georgia, has recently ordered fifteen White Trucks for immediate delivery.

Responsible firms prefer to purchase truck equipment from responsible manufacturers. This is one of the reasons why the final choice of the discriminating purchaser is invariably White.

Another point of importance is the fact that White Owners continue to buy White Trucks. When Whites are used, experimentation ceases.

White Trucks are the most economical trucks to operate.

NEW YORK, MAY 10, 1913

WHOLE NUMBER 1203

TOPICS OF THE DAY

HAYWOOD'S BATTLE IN PATERSON

THE STRIKE in the Paterson silk mills is a war, says William D. Haywood, "a bitter war—it's worse than any other war." That, suggests a writer in a New York paper, may be because he has to reckon with a foe "more formidable than the employers, the Mayor, the Chief of Police—more powerful even than the imported private detectives—the American Federation of Labor." So this strike takes on the form of a rivalry between two labor organizations, between two labor ideals. The difference of point of view, as generally understood, is that the American Federation of Labor fights only when necessary, to gain certain advantages, and that it is willing to compromise and make agreements with employers, while the Industrial Workers of the World aim at a union which, "by sheer strength, numbers, and determination, can force whatever demands and concessions it chooses." Or, to put it in the blunt Haywood phraseology, "We are making an effort to develop class consciousness. The I. W. W. wants to wipe out the power of Sam Gompers, John Mitchell, Jim Lynch, and John Golden, who banquet with the capitalistic class at night and talk to workingmen in the daytime."

Haywood himself has drawn from a reluctant press many

admissions of his ability as a strike leader. The strike he has been managing in Paterson for the past ten weeks seems, says the *Springfield Republican*, "to be as notable in its way as the strike he managed at Lawrence a year ago." His leadership,

notes *The Republican*, and the same observation is made by a number of papers in New York and New Jersey, was strengthened by his apparently groundless arrest on March 30 and subsequent release. With four of his associates, Haywood is now on trial under indictments for inciting to riot and unlawful assemblage. The issues of the contest, which those outside of the silk industry find it rather difficult "to consider with clear understanding," are thus stated in *The Republican's* editorial:

"Some 27,000 silk mill operatives have now been idle nine weeks, and the loss in wages alone has been at least \$2,000,000. So much dyeing of fabrics is done in Paterson for silk mills located elsewhere that the strike is believed to have affected 50,000 workers in the silk industry at large. There were some grievances originally of the broad silk weavers, who weave the cheap grades of goods, on account of the introduction of the three- or four-loom system. The principal seat of the cheap silk manufacture hitherto has been in Pennsylvania, while the Paterson mills have woven the finer fabrics. Only the large mills can introduce the multiple

THEY LEAD THE STRIKERS IN PATERSON.

On the reader's left is Carlo Tresca, whose fiery appeals commend him to his fellow-Italians, on the right is "Big Bill" Haywood, between them stands Elizabeth Gurley Flynn, who says she has "been in this business" of speechmaking and organizing workers since she was fifteen.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. Instructions for **RENEWAL**, **DISCONTINUANCE**, or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses must always be given.* **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed

that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 44-60 East Twenty-third Street, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

looms, and they have sought to extend their business in the cheap grades of silks, which are highly profitable.

"The Paterson weavers contend that the new system will lower wages and result in the displacement of men by the low-priced labor of women and girls. They struck against the multiple-loom system and for a minimum wage of \$12 a week. The ribbon weavers and the dye-house workers struck out of sympathy. The dye-house men, who work in two shifts of twelve hours a day, demanded shifts of eight hours and a minimum wage of \$12, inasmuch as their work is carried on under unhealthy conditions. All the strikers, being unorganized, joined Mr. Haywood's I. W. W.

"Here one sees again how Haywood finds his opportunity to build up the industrial workers of the world. It was the same at Paterson as at Lawrence. The older and more exclusive trade unionism in the textile industry had never organized the Paterson operatives. The I. W. W. jumps in and furnishes leadership for the strike, no doubt fomenting it and keeping it going in accordance with the 'direct-action' principles the organization stands for. If the strike fails, the defeated workers will probably practise the destructive arts of sabotage after their return to the mills, precisely as is taught by syndicalism."

As in Lawrence, the strikers' children play a prominent and picturesque part. The first declaration that they would be sent out of town to be taken care of was met by the Mayor with the statement that Paterson could take care of her own children. To "call his bluff," Miss Elizabeth Gurley Flynn, "Bill" Haywood's chief lieutenant, took eighty-six small children around to the City Hall. But here they found the Commissioner of the Outdoor Poor ready to take charge of each case after proper investigation. So the promised presentation ceremony failed to take place, and the distribution of children began, some reaching New York in time to appear in the May Day Socialist parade.

The somewhat belated entrance of the American Federation of Labor is interpreted by the Industrial Workers as "a declaration of war." As the *New York Evening Post* puts it:

"With the advent of John Golden, president of the United Textile Workers, at the behest, it is said, of the mill-owners, and the opening of a headquarters to enroll strikers in the A. F. of L., the old fight between the two organizations, that had its opening battles in the great strikes at Lawrence and Little Falls, is on again, with more bitterness and determination than ever, and the situation has reached the point where Haywood and his followers realize that if the A. F. of L. effects a settlement with the bosses, and the workers return to their tasks, the loss of prestige to the I. W. W. will be a blow from which recovery will be nearly impossible."

While several newspapers reported much apparent success in this effort to organize unions among the dyers and textile workers, the *New York World* does not see what the A. F. of L. leaders can accomplish, for "the strikers are lined up almost solidly with William D. Haywood and his colleagues." And the *Newark News*, explaining this peculiar situation in the near-by city, says:

"If the workers now have a substantial grievance, they had it when the I. W. W. organized the strike. If they are now in an effective position for redress, the I. W. W. leadership deserves the credit.

"On the surface it would seem that the I. W. W. had 'put one over' on the craft unionists, and that the latter should take counsel with themselves to avoid losing prestige. Their delayed entrance into the field looks like an effort to cover ready-made union recruits into their organization, using as a lever the apparent inability of the I. W. W. to reach any settlement because of their radical and hostile philosophy.

"The refreshingly simple I. W. W. creed, with its all right and all wrong, its uncompromising adherence to the belief that labor is the sole agent in production and that the share of all else is robbery, may naturally be expected to make an effective appeal to mentalities which the more conservative, and, in the long run, sounder beliefs of the Federation leave unimpressed. Perhaps this may account for the success in organization that the I. W. W. had as much as remissness on the part of the Federation."

The national leaders of the Federation, explains *The News*, do not take part in a labor contest like that in Paterson unless called in by the local central body. But the central body in Paterson could not act at first because it could not get the indorsement of enough votes, for "many of its members were I. W. W. sympathizers." The logical way out, that is, from the manufacturer's standpoint, concludes the *Newark daily*, would seem to be "an alliance with union influences that are constructive rather than revolutionary." And, according to some Paterson dispatches, this is the way many mill-owners feel about it.

The *Paterson Call* believes that the strenuous campaign for members now being waged by the American Federation of Labor will bear fruit, and that through the efforts of Federation officials the strike will finally be settled. This is a consummation earnestly desired by many papers in the region near the scene of Mr. Haywood's activities. And they pass to a denunciation of this labor leader, his organization, and his methods. Working people, declares the *New York World*, "need protection quite as much against dangerous breeders of disturbance like the Industrial Workers of the World as against unjust and greedy employers." *The Journal of Commerce*, too, remarks:

"If allowed to have their way from economic anarchy to the verge of political anarchy, the inevitable recourse must be to a strengthening of power in the hands of those who have the capacity to govern, for the protection of person and property alike, and for the preservation of the economic and social system. These Haywoods and Eiters and Treseas and Flynns are the worst enemies of democratic government."

Yet rioting, "mob rule," anarchy, is not what capitalists fear, comments the *Socialist New York Call*, for "that is a matter that can be easily handled." But, it continues:

"Down deep into the minds of workingmen is being driven the illustrated lesson of the power the capitalist class is armed with in the possession of the law-making and law-administering functions of society, and therein lies the danger. To wrest that power from those who now exercise it is the object that is being irresistibly thrust upon the workers, and this result the capitalist press fears infinitely more than anything else the workers may attempt. And Paterson has gone further than either Lawrence or Little Falls in impressing that lesson upon them."

Several editors who would be the last to commend either the methods or the ideas of William D. Haywood can not help noticing in his Paterson leadership an apparent anxiety to keep within the law, and a comparative absence of such speechmaking as could properly be termed incendiary. One writer calls attention to the fact that while he lashes the American Federation of Labor and the Paterson employers, and will hear of no compromise or concession, yet in his daily talks to his loyal and zealous followers he does not stir them to violence, but rather urges them to stand firm, and pictures the glories of the day when they shall have won the victory. It is rather easy to understand the appeal of such a vision of a Paterson Paradise as was one day painted before the poor strikers who had not received pay envelopes for weeks. Not many years hence, explained Haywood in his low, well-modulated voice, all the small silk-mills will be abandoned and the work will be done in one mammoth plant conducted by the workers—

"It will be utopian. There will be a wonderful dining-room where you will enjoy the best food that can be purchased; your digestion will be aided by sweet music, which will be wafted to your ears by an unexcelled orchestra. There will be a gymnasium and a great swimming-pool and private bathrooms of marble. One floor of this plant will be devoted to masterpieces of art, and you will have a collection even superior to that displayed in the Metropolitan Museum in New York. A first-class library will occupy another floor.

"The roof will be converted into a garden. There beautiful flowers will fill your eyes and their sweet perfume your nostrils. The workrooms will be superior to any ever conceived. Your work chairs will be morris chairs, so that when you become fatigued you may relax in comfort."

PEACE IN WEST VIRGINIA

THE LABOR WAR of more than a year in West Virginia ends with what is generally taken by the press to be a nearly complete victory for the miners and something of a triumph, too, for Governor Hatfield. The open hostility engendered on both sides, the clashes between miners and guards, the repeated establishment of martial law with the consequent perplexing legal problems, and the appearance of such picturesque figures as Mother Jones, cause the *New York Sun* to refer to the strike in the West Virginia coal fields as "probably the most bitter and protracted industrial struggle of the kind in the history of the country." Governor Hatfield's intervention brought about an agreement between certain operators and their employees several weeks ago, as related in our issue of April 5. Elsewhere there was more obstinacy, and finally, according to one newspaper account, on April 25 at midnight, the Governor "issued what he termed an ultimatum, giving warning that 'this strife and dissension must cease within thirty-six hours.' The Governor's proposals were accepted a little more than twelve hours later."

Most of the miners have now returned to work, the State troops are being withdrawn from the coal fields, and normal conditions are being restored. "The strike is ended," declares Governor Hatfield in an official statement which reads in part:

"As Governor of West Virginia, I felt for the good of all that the dispute should be terminated. While I took no sides in the matter in so far as the contentions of the parties in interest were concerned, I took a decided position and suggested that certain concessions be made by both parties."

"I did not ask the coal operators to adopt something that was inimical to their interests or that will cast opprobrium upon or in any way handicap the industry in West Virginia. It was also foreign to me even to suggest or dictate how they should conduct their business, nor did I wish to conflict in any way by suggestion or otherwise with the rights and liberties of the laboring man."

"However, I felt it my duty as Chief Executive of the State to insist that the law be enforced in letter and in spirit."

The miners' demands, as stated by President White, of the United Mine Workers of America, were, besides better wages and hours, "the right to belong to a labor organization without discrimination; the semi-monthly pay day; the selection of check-weighmen to secure honest weights; to have their coal weighed, and that 2,000 pounds shall constitute a ton." And the Governor's recommendations, which were finally accepted, include most of the points in a proposition submitted to him by President White and published in *The United Mine Workers' Journal*. To quote the Governor's statement of his terms of agreement:

"First—That the operators concede to the miners their right to select a check-weighman from among their number when a majority demands, as indicated and in keeping with sections 438-439 of the code, to determine, to the entire satisfaction of the employee, the exact weight of all coal mined by him and his co-workers."

"Second—That a nine-hour day be conceded to the miners by

the operators. To be more fully understood as to what constitutes a nine-hour day, I respectfully advised that it meant nine hours of actual service by the employee to the employer at the same scale of wages now paid."

"Third—That no discrimination be made against any miner, and that if he elects he may be permitted to purchase the supplies for the maintenance of his family wherever it suits him best, as this was claimed by the operators to be the case at the present time. It is hoped by the Chief Executive that it will be the pleasure of the mine operators who own and control commissaries to see that the prices of their merchandise are in keeping with the same prices made by independent or other stores throughout the Kanawha Valley."

"Fourth—That the operators grant a semi-monthly pay."

"It will be my pleasure to use all the means at my command to see that each and every proposition so acceded to is carried out in its fulness, and I will further endeavor in such cases where the law is not now explicit to have the same so amended as will secure in the future the carrying out of the suggestions I have made."

The West Virginia correspondent of the *Socialist New York Daily People* believes that the striking miners have been duped on one point, "that of no discrimination against union men." He says:

"The discrimination clause in the settlement is of an equivocal nature. It was announced at the ending of the strike that there would be 'no discrimination against the men.' Just what that means and how it applies is proving a problem now."

The construction of this clause, according to other dispatches, has been left by the miners with Governor Hatfield, and, as the *Buffalo Express* sees it, "his firmness in dealing with both

miners and operators would indicate that the trust is safely imposed."

The Federal investigation of conditions in the strike zone proposed by Senator Kern should not be killed off by this settlement, declares the *New York Globe*, for these reasons:

"This West Virginia outbreak has been of such character, and on so extended a scale; it has cost so much in life, property, and business to a great State; it has indicated such a tenseness of feeling between the miners and the operators, that there is need for the community to know what it was about and on which side lay the merits. A settlement that merely sends the men back into the diggings, without assurance that the trouble may not break out again at any time, will not be satisfactory."

"It is quite within the present demands of an exacting public sentiment toward these questions of industrial condition and human welfare that a thorough study should be made of such a situation. The whole nation is turning its thought to this great set of issues. It cannot think accurately or decide rightly until it knows the facts. Therefore, whether there is a present settlement or not, the inquiry ought to go ahead. If this course is taken, the chance of a future outbreak will be lessened."

Correspondents in West Virginia write to inform us that the rifles and ammunition pictured in our issue of April 5 were not taken from the strikers, as claimed in the paper from which we had the illustration, but from the mine guards employed by the operators; and also that Judge Littlepage, whose ruling we quoted, is Judge of the Kanawha County Circuit Court, not of the United States Circuit Court, as the dispatches had it.

ATLANTIC AND PACIFIC COAST VIEWS

MARKETING THE FRIEDMANN CURE

WHILE DOUBT about the merits of the Friedmann treatment for tuberculosis is still entertained by the medical experts, and while no report from the Federal Government officials is yet forthcoming, the improvement reported in several cases seems to have been sufficient to persuade a New York drug firm to undertake the marketing of the serum. The sale of the remedy gives the buyers the sole right to prepare the remedy discovered by Dr. Friedmann, and to apply the treatment to tuberculosis victims. "Regrettable, but not so surprising," is one newspaper characterization of what is discussed in the New York press as the "commercialization" or "exploitation" of this cure. And tho they deplore the doctor's "ethics," these papers in the city which he has made his American headquarters admit that he is quite within his rights, and that if he is really the conqueror of consumption, no one will grudge him the millions he may make. The arrangements for the continuation of the Friedmann treatment in the future are outlined in the following formal statement issued to the press:

"An arrangement has been definitely arrived at between Dr. Friedrich Franz Friedmann and Mr. Moritz Eisner, of this city, providing for the preparation and use of the Friedmann vaccine in the United States. The plan which has been formulated provides for the establishment of institutes in the various States in order that fresh vaccine may at all times be available to those afflicted with tubercular disease; that under reasonable regulations persons requiring treatment, but who are unable to pay for same, shall be treated free of charge, and that all duly licensed physicians shall without cost to them be entitled to receive at the respective institutes proper instructions in the methods of application.

"Dr. Friedrich Franz Friedmann will return to the United States after his visit to Canada for the purpose of instructing a number of doctors in the methods of handling the vaccine.

"Dr. Friedmann has from the start made it an absolute condition that the poor in every State shall be treated free of charge."

In view of the stories of a million-dollar offer which first brought Dr. Friedmann from Germany to America, there is much curiosity regarding the exact sum which he receives for the disposal of the American rights in his cure. This, Dr. Friedmann says he does not care to discuss. But the New York

Times, on what it believes to be good authority, tells its readers that "he received \$125,000 in cash and \$1,800,000 in stock in thirty-six Friedrich F. Friedmann Institutes to be organized in thirty-six selected States, with a total capitalization of \$5,400,000."

The objection to this arrangement, or whatever arrangement of the kind Dr. Friedmann has made, is, as the *New York Globe* puts it, that he gets "a handsome amount of money" before he has proved "that his serum would do what he said it could." This "melancholy end to Dr. Friedmann's mission here," as *The Tribune* calls it, apparently confirms "a wide-spread impression" that Dr. Friedmann's motives are "not scientific and humane, but commercial," thinks *The Evening Post*, which adds:

"Certainly, the drug company that offers such a royal payment—in stock or cash—must be admired for its courage. . . . Until tested in hundreds of cases and a period of years has elapsed, no one can state with authority just how effective the injections are."

But tho it regrets that Dr. Friedmann has laid himself open to such charges, *The Times* reminds its readers that "the important question is not the delicacy and unselfishness of Dr. Friedmann, not whether there is too much business in his science, but whether he has found something that is or approaches a specific for tuberculosis in all or some or even a few of its many forms." *The World, Sun, and Commercial* agree that no reward, however great, will be grudged Dr. Friedmann if his turtle serum will cure tuberculosis. It seems clear to *The Sun*

"that the medical scientist is entitled to the same reward as the electrical or other scientist in financial emolument as well as in reputation. Especially erroneous is the view that suffering humanity may be injured by the commercialization of a medical discovery.

"On the contrary, the preparation of a remedy by a reputable manufacturer insures its purity, whereas the publication of the formula must encourage competition that would necessarily lead to economy in the mode of preparation, with the probable result of deterioration in quality. This view is justified by results of Behring's diphtheria antitoxin. Especially menacing is the danger when a remedy demands skill and knowledge in its administration, as is claimed by Dr. Friedmann. These detrimental results to the sick are obviated by the retention of control by Dr. Friedmann."

MISSOURI'S FIRE-INSURANCE SNARL

THE FAME of the "Show Me" State as a punisher of "outside corporations" is recalled by the *Washington Post* in comment on Missouri's harsh fire-insurance law. It was the first and only State, we are reminded, to drive out the Standard Oil Company by a decree of ouster. Now it passes a law, in the spirit of stringent antitrust legislation, which compels nearly 200 insurance companies to serve notice that they can not attempt to do business in Missouri after April 30. The instructions of one company to its agents in Missouri order them not to "write, issue, renew, or indorse" any policies after the stated date. The Orr Insurance Law, as it is called, does not go into effect until June 24, and must stand as enacted for two years unless repealed by the legislature at a special session. Gov. Elliott W. Major declares he will not call a special session no matter how many business men appeal to him. "The local interests which would suffer most if the insurance companies close their doors," observes the *Washington Post*, "include banking houses, property-owners with policies about to expire, corporations with money to loan on mortgages, wholesale houses that give credit to merchants, and an army of agents who see their employment at an end."

The immediate act of the State Attorney-General, John T. Barker, on the announcement of the fire-insurance companies that they will retire from Missouri, is to secure an injunction from the State Supreme Court restraining them from terminating contracts now in force. Yet the Court does not restrain them from ceasing to write new policies. The actual provision of the Orr Law, which is the cause of the present conflict in Missouri, is described by the *New York Journal of Commerce* as "forbidding any agreement between fire-insurance companies for fixing rates as 'restraint of trade,' and imposing severe penalties, including imprisonment of agents up to a limit of five years." The mere fact that an employee of one company should consult or inspect the rate schedule of another company "is made *prima facie* evidence of violation of the law." The *Journal of Commerce* draws this conclusion:

"The fact is that State legislatures in several States have gone beyond all reason in their fear of combinations, and make no distinction between a necessary regulation and supervision

and absolute prohibition. A little experience of this kind may teach them better."

The general sentiment of newspapers outside Missouri about the law and the consequent injunction is largely of one cast. Missouri, "having made it impossible for fire-insurance companies to continue business in the State," says the *Pittsburg Gazette-Times*, "proposes to prosecute them for not doing business there." The *Detroit Free Press* asserts that the injunction restraining the companies from canceling policies now in force comes "dangerously near to an attempt to impose involuntary servitude, if not on individuals, at least on corporations." "All eyes are on Missouri," remarks the *New York Times*. "If it shall succeed in making corporations do business against their will, there will be many imitators." Compulsory insurance is not easily contrived, thinks the *Philadelphia Record*, because insurance is not a public service in the sense that transportation is. State insurance would be a public service, but insurance between private individuals or corporations is legally classified as a wager. While it is one of the few kinds of wager contracts that the courts will enforce, nobody can be obliged to take a bet.

But according to the *Kansas City Star*, Missouri is well rid of the insurance companies. They may force cooperative insurance on the people of Missouri. They may force State insurance:

"For years Missouri has been sending its money to Hartford, Conn., to Liverpool, and other outside cities. Now these companies which the people of Missouri have helped build up threaten to withdraw from the State because they oppose certain State legislation.

"They do this in the belief that the State cannot get on without them. They fancy they have become indispensable. So they resort to coercion. The legislature must repeal its objectionable law or they will tie up credits in Missouri. They are mistaken. They may cause a little inconvenience. But they won't tie up credits. They may convince the people that the people have been victimized and overcharged. But that is all.

"Insurance ought to be a cooperative undertaking—not a money-making affair. An insurance company ought to be nothing more than a clerical bureau for looking after the business of its members.

"Cooperative insurance has been successful. Lumber companies insure each other. So do flour mills and other industries. There is no reason why cooperative insurance companies should not be established in Missouri. There is no reason why the

State itself should not undertake the business of insurance. Governments are doing this in several countries abroad.

"People have been hearing about State rights for a hundred years. It is time it heard about State privileges. The public has been feeling more and more that the business of fire-insurance in this country has been badly conducted. The people are in a temper to try to conduct it themselves.

"Governor Major will find the people with him in his refusal to bow down to the insurance companies."

The St. Louis *Republic* notes that a Missouri company has changed its methods to conform to the new law, and asks why outside companies can not do the same, thus making the law innocuous to the insurance companies at the expense of a certain amount of inconvenience, the expense arising out of which will necessarily, in the long run, fall upon the purchaser of insurance."

A JUDGE OUSTED BY WOMEN'S VOTES

THAT THE WOMEN VOTERS of San Francisco made history in bringing about and carrying the election for the recall of Judge Weller, a police magistrate of that city, seems to be generally conceded. While reflecting that Judge Weller is recalled by a small majority under unusual circumstances, the San Francisco *Post* admits that "in the residence districts the vote indicates that the womanhood of the city is aroused against what has been termed a 'system' in the police courts." It is to be noted that the ground on which the demand for the recall election was based was not malfeasance in office, but incompetency. Judge Weller may have been entirely honest in his action, the Sacramento *Bee* says, in praising the work of San Francisco's women voters, "but he followed a vicious precedent and disregarded an awakened public sentiment which execrates the white slaver and his despicable calling." The *Bee* believes that the first exercise of the recall for the judiciary in the State may be productive of great good in the courts. Especially is it "a warning to other easy-going and tolerant judges that the days of indulgence for criminals, especially criminals inherently vicious, have passed in California."

The *Woman's Journal* (Boston) states that Judge Weller, as shown by his record, "has systematically declined to consider rape as serious as petty larceny." In cases of this sort he has repeatedly fixt the bail so low—sometimes at only \$50—that the culprit forfeited it and fled. He has often interfered when offenders appealed to him, we read, and has lowered the bail required by other magistrates. When recently in a criminal assault case he lowered a bail of \$1,000 to \$300 the women voters of San Francisco began to look into the "system" and formed a Recall League. They were opposed by the Bar Association and local interests. Throughout the campaign, the San Francisco *Call* informs us, the women worked sedulously, and it was they who furnished the small majority by which Judge Weller was dismissed from office. The *Call* considers that this recall victory "serves to define more clearly the influence the enfranchisement of women may be expected to exercise in the governmental affairs of the State," and gives the women credit for fighting fair:

"The women were frank enough to say that they did not

fight Judge Weller personally. They conceded the excellence of his private character. They fought him as the representative of a system. They believe that their victory will be reflected in a radically changed system."

The New York *American* says ironically that conservative citizens throughout the nation will be duly shocked at the action of the good people of progressive San Francisco in recalling a judge, believing, or professing to believe, as they do, that the recall "would shatter the foundations of order and of established government." The reactionaries will be further startled to

learn that "the women led the crusade for the recall of Judge Weller, and cast a large part of the vote which recalled him." Yet it thinks that when the conservative, or even the reactionary, citizens know the history of the case which resulted in Judge Weller's downfall they will be inclined to realize that "in this first instance at least of the recall of a judge their fearful forebodings are not wholly justified."

The *American* adds:

"Let the reactionaries attack the principle of the recall and the policy of woman's suffrage in this instance, if they can find arguments with which to do so.

"But The *American* believes that the recall of judges has begun in a case which gives every evidence that the principle will be carefully and intelligently applied, and only exerted when its operation is obviously for the best interests of the community.

"The *American* also believes that the women have again demonstrated their intelligence and conscience and fine moral quality as citizens and voters."

The New York *Globe* contrasts the actual working-out of the first judicial recall with the picture Senator Elihu Root draws when discussing this innovation of popular government. Senator Root, it says, assumes that "the people, if they

get the power, will strike down and degrade all just and righteous members of the judiciary." Then, reciting the facts of the San Francisco election, The *Globe* observes that in this case—

"Not a word is said about the troubles of the judge being due to his courage and high-mindedness and the soundness of his decisions. On the contrary, it appears that he was assailed for a bad action rather than a good one. . . . In the campaign every one admitted that he had committed a blunder; the only dispute was over whether his motive was good and whether he planned to have the prisoner escape the just consequences of his act. This is not exactly the sort of judicial recall that Senator Root taught the public to expect."

As the San Francisco *Star* points out, the people took no "snap judgment" in the matter. The recall movement lasted for more than three months. And The *Star* concludes:

"The people of San Francisco declared at the ballot-box that the honor of womanhood is more important than any judge. And to the women of San Francisco belongs whatever credit is due for inaugurating the recall movement and carrying on the campaign to a successful conclusion.

"No one gloats over the recall of Judge Weller—many of his old friends regret the necessity for it—but all good women and men who know the evil practises of some police courts in the past will rejoice that the pernicious 'system' is no more. The recall of Judge Weller has wiped it out forever. It has done more—it has warned every other judge, high or low, that he is amenable to the people for his acts, and a judge inclined to go wrong will hesitate before doing so."

CHARLES L. WELLER.

The San Francisco police magistrate who is first victim of the "recall of judges" through the activity of women voters.

CLASH OF THE FOOD LAWS

A SHARP LINE is drawn by the Supreme Court between Federal and State food laws in what seems likely to be known as "the Wisconsin Karo Sirup Case." In the food trades legal experts regard the decision as the most important rendered since the Pure Food Law was enacted. The point at issue was whether packed merchandise, labeled in accordance with the requirements of the Federal statute, should have to be relabeled when received into a State whose food law differs from the Federal law. The Court ruled in favor of the integrity of the label of the "original package," holding that the merchandise in litigation remained in the province of interstate commerce and was consequently subject to Federal law. The effect of the decision is believed to make void the food law of Wisconsin, and probably many other States.

It seems that a wholesale grocer in Chicago shipped to a retailer in Wisconsin a box containing tin cans of Karo corn sirup, labeled to conform with the Federal law. The law of Wisconsin, however, demands a different description or label on this product. In denying the right of the State to enforce its provision, the Court says:

"To permit such regulation as is embodied in this statute is to permit a State to discredit and burden legitimate Federal regulations of interstate commerce, to destroy rights arising out of the Federal statute which have accrued both to the Government and the shipper, and to impair the effect of a Federal law which has been enacted under the Constitutional power of Congress over the subject."

Obviously the immediate container of a box of a canned or bottled commodity is not the box, but the can or the bottle. It

is this immediate container that must bear the labeling statements required by the Federal law. To limit these requirements to the outside packing-box, says the Court, "would render the act nugatory and its provisions wholly inadequate to accomplish the purposes for which it was passed." C. W. Dunn, an authority on food laws, in an analysis of the decision, made for the *New York Journal of Commerce*, notes that this verdict gives outside manufacturers a great advantage over those within a State where laws are drastic, and he predicts that "shipments in interstate commerce direct to the retailer for sale in States where the local law is not in harmony with the Federal law are likely to be greatly increased."

This point is also raised by *The Journal of Commerce*:

"The effect of this decision on such commodities as benzoate of soda is interesting. The Federal law permits it in specific quantities, so long as it is stated on the label. Would prosecution by a State which prevents it altogether be blocked under this decision?"

What the feeling of the jobbers may be about the decision is partly to be judged from the editorial comment of *The Grocery World and General Merchant*, New York:

"The way this Karo sirup was sold had something to do with the decision. It was sold to the Wisconsin retailer direct by an Illinois jobber. Had it been first sold to a Wisconsin jobber, and then resold by him to the retailer, a different case would have been presented, and the decision would not have been as it was. What the case decides is this: that where a sale of package goods is made direct by somebody outside the State to a retailer within the State, any package whatever—tin can or carton—is an original package and not subject to State law. Therefore any manufacturer who is tired of conforming to different State laws can make himself subject to the Federal law alone by selling the retailer direct."

FOREIGN COMMENT

THE KRUPP SCANDALS IN GERMANY

THE ASTOUNDING CHARGE that the great gun-makers of Essen, in Rhenish Prussia, keep up the war fever in Germany through the agitation of French and German hired agents is boldly made in the Reichstag by the Socialist leader, Dr. Liebknecht. By employing such agents

these ironmasters are said to be making millions of dollars. The statements of this deputy have been confirmed after investigation by the War Minister, Gen. Josias von Heeringen, who admits that the Deutsche Waffen Fabriken, which supplies small arms, etc., to the Government, is also involved in the accusation. According to the German press, General von Heeringen may be forced to resign his portfolio. Many arrests have been made at Essen, and the incident, we are told, has done much to increase the dissatisfaction with which the Kaiser's Army Budget of \$250,000,000 has been received. The accusation is made that small-arms and ammunition companies in Germany, Austria, and Belgium, backed by French money, are in a combination to engineer war

press as to produce "a brilliant number." The circular concludes with the assurance that such a number of the journal would produce "a profound impression in Germany and an enormous sensation abroad." These alleged attempts to influence the people in supporting the war budget are alluded to in another article by the *Vorwaerts* as "Germany's shame." To quote further the words of this outspoken oracle of the workers:

"These scandals, those of Essen, and this of the Government's war policy and fiscal maneuvers, are merely symptoms of the universal cancer which affects modern society in every country. Now or never is the time when Germany should seriously enter upon negotiations with France and England for the regulation of armaments."

The assertion by Deputy Dr. Liebknecht in the Reichstag that German officers were allied with the Krupp company in stirring up anti-German sentiment in France leads the sober-minded *Germania* (Berlin) to speak with much bitterness. It will be remembered that this organ is said by a contemporary to be "more Catholic than the Pope." It is the organ of the solid Center party—the balance-wheel of the Reichstag—and loves nothing better than a journalistic fight. This paper exclaims that Liebknecht's revelations form a sort of two-edged weapon, saying:

"Up to this day such a state of things as has been described in the ears of the Reichstag was considered quite impossible in the Prussian Army, with its boasted discipline and sense of honor. This agitation will prove an obstacle to both France and Germany in passing each its projected army legislation."

This foreboding is echoed by such Berlin papers as the *Vossische Zeitung* and the *Norddeutsche Allgemeine Zeitung*. The latter, having been formerly one of Bismarck's mouthpieces, naturally steps forward as the champion of General von Heeringen, who is declared to have acted in good faith and for the interests of the Army. Therefore he cannot be held

THE WAR MINISTER.

General von Heeringen, whose friends deny that he had any share in the profits accruing from the artificial war rumors.

THE SOCIALIST LEADER.

Dr. Liebknecht, who exposed the plan of the gun-makers to foment war scares in France and Germany to aid their sales.

scares to swell their profits. The Socialists naturally exploit these revelations as an argument in favor of Bebel's constant cry that capitalism is at the root of all the wars and the war scares. To quote the words of his proletarian organ:

"General Heeringen in his speeches in the Reichstag has several times insisted that the deputies handle business in a practical and correct manner. Does he think that the publication of war circulars and war articles, and the requests made to illustrated journals to fill their pages with war pictures, are proper measures to take in the service of the state?"

Then the *Vorwaerts* proceeds to publish a copy of the circular issued by General von Heeringen, address from the War Office to certain manufacturers of arms, in which he earnestly begs that they will insert their advertisements in a special number of the *Leipsic Illustrirte Zeitung*. He offers to furnish them with materials for making such contributions to the illustrated

responsible for the conduct of the Krupps in hiring certain officers of the Army and Navy in Germany and certain agents in France to stir up hatred and fear toward other countries. What share, it asks, had the Minister for War in the \$75,000,000 earned by the Krupps through such means?

There is a sad irony in the fact that if Germany has been stabbed to the heart by the revelations of Deputy Liebknecht, she has been stabbed by means she herself furnished, like Byron's "struck eagle" "dying upon the plain":

"Keen were his pangs, but keener far to feel
He nursed the pinion that impell'd the steel."

More unintentionally ironical are the recent words of the Imperial Chancellor about French and German relations:

"For some time past the French press has been endeavoring to stir up French public opinion against Germany. Once more attempts are being made to inoculate the citizens of France with the fear of a coming German invasion. Lying statements of all kinds are being spread abroad, maps are being shown with the provinces of Champagne and Burgundy already marked in as German provinces, and it is actually maintained that these maps are in use in German schools. This chauvinistic movement has even forced the French Government to bring in a bill for the reintroduction of the three years' military service."

The number of the *Illustrirte Zeitung* referred to by Dr. Liebknecht in his speech before the Reichstag styles itself "The German National Defense Number." It is full of war matter from beginning to end. All the advertisements, with few exceptions, relate to things used in war, not only cannon, but, as one of the advertisers claims, everything necessary for arming the soldiers and equipping an army, from airships to surgical instruments and field-glasses. Colored pictures represent the manufacture of weapons by firms who employ from 40,000 to 50,000 men. Then there are pictures of the cavalry charging in their gaudy uniforms. A history of the German Army and its triumphs is preface by a colored portrait of the Kaiser as "Chief of the Prussian Army, and Commander-in-

The Military Kaiser. The Religious Kaiser. The Business Kaiser.
THE TRINITY OF POTSDAM.
—Gülichner (Vienna).

chief of the German Army in Times of War." The German is thus to be enthused by the "pride, pomp, and circumstance of glorious war," and he is even instructed how to act when "England lands her expeditionary force unhindered on the coast of France."—Translations made for THE LITERARY DIGEST.

HEARTENING TURKEY

THE GREATEST CALAMITY for Turkey is despair, cries the *Ikdam* (Constantinople), and it proceeds to consider the Ottoman reverses as if illustrating Tennyson's counsel that "Men may rise on stepping-stones of their dead selves to higher things." This patriotic and earnest paper

WAR ISSUE OF THE ILLUSTRIRTE ZEITUNG.

Manufacturers of arms and military supplies were urged by the War Office to advertise in this issue on the plea that it would make "an enormous sensation," which proved true in a way not expected.

assumes a high tone in giving advice to the people and the Government. They themselves are blamed for the calamities which have fallen so heavily on European Turkey. The main deficiency in the Turkish Army was its low grade of intelligence. The Bulgarians, like the Prussians, relied upon the intellectual training of their fighting men. Their men had read history, they were "thinking bayonets," and would intelligently receive and understand the instructions of their superior officers. Thus Ali Kemal, a highly educated Turk, writing in the *Ikdam*, gives a very animated answer to the question, "Why have we fallen?" He relates this pointed incident:

"I was at Kirk Killisse shortly before the opening of the war. Among the disturbing incidents on the border, one day a young Bulgarian soldier, twenty-one or twenty-two years old, was brought in and sharply questioned by our commanding officer. I especially noticed these questions and answers. Q. 'What is your occupation? Can you read and write?' A. 'I am a farmer. I can read and write. I have the certificate of graduation from school.' Q. 'Are there others in your company who can read and write?' A. 'There is scarcely one who can not. Our studies are obligatory; we have all been to school.'"

"This set me to thinking then. The nation that so trains the units of its people possesses a strong army. When the lowest of its agricultural class has acquired the elements of mental and moral education, and shares a national aspiration, what a pledge is thus furnished for individual and national progress.

"We find here the reason of our defeat. With our enemies

common school education was universal. With us it was not."

He confirms these views with the following reference to the campaign in Western Europe which ended in Sedan:

"After the Napoleonic wars common school education was made obligatory in Prussia, with what ultimate results we know. Our adversaries learned that lesson; we did not; they were victorious; we met defeat. All other explanations of the

NO EFFECTS.
BALKAN LEAGUE—"It's your money we want."
TURKEY—"Money, dear boy? Search me!"
—Punch (London).

result are matters of detail, comparatively unimportant. In whatever line of progress in knowledge and civilization we see our enemies in advance of us. If only we will compare and measure ourselves honestly, we can easily see why we have failed. Such seeing may profit us, for real calamity does not consist in ignorance, but in not seeing and confessing our ignorance. When we see and know what we lack, we can make a beginning of real progress."

There is something really noble in the tone in which Ali Kemal discusses the question put by himself, "How are we to rise?" He plainly blames the Turks themselves for their fall, and tells them that they need better political leaders. Sloth and self-indulgence must be cast away. How can Turkey revive her former greatness?

"By strenuous, long-continued, physical, mental, moral discipline. We are not an effete race. Our inherited national vigor will stand us in good stead. Sir Edward Grey has spoken in hopeful terms of our ability yet to give good account of ourselves in the world of rich resources, undeveloped, which we have in our vast possessions in Anatolia."

But the best instrument is useless with none skilled to use it; the bravest army is powerless without good generals. Therefore this writer goes on to say:

"First of all, we need wise statesmanship. For some years past we have been illustrating the proverb, 'Trimming his eyebrows, he put out his eyes!' Happily we have constitutional government. The executive is responsive to public opinion and sentiment, but not blindly responsive. The recognized Government must inform and guide, must educate and enlighten and unite, for worthy ends, the aspirations of the people—it is a great task. Let us rise out of indolence and ignorance. Educate and discipline our youth according to the example our enemies have set us and hail our future with no shadow of doubt or misgiving."—Translation made for THE LITERARY DIGEST.

ALBANIA'S MANY FRIENDS

THE RICH ORPHAN who finds uncles coming forward by the score to adopt her and her money is paralleled in the Balkans by Albania, which has a highly desirable coast-line along the Adriatic. Even the most cursory reading of the press reveals Uncle Francis-Joseph as so affectionate that he is ready to break up the European Concert to gain her as his ward. Uncle Nicholas of Montenegro is on the spot with his claim, and uncles from Italy, Russia, and elsewhere are taking a friendly interest. The solution most popular with the diplomats, say the press, is that Albania remain independent, and, acting on this theory, Essad Pasha, the defender of Scutari, gave the city to King Nicholas and announced that he would be the father of his country—or King of Albania. Whether he can carry out this noble resolve remains to be seen.

The only people who have nothing to say on the subject seem to be the Albanians. Yet, despite their present inactivity, they are a people with a glorious past, as history records. They number some 2,000,000, or did before the fighting began, and occupy a territory of about 22,000 square miles. The Albanians are an ancient race, and up to the third century B.C. they owned no foreign authority till Pyrrhus subjugated them. When the Mohammedans overran Europe, George Castriota, their leader, in the sixty-four years which closed in 1468, overwhelmed twenty-three Ottoman armies, often commanded by the Sultan himself. The fall of Scutari in 1478 caused the Albanians, who reluctantly surrendered their capital to the supremacy of the crescent flag, to acknowledge the sovereignty of the Turk. One of the most deep-rooted features of the Albanian character is a deadly hatred of the Greeks. And the course of the war has been such as to emphasize the fact that behind the Turks who stubbornly defended Scutari and Janina were the real people of the land, the Albanians. Now Greece has taken Janina and threatens the port of Valona, the seat of the Albanian provisional government; while Montenegro has seized Scutari, the ancient capital, and by far the most important inland city of Albania. But the Powers have decreed that Albania must be independent and have decided that the Allies must give up their prizes there. The final fate of Scutari remains to be seen. The armies released by the capture of Albania's two main cities are said to be supporting the regal claims of Essad Pasha, himself an Albanian.

The Albanians are by race almost isolated in the Balkan Peninsula. They call themselves Shkipetars, and are descendants of an old Illyrian race of mountaineers. Hence their non-

participation in the Slavic and Greek alliance. But Austria, we read in the *Neue Zeit* (Stuttgart), casts covetous eyes on this, as on other districts of the Peninsula. To quote from this well-informed weekly:

Copyrighted by the International News Service.

WARSHIPS OF THE POWERS LYING OFF ANTIVARI, MONTENEGRO.

With the idea of intimidating Nicholas into giving up Scutari.

"Albania has always been an object of Austria's covetous ambition, for Austria has at present but a meager coast-line on the Adriatic. Of course, Austria has long foreseen that European Turkey would some fine day disappear from the stage and the Monarchy of the Danube has been mining like a mole to find a foothold in the territory of the Shkipetars. It is thus that the House of Hapsburg has always assumed a protectorate over the Albanian Catholics, and the imperial exchequer has always been ready to support the Albanian priests. This is the reason why one is greeted in every Roman Catholic rectory in the basin of the Drin by the portrait of Francis Joseph on the walls. This is Vienna's object in treating well and caring for Albanians—godly and godless alike, whether they carry a rosary or a Mauser rifle. It is thus that the assiduous consuls of Austria show themselves so active as agents of Hapsburgian expansion in Albania, and it is with this Teutonizing object in view that in the Austrian school at Pristina the children are crammed with the Austrian national anthem. In one word, Austria claims as a legal and hereditary right the exercise of waving her black and yellow flag of defiance in Albania."

But Austria herself states her views in the Vienna Government organ, the *Fremdenblatt* (Vienna), an official mouthpiece of the Foreign Office. This paper openly blames the Powers for their apathy, their indifference to the pretensions of Montenegro, and their inertness in not backing the claims of the Danubian Monarchy. Austria is determined to make a disturbance, and like an organ-grinder who wants to make gain out of his annoying strains, will not "move on" until the Concert of Europe has done something to carry out her wishes. Hence we read:

"If the Powers desire that Austria-Hungary keep really quiet, they must show that their unanimous declarations are to be read in something more than a Platonic sense. They must prove their good intentions by action, and that without delay. The military prestige of Europe has suffered by the fall of Scutari. If this strain upon their prestige, this checkmate to their efforts, is regarded by the Powers with indifference, Austria at least is not inclined to follow their example. Austria feels bound to insist upon the enforcement of the Concert's decision and will continue to do so until some remedy for the present condition of things be discovered."

"The least that Austria demands is the immediate presentation at Cetinje by the Powers of the protest already decided

upon, including an emphatic demand for the immediate evacuation of Scutari and, in case this is refused, the adoption of new military measures to enforce the will of Europe."

"All holding back on the part of Europe, all reluctance to grant this minimum demand, would rouse up sentiment of discontent and bitterness in Austria-Hungary. It certainly is in the interest of Europe to prevent the occurrence of such a contingency."

But the writer in the *Neue Zeit* thus introduces another claimant for dictatorship and mastery in Albania, a claimant likely to trouble the dreams of Austria:

THE CONCERT OF THE POWERS IS ON THE POINT OF COLLAPSE.

—Goulet (Paris).

"The condition of things we have described has gone on well and peaceably in Albania until Italy rose among the Allies with the tumultuous propaganda of the Adriatic as 'Our Sea.' The Adriatic was, in fact, to be turned into an Italian lake, so that the Albanian coast should be brought under the influence of Rome. The Italians proceeded to employ the same means as the Austrians had used to win the Albanians. They opened consulates, hospitals, churches, schools, altho south Italy and Sicily were sadly in need of educational institutions and the alliance of the House of Savoy with Montenegro might have had some influence in arresting

them. Meanwhile the building of the railroad from Antivari to Virpazar, and the concession of entrance by ship into the Lake of Scutari added immensely to Italian influence on the west coast of the Balkans."

This growing influence of Italy in the western Balkans incensed Austria, we are told, which country was driven from a sea outlet and compelled "to export her staple goods by way of Aussig and Hamburg as a vassal to Germany." "Henceforth the two Allies have regarded one another with direful suspicion."

This writer concludes with the following prophecy:

"Thus it is that altho after the fall of Adrianople people considered the war to be ended, the question of autonomous Albania has proved a Pandora-box out of which will break forth some day a fresh swarm of perils to the international position. By some day I mean soon!"

In support of the Albanian claims against the Balkan Allies, Italy comes forth in the person of Michele Marchiano to demand the protectorate over Albania which necessarily consists, he declares, of "the four ancient Turkish vilayets of Scutari,

Kosovo, Monastir, and Janina. To quote his words in the *Rivista d'Italia* (Rome):

"It necessarily follows that the Albanian frontier be confined to the limits which have been assigned to it by nature, sanctioned by history, confirmed by ethnography, and demanded by the unanimous sentiment of the people as well as by abstract right. . . . The Eastern Question, until the rights and the wishes of certain Powers had become known, and they had voluntarily taken occasion to extend over Albania their protecting wing, would have been stirred up afresh and the Balkan explosion would have been repeated with more suicidal and bloody results—events which certainly would have been beyond the power of Italy to prevent, however much she felt them. But Italy, at the present moment, feels it an imperious and inevitable duty, in obedience to the tradition of her own restoration from political death, at the prompting of her own manifold and vital interests, for the sake of the Italian colonies in Albania, in return for the strong support these gave her in her hour of release from bondage, in consideration of her duties as an ally, and particularly in face of the formidable Slav peril, which is heard stormily to thunder along the coast of our Adriatic,—now azure blue and tranquil, but destined some day, perhaps, to rise foaming and red with slaughter—to protect and keep with all her authority, her good faith, and energy the territory and the state of Albania. It is her duty to proffer, as has already been proffered, her strong hand of help to her, this ancient mother of peoples, this nurse of heroes. Italy has yet to write upon the page of modern history one more record of wisdom and greatness."

The Russians, in turn, present a very different view of the matter. With St. Petersburg editors it is neither Codlin nor Short, but a third party. Not Italy nor Austria is to control western Albania, but Montenegro. The bold claims of the Slav press in favor of the Slav monarchy of Montenegro are expressed in the *Novoye Vremya* (St. Petersburg), as follows:

"European diplomacy, in its decision to take Scutari from Montenegro, was guided by the desire to please Austria and by the hope that the cession of that city would be as easy for Montenegro as for the London conference. It closed its eyes on the inevitable consequences of its polite but thoughtless step. Now it is forced to pay for the ill-considered readiness to afford pleasure to Austria. . . ."

"The European ambassadors somehow imagine that every decision of theirs is equivalent to an immutable law of nature. They quite forgot, it seems, that the Balkan War had begun in spite of the strictest injunction of European diplomacy. Neither Turkey nor Montenegro nor Greece paid the least attention to it. And each time diplomacy reconciled itself to its defeat and reversed its 'unalterable' decisions. And it did well in reversing them, because events are developing according to their inner laws, not by written orders. In the question of Scutari diplomacy does not want to admit its mistake and persists in it. As a result, we are facing the danger of a new, and this time absolutely senseless, bloodshed. . . ."

"These diplomatic dilettanti live in the present, and do not care about the future. By their injudicious acts they have put Europe on the brink of a precipice. Fortunately no irreparable errors have been committed. Europe can change her decision and enforce the verdict, not against Montenegro, but against Austria. Montenegro will defend herself to the last breath; the verdict against her, therefore, means war and the danger of a general conflict. The verdict against Austria, on the contrary, will lead to an immediate and general pacification. If three great Powers will say 'enough!' in a firm tone, the Austrian filibusters will lay down their arms. For they count not on their strength but on the faint-heartedness of others. All, even the nations of Austria herself, are tired of their political impudence."

"Reconsider the decision about Scutari and the air will clear immediately."—*Translation made for THE LITERARY DIGEST.*

DAME EUROPE—"Who's there? What y' want?"
CHINA—"I want to borrow some money."
D. E.—"Money! At a time like this! It can't be any one but a Chinaman!"
—Kikeriki (Vienna).

OUR LOAN WITHDRAWAL AS VIEWED IN CHINA

THE DETERMINATION of America to withdraw from the proposed sextuple loan to China has caused much perturbation in the Flowery Land, as well as in our own country. President Wilson is credited by the Anglo-Chinese papers with justice and wisdom in declining participation in a loan to China which was to the disadvantage of that country, bound hand and foot as the Chinese Government would be by the conditions attached to the accommodation. Yet President Wilson has been somewhat taken aback that now the sextuple loan has been replaced by a quintuple loan, which the Powers are negotiating. These Powers comprise Germany, France, England, Japan, and Russia. It was hoped by some that American bankers would have clubbed together to furnish the funds and endorse the securities, and make a purely American loan, as Mr. Crisp tried to make it an English loan. But there was such an international prejudice against "Morgan monopolies" that the President's hope was deferred and at length abandoned.

Yet it was a relief, altho it was also a surprise, when the United States withdrew from the Eastern money league, says *The Celestial Empire* (Shanghai). "The news was entirely unexpected in banking circles," we are told. But the American people were entitled to say, "we must be cruel only to be kind," and have acted quite disinterestedly. To quote further from this paper:

"To some the announcement of the withdrawal of the American Government from the sextuple group—sextuple no longer—has come like a bolt from the blue. And yet to those conversant with public feeling in America it has been long apparent that what has happened would happen as soon as President

Wilson was safe in the saddle. Curiosity mingled with anxiety is for the moment the prevailing state of mind in some circles. There may be ground even for the latter, tho we do not share it. Exactly what will happen next is, doubtless, an excellent subject for surmise or intelligent anticipation, but that any American should regret the action taken is, to us, inexplicable."

In the minds of all high-thinking statesmen, we are assured, the conditions imposed upon China were "accursed." England would like to have thrown up the whole business, but she could not because of her entangling alliances. Yet the stipulations "touched the administrative independence of China." By these stipulations, remarks the Shanghai paper:

"The [Chinese] Government is tied hand and foot with regard to expenditure, so much so that nothing but the most urgent need of money could have induced them to agree. There is, moreover, a suggestion of monopoly about some of the articles in the agreement which can not fail to arouse suspicion in the minds of foreigners of whatever nationality they may be. Altogether we have in this matter a very thorny proposition indeed."

President Taft, we are told, would like to have "cut adrift from the accursed thing," but "it would be so much easier for his successor to cut adrift. This his successor has done." England would have liked to do the same, but of the parties to the loan England "was allied with one [France] and friendly with another [Russia]." The article concludes with a grateful eulogy of President Wilson.

SCIENCE AND INVENTION

THE PERILOUS BARBER SHOP

THE COURAGE of the man who fearlessly enters a barber shop and seats himself in the chair without blanching, or even blenching, is not generally recognized. His bravery is unsung. Yet the perils he faces are many. Foreign lands know little of them, for the tonsorial studios have multiplied in America far beyond anything known abroad, where the rich man is generally shaved by his valet, while the poor man shaves himself. Barbers here complain that the enormous sales of safety-razors and shaving-sticks are cutting into their business, so it may be that America is growing more like Europe in this regard. Here we run to gilt-edged "tonsorial parlors" or even "palaces," where plate glass and marble are much in evidence and the objectionable features are noticeable only through the microscope. Sanitary legislation in more than one State has much to say about the way in which this business shall be carried on; but if we are to believe Dr. F. C. Walsh, who writes in *The Technical World Magazine* (Chicago, May), there are special precautions yet to be taken and much general watchfulness to be exercised. Writes Dr. Walsh, in substance:

"Legislation and the smattering of knowledge as regards the more obvious diseases with which the registered barber is required to be familiar, were supposed to safeguard the public against the former common dangers of the barber shop, but recent investigations in France and Germany have revealed dangers not suspected before, and in at least one case a sanitary precaution itself has been shown to be a menace.

"Everybody is familiar with the small stick of alum which occupies a conspicuous place on the shelf just beneath the large mirror which faces the customer in barber shops the world over. If a real or imaginary pimple be slashed, or be made the excuse for an apology after a slash, the every-ready alum-stick is at once applied. The barber is proud of his action, thinking that the alum-stick and his method of applying it are both essential to the proper conducting of a strictly 'sanitary' shop.

"Dr. Remlinger, in the Paris investigation, took one of these sticks from a certain barber shop where it had seen service for about two months, a comparatively short time. By way of parenthesis it may be said that these 'sticks' are composed of glycerin and alum, combined with a small quantity of boric acid, the latter being added with the avowed purpose and confirmed conviction of making them perfectly sanitary and antiseptic! There is an ironical stupidity in that supposition. Dr. Remlinger hastened with his specimen 'stick' back to his laboratory. He placed it in a carefully measured quantity of sterilized water—water free from all germs—then immersed it a second time in another water-bath of the same kind. Next, he proceeded, with the aid of a microscope, to make a thorough search for any possible germs which might be contained in the two separate specimens of water in which the stick had been im-

mersed. The results were so surprising that he himself was astounded. In the first specimen he managed to count approximately no less than sixty-eight thousand two hundred and fifty disease-producing germs of various kinds! In the second specimen which he examined, and where few if any bacteria would be suspected, he recorded exactly fifty-nine thousand one hundred and fifty germs!

"These results were a surprise to everybody, including the medical profession, who had always supposed that these sticks were not only harmless, but actually as safe and sanitary as anything could be, and an important adjunct to any shop worthy

the name of 'sanitary.' Yet, in spite of the boric acid which the stick contained to make it antiseptic, it fairly reeked with five different species of producers of 'catching' diseases.

"Among the more numerous and important of these germs were the so-called 'staphylococcus' and 'streptococcus.' Both of these are as wicked and troublesome as their names are long. The first is always present in such delightful little troubles as boils, pimples, and abscesses; while the second is the cause of such serious and quite often fatal diseases as carbuncle and erysipelas. It is small wonder that after a visit to the barber a customer so often develops some one of

these unpleasant and at times serious contagious diseases. Yet hitherto, or at least until this discovery by Dr. Remlinger, no one thought of blaming the barber, or thought of putting two and two together and tracing these contagions to their proper source. For none of these diseases, it must be remembered, ever develop of themselves; they are always 'caught' from something or some one.

"Dr. Remlinger examined dozens of other sticks under the same conditions, and always with the same deplorable results. He even turned his attention to the leather 'strops' used for sharpening razors, and found them almost as bad as the alum-sticks. But not content with what he had learned, he pursued his war on the alum-stick even farther.

"In a second experiment similar to the series already mentioned, he found on the surface of a newly purchased stick of alum which had never been used, not only the five varieties of germs just referred to, but also large numbers of the deadly germs which are positively known to be the sole cause of such serious diseases as lockjaw, tuberculosis, and the formerly much-dreaded diphtheria. To make assurance doubly sure, Dr. Remlinger filled a syringe with the originally sterile water in which he had immersed the innocent-looking alum-stick, and by means of a hollow needle injected the contents of the syringe into the blood-stream of several live guinea-pigs. None of them escaped infection; every one of them contracted some disease, including tuberculosis and the deadly lockjaw."

Another danger, usually unsuspected, must be guarded against in the barber shop, if we are to trust our informant. Baldness is now known to be the aftermath of a really serious disease, commonly transmitted by the barber's hair-brush and only too often the forerunner of a wide range of skin diseases, including cancer. We read of the ancestor:

Giftshop of "The Technical World Magazine" Chicago.

AS IT SHOULD BE: INTERIOR OF A SANITARY SHOP.

"This disease, which is the common forerunner of baldness, of many cases of skin-cancer, and of a wide range of most annoying or serious skin affections, is known broadly as 'seborrhea,' and manifests its presence under the guise of what is commonly known as 'dandruff.' In the vast majority of instances it is absolutely a barber-shop disease, contracted from the barber's comb and brushes in their previous employment on some one already afflicted with the ailment. . . . The disease is the result of an infection,—that is, it is caused by one or more species of germ. Sometimes the disease confines its ravages wholly to the scalp, with resultant dryness of the same for a long period of years, then falling out of the hair, and eventual baldness.

"This is the commoner course of about one-half of all cases. The main fact to be borne in mind, however, is that this disease only too often prepares the way for a vast array of obnoxious and annoying skin diseases which affect other portions of the body; while the disease itself in a large number of cases spreads to various parts of the face, especially to the bearded portion; and down over the back and chest. In these various regions this common ancestor of many ailments is designated as one form of eczema. Almost any other skin affection may follow in the wake of this piratical pioneer. The one thing not to lose sight of, however, is this: these various mentioned conditions start in the scalp, and are caused by the barber's brush! So far as cancer of the skin following on this trouble is concerned, no statistics are available; but it has been estimated that they run pretty close to 8 per cent. of all those cases in which the disease produces a general eczema instead of only baldness.

"The key to the avoidance of the dangers of the barber shop lies in refusing to have applied to the scalp or face anything which is in all likelihood infected. A few shops furnish a fresh, sterilized brush for every hair-cut, and the brushes which are not washed in barber shops after use on each individual should be tabooed."

THE PASSING SILKWORM

THE OLD LADY who asked sadly, when petroleum began to supersede whale oil as an illuminant, "But what will the poor whales do?" might, if she is still with us, ask a similar question, and for a similar reason, about the silkworm. The so-called "artificial silk" is now coming widely into use. Instead of letting the worm dissolve cellulose for us and spin it out into gossamer, we have now learned to do our own dissolving and spinning. When any imitation or substitute is in the experimental or laboratory stage, we hear a good deal about it, but when it begins to enter the market we lose sight of it. "And this is scarcely odd, because," as the author of "Alice in Wonderland" remarks, our friends the merchants do not desire to call our attention too brusquely to what is going on in the field of substitution. Now, however, *The Textile World Record* (Boston, May) lets the cat out of the bag in its "English Notes." Its correspondent says:

"Silk men in this country are at last seriously questioning the lawfulness of the appearance of the word silk in the compound name 'artificial silk.' Artificial the article certainly is, but silk it is not—any more than celluloid is marble. Its consumption is

clearly increasing daily. The handsomest ties for men are all artificial this season, the small-ware manufacturers seem to have abandoned natural silk altogether and the tapestry people use next to no tussah tram (silk filling or woof). Taffeta linings are dead, rich black goods can hardly be given away, and the whole silk-weaving trade is sliding headlong into the fancy-cotton branch. The goods imported as 'silks' from the Continent are artificial in very large part, and altogether there has been nothing less than a revolution in the business in the last six years. In 1907, when Courtaulds were crape makers and users of natural silk, their dividend had sunk to three per cent. Now that they are the principal makers of viscose silk yarn they pay 50 per cent. on the old capital and are giving their shareholders ten new shares in exchange for one old one."

LOOPING THE LOOP IN THE AIR

TO AN OBSERVER looking vertically upward at an aeroplane, the machine often seems to turn directly over; but this is an optical illusion. The first man to turn a somersault in an aeroplane, and live to tell the tale, is Capt. H. R. P. Reynolds, of the British Royal Flying Corps. The late Captain Hamilton once turned upside down in Central America, but his machine fell at once to the ground and only the low altitude at which he was flying saved his life. *Flight* (London) prints the following account of Captain Reynolds's adventure from his own lips, the reason for giving it being a report that Captain Aubry, of the French Army, recently did precisely the same thing during a flight from Reims to Longwy. The paper named above is quoted as follows in *Aera and Hydro* (Chicago, April 26). Captain Reynolds is speaking:

"I started from Oxford on the morning of August 19, 1911, and flew along the line toward Cambridge, where I encountered a misty atmosphere and thought it well to descend. I came down close to Launton station. That evening, soon after 7 o'clock, I started again. It was warm and fine, but rather suggestive of thunder; the air was perfectly still. I scarcely had occasion to move the control lever at all until I got to Bletchley, where it began to get rather bumpy. At first I thought nothing of this;

but suddenly it got much worse, and I came to the conclusion it was time to descend. A big black thunder-cloud was coming up on my right front; it did not look reassuring, and there was good landing-ground below. At this time I was flying about 1,700 feet altitude by my aneroid, which had been set at Oxford in the morning. I began to glide, but, almost directly I had switched off, the tail of the machine was suddenly wrenched upward as if it had been hit from below, and I saw the elevator go down perpendicularly below me. I was not strapped in and I suppose I caught hold of the uprights at my side, for the next thing I realized was that I was lying in a heap on what ordinarily is the under surface of the top plane. The machine, in fact, was upside down. I stood up, held on, and waited. The machine just floated about, gliding from side to side like a piece of paper falling. Then it overswung itself, so to speak, and went down more or less vertically, sideways, until it righted itself momentarily the right way up.

"Then it went down tail first, turned over upside down

NOT AN ACCIDENT.

It is only Chevillard doing aerial "stunts" on his 80-horse-power machine, at Hendon, England.

again, and restarted the old floating motion. We were still some way from the ground, and took what seemed like a long time in reaching it. I looked round somewhat hurriedly, the tail was still there, and I could see nothing wrong. As we got close to the ground the machine was doing long swings from side to side, and I made up my mind that the only thing to do was to try and jump clear of the wreckage before the crash. In the last swing we slid down, I think, about thirty feet and hit the ground pretty hard. Fortunately I hung on practically to the end, and, according to those who were looking on, I did not jump till about ten feet from the ground. Something hit me on the head and scratched it very slightly, but what it was I did not know, for I was in too much of a hurry to get away from the machine to inquire at that time.

"The next morning I went out to it, and found one of the rods which held up the left extension lying between the engine and the right wing tip. The propeller was undamaged, the elevator and the tail were practically unhurt, while the undercarriage, being uppermost, was untouched. The machine on which this happened was an ordinary Bristol biplane with a 50-horse-power Gnome.

"I was told that just before I smashed there had been two or three 'whirlwinds' as the people called them, in Bletchley, and that one of these had stripped the leaves off a tree. Very possibly this was my friend."

The aerial "stunts" of Chevillard at Hendon, England, do intentionally very nearly the same thing as Captain Reynolds did by accident. *The Aeroplane* (London) says of the feats shown in the accompanying illustrations:

"The sensation of the last few weeks among aviators has certainly been the flying of M. Chevillard on the 80-horse-power Henry Farmans at Hendon; so it may be interesting to know how he does the particular trick for which he is most famous. The performance in question consists in banking the machine suddenly to the left, standing it on its nose, doing a spiral dive for anything over a hundred feet, and flattening out between 50 and 100 feet from the ground, just when everybody has made up their minds that he is going to hit the earth vertically. . . . According to M. Chevillard, the first thing he does is to throw the control lever to the left, thus banking the machine upon the right, at the same time pushing the lever forward to get the nose of the machine down. Immediately the machine begins to dive he brings the ailerons back level by centralizing the levers, gives full rudder to the left with the left foot, thus increasing the bank, and immediately afterward, or almost simultaneously, he pulls the lever back as far as it will go, thus pulling the elevator up. The effect of this is that, owing to the steep bank, the rudder acts as an elevator and keeps the tail up, while the elevator acts as a rudder and keeps the machine turning in a small circle, so throwing it out against the air by its own centrifugal force. At the moment of beginning the maneuver M. Chevillard switches off, apparently with the idea of removing most of the gyroscopic force of the engine, and so making the machine quicker in answering its controls. As soon as it starts on the spiral he switches on again, so as to have the engine ready to steady the machine in flattening out. The precise moment during the performance at which the different maneuvers are executed can . . . only be learned by practice. . . . I think that the performance would be impossible on any machine which had not a very large tail and elevator situated on a level with

MERELY A "SPIRAL DIVE."

Chevillard drops a hundred feet or so with dazzling twists and turns, and recovers just in time to escape a wreck.

the top plane, because it is highly probable that in the ordinary type of tractor biplane, when the machine really began to dive at a speed of about 120 miles an hour, . . . the stream lines from the fuselage and the deflection of air by the upper plane would so upset the controls that they would refuse to act."

NEED OF MEDICAL EDITORS

SELF-RESPECTING NEWSPAPERS

"are careful to have their financial articles written by those familiar with financial subjects; for technical articles in various fields of activity they seek experts. Why not the same care in medical matters?" This reasonable query is propounded by an editorial writer in *The Journal of the American Medical Association*. This writer is a believer in the daily press as an educator and a disseminator of information. The public, he says, should be educated as thoroughly as possible in all the essentials of public and personal hygiene and sanitation. It is also entitled to correct information about medical progress. Newspapers are giving more and more space to all these matters, and they doubtless desire, says the writer, to print correct information, but their attempts are often misinforming and sometimes ludicrous. Here are some examples, which even the layman can appreciate, tho they seem to have slipped past the editorial force of some of our best papers:

"The Philadelphia *Ledger* in describing the Trendelenburg position says: 'The Trendelenburg posture consists simply of posterior operations by means of a specially contrived operating-table, that in cases of a particularly delicate character have been remarkably successful.' Another leading daily paper, the Cincinnati *Enquirer*, says: 'Dr. M. W. died suddenly of pleurisy of the brain. He became ill in this city with pulmonary peritonitis.' The Philadelphia *Press* reports that 'A four-months-old child died of what is known among surgeons as farman ovale.' The Fort Wayne *Journal-Gazette* in speaking of what it calls 'ankers-teal nephortis' declares that 'this disease makes the internal conditions worse than Bright's disease.' The Cleveland *Plain Dealer* says: 'The V— Pharmacy has been named as a supply-station for antitoxin. The antitoxin will be used in cases of diphtheria, to prevent blindness in newly born babies, for throat cultures, and in the examination of blood in typhoid and malarial cases.' The San Francisco *Chronicle* tells of a citizen who, 'while cranking his automobile, sustained what is technically known as a Colles fracture of the right rib.' The Boston *Record* says: 'The bacillus Welchii is the gas bacillus dwelling in the international track.' The Chicago *Record-Herald* describes the death of a man from 'shock and lumbar pneumonia following six gunshot wounds.' An Erie (Pa.) paper records the opinion of three surgeons that a man 'would always be a sufferer from chromatic epilepsy.' . . . Describing a fatal accident, one paper says: 'The shock acted on the neuromastic nerve leading from the lungs and stomach to the heart.' A Röntgen-ray examination of a man who thought he had two hearts showed that he was suffering from 'an aneurism of order A.' Another suffered from 'plumbago,' and a third from 'schlerous of the liver.' . . .

"The question has also its serious side, as in the instance of sensational newspaper articles concerning cancer and tuber-

culosis cures, some of which at least soon prove to be the rankest fakes, and their exploitation under the guise of great scientific discoveries the most palpable advertising dodges. Such false, incomplete, or premature reports delude incurables into undertaking long journeys, thereby undergoing the most acute and hopeless suffering and wasting fruitlessly their remaining funds, only to experience the most cruel disappointment."

DANGEROUS MEDDLING WITH FOODS

IF YOUR breakfast-food does not agree with you, possibly the manufacturer has ignorantly removed all the activators from it. An activator is a substance whose presence is necessary in order that the food should perform its work of nourishment properly. Its absence may cause serious trouble, and at least one serious disease, long a mystery, is now believed to originate in this way. No one has seen an activator, nor analyzed it chemically, and yet it is now practically certain that substances of this kind exist. It may therefore be dangerous to "prepare" foods in any way that involves the removal of part of their natural substance, for this missing substance may contain the activator, without which the food may be worse than valueless. Breakfast-foodsters will please take notice. To quote and condense an article in *The British Medical Journal* (London, April 5):

"During the last five or six years many references have been made to observations and researches tending to show that certain common articles of diet contain minute quantities of substances which are of so much importance in nutrition that their absence may prevent the normal growth of young animals, or lead to actual disease in them or in adults. The facts ascertained as to the etiology of beri-beri first put physiologists on the track. Observations showed that beri-beri was associated with a diet of polished rice, that is to say, rice from which the outer covering was completely removed. Braddon added the significant observation that the disease did not ensue if the rice was parboiled before polishing. The characteristic lesion of beri-beri is polyneuritis, and Eykman showed that birds fed on polished rice developed extensive polyneuritis, and further that this condition could be cured by giving the birds aqueous extract of rice-polishings. Later it was shown that exclusive diets of various pure carbohydrates induced polyneuritis in birds, and that foodstuffs other than unpolished rice could prevent it, but that their preventive properties were destroyed by heating to 120 degrees Cent.

"The general conclusion is that there is removed from rice during the process of polishing a nitrogenous substance which is essential to normal metabolism, especially of the nervous system. It is probably a pyrimidine base, but it exists in such minute quantities and is so easily destroyed during chemical manipulations that its exact nature has not yet been ascertained. The outbreaks of beri-beri which have occurred from time to time among the crews of sailing-ships on long voyages have been an epidemiological puzzle. Their investigation in the light of the new knowledge as to tropical beri-beri seems to have proved that they are due to replacing rye-bread and peas in the crews' dietary by white bread, and has suggested wider generalizations.

"Of even greater immediate practical importance here and now are, perhaps, recent investigations showing that the abstraction or destruction of certain substances present in small amounts in normal or unmodified foods leads to a failure of growth. The composition of these substances has not yet been ascertained, but whatever their nature they appear to possess the power of so stimulating metabolism as to cause growth at the normal rate.

It will be seen, therefore, that these observations on beri-beri, on scurvy, and on growth, have opened up a new field of inquiry in dietetics. They serve to show that some modern methods of preserving and preparing food have been running on wrong lines, that we have been disturbing the balance of nature, and that we must hark back to the original scent."

QUICK TRICK MATHEMATICS

THE LEARNED HORSES of Germany, described recently in these columns, if they have done naught else, seem to have stimulated the human mind. The horses, it will be remembered, give the answers to certain arithmetical problems with unusual rapidity, so that those who explain their performances by supposing signals from their master are confronted with the fact that the animals calculate faster than any men could do, except mathematical prodigies. In a recent discussion among a body of scientific men at a meeting of the French Philosophical Society, in the Sorbonne at Paris, it was

shown that in the case of some of the problems solved by the horses, short cuts and arithmetical tricks might shorten the process greatly. Apparently it was the opinion that some one in communication with the animals used such methods. We translate from an account contributed by René Merle to *La Nature* (Paris, March 29), as follows:

"The discussion was an animated one, some affirming the existence of a secret trick, while others were prudently doubtful. Among the former was Mr. Quinton, who found in the experiments of Krall divers 'impossibilities' which he severely criticized. He had been struck with the fact that the horses made as many mistakes

(about 40 per cent.) when they performed a very simple addition as when they extracted a cubic, fourth, or fifth root; he asked why the horses added, multiplied, and extracted roots, while they neither subtracted nor divided. Finally, he found no trace, in their education, of lessons going farther than 144. Wishing to explain possible trickery in the extraction of roots, he succeeded in discovering a very simple and rapid process of finding the cubic or fifth roots of perfect powers, and he astonished the Philosophical Society by announcing that he would undertake to give in a few seconds the results of all such problems that might be presented to him. This was done, and it was shown that Quinton was able to calculate at least as quickly as a learned horse. The latter answered in several seconds such questions as, 'Find the square root of 15,376, the third root of 5,882, and the fourth root of 456,976'; and Quinton did just about as well!

"Quinton refused at first to reveal the secret of his method, declaring that a little reflection would enable any mathematician to discover it. Next day *Le Matin* announced it, as communicated by the author. The method is not at all general, but is applicable only to the roots of perfect powers; it does not enable one to know whether a given number is or is not a perfect power, and it is necessary to be certain that we have a perfect power before applying Mr. Quinton's simplified method. . . .

"For fifth roots, Quinton notes that the unit figure of the root is the same as that of the power. $\sqrt[5]{32} = 2$; $\sqrt[5]{243} = 3$; $\sqrt[5]{59,049} = 9$. The fifth powers of the nine digits thus may be extracted rapidly and easily. Beyond this a little more memory is necessary, for the fifth powers of the digits must be kept in the mind. . . . Thus Quinton solved instantly the problem $\sqrt[5]{229,345,007}$, proposed to him by the president of the Philosophical Society; 2,293 lies between 1,024, which is the fifth power of four, and 3,125, which is the fifth power of five. The figure in

THE GREATER BIRD OF PARADISE.

The most beautiful species of this bird are nearly extinct.

the tens place is thus 4 and that in the units place is 7; so 47 is the root.

"For cube-roots the process is somewhat different. Mr. Quinton has noted that the cubes of 1, 4, 5, 6, 9, all end in the same figures, and that those of 2, 3, 7, and 8 end in 8, 7, 3, and 2, the figures obtained by subtracting from 10. The cube-roots of cubes smaller than 1,000 are thus obtained at once. . . . For larger cubes, running up to a million, we must, as before, know by heart the cubes of the nine digits. . . .

"This is the whole mystery. Mr. Quinton is able to extract by the same process many other roots, 7th, 9th, 11th, 13th, 14th, etc. Is this the secret of the Elberfeld horses? Quinton does not assert this, and notes only that these rapid processes are able to abridge calculation greatly, so that if some one were in communication with the horses, the spectators would be astonished at their apparent knowledge. The process is hardly utilizable ordinarily, and we describe it here only as a curiosity. It will enable those familiar with it to astonish their friends, as being more extraordinary than Inandi or Diamandi; more rapid even than a learned horse. The only thing they must look out for is that they shall be given only perfect powers!"—*Translation made for THE LITERARY DIGEST.*

WORLD-WIDE BIRD-SLAUGHTER

WHILE WE LAMENT the disappearance of our wild birds here in the United States, and are trying to check it by legislation, the same ruthless slaughter, ending in the total extermination of one species after another, is going on in all parts of the world. Trade, backed by fashion, has a "pull," apparently, that can not be withstood by laws, nor appeals to pity, nor the outcries of scientific naturalists. So the goose that lays the golden egg continues to be killed, for after a feather-yielding bird has been exterminated no more feathers of this kind are to be had. The feather-dealers, like the French king, however, seem to be content that the deluge shall arrive after they have enriched themselves sufficiently. A writer in the *Tour du Monde* (Paris, March 15), abstracting an article contributed to the *Journal Suisse* by Mr. De la Rive, an expert in this subject, asks whether we are to go on until every bird has vanished, or whether there is some way out. We read:

"To state the problem is not to solve it, but we may point out what the solution ought to be. The bird constitutes part of our common heritage and the hour has come to seek to preserve it, not only in Europe, where insectivorous species have long been protected by law, but throughout the world, which is seeing one marvel after another disappear. The feather-dealers oppose all restrictions and declare that their activity plays

little part in the diminution of winged life on the globe. The bill now pending in the British Parliament, looking toward the prohibition of the importation of certain species . . . has provoked lively opposition on both sides of the Channel. London is the market for the raw feathers, but Paris is where they are manufactured; and if the sale is suppressed, the industry will suffer. The argument has its value, but is there no remedy?

"The feather trade, quite inactive thirty years ago, has recently taken on an extraordinary extension. As conquering civilization has opened new regions to European exploitation, the sale and exchange of tropical and other species have become more intense. No measure of control has stopped the hunter in these new lands, and he has had his own way.

"The United States offer an example of what man's destructive powers can accomplish when nothing prevents. The American Ornithological Society called attention, in 1885, to the necessity of effectively protecting the winged

fauna of the continent. . . . Ornithologists have told of the extermination of the herons, ibises, spatulas, and pelicans in Florida, of the grebes and swans of Oregon, and of the sea-shore birds. Legislation has finally interfered; but there are no more herons, and the shore birds have been preserved only by creating island reserves. . . .

"The English and French merchants assure us that in Venezuela the white heron is rigorously protected, and that the feathers shed at molting time are collected under the nests by the natives to be exported to Europe. Nevertheless . . . investigation shows that protective measures in Venezuela exist only in the district of Apuré, and that feathers are not gathered at molting time for the very good reason that they are then so dirty and bedraggled ('dead,' as it is called) that they have practically no market value."

The rarer the bird the more it is sought, and the less its chance of escaping extermination. The sad story of the New Guinea bird of paradise as told by Walter Goodfellow, an English traveler, is typical. Several species, including the blue paradise-bird, have already been exterminated, and others are nearly gone. The pursuit is carried on systematically, the birds being swept from one section after another. The Dutch Government's efforts at restrictive legislation have failed, owing to the strong opposition of the traders. Exportation of these birds is forbidden in British possessions, but there is much contraband trade. The same is true in the French and German colonies. "So long as the European outlet remains open," says the writer, "thus it will be." A remedy proposed by Mr. De la Rive is to substitute as far as possible the feathers of domesticated birds, such as the pigeons, for the wild birds. This may relieve the trouble somewhat, but there can be no tame substitutes for some of the creatures most in demand, and therefore nearest to extinction.—*Translation made for THE LITERARY DIGEST.*

LETTERS AND ART

WHY ALL SHOULD ENJOY POETRY

FOR THE AVERAGE MAN, as well as for the distinctively poetic type, poetry has its function, according to Max Eastman; and because he believes that an understanding of this fact will increase the sum of enjoyment in the world he devotes a book to it. Recognizing that people tend to fall into two opposing classes, the practical and the poetical, Mr. Eastman keeps also in mind the fact that the majority of us represent a blending of these two types. Practical people, he points out, are intent on attaining ends, poetical people with receiving impressions. And he argues that in this adventure of living the poetical impulse, the impulse to realize, must not be sacrificed to the practical impulse to achieve—despite the well-known intolerance of the practical person for poetry. Throughout his book on the "Enjoyment of Poetry" runs a faith in the possibility of reconciliation between these two points of view. He urges the practical man to recognize that the poetic is "not an attribute of special, exotic, or disordered types, but a universal quality of our nature," and that the poetic impulse, "the impulse to realize," is "as deep and arbitrary and unexplained as that 'will to live' which lies at the bottom of all the explanations." We should therefore strive for "a more equable union of the practical and poetical in our character." "It is only the childlike and the poetic who make the innumerable intimate acquaintances that are made."

But the service of poetry to the practical man is not only to enhance things for him and add a richness to his experiences, but to vivify ideas by clothing them with color and emotion:

"And thus it is that poetry, altho primitive, is also divine. It is a redeemer of the mind from the serious madness of abstraction. . . . It carries science and knowledge continually back into the specific realities out of which they arose, and whose illumination is their culminating function."

Nor does Mr. Eastman ignore poetry's more mystical service, of which he observes:

"We are sometimes led by her most fine suggestions, not only into the presence of ideas, but into the presence of what is beyond any idea. We are made to apprehend the being of things the mind can not contain. In trigonometry, because we know the relation between two lines, we can measure the one which is beyond the span of our instruments, and we nail our diagram to the stars; and in poetry, likewise, when we have experienced the reference of a present image to absent ones, we are awake to those references which pass beyond our minds, and we catch them on their way to the images that are eternally absent. There is poetry that runs along the verge of infinity. Repeatedly we span the universe by the juxtaposition of words, and as the architecture of these successive visions is piled before us, we are led almost to expect a revelation of the unseen. This power has hung the veil of sacredness upon the name of poetry—that with these written syllables it can so bring over us the nearness of infinite and universal being."

Returning again to more practical considerations, Mr. Eastman points out that the worship of "respectability" and the

lack of leisure are two serious obstacles to the enjoyment of poetry. At present, he says, the rich have the leisure, but are handicapped by the ideal of conformity, of respectability. And the poor have no time for poetic realization of their lives. If the golden age of poetry is before us, he argues, the world will first have to undergo certain social readjustments. As he puts it:

"Realization is a flower of leisure and does not blossom quickly. It is a flower of the mood of leisure, and that in these days is the possession of a few. Among the well-to-do it is a traditional possession of women only, and so poetry has there grown to appear feminine. Among the poor it is unattainable to any but degenerates, or the best rebels, and so poetry appears not to belong there at all, but to be almost an exclusive pleasure of those whom we call cultivated. Poetry has grown aristocratic. It looks into the future for its golden age, the age when it will again be loved by many kinds of people, and rise to its heights upon a wide foundation. They who cherish hopes of poetry will, therefore, do well to favor in their day every assault of labor upon the monopoly of leisure by a few. They will be ready for a drastic redistribution of the idle hours."

"Even a more heroic change they will have to see, if poetry is to prosper in those hours. For with the achievement of leisure as it is to-day, there spreads over the whole nature of man that baleful constraint, the ideal of respectability. And that is a more sure destroyer of poetry than even necessity or the absorbing ambition that is genuine. The privilege of maintaining a refined insulation from real contacts with the matter of life being possible only to the wealthy, it becomes the accepted token of wealth, and a stern requirement to those whose judgments of merit are determined by a pecuniary standard. They wrap themselves in fabrics and fine manners. They incase themselves in forms. They touch nothing to the quick. They are even more effectually sundered from the poetry of experience than those considered less fortunate who are occupied with a genuine problem of self-pres-

ervation. For they, when they do discover some hour of contemplation, look straight into the face of the world. They taste the sorrows at least. But these others dwell in their mansions of great aspect as in the tomb, forbidden by their ideal the realization even of the tragedy of their own deadness."

In the last chapter, which discusses the "practical value of poetry," we read:

"The poetry of books prepares, and also it restores. To us the world grows stale, because in proportion as we become accustomed to a thing we are estranged from it. In proportion as we win the daily presence of our friends, we lose them. We come to regard life as a dry package of facts. We want the spirituous refreshment of another's vision. We want to have our eyes reopened, and our souls made naked to the touch of being."

"This is the priesthood of art—not to bestow upon the universe a new aspect, but upon the beholder a new enthusiasm. At our doors every morning the creation is sung. The day is a drama, the night as an unfolding destiny within whose shadowy arena impetuous life shall still contend with death. A world laughs and bleeds for us all the time, but our response in this meteoric theater we suffer to be drugged with business and decorum. We are born sleeping, and few of us ever awake, unless it be upon some hideous midnight when death startles us, and we learn in grief alone what bit of Olympian fire our humid

MAX EASTMAN.

"This is the priesthood of art—not to bestow upon the universe a new aspect, but upon the beholder a new enthusiasm."

forms enwrapped. But we could open our eyes to joy also. The poet cries 'Awake!' and sings the song of the morning. He that hath eyes let him see! Even now all around us the trees have arisen, and their leaves are tongues of the air in song—the earth swings on in drastic revolution—and we laugh and love perpetually—and the winds enlarge our goings and our comings with a tune.

"So far from being past, or on the wane, this wisdom of the soul of poetry looks for the first time joyfully into the future. Man is now returning to his rights as an animal. He has now learned that morals is not meant for a scourge and a dry medicine, and that joy is its own reason. Existence was not perpetrated in malice or benevolence, but simply is, and the end of our thinking is that here we are, and what can we make of it. We have a planet to act upon, a sense of the drama. We will not squat and argue, nor balk, and try to justify God, but we will make with high hearts of abandon our entrance and our exit before the congregation of the stars."

CREATIVE PHOTOGRAPHY

THE MUCH-DISPUTED CLAIM of photography to be classed as an art will doubtless derive a fresh impulse from the work of Baron De Meyer, who succeeds, according to a writer in the May *Craftsman*, in proving himself a creative artist despite the fact that his medium of expression is the photographic plate. "One is impressed," we read, "by the quality of 'style' that pervades all his work; his portraits have that fam-

pictures "all the qualities required of a painter, excepting of course color." To quote further from the *Craftsman* article:

"Few amateurs realize the difficulties to be overcome in seeking to express through this purely mechanical agency the qualities required of the painter, but Baron De Meyer has given in his portraits a personal and artistic utterance.

"To express beautifully an emotion or sensation is the chief

"MRS. SMITH OF CHELSEA."

It is claimed for Baron De Meyer that he achieves in his photographs "all the qualities required of a painter, excepting of course color," and proves "how real an analogy is to be drawn between photography and the other forms of 'black and white' work."

"THE BALLOON MAN."

The two examples of Baron De Meyer's photography on this page afford an interesting contrast to his well-known portraits of fashionable women. At the same time, says a writer in *The Craftsman*, "his portraits have that family resemblance which characterizes the works of a good painter, and shown in each is the stamp of one man's work."

ily resemblance which characterizes the works of a good painter, and shown in each is the stamp of one man's work." At the same time "each photograph is individual, the mood and manner of treating the sitter prove the keen observation of an artist." In other words, Baron De Meyer brings to his work both the creative ability and the critical instinct, and achieves in his

object and fundamental aim of any art, and the latest development of what was once mere photography opens up a new field of experience requiring a mastery of many technical difficulties. One sees in Baron De Meyer's portraits how real an analogy is to be drawn between photography and the other forms of 'black and white' work which art lovers have ever held in high estimation, and it is again proved that the artist is as independent and as unhampered by his rigid medium as if he wielded the more supple pen and pencil. One feels in Baron De Meyer's work great ability, keen observation of life, enhanced by a charming sense of humor, and the true artistical sense of just and vital values.

"The draftsman has indeed fewer difficulties; his is the power to suppress or eliminate details in his pictures that detract or are non-essential, details which interfere with the harmonious whole. The photographer, because of his medium, has not the power to retouch or correct his picture. His choice from the first must be sure and unerring, and yet one's first impression from these photographs is that they might be reproductions of a master's painting, or of the tone etchings of such a great artist as Brangwyn. Upon deeper observation one perceives the clear-cut value of lens work."

While Baron De Meyer is famous for his portraits of beautiful women, "he has not been content with reproducing a galaxy of the fair women of two continents":

"In his London studio he has worked from models and has thus obtained most interesting studies which have allowed him larger scope in his portrayal of types.

"In these selected studies of many types, as in the portraits of beautiful women, Baron De Meyer gives us a valuable record of modern society, and his work through it all remains critical, constructive, and creative."

MR. MORGAN AS A COLLECTOR

THE "greatest collector of the last half century—perhaps, indeed, of all time." This is the tribute of the *London Morning Post* to Mr. Morgan, whose art collections, valued at \$60,000,000, will, it is now believed, eventually become public property. The terms of the will, just made public, do not, indeed, definitely bequeath them to the people. It pleads lack of time and energy to effect so great a transfer. The implied obligation, however, is left upon the son and principal heir, and the general belief is that Mr. Morgan's express wishes will be put into execution. The *New York Sun* records the prevalent feeling that the greater part of the art collection will go to the Metropolitan Museum, "possibly not as a gift, for the present at least, but as a loan with conditions that would have the effect of making the treasures, in the words of the Morgan will, 'permanently available for the instruction and pleasure of the American people.'" Again, the man who wrote this will, remarks *The Morning Post*, "collected in a fashion unknown until the present generation." The word "collecting," it continues, "does not, perhaps, correctly express Mr. Morgan's enterprises; 'amassing' would probably be the better term." For all that, the belief held by this journal contradicts the oft-asserted statement that Mr. Morgan delegated all his collecting activities to trained experts:

"He had the genuine instinct of the collector, and many years before he began to buy on a large scale he used to frequent more than one print-dealer's shop and spend hours in turning over portfolios, selecting fine mezzotint and other engravings."

Much has been written about the Morgan collection. Their variety and riches are so vast that no brief statement can give a hint of their compass. The summary in the *London Times*, where Mr. Morgan is treated in a five-column memoir, gives a valuable survey:

"Mr. Morgan began to buy pictures in 1884, but only bought largely after 1890. From that time till about 1908 no sooner had the report of his purchase of one fine collection died away than another was announced. He bought readily and widely, but only such things as were supremely fine, in almost every branch of art. For these he built a palatial home in New York."

"Mr. Morgan's first great enterprise in the way of book-buying dates from about 1890, in which year he purchased *en bloc* the Toovey library of early English printed books, the magnificent Aldines (529 in number), a very fine series of bindings by the great masters of the French school, and, above all, a superb copy of the First Folio of Shakespeare in the original calf, with the arms of Robert Sydney, Earl of Leicester. In this purchase, as indeed in all his bibliographical purchases, Mr. Morgan largely depended on the advice of his nephew, Mr. Junius S. Morgan."

"About 1900-1, Mr. Morgan bought, also *en bloc*, the libraries of Theodore Irwin, of Oswego, A. J. Morgan, George B. de Forest, and Marshall C. Lefferts, all especially strong in various phases of Americana. But his greatest coup of all was the purchase of the library of Mr. Richard Bennett, of Manchester. Mr. Bennett, besides buying elsewhere, had purchased William Morris's library, and, after making his selection of manuscripts and books, sent the residue to Sotheby's in 1899. For reasons which are not known, Mr. Bennett suddenly determined to part with his library, and placed it in the hands of Messrs. Sotheby for sale by private treaty. There were only about 700 volumes, but every one was of the highest importance; there were, for instance, 32 Caxtons, and in this respect the Bennett collection ranked the fourth largest in existence. The collection was, after very little delay, purchased by Mr. Morgan at a price said to be about £200,000. Then came the purchase of the 14 Caxtons in the Amherst of Hackney library for something like £25,000."

"Mr. Morgan's greatest single-book purchase was the Ashburnham 'Evangelium,' for which he paid £10,000; it is one of the most beautiful examples in existence of early goldsmiths' and jewelers' work. The only fragment in existence of the manuscript of Milton's 'Paradise Lost' was acquired early in 1904 for about £5,000. The Hamilton Palace copy of the 'Golden Gospels' of Henry VIII., a manuscript of 'Imperial magnificence,' came to Mr. Morgan in his purchase of the Irwin

library; and he also obtained the acknowledged masterpiece of the greatest of all the miniaturists, Giulio Clovio. His more recent purchases include both the vellum and the paper copies of the great Mazarin or Gutenberg Bible, which cost £8,850 at the Huth sale, and several of the Hoe treasures fell to him. Some time since an ingenious statistician reckoned—and this was before the Huth-Hoe sales—that out of 100 books which sold at auction during the last century at from £500 to £5,000 each, Mr. Morgan owns 16, or one-sixth of the highest-priced books of the last hundred years. A long account—the first of its kind to appear—of Mr. Morgan's library and its treasures was published in *The Times* of December 4, 1908."

Mr. Morgan's pictures have so lately been the subject of an article in these pages that we omit the remention of them and go on to indicate some of his accumulations that are less well known:

"When Mr. Morgan decided to remove his collections from the Victoria and Albert Museum, it was roughly estimated that the value of the contents of the 30 or 40 showcases amounted to three-quarters of a million sterling—£300,000 in jewels, £100,000 each in porcelain and ivories, not to mention other articles. Even these formed only a small portion of his collection, for his gold and other snuff-boxes alone represent an enormous fortune. The Morgan jewels formed the subject of a special article in *The Times* of August 25, 1911; while his equally famous and important collection of watches was dealt with in these columns on November 23 of last year."

"Mr. Morgan purchased at a high price the Pfungst collection of fifteenth-century bronzes, and is said to have paid £60,000 for a portion of the collection of goldsmiths' and silversmiths' work of the sixteenth century which was formed by Consul Guttman, director of the Dresdner Bank. For two busts by Houdon he is reported to have paid £20,000, and £100,000 for the Van Eyck series of tapestry from the Royal Palace at Madrid, and probably brought from Spain to Paris by Cardinal Mazarin. The Oppenheim collection of ivories, wood carvings, Munich-stone, Italian faience, Byzantine enamels, terra-cotta work, and so forth; the Mannheim collection of majolica; the Marsden Perry collection of Chinese porcelain, 227 pieces, one of the finest in the United States; and the Georges Hoentschel collection of Gothic and eighteenth-century woodwork, ormolu decorations, which were affixed to furniture, domestic furniture, and ecclesiastical work—said to have filled 364 packing-cases in the transshipment to New York; the John Ward collection of Greek coins; the Marpels collection of watches—these are all now part of Mr. Morgan's accumulations. It should be mentioned that the eighteenth-century objects in the Hoentschel collection were presented by Mr. Morgan to the Metropolitan Museum of New York. He had also a vast collection of fine Oriental porcelain; and quite recently he bought Mr. Fairfax Murray's very important gathering of drawings by old masters. In fact, there was hardly a department of the art of the past of which he had not acquired a fine and thoroughly representative collection. It is universally believed that the whole, or nearly the whole, of his treasures will go either now or later to the Metropolitan Museum of New York."

The above recital indicates that Mr. Morgan was almost entirely a patron of the art of the past. This point is taken and dwelt upon by the *New York Evening Post*, which sees him removed as far as possible from such figures, for example, as the Medici of Florence:

"To name the Medici and their business and political associates is to revive the memory of the greatest artists of their age. Mr. Morgan's name will evoke no such memories of our artists in the future. He outlived two artistic revolutions, marked by the success of the Barbizon school and that of the Impressionists, but his taste was deeply touched by neither. He employed, to be sure, the best architect in America to build his beautiful private library, but it never occurred to him to summon a mural painter of highest distinction to complete the work. The only portrait-painter whom he consistently and enthusiastically employed is an artist of inferior talent. We call attention to these limitations of a great art lover, not to depreciate his taste, but because these facts mean something for both the man and the art of our modern times."

"It must be admitted immediately that modern art, subdivided into specialties, maintained largely by esoteric cults, an art so little central and public, could not have appealed to so

potent, public, and essentially simple a character as was Mr. Morgan's. Such an art must have represented to his consciousness either an evasion of the main business of life, or a disintegration parallel with that which he dreaded in society at large. In short, the Medici art patrons transported to our age would probably have liked our art no better than Mr. Morgan did, while he, in their times, might well have been the friend and employer of a generation of artists. It is the defect of our art, and the loss of our wealthy contemporaries, that its appeal to those who robustly do the world's work is so small."

It would "be to affront his memory to claim for him a connoisseurship to which he never pretended when living," continues this journal. Finally:

"It was his weakness as a collector that he did not readily seek or win the confidence of critics and other amateurs, but depended too much on dealers. He was too impatient and too rich to give himself the luxury of buying shrewdly, and the great prices which he willingly paid did much to produce the present demoralization of the art market. In fact, the amateur must regard Mr. Morgan's artistic career with something of awe and misgiving, not unmixt with pity, feeling the disproportion between his tireless activities as a collector, and the personal solace which he got from his royally abundant possessions. Such refinements of sympathy and appreciation need not trouble the average man. It is enough for him to know that all his long life Mr. Morgan earnestly coveted the best in art, that through his enterprise tens of thousands of beautiful objects have come from Europe to America, and that through his gifts we all have the possibility of an illimitable extension of our esthetic life."

MASSENET'S GHOST—A problem for the Society of Psychical Research seems to be furnished by a ghost story coming from Paris. Massenet, it appears, attends rehearsals of his opera "Panurg," about to be produced, and is seen by nearly all the people connected with the theater—stage-hands as well as singers. The "tenors and basses were as nervous as schoolgirls" at first, but after a few days began to accustom themselves to the apparition, and worked on comfortably with him. This account furnished by the barytone Marcoux is printed in the *Philadelphia Ledger*:

"I first noticed the apparition at the second rehearsal. It appeared at the end of the second act at the right-hand corner of the stage. I thought it was a hallucination, but try as I might I could not keep my eyes from the figure which I could see distinctly clad in the familiar gray frock coat.

"It beat time with its hands and would shake its head with approval or disapproval. I said nothing for fear of being ridiculed, and as the ghost or whatever it was did not appear again that day I took a dose to steady my nerves.

"Next day Mlle. Lucy Arbell, who has the principal rôle, clutched my arm suddenly during a duet in the second act and whispered in a terrified voice, 'Look! Look!'

"There in the same place stood the strange figure going through the motions of conducting the orchestra. I confess our voices sounded quaky as we continued singing.

"During an interval several stage-hands approached the stage-manager and told him they had seen the ghost of Massenet. At every rehearsal we saw the apparition, always in the same spot, but not always in the same act. The strange thing about it is that those not connected with the theater were unable to see the ghost.

"Director Isola had a camera pointed at the stage one day, the operator standing by ready, but altho he snapt at the exact moment when four of us saw the figure plainly, the negative, when developed, showed a blank. I can not explain it. I could have doubted my own eyes, but there is the testimony of the others."

The director of the theater adds this:

"The history of the *Gaieté Lyrique*, dating back centuries, contains many extraordinary incidents, including ghosts. Some old employees of the theater are quite ready to accept the theory that the theater is haunted by another uncanny visitor. Personally, I have no theory whatever, but at one time I feared we would be unable to continue the rehearsals. Everybody was absorbed in the extraordinary phenomenon."

WAGNER'S "RHEINGOLD" AN ATTACK ON PROPERTY

THE SOCIAL-DEMOCRATIC DOCTRINE of "the vicious fraudulency of private property," according to Prof. Karl Fuchs, is the underlying and permeating idea in Richard Wagner's "Rheingold." And "never was a senseless and dangerous thought made plausible to the public with greater pomp of presentation than by this thoroughly and endlessly romantic magic opera," declares this German interpreter of his great fellow-countryman. This view of the "Rheingold" is set forth by Professor Fuchs in *Die Danziger Zeitung* and discussed at some length in *Die Allgemeine Musikzeitung*. It will be recalled that in this opera, which forms the prelude to the trilogy, "Der Ring des Nibelungen," all the disasters trace back to the fact that the gnome Alberic, repulsed by the three maidens who guarded the mysterious treasure of the Rhine-gold, utters a vow to renounce love, and as a result of this renunciation is enabled to steal the gold and shape it into a ring of miraculous attributes. Altho this ring gives almost limitless power to its possessor, it also carries with it a curse which ultimately threatens to destroy even the god Wotan. In the *Musikzeitung* we read:

"What else could be symbolized in the fact that the curse is fastened on the individual who forges into a solid ring the liquid gold scattered in the green stream of the Rhine for the enjoyment of all, and that only the loveless man is capable of working this transformation? The forging happens through robbery. . . . Never more clearly than in this instance can the dictum of the French socialist, Proudhon, that 'Property is theft,' be illustrated. It is not the misuse of the stamped gold or money that is curst, but possession as such; the rich man is bad and loveless possession possesses the possessor and whoever acquires it must sow ruin and death and finally harvest them himself.

"The loveless man is the image of the detested capitalist. To make this impressive, the whole magical scheme of action and all the wonderfully devised scenery are conjured into an effect that is embellished with what is musically interesting. Finally, the whole thing, in consequence of the contradictions in the environment of the participant, and particularly in the character of Wotan, sinks so far toward the mere show-piece with music that it fortunately forfeits the seductive power which envelops the childish idea. The giants in the piece represent the workman; the problem of work and wages is solved by Wotan, specifically in regard to himself, with the principle of 'Ordering and not Paying,' with the mental reservation that 'The Higher Right is always on the Side of the Higher Nature' . . . really of the higher man, higher through rank or genius . . . this solution being a kind of denial of claims approved by civil law, a denial that the social democrat, too, would deem silly since it operates against the workman.

"It is in this manner that Wotan, the guardian of compacts, acts. Not yet in 'Rheingold,' but later, in the 'Ring,' which is intended to be a unity, he reveals himself as a god of the clouds, of storm, of the weather. . . . Has any one ever succeeded in making a compact with the weather? No wonder, finally, that this god [thinks and does so little in consonance with the fifth and sixth commandments. Likewise he fails to show definite respect for the seventh, for what compact has been violated by Hunding, whom he beats to death? To signify anything essentially other than the Ten Commandments can not be expected from the compacts whose formulas in runes find place together on a spear.

"Without this crass deviation in consequence of the excess of inner contradictions, the sum of which is by no means indicated by those already mentioned here, the complacent auditor might think that the piece had not contributed materially to the growth of the red flag, for however green the flood, the Rhine, may appear, there it is red and signifies that 'Everything belongs to Everybody.' The more the author strove, however, to diminish the historical aspect of the plot, the more intent he was as prophet to make impressive the group of ideas which he deemed the real life of his piece. It is well known, too, mark you, that this same Wagner, at a certain not very remote time, when certain heads were hot with a certain keen idea, wrote a wholly serious letter to the King of Saxony demanding that the King abolish the use of money in his states!"

RELIGION AND SOCIAL SERVICE

CHINESE APPEAL FOR CHRISTIAN PRAYERS

IN RESPONSE to an official request from the Chinese Cabinet, special prayers for the new Republic were offered on April 27 in Christian churches throughout China, the United States, and probably all Christian nations. This unprecedented action on the part of China's new Government is generally interpreted by our religious press as at once a vindication of our missionary efforts and a spur to fresh activities. Typical of the comment in many quarters is the remark of the Portland (Me.) *Zion's Advocate* (Baptist): "China has invited her own evangelization; the missionary enterprise will henceforth stand on a very different footing in that old land." "The world has heard nothing like this before," exclaims the *Chicago Advance* (Congregational), and the *Cleveland Evangelical Messenger* (Evangelical) hails the incident as "prophetic of the coming supremacy of the principles of the Christian religion in China." The appeal, as telegraphed to the various Chinese provinces and cabled to the Department of State at Washington and to foreign mission boards, is as follows:

"Prayer is requested for the National Assembly now in session, for the new Government, for the President who is to be elected; for the Constitution of the Republic; that the Government may be recognized by the Powers; that peace may reign within our country; that strong and virtuous men may be elected to office, and that the Government may be established upon a strong foundation. Upon receipt of this telegram you are requested to notify all churches in your province that April 27th has been set aside as a day of prayer for the nation. Let all take part."

This is said to be not only the first time in the world's history that a non-Christian nation has called for the prayers of Christian peoples, but the first time that any nation about to adopt a new constitution and enter on a new order of life has asked the prayers of other nations for success. And it is little more than twelve years since the Boxer uprisings in China resulted in the martyrdom of 135 missionaries and 16,000 native converts!

Our religious papers are naturally jubilant over this recognition from so unexpected a source of the importance of Christian prayer. "Not only will this action of the Chinese Government impress the millions of its own subjects with the importance of Christianity," says the *Philadelphia Christian Instructor* (United Presbyterian), "but it should impress the so-called Christian

nations with the importance of recognizing their dependence upon God, and their need of looking to him continually for his guidance and blessing." Another Philadelphia paper, *The Catholic Standard and Times*, also sees in this act of the Chinese Republic, "a very good example to the rest of the world." And it notes, "How different this attitude of the newest republic from that of the greatest one of Europe—France!" "The motive of China's call to prayer can only be conjectured," says the *New York Christian Advocate* (Methodist), but

"the simple fact that such an appeal has been made is tremendously significant, indicating that the influence of Christian missions has extended far beyond the mere numbers of converts. It will give strength to the Christian movement in Asia and to the operations at the home base, upon which foreign missions must depend for their maintenance and extension."

The *New York Christian Herald* (Undenominational) confesses that "it is difficult to be moderate" in commenting upon this event, and goes on to say:

"Has anything more spectacular and stupendous happened in the modern history of Christianity? It reminds one of the act of Constantine that made Christianity the religion of the great Roman Empire and the sign of the Cross the banner of its imperial legions, or of the zeal of Charlemagne in subjecting pagan nations to the yoke of Christ, Japan recently made Christianity one of the recognized religions of the Empire. And now China, the newest and largest republic, which during all the centuries of the Christian era has been thought of as so deeply and firmly heathen, sends this request for prayer, not to its priests of Buddha nor to its wise men of Confucianism, but to the faithful missionaries and native workers

who have been telling there the old, old story of Jesus and his love, and holding up to view the life and character of him who said, 'And I, if I be lifted up, will draw all men unto me.'"

"It commits China to Christianity," exclaims the *Boston Watchman* (Baptist), which comments as follows on certain outstanding facts in the case:

"The prayer-edict is issued by Yuan Shi Kai, the President of the Republic, thus giving it the highest official sanction. It is a little more than a decade ago that China was bitterly opposed to Christianity, and was using all her power to stamp it out of the Empire. President Yuan's edict easily recalls the edict of the imperial Government issued in 1900 calling for the destruction

of foreigners and making it a crime to harbor them. It was claimed by many at that time that the edict was directed not so much against Christians as such, as it was against the scheme of the European Powers to get possession of their territory. The aggressions of England, Germany, Russia, and France may well have aroused Chinese opposition not only to these countries but to their religion.

"Whatever influences have caused the reaction in favor of Christianity, and evidently there must have been strong and well-nigh irresistible influences, it may safely be believed that the attitude of the United States in its diplomacy, approving the integrity of the Empire as against the European carving process, and also in returning the portion of the money allotted to the United States as its share of the cost in subduing the Boxer rebellion, was among the most powerful factors. It shows in a large way that justice and honesty are always the safest factors in international policy."

"But probably the strongest human influence of all," adds the same paper, "has been exerted through the missionaries whose hard and faithful work has borne fruit not only among the people, but in the palace itself." The *Boston Congregationalist* (Congregational) calls attention to the interesting fact that "in the province of Kwangtung, the chief city of which is Canton, sixty-five per cent. of the Government officials are Christians, and in the new National Assembly there is also a good proportion of Christians."

We learn from the news dispatches that not only in the United States, but in Great Britain, on the Continent, in Canada, Australia, and South America, China's appeal was heard and answered. Commenting upon this unique day of prayer, Secretary of State Bryan said to a newspaper correspondent:

"It is an extraordinary tribute to Christianity. . . . The United States has exerted, largely through its missionaries, an increasing influence on the thought of China. The President has recognized this in his efforts to secure Mr. John R. Mott as the first Minister from this country to the new Republic, Mr. Mott being a conspicuous layman and known for his identification with all forms of religious activity."

In fact, the incident seems to hold scarcely less interest for the lay press than for the religious papers. "Praying for China is a proof that the American people have the sort of sentiment for the Chinese people upon which enduring friendship may be founded, and out of which the new dispensation of peace over all the world may gradually be evolved," remarks the *New York Evening Mail*. And *The Tribune* points out that whether China's request indicates the spiritual power of Christianity or merely the use of that religion for political purposes, it is in either case a reminder that the world has henceforth to reckon with "a Europeanized and Americanized China."

HOW TO HELP THE MOUNTAIN WHITES

IN THE FOREFRONT of all "rural problems," declares the editor of the *Berea Quarterly*, is the task of bringing the best educational guidance to the isolated people of the mountains of Kentucky, Tennessee, the Virginias, and the Carolinas. And Berea College in Kentucky represents, according to the *New York Times*, "the best thus far attempted

for the education of these hemmed-in millions of sturdy Americans." In the current number of *The Quarterly*, Mr. John F. Smith, of the Berea Normal Department, who recently made a survey in the mountain country for the National Bureau of Education, notes that there are active thinkers there who are doing all they can to better conditions. They want "to see religion become a real, active, character-building principle, instead of an excited state of mind or a mere belief in a creed," to "arouse a sentiment that would build bridges where ferry-boats are used now," to "have roads built over which a single team might draw a heavy load at all seasons," to have "better churches and better schools." But in the mountains, "as in perhaps most rural districts, the active thinkers are in the minority." So, declares Mr. Smith, "the practical way to better conditions in the mountains is to reinforce these active few." And he goes on to show how necessary these reinforcements are and how Berea is furnishing them:

"Take the boys and girls who will build the homes of to-morrow, put them in an institution where their horizon will be broadened, where they may catch a vision of better roads for their county, better farms and better methods of farming, better homes for themselves and their friends, and better schools and churches and happier days for their people.

"The active few want to help their county, but they can not be patriotic for the many who are not patriotic. Many a man is quite willing to have a bridge built across a stream near his farm, but he complains if he is asked to help build one in another part of the county.

"Often the criminally harmful influence of a few people who live on the frayed edges of the community, degenerates born of long intermarriage, mental atrophy, overindulgence of appetites and passions, 'vote sellers' and others, occasion ceaseless anxiety to the better classes who must make an honest living and lead respectable lives in spite of their less exemplary neighbors.

"Then there are the fatalists who have persuaded themselves that evil will come, that the

A FAMILY OF KENTUCKY MOUNTAINEERS.

hearts of some men are inevitably bad, and they rather avoid doing police duty in the neighborhood while winning bread for their children. They do have to win bread; they don't have to guard the morals of the people and the ballot boxes. Therefore they rather prefer to do what must be done and are often slow to assume responsibilities that may mean the expenditure of both time and money and involve them in 'difficulties' with their neighbors.

"In many cases the presence of Berea's 'Extension' outfit for two or three nights in a remote valley will turn the scale between the better and the worse elements by waking up those who have been indifferent.
